Preisner, Zbigniew (*b* Bielsko-Biała, 20 May 1955). Polish composer. A self-taught musician, at Kraków University, he studied the history of art. From 1978 he worked with the legendary Kraków cabaret Piwnica pod Baranami ('The cellar beneath the sign of the ram'). As a film composer he made his début in 1982 with music for *Prognoza pogody* ('Weather Forecast'), directed by Antoni Krauze. From 1985 he collaborated regularly with the celebrated film director Krysztof Kieślowski, an assocation which lasted until the director's death in 1996. The great success of Kieślowski's films, particularly *Dekalog* ('The Ten Commandments'). *La double vie de Véronique* and the trilogy *Trzy kolory* ('Three Colours'), led to the composer's career flourishing in Europe and the United States. Preisner has since composed music for more than 80 films, among them documentaries and short films. He has received many prestigious awards, notably the Los Angeles Critics' Award (1991, 1992 and 1993), the French 'Cesar' Award (1995 and 1996) and a Golden Disc award in Paris for the sound recording of *La double vie de Véronique*; the latter was also nominated for an Academy Award in 1991.

On the one hand Preisner continues the lyric-musical tradition of the cabaret, while, on the other clearly owes much to various styles of classical music, especially neo-romanticism (as evidenced by his music's monumental quality and its pathos). He prefers to write for traditional orchestral forces (often augmented by a choir), against which he sets melodic parts for various solo instruments or soprano vocalise. His economy with musical means gives Preisner's music an added dimension in its association with film; his music for Kieślowski's films, for example, emphasizes and enhances the metaphysical atmosphere and the humanitarian meaning. The regular closed structures of his compositions allow them to function equally well as recordings and concert pieces.

WORKS

(*selective list*)

Film scores (dir. K. Kieślowski): Bez końca [Without End], 1985; Krótki film a miłości [A Short Film about Love], 1988; Krótki film o zabijaniu [A Short Film about Death], 1988; Dekalog [The 10 Commandments], TV series, 1989; La double vie de Véronique/ Podwójne życie Weroniki, 1991; 3 couleurs/3 kolory: bleu/ niebieski, 1993, blanc/biały, 1994, rouge/czerwony, 1994

Other film scores: At Play in the Fields of the Lord (dir. H. Babenco), 1991; Europa, Europa (dir. A. Holland), 1991; Damage (dir. L. Malle), 1992; Tajemniczy ogród [The Secret Garden] (dir. A. Holland), 1993; When a Man Loves a Woman (dir. L. Mandoki), 1994; Elisa (dir. J. Becker), 1995; De Aegypto [From Egypt] (TV spectacle, dir. J. Ptaszyńska), 1996; Feast of July (dir. C. Manaul), 1996

Principal recording companies: Columbia, Nouvelles éditions de films, Mercury, Sideral, Saul Zaentz, Sony, Warner

Prelleur, Peter [Pierre] (*b* ?London, ? Dec 1705; *d* 25 June 1741). English composer, organist and harpsichordist. He was perhaps the Pierre Preleur, son of Jacque and Francoise, who was baptized at the French church, Threadneedle Street, London, on 16 December 1705. He began his career as a writing master in Spitalfields. He played the harpsichord at the Angel and Crown tavern in Whitechapel before becoming organist at St Alban Wood Street in 1728. Soon after Goodman's Fields Theatre opened on 31 October 1729, he was engaged there to play the harpsichord, compose music and arrange ballad operas. His first known benefit, shared with John Giles (*fl* 1710–40), was on 13 May 1731. In March 1736 he was elected first organist of Christ Church, Spitalfields, triumphing over stiff competition and intrigue. When Goodman's Fields closed under the Licensing Act of 1737, Prelleur transferred to New Wells (or Goodman's Fields Wells) Theatre in Leman Street, where he composed several pantomimes, and the delightful interlude *Baucis and Philemon* (1740), which was published with the overture in full score, but without violas. He was one of the original subscribers to the Royal Society of Musicians on 28 August 1739. He died after a short illness, and his obituary described him as 'a sincere good-natur'd man, and one of the few of whom may be said he has not left an Enemy behind him'. His burial took place on 27 June, accompanied by the singing of the Charity Children, whom he had taught.

A concerto for two trumpets by 'Signr. Prelure' in the Sächsische Landesbibliothek, Dresden, is virtually identical to one in a set of anonymous orchestral works in the British Library. The latter includes two overtures, concertos and dance movements, grouped into three 'acts'; it is not clear if this implies a stage work, as the term was often used to divide concert programmes. It ends with a short St Cecilia ode, *Patron of the tuneful nine*, clearly by the same composer. Perhaps the whole set, which is surprisingly fully scored, was intended as an entertainment for some special occasion. Its attribution to Prelleur is strengthened by the concordance with a movement in one of the organ voluntaries ascribed to him. A manuscript set of concerti grossi is also attributed to Prelleur; the pieces are italianate in style, with contrapuntal suspensions and virtuoso solo passage-work. The set comprises eight concertos: no.1 is incomplete, no.3 is for two trumpets and no.5 is titled 'overture'. Generally the quality of these works shows Prelleur to have been a more considerable composer than could previously have been judged.

His reputation has rested mainly on the publication of his educational work, which began, according to Hawkins, with a commission by Cluer and Dicey to write an *Introduction to Singing* (London, 1735). This was first published as the first part of a much larger work entitled *The Modern Musick-Master, or The Universal Musician* (London, 1730/31/*R*), a beautifully printed book that also contains instructions for playing a variety of instruments, a history of music and a musical dictionary.

WORKS

STAGE

Harlequin Hermit, or The Arabian Courtezan (pantomime), some songs pubd singly (1730), later perf., London, New Wells, 1739

The Contending Deities (masque), London, Goodman's Fields, 7 May 1733, lost

Jupiter and Io (pantomime interlude), London, Goodman's Fields, 24 June 1735, collab. J.C. Eversman, lost

Baucis and Philemon (interlude), London, New Wells, 7 April 1740, ov., songs, duets (London, *c*1740)

Harlequin Student, or The Fall of Pantomime (pantomime), London, New Wells, 3 March 1741, some songs pubd singly

OTHER WORKS

8 concerti grossi, *GB-Cfm*

4 Concertos (2 for tpt, 1 for fl, l for fl traversi), suite, independent movts, *Lbl*

Concerto, 2 tpt, 2 ob, str, bc, *D-Dl*

Medley Overture, a 4 (London, 1736)

2 Medley Overtures, a 7, nos.5–6 in 6 Medley or Comic Overtures (London, 1763)

Dance movts, various insts, *GB-Lbl*

10 voluntaries, 8 other pieces, org, *Lco*

2 overtures, 2 ob, 2 vn, va, bn, b, *Lbl*

Patron of the tuneful nine (ode), St Cecilia's Day, S, SATB, 2 tpt, 2 hn, 2 ob, str, bc, *Lbl*

5 hymns, in Divine Melody in 24 Choice Hymns (London, 1758), rest by J.H. Moze

Numerous songs pubd singly and in 18th-century anthologies

Prellmechanik (Ger.). The German and Austrian type of piano action in which the hammer heads face towards the player and are either fixed by a type of hinge on, or held in, a *Kapsel* (a kind of fork with beds for the hammer's axle) attached to the key. As Vienna was the centre for piano makers using the *Prellmechanik*, it became known as the 'Viennese action'. By the mid-1770s, J.A. Stein improved it by adding an escapement. Increasingly heavy versions of the *Prellmechanik* were used into the early 20th century. *See* PIANOFORTE, §I, 3 and 5, esp. figs.4, 5 and 18.

HOWARD SCHOTT

Prelude (Fr. *prélude*; Ger. *Vorspiel*; It., Sp. *preludio*; Lat. *praeludium, praeambulum*). A term of varied application that, in its original usage, indicated a piece that preceded other music whose mode or key it was designed to introduce; was instrumental (the roots *ludus* and *Spiel* mean 'played' as opposed to 'sung'); and was improvised (hence the French *préluder* and the German *präludieren*, meaning 'to improvise'). The term 'praeambulum' (preamble) adds the rhetorical function of attracting the attention of an audience and introducing a topic.

The earliest notated preludes are for organ, and were used to introduce vocal music in church. Slightly later ones, for other chordal instruments such as the lute, grew out of improvisation and were a means of checking the tuning of the instrument and the quality of its tone, and of loosening the player's fingers (as was the TASTAR DE CORDE). The purpose of notating improvisation was generally to provide models for students, so an instructive intention, often concerned with a particular aspect of

instrumental technique, remained an important part of the prelude. Because improvisation may embrace a wide range of manners, styles and techniques, the term was later applied to a variety of formal prototypes and to pieces of otherwise indeterminate genre.

1. Before 1800. 2. From 1800.

1. Before 1800. The oldest surviving preludes are the five short praeambula for organ in Adam Ileborgh's tablature of 1448 (ed. in CEKM, i, 1963), where they are grouped together in a section headed 'Incipiunt praeludia diversarum notarum'. Each consists of a florid, quasi-improvisatory right-hand part that decorates a simple shape in the left hand or pedal, such as the alternation of two sustained, two-part chords, or a descending scale. Later 15th-century German sources, notably Conrad Paumann's instructional *Fundamentum organisandi* (1452; ed. in CEKM, i, 1963) and the Buxheimer Orgelbuch (*c*1470; ed. in EDM, xxxvii–xxxix, 1958–9), make a characteristic distinction between two predominant textures: simple sustained chords (*schlicht*) and florid passages (*colorirt*). Typically, the final of the piece forms part of the title (e.g. 'Praeambulum super C', 'super D', etc.).

These features remained fundamental to the prelude into the 16th century, when the original improvised character of written preludes began to give way to a more closely organized form. The keyboard tablatures of Leonhard Kleber (*c*1524) and Hans Kotter (before 1535) added new textures, Kleber's praeambula tending to sequential patterns that still suggest improvisation, and Kotter's *proeemia* contrasting light imitation with passages of antiphony between groups of voices. Similar features are found in the contemporary lute tablatures of Hans Judenkünig (1523) and Hans Neusidler (1536).

From the later 16th century the term 'praeludium' and its cognates were not commonly used in southern Germany, nor in Italy or Spain, where prelude-type pieces generally bore other titles (*see* Intonazione; Intrada; Ricercare; Toccata). More extended and brilliant pieces in free style were called 'toccata', such as those for chitarrone by Kapsberger (1604) and for keyboard by Frescobaldi (published 1615–37) and his pupils.

A parallel development continued in northern and central Germany under the title 'praeludium', the equivalence being underlined by titles such as 'Praeludium toccata' (Sweelinck) and 'Toccata vel praeludium' (Matthias Weckmann). The large-scale north German *praeludium pedaliter* for organ, the most elaborate of the prelude genre in the Baroque, began its development in the generation of Sweelinck's pupils. The praeambula of Scheidemann typically have a free opening section, an imitative or fugal middle section and a free closing section. Into this sectional structure Tunder and particularly Weckmann introduced more stylistically diverse elements derived from the southern German toccatas and canzonas of Froberger. The peak of this development was the large multi-sectional praeludia by Buxtehude. They contrast free virtuoso flourishes with elaborately worked fugal sections, and the traditional rhetorical style with the motor energy of the new Italian manner, and often have subtle motivic and other links between sections.

These are highly sophisticated examples of a type of improvisation customary before and after the Lutheran service. Instructions for such improvisations are given by various writers, notably F.E. Niedt (1706). Some of the praeludia of Kuhnau's first *Clavier-Übung* (1689) come close to Niedt's description. Other places in the service where 'praeludiren' was in order were before concerted music, where writers from Praetorius (1619) to Türk (1787) exhorted organists to keep to keys involving open strings, to allow discreet tuning, before modulating to the key of the piece; and before the singing of a chorale, a practice that led to the development of the chorale prelude (*see* Chorale settings, §II). In a secular context, the practice of group improvisation by instruments under the title 'praeludium' is mentioned by Fuhrmann (1706) and, in France, by Brossard (1703). Techniques for improvising on solo woodwind instruments are described by Hotteterre in *L'art de preluder* (1719); Rousseau (1768) listed in addition short improvised preludes for voice.

Among the few notated examples from France in the 16th century are those published by Attaingnant (1530, 1531). The 17th century saw a highly distinctive development of the prelude as a genre in France, associated particularly with the lute. Preludes from early in the century are indistinguishable from polyphonic fantasias, but around 1620 examples by Lespine and in Lord Herbert's manuscript (*GB-Cfm*) show a rhythmic loosening that suggests that the semi-measured and unmeasured prelude for solo lute, viol or harpsichord may have developed as much from this direction as from the elaboration of a tuning routine (*see* Prélude non mesuré). The highly sophisticated semi-measured lute preludes of Mesangeau (written in the 1630s) explore different voices of the lute in an improvisatory manner, while retaining references to contrapuntal genres. The 1620s and 30s also saw the establishment of the prelude at the head of the solo instrumental dance suite, the first published example being Chancy's *Tablature de mandore* (1629).

The polyphonic prelude was continued in France on the organ. The frequent use of an opening point of imitation consisting of a slow-moving scale segment, sonorous dissonances (especially major 7ths, 9ths and augmented 5ths), and evaded cadences in order to avoid the establishment of subsidiary tonal centres, suggests that these were improvisational commonplaces. The ensemble prelude, though initially less common than the entrée, was a steady feature of French opera from Lully to Rameau, used to introduce an *air* or scene.

In Italy, Corelli initiated an important association of the prelude with a suite with sonata features. His chamber sonatas (1685, 1694) open with a Preludio of a type similar to the initial Grave or Largo of his church sonatas, while the more varied preludes of the violin sonatas (1700) provided models for the opening movement of the later Baroque sonata. This association continued in the ensemble *Concerts* of François Couperin (1722, 1724) and in the solo suites for violin, cello and harpsichord of Bach. With Bach the prelude reached the pinnacle of its development, both in its compositional quality and in its range of styles, manners and formal prototypes. His early organ preludes developed the sectional praeludium of Böhm and Buxtehude, while those after about 1713 generally exploit the fertile possibilities of the Vivaldian ritornello principle for unifying an extended movement in a single span. Bach's most systematic demonstration of the variety of the prelude as a genre is in *Das wohltemperirte Clavier* (1722). This brought to fruition in tonal terms the tradition, already present in Ileborgh, of

providing preludes in some or all of the eight or 12 modes. Series of *Magnificat* versets for organ, generally consisting of a praeambulum, five fugal versets and a finale in each of the eight church modes, were published in both Catholic and Lutheran areas, for example by Kerll (1686) and Speth (1692). With the development of tonality this cyclic concept was extended in prelude collections to cover all or most of the 24 major and minor keys, for example in the 30 preludes for 12-course lute by John Wilson (written in the 1640s) and the prelude collections of the French lutenist Bocquet (*c*1680). More directly in Bach's ambit was the *Ariadne musica* of J.C.F. Fischer (1702), a verset-type collection for organ with a single praeludium and *fuga* in each of 19 keys. Bach was the first to provide keyboard examples in all 24 keys. His collection is also didactic, using preludes to demonstrate techniques of fingering and composition, and including examples of many formal prototypes which the unspecific title 'praeludium' allowed him to treat with some freedom. The second book (completed by 1742) adds large-scale binary types that by then would more normally be termed 'sonata'.

The prelude and fugue for keyboard continued into the late 18th century in central and northern Germany, particularly with Bach's pupils, though not with his sons, and also with Albrechtsberger in Vienna. According to Mozart (letter of 20 July 1778) there were at that time two sorts of keyboard prelude: one that modulated from one key to another, of which he himself wrote some examples (1777) and others are in Soler's *Llave de la modulacion* (1762) and Beethoven's op.39 (1789); and a freely improvised type whose function was to test the keyboard. The second type commonly included arpeggiated sections and continued the sort of prelude that had introduced the harpsichord suites of Handel (1720) and later sonatas such as those of G.B. Martini (1742) and Giuseppe Sarti (1769). Such pieces by then were more commonly called 'fantasia'.

2. From 1800. The 19th century's awakening interest in music of earlier times encouraged a revival of forms that had fallen into disuse. The attached prelude reappeared in a number of Bach-influenced works, such as Mendelssohn's Six Preludes and Fugues for piano op.35 (1832–7), Liszt's Prelude and Fugue on B–A–C–H (1855), Brahms's two preludes and fugues for organ (1856–7), Franck's *Prélude, choral et fugue* for piano (1884) and Reger's Prelude and Fugue for violin op.117. More typical of the Romantic period and its aftermath, however, are the many independent preludes for piano, whose prototype was Chopin's matchless set of 24 Preludes op.28 of 1836–9. (They were not the first: Hummel had published a set of 24 preludes 'in the major and minor keys', op.67, some 20 years earlier.) Although some of his preludes are epigrammatically short, others are so large in scale and so dramatic in content that they would overshadow any alien sequel to which they might be attached. It seems likely, therefore, that they were always intended either to be played as a complete cycle or to serve as a quarry from which shorter homogeneous groups could be made up. Chopin's collection was the model for those of Stephen Heller (op.81), Alkan (op.31), Cui (op.64) and Busoni (op.37), each of which contains 24 or (in the cases of Alkan and Cui) 25 independent preludes in the major and minor keys, and seems to have established the prelude as an important kind of non-programmatic characteristic piece, subsequently exploited by such composers as Skryabin, Szymanowski, Rachmaninoff, Debussy, Kabalevsky, Antheil, Gershwin, Messiaen, Ginastera, Scelsi and Martinů. These preludes have no prefatory function and are simply collections of short pieces exploring particular moods, musical figures or technical problems, and drawing on a wide range of influences including jazz, folk music and dance forms. Debussy's have programmatic titles, which are otherwise rare. His *Prélude à l'après-midi d'un faune* is an orchestral tone poem.

Schoenberg's Prelude op.44 for chorus and orchestra is one of the few attached preludes written in the 20th century which was not (unlike those of Shostakovich, Schedrin and N.V. Bertzon) intended as an evocation of the Baroque type. It was composed as the first movement of a suite commissioned from several composers by the American publisher Nathaniel Shilkret; Schoenberg's section was to precede a depiction of the Creation, and its mood is skilfully conveyed both by orchestral effects and by the restriction of the choral part to vowel sounds rather than words. The unattached prelude was taken up by avant-garde composers of the mid-20th century: John Cage wrote *Prelude for Meditation* for prepared piano, and electronic resources were used by François-Bernard Mâche (*Prélude*, 1959) and Branimir Sakač (*Aleatory Prelude*, 1961).

Liszt's symphonic poem *Les préludes* is unrelated to the musical genre, as it took its name (as well as its programme) from a poem by Lamartine.

DAVID LEDBETTER (1), HOWARD FERGUSON/R (2)

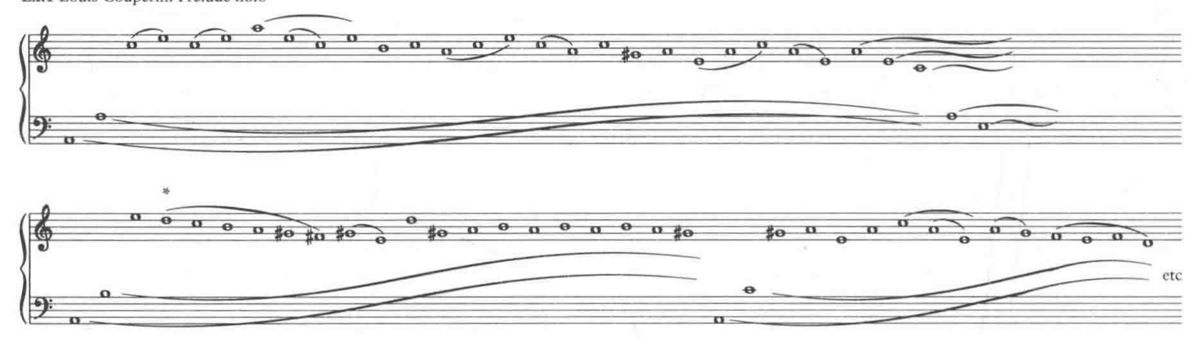
Prélude non mesuré (Fr.). A term usually reserved for a body of 17th-century harpsichord preludes that are written without orthodox indications of rhythm and metre. Various methods of notating such works can be seen in the manuscripts and early printed editions of Louis Couperin, Nicolas Lebègue, J.-H. D'Anglebert and Gaspard Le Roux. In the early 18th century unmeasured notations were largely abandoned, some publishers even omitting the unmeasured preludes altogether when republishing harpsichord music. The interpretation of these extraordinary-looking pieces has caused confusion for players and scholars.

1. Origins and background. 2. Styles. 3. Notation and interpretation.

1. ORIGINS AND BACKGROUND. Rhythmically free preludial pieces were common before the 17th century (under such titles as *intonazione*, toccata, ricercare and PRELUDE), but the usual notation of these pieces was rhythmically precise even if the notes did not fall into regular patterns. Although it seems likely that 17th-century harpsichordists adopted elements of the French lute prelude, the earlier tradition of keyboard pieces that did not conform to regular rhythmic groupings but were written in measured notation is a main line of descent for the *prélude non mesuré*.

Rhythmically unmeasured notation for preludes originated in lute preludes designed to test the tuning of the instrument before playing, at about the same time as the *nouveau ton* triadic tuning was introduced for that instrument. The earliest examples date from about 1630. The five short unmeasured preludes in the lute manuscript of Virginia Renata (*D-Bsb* 40264) are in various tunings; four include the normal rhythmic signs above the tablature, while one does not indicate any rhythm but includes a series of slurs to group the notes. A generation later Denis Gaultier wrote similar preludes. Although they are generally playable in free rhythm, they include sections that fall naturally into regular groups. Thus the genuinely unmeasured lute pieces represent a style in which notes cannot satisfactorily be grouped into regular rhythmic and harmonic patterns, independent of the presence or absence of notated rhythm; numerous pieces written without rhythmic notation, particularly in the late 17th-century lute repertory, clearly fall into regular patterns and thus are not really unmeasured.

Unmeasured music was also written for the viol: De Machy included eight such preludes in his *Pièces de violle* (1685) and Sainte-Colombe wrote many unmeasured movements for one and two viols together, surviving with titles such as *La volontaire ... parce qu'estant sans mesure, on joue comme on veut* ('because it is unmeasured one plays it how one wishes') and *L'aureille ... parce qu'il se joue sans mesure et seulement il faut jouer d'aureille* ('because it is played unmeasured, only by ear'). Wholly unmeasured notation for these instruments is normally found only in manuscript books. Despite superficial similarities, however, the harpsichord preludes are really a separate phenomenon from the lute and viol examples, and in the past too much has been made of their connection with the lute pieces. The surviving repertory of *préludes non mesurés* for harpsichord comprises over 50 works.



2. STYLES. The majority of unmeasured preludes fall into one of two main groups: toccatas and *tombeaux*, relating to the Italian toccatas of Frescobaldi and Froberger and to the elegiac *tombeaux* composed, mostly by the French, in honour of dead teachers, patrons or friends. (Many such laments occur in the works of Froberger, often disguised as allemandes, as in Suites nos.12 and 30; see also the *Tombeau ... de M. Blancrocher, lequel se joue fort lentement à la discretion sans observer aucune mesure.*)

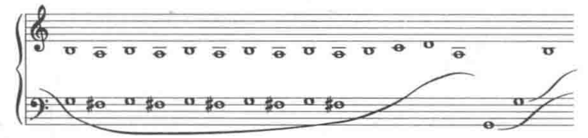
The toccata style is recognizable in four of the preludes of Louis Couperin (nos.1, 3, 6 and 12 in *Pièces de clavecin*). These are in three sections, the outer two freer and the central one strictly fugal. One (no.6), occurring in both the Bauyn (*F-Pn* Rés.Vm⁷674–5) and Parville (*US-BEm* 778) manuscripts, bears the title 'Prelude ... a l'imitation de Mr. Froberger' in the latter source. The fact that it is almost certainly derived from Froberger's first organ toccata confirms the connection between the two forms. Furthermore, its interpretation of the opening chord of Froberger's toccata is instructive: Couperin's notation (ex.1) elaborates the chord into a series of arpeggios, recalling Lebègue's remark that in harpsichord playing the 'manner is to break and re-strike the chords quickly rather than play them as on the organ' (*see* KEYBOARD MUSIC, §I, ex.4, for the toccata).

The *tombeau*-allemande style in normal measured notation is characterized by a slow tempo, a freedom of rhythm and a characteristic opening motif of an anacrusic melodic scale rising a 4th (usually from the leading note to the mediant). Three of Couperin's preludes (nos.2, 4 and 13) relate to this style (ex.2*a*). Couperin's *Tombeau de Mr Blancrocher* (ex.2*b*) might as well have been written in the same unmeasured notation, for the musical style is almost identical.

3. NOTATION AND INTERPRETATION. The basic unmeasured notation as devised by Louis Couperin consists of a succession of slurred semibreves. Playing it depends mainly on understanding the several meanings of the slurs, distinguishable by their context. Firstly, slurs can

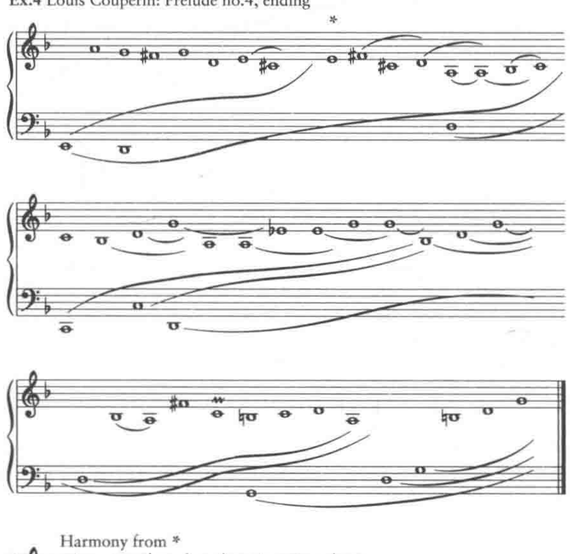
Ex.1 Louis Couperin: Prelude no.6

Ex.2



(a) Louis Couperin: opening of Prelude no.13

(b) Louis Couperin: *Tombeau de Mr Blancrocher*



Ex.3 Louis Couperin: Prelude no.1

indicate sustained notes, as in ex.1, when notes in immediate succession form a chord. The combined factors of sustained sound and chordal cohesion tend to give such notes the rhythmic weight of a strong beat. Secondly, slurs can indicate that a group of notes has ornamental significance (ex.3) or melodic importance (ex.1, at asterisk). Thirdly, slurs can isolate notes from what precedes or follows. These last slurs are sometimes not attached to any note at all, and usually extend from the lower staff to the upper one. In ex.4 the slurs indicate a chord sequence quite at variance with the vertical alignment on the page. Thus a manner of arpeggiating is suggested by an exceedingly elegant and economical notation.

Ex.4 Louis Couperin: Prelude no.4, ending

Ex.5 D'Anglebert: Prelude no.2

In the preface to his *Les pièces de clavessin* (1677) Lebègue commented on the difficulty of notating preludes intelligibly, and he devised a modified notation which was the basis of most later published *préludes non mesurés*. His notation uses normal note values from semibreve to semiquaver (including dotted notes) and bar-lines, but the bar-lines (usually sloping) indicate chord changes; thus they appear to have a meaning like that of the third kind of slur mentioned above, in that they are lines unattached to any note, sloping from the lower staff to the upper one, designed to clarify the harmonies.

Lebègue's semi-measured notation was not universally adopted; indeed, no other composer used such a precise notation. Louis Marchand, Clérambault and Rameau all used a notation first adopted by D'Anglebert for the printed preludes of 1689. (These preludes survive in his own handwriting, written entirely in semibreves, in *F-Pn* Rés.89*ter*.) D'Anglebert's system is perhaps the closest any composer came to an acceptable solution to the problems of unmeasured preludes. Semibreves are used for the basic notation, but fragments of melodic importance are identified by being notated in quavers. The sequence of notes from left to right indicates conventionally the sounding sequence of notes in time, and the occasional bar-lines indicate the end of a significant musical sentence. In ex.5 the use of quavers for the arpeggio shows that it is not to be played fast but rather melodically, and the bar-line indicates a pause to mark the arrival on the dominant.

D'Anglebert's notation, unlike Lebègue's, is not in any real way more measured than the semibreve notation used by D'Anglebert in his manuscript preludes or by Louis Couperin. It simply uses white notes for harmonic pitches and black ones for melodic passages. The black notes are quavers (semiquavers for ornamental notes) because these can be ligatured into melodic groupings which are more easily assimilated by the player. The visual aspect of this notation is a parallel with the kind of notation used by Italian toccata composers, where shorter notes do not always imply an increase in speed, but may show a distinction between harmonic and melodic passages (*see* KEYBOARD MUSIC, §I, ex.4).

Many of these preludes are highly organized works, cogently and coherently planned, with a powerful harmonic structure and a careful use of motivically developed melodic elements. Continued performance from the original unmeasured notations brings a musical insight and freedom not to be obtained from any other notation.

DAVITT MORONEY

Premier. English firm of percussion instrument makers, renamed Premier Percussion in 1984. It was founded in London in 1922 by Alberto della Porta (*d* 1965), a dance band drummer, and his assistant George Smith. Having been bombed during World War II (radar equipment was also produced on the premises), the firm moved to Wigston, Leicestershire, in 1940. On his death, Alberto della Porta was succeeded by his sons Clifford, Raymond and Gerald, who ran the firm until 1983, manufacturing a comprehensive range of percussion instruments, notably pedal timpani and 'Creative Percussion' (formerly New Era Educational Percussion Instruments). In 1966 the firm became the first recipient of the Queen's Award for Export Achievement. Although they seemed to lack the drive of some of their competitors to update and extend their range of instruments, Premier remained an important manufacturer of percussion instruments at the end of the 20th century. For illustration of Premier instruments, *see* DRUM, figs.11 and 16; TIMPANI, fig.1; TUBULAR BELLS; and XYLOPHONE, fig.3.

Premium (Lat.). *See* PROOIMION.

Premonstratensian canons. In the Western Christian Church, the order of canons regular of Prémontré (O. Praem.). They are also known as 'White Canons', from the colour of their habit, or 'Norbertines', after the name of their founder, St Norbert (*c*1080–1134). The name of Prémontré comes from the place near Laon where Norbert and his first disciples established themselves in 1120. The early Premonstratensian Statutes (1131–4), based on the Rule of St Augustine, were monastic and largely modelled on the *carta caritatis* of the Cistercians. A certain degree of centralization was also reminiscent of Cîteaux. As the order developed, the individual houses ('canonries') were grouped into 'circaries' according to regional or (later) linguistic affinities. The order suffered greatly during the Reformation and the French Revolution, and at the end of the 20th century there were fewer than 1500 members worldwide.

The *Constitutions* of 1971 stress community and pastoral activities, whereas previously the emphasis was on contemplation and the liturgy. The canons used to sing each day in choir the full daily Office and conventual Mass according to their own rite. This rite dates from the 12th century, but from the beginning had a constant struggle for existence. It was approved by Pope Alexander III in his bull *In apostolicae sedis* (1177) and by Alexander IV in *Felicis recordationis* (1256). The early *Statutes*, those of 1505 and of 1630, and visitation injunctions such as those of Bishop Redman in England during the 15th century, stressed the need for uniformity in the books of the rite and for the preservation of the traditional forms of worship. The rite has had to contend with the rival claims of the Roman rite in the 16th and 17th centuries, and twice in the 20th century.

The medieval Premonstratensian rite contained many sequences, of which only a handful were retained in later centuries, among them the Christmas sequence *Laetabundus*. Another feature of the rite was its series of rhymed and historiated antiphons. Many Premonstratensian chant melodies are fairly close to their Roman counterparts, but there are also notable differences: the opening of the offertory *Jubilate Deo universa terra*, for example, has no repeat and no melisma, and there is a slightly different tone for the Lamentations and for the litany of the saints. Some *Venite* tones contain a B♭ in places where the Roman equivalents use B♮. Sometimes the differences are textual as well as musical: for example, the sequence *Victimae paschali laudes* includes the original line now missing in the Roman version, and the alleluia for Easter Day has two verses ('Pascha' and 'Epulemur') instead of one.

After a period of decadence following the Council of Trent, and of increasing Romanization, which lasted until Pius X's *Moto proprio* of 1903, a commission for sacred music was set up under Lambert Wendelen of Tongerloo, charged with re-editing the service books according to the earliest and best traditions of the order. In 1908 the new gradual was accepted by the general chapter and published two years later; the processional followed in 1932 and the antiphoner in 1934, but these books and indeed the rite itself were discarded some 40 years later when Latin was replaced by the vernacular in many canonries.

Music other than chant does not appear to have been extensively cultivated among the Premonstratensians. The minutely detailed 17th-century *Statutes* banned certain musical instruments ('violas, citharas aliaque instrumenta'). The organ was a notable exception, for organ *alternatim* performance was used to add solemnity to the services on Sundays and festivals. The *Ordo* of 1635 gave full instructions as to its use during Mass and the Divine Office.

MARY BERRY

Prendcourt, 'Captain' (François de) [Gutenberg von Weigolshausen] (*b* Würzburg, 1640s; *d* Newcastle upon Tyne, Sept 1725). German keyboard player and composer. His real name seems to have been Gutenberg von Weigolshausen. He served as a soldier, and was probably ordained a Catholic priest. He spoke French, Spanish and Latin, as well as his native German. At the end of 1686 he was appointed Master of the Children of James II's new Catholic chapel at Whitehall. He was an excellent organist and harpsichord player and apparently a prolific composer, but in manner he was arrogant, and he would only play his own music. In autumn 1688, just before James II was deposed by William III, he was dismissed for misconduct, probably because he married a Protestant, a daughter of Richard Bishop of Warnborough (Hampshire) and niece of Lady Clarendon. He and his wife moved to Ireland, and when James II arrived there in 1689 with a French army, Prendcourt was restored to favour and appointed military governor (Lieutenant) of the town of Armagh. But he soon came under suspicion of betraying Jacobite military plans. In December 1689 he was sent as a courier to Versailles and encouraged to return to Germany. Still in Paris in March 1690, he was arrested for espionage, having secretly corresponded with supporters of William III. He was imprisoned in the Bastille, where he remained until October 1697, when England and France had made peace at the Treaty of Ryswick. He was then ordered to leave France and escorted to Calais.

Prendcourt's next appointment was probably at the Catholic chapel of the Count of Tallard, the French Ambassador in London, 1698–1701. When war was renewed he was thrown on his own resources and taught the harpsichord. He was given hospitality in several households but acquired a bad reputation by selling the furnishings of the rooms he occupied to relieve his financial distress. He declared himself a Protestant, but for several years never took the sacrament in the Church of England and would not compose for its services. Letters of 1705 show that he was then engaged in making arrangements of music for Thomas Coke (Vice-Chamberlain to Queen Anne), and that he acted as go-between in Coke's contacts with Tallard, taken prisoner at Blenheim. In 1709 he was employed to teach the children of Roger North, who described him as a 'rare harpsi[c]ordiere'. In January he was appointed organist of All Saints' Church, Newcastle upon Tyne, a post which he appears to have held until his death. He was buried at the church on September 12 1725.

Prendcourt was a good teacher and left a treatise on harpsichord playing and thoroughbass that was transcribed and annotated by Roger North, who also wrote an account of his life (*GB-Lbl* Add.32531, 32549). The treatise contains useful remarks on fingering and ornamentation. A manuscript of four harpsichord suites (*GB-Y* M.16(s)) seems to be his only surviving music. The style is predominantly French, particularly in the courantes and allemandes. The movements are harmonically simple, but have a sense of melody that distinguishes them from average keyboard works of the time. North considered Prendcourt's sacred music (now lost) to be his best.

Prenner [Brenner, Pyrenaeus], **Georg** (*b* Laibach [now Ljubljana]; *d* St Pölten, 4 Feb 1590). Slovenian composer. In 1554 and 1560 he is recorded as a copyist in the Kapelle at Prague of Archduke Maximilian, whom he later served as court chaplain and almoner after the archduke had become emperor as Maximilian II. He left imperial service on 20 August 1572 on being appointed abbot of the monastery of St Dorothea, Vienna. In 1578 he took up a similar appointment at the monastery of Herzogenburg, near St Pölten. On 5 March 1587 the Emperor Rudolf II nominated him an imperial councillor. He appears to have been active as a composer only in the 1560s, and his output is almost exclusively sacred. His published works appeared only in anthologies, some of them among the most popular of the time: 17 motets in RISM 1564^{2-5}, five in 1567^{2}, 16 in 1568^{2-6} and three in 1569^{4-6} (39 motets ed. in Monumenta artis musicae Sloveniae, xxiv, Ljubljana, 1994). *Carole, plena tui spe* (in 1568^{2}; ed. in Monumenta artis musicae Sloveniae, xxiv, Ljubljana, 1994), composed in honour of Archduke Karl of Styria, is representative of the late Netherlands motet style; a solmization theme, reminiscent of the Josquin period, is repeated in canon within an up-to-date contrapuntal framework. Over 40 works by Prenner survive in manuscript, some of which are copies of works in printed anthologies: their sources are given by Eitner, and to them should be added a few others (in *A-Gu* and *D-Dl*).

Prentice, Charles [Jock] **(Whitecross)** (*b* Prestonpans, 28 Jan 1898; *d* Midhurst, 7 Sept 1970). Scottish orchestrator, conductor and composer. A violin student of William Waddell, he conducted the Edinburgh University Choral and Orchestral Society and composed and orchestrated music for university revues while graduating in music under Donald Tovey. He became musical director at the Gaiety and other West End theatres, providing orchestrations for musical comedies such as Harold Fraser-Simson's *Betty in Mayfair* (1925), Vivian Ellis's *Streamline* (1934),

Jill Darling! (1934) and *Big Ben* (1946), and Noel Coward's *Conversation Piece* (1934) and *Operette* (1938). Shows for which he was musical director included Jerome Kern's *Blue Eyes* (1928), and then in 1932 he became musical director at the Theatre Royal, Drury Lane, where he conducted and orchestrated Ivor Novello's *Glamorous Night* (1935), *Careless Rapture* (1936), *Crest of the Wave* (1937) and *The Dancing Years* (1939).

Prentner, Johann Joseph Ignaz. *See* BRENTNER, JOHANN JOSEPH IGNAZ.

Prentyce [Prentes, Prentice], **Henry** (*b* mid-15th century; *d* Westminster [now in London], 1514). English composer. He is recorded as a clerk of the Fraternity of St Nicholas, London, in 1502. In 1508 his wife also obtained membership. By 1509 he had become a Gentleman of the Chapel Royal. A 'Harry Prentes' is also mentioned in the churchwarden's accounts of St Mary-at-Hill, as a visiting singer engaged at the church during 1510–11. His only extant composition is a five-voice *Magnificat* in the Caius Choirbook (*GB-Cgc* 667; ed. in EECM, iv, 1964), a manuscript associated with St Stephen's Westminster and dating from the mid-1520s. The work is a very closely modelled and extended study, both structurally and stylistically, on a Magnificat by William Cornysh (i) in the same choirbook. Prentyce's work is grandiose and elaborate, displaying compositional features that become standard to the genre in England by the early 16th century. The register of the City Fraternity of St Nicholas records his death in 1514; in the same year a 'Henry Prentes' was buried in the parish church of St Margaret's, Westminster.

DAVID SKINNER

Preobrazhensky, Antonin Viktorovich (*b* Sïzran, 16/28 Feb 1870; *d* Leningrad [now St Petersburg], 17 Feb 1929). Russian musicologist. He graduated from the ecclesiastical academies at Yekaterinoslav (1889) and Kazan′ (1894), then taught Russian language and literature at various educational institutions in Taganrog and Bakhmut. From 1898 he taught at the Moscow Synodal School. In 1902 he moved to St Petersburg to become lecturer and librarian at the Court Chapel, of which he was assistant director in the last years of his life; while there he wrote a book on one of the chapel's distinguished former directors, Aleksey L′vov. From 1920 Preobrazhensky was also a professor in the Russian music department of the Russian Institute for the History of the Arts, and from 1921 at the Petrograd/Leningrad Conservatory. His research interests were centred on Russian sacred music, on which he wrote several generalized surveys; he also made valuable studies of individual composers, notably Turchaninov and Bortnyans′ky.

Preparation. In part-writing, the 'softening' of the dissonant effect of an accented NON-HARMONIC NOTE (i.e. an appoggiatura) by presenting it as a consonant note in the previous chord; the result is called a 'prepared appoggiatura'. The dissonance is softened further if the preparation note is tied to the appoggiatura, creating a SUSPENSION.

□

Prepared piano. A piano in which the pitches, timbres and dynamic responses of individual notes have been altered by means of bolts, screws, mutes, rubber erasers and/or other objects inserted at particular points between or placed on the strings. The idea originated with Cowell. The prepared piano was devised by Cage for his *Bacchanale* (1940), and used in a number of his subsequent compositions.

Since around 1950 the prepared piano has been used by other composers, sometimes solo but usually in an ensemble work, including Christian Wolff, Conlon Nancarrow, Toshirō Mayuzumi, Pauline Oliveros, Dieter Schönbach, Aldo Clementi, Gérard Grisey, Harrison Birtwistle (muted bass strings), Kaija Saariaho, James Tenney and Annea Lockwood. Less predictable was its popularity in Eastern bloc countries before the demise of communism (especially in Poland, Czechoslovakia, Hungary, Romania and the Soviet Union – including one concert work each by Pärt and Shchedrin and two by Denisov and Schnittke). Particularly notable is its use for continuo-like colouration and punctuation in two compositions for two solo violins and string ensemble, Pärt's *Tabula Rasa* and Schnittke's First Concerto Grosso (both 1977). A somewhat different approach to piano preparations was devised from 1970 by Hans-Karsten Raecke, as in his *Raster* cycle (1972–91), with some works requiring up to eight players at two prepared pianos. The prepared piano has gained a new popularity with members of the generation of composers that emerged in western

*MEASURE FROM BRIDGE.

Prepared piano: table of preparations from Cage's 'Sonatas and Interludes' (1946–8)

Europe after 1990. In the 1990s new solo works for prepared piano were commissioned by the pianists Lois Svard (USA) and Joanna MacGregor (Britain, including Jonathan Harvey and Django Bates).

The prepared piano has also been used in jazz by Cecil Taylor, and by the improvisers Chris Burn, John Wolf Brennan, Hermann Keller and Harry de Wit, among others.

Since the tonal alteration desired varies from one piece to another and depends on the nature and placement of the objects used to effect it, these have to be indicated in the score, as shown in the illustration, which reproduces the table of preparations for Cage's *Sonatas and Interludes* (1946–8).

See also INSTRUMENTAL MODIFICATIONS AND EXTENDED PERFORMANCE TECHNIQUES, esp. fig.1.

EDWIN M. RIPIN/HUGH DAVIES

Prepositus Brixiensis [Brisiensis, Melchior de Brissia, Marchion de Civilibus (Civillibus)] (*fl* 1405–25). Italian composer. He is known from references to the title of his office (Provost of Brescia) and the first name Melchior in Paduan archives. Two references to a Melchior of Brescia are in a Padua Cathedral register from 1410–11, while Ciconia was still there. Melchior is referred to as a priest in both references, in one as a chaplain and in the other also as a *cantor*. 'Prepositus Brixiensis', with neither personal name nor designation as a priest, is listed as having been paid as *cantor* in salary lists of the Padua Cathedral Chapter from late 1421 to 1425. He is last recorded in 1425, when 'Dominus Melchior prepositus Brixiensis', dissatisfied with his salary, renounced a chaplaincy in Padua Cathedral. An earlier reference to 'Marchion de Civillibus prepositus' in Brescia in 1405 probably refers to the same man: Marchion's absences from Brescia interlock with Melchior's presence in Padua; there can only have been one provost at a time, and no

others are named to this office in Brescia meanwhile. He was absent from Brescia between 1409 and 1412, during which period he was mentioned in Padua; he is documented as having been in Brescia between 1413 and 1415, and again in 1420 (few records that would contain his name survive from the years 1416–19), but he was not there in October and November 1421, which coincides with his reappearance in the Paduan records. Very few records survive in Brescian archives from the period between 1422 and 1449–50, when a new provost is named.

Five compositions by him survive, all as *unica*. Surprisingly, none of them is in *I-Bc* Q15, compiled in Padua while he was there. The ballatas are all in *GB-Ob* Can. misc.213 (facs., Chicago, 1995): both voices in the two-part ballatas are texted; all of them have refrains of only two lines; and they have word repetitions, as in similar works by Ciconia and Zacar. *I pensieri* has the acrostic 'Isabetta'. As with Ciconia, rhythmic usage betrays origins in Italian notation. The homophonic rondeau *De gardés vous* has a second line of text below the upper voice, and according to Gallo was copied after 1440 into a Brescian part of the manuscript *I-Bu* 2216.

He is not identifiable with the singer MATHEUS DE BRIXIA.

MARGARET BENT

Pres. *See* YOUNG, LESTER.

Prés [Près], **Josquin de** [des]. *See* JOSQUIN DES PREZ.

Presa (i) (It.: 'handle', 'catch'). A sign used in a canon to indicate the places at which the *guida* (subject) of the canon is to be taken up by other voices. *See* CANON (i).

Presa (ii) (Lat.). A response, originally sung by the congregation, in the *preces* of the Gallican rite. *See* GALLICAN CHANT, §13.

Preschner, Paul (*fl* late 16th century). German composer. Rühling's *Tabulaturbuch auff Orgeln und Instrument* (Leipzig, 1583[24]) includes a transcription of Preschner's five-part motet, *Also hat Gott die Welt geliebt*. Two manuscript sources of this motet were apparently destroyed at Liegnitz (now Legnica) during World War II; E. Bohn: *Die musikalischen Handschriften des 16. und 17. Jahrhunderts in der Stadtbibliothek zu Breslau*, Breslau, 1890/*R* lists a five-part mass and two five-part motets by the composer, which were also destroyed.

RICHARD MARLOW

Prescott, Abraham (*b* Deerfield, NH, 5 July 1789; *d* Concord, NH, 6 May 1858). American maker of bowed string and keyboard instruments. He learnt cabinet making from his uncle, and made his first instrument, a 'bass viol' or 'church bass' (in fact a large cello; *see* BASS VIOL), in 1809 in Deerfield. The instrument, bought by a local musician for use in church services, was the first of several hundred made and sold by Prescott by the 1840s. He played the 'bass viol' (again, probably the cello) while attending Atkinson Academy, served as fife major in the 1812 war and later gave occasional singing lessons. He used his commercial acumen and his musical and religious associations (he was a deacon of the Baptist Church) to build a thriving music business. His apprentices included David and Andrew Dearborn.

In 1831 Prescott opened a music store in Concord, New Hampshire; by 1833 he had moved the whole of his business there for better trade and shipping connections with Boston. In 1836 he pioneered the manufacture of small reed organs (known as 'lap organs' or 'rocking melodeons'; *see* REED ORGAN, §1). In 1845 the Prescott firm, now Abraham Prescott & Son (his son was Abraham J. Prescott) turned its attention to seraphines, melodeons and reed organs for church, school and home use. The Dearborn brothers took over from Prescott's the manufacture of string instruments in about 1848, and after Prescott retired in 1850, the firm's constitution underwent several changes. From 1850 to 1852 it was known as Prescott & Brothers (in the hands of Prescott's sons: Abraham J., Joseph W. and Josiah B.); from 1852 to 1870 Prescott Brothers (after 1858 under Abraham J. & George D.B. Prescott); from 1871 to 1886 the Prescott Organ Co.; from 1887 to 1891 the Prescott Piano & Organ Co.; and from 1891 to 1912 the Prescott Piano Co. (which continued as piano dealers until 1917).

Prescott's instruments were well made. What he described as 'bass viols' in his Deerfield business ledgers were no doubt the large cellos (typical dimensions: length 82 cm, lower bout 51 cm, upper bout 40 cm, neck 25 cm) used in churches and now found in private collections and those of the Smithsonian Institution and at Yale University. Most Prescott basses are fitted with machine-head tuning devices in place of pegs. His double basses are used today by leading orchestral and jazz players. Examples of his lap organs and larger reed organs can be found at the Smithsonian Institution and the New Hampshire Historical Society, where his business ledgers are also held.

CYNTHIA ADAMS HOOVER/R

Presley, Elvis (Aaron) [Aron] (*b* East Tupelo, MS, 8 Jan 1935; *d* Memphis, 16 Aug 1977). American rock and roll singer, guitarist and actor. As the most successful artist of the mid-1950s rock and roll explosion, Presley had a profound impact on popular music. His sense of style, musical and personal, was both the focal point of the media reaction to early rock and roll and the inspiration for many of the most important rock musicians to follow. The narrative of his meteoric rise and subsequent decline amidst mysterious and tawdry circumstances fuelled many myths both during his life and after his death at 42.

Raised in extreme poverty in the deep South, his earliest musical experiences came in the Pentecostal services of the First Assembly of God Church. Other formative influences included popular tunes of the day, country music, blues, and rhythm and blues. Although he had little experience as a performer, in 1954, at the age of 19, he came to the attention of Sam Phillips, owner of the Memphis recording company Sun Records. Phillips teamed Presley, who sang and played guitar, with local country and western musicians Scotty Moore (guitar) and Bill Black (bass). During their first recording session in June 1954, the trio recorded a single with the two sides *That's all right, mama*, originally recorded in 1946 by blues singer Arthur 'Big Boy' Crudup, and *Blue Moon of Kentucky*, originally recorded in 1946 by bluegrass pioneer Bill Monroe. The group's style blended elements of country and rhythm and blues without being identifiable as either; the distinctive sound included Moore's rhythmically oriented lead guitar, Black's slapped bass, and Presley's forceful, if crude, rhythm guitar, with the recording swathed in a distinctive electronic echo effect. Presley's voice, however, attracted the most attention: swooping almost two octaves at times, changing timbre from a croon to a growl instantaneously, he seemed not so much to be synthesizing pre-existing styles as to be juxtaposing them, sometimes within the course of a single phrase. While the trio's initial record provoked enthusiastic responses immediately upon being broadcast on Memphis radio, it confused audiences, who wondered if the singer was white or black. Although white hillbilly musicians' music had incorporated African-American instrumental and vocal approaches since the earliest recordings in the 1920s, no previous white singer had so successfully forged an individual style so clearly rooted in a contemporary African-American idiom. Presley, Moore and Black released four more singles with Sun Records (1954–5); each one featured a blues or rhythm and blues song backed with a country-styled number; each one displayed increasing confidence on the part of Presley, and each recording was more commercially successful than the preceding one, with the last two, *Baby, let's play house* and *Mystery Train*, reaching the top ten in *Billboard's* national country and western chart. Presley's uninhibited, sexually charged performances throughout the South-east provoked frenzied responses and influenced other musicians: by the end of 1955 performers such as Carl Perkins and Johnny Cash had emerged with a style coined 'rockabilly' that bore a strong resemblance to Presley's.

Presley's growing popularity attracted the attention of promoter 'Colonel' Tom Parker, who negotiated the sale of Presley's contract to RCA records for the unheard-of-sum of $35,000. His first recording for RCA, *Heartbreak Hotel*, which was released in March 1956, achieved the unprecedented feat of reaching the top five on the pop, rhythm and blues, and country charts simultaneously. This recording and the songs that followed in 1956 all combined aspects of his spare Sun recordings with an increasingly heavy instrumentation that included piano, drums, and background singers, and so moved the sound closer to that of mainstream pop. Both sides of his third RCA single *Hound Dog* and *Don't be cruel* hit number one on all three charts. *Hound Dog* radically transformed Willie Mae 'Big Mama' Thornton's 1952 rhythm and blues hit, while *Don't be cruel* was a more pop-orientated recording written specifically for him. Presley's vocal style already showed signs of mannerism, trading the unpredictable exchanges of different voices of the early recordings for a single effect throughout each song. At the same time he continued to explore new musical territory with the recording of *Love Me Tender* (1956), from his first movie of the same title, an updated version of the Civil War song *Aura Lee*.

Over the next two years, Presley released numerous successful recordings of fast or medium tempo rock and roll songs, and ballads derived from country music, Tin Pan Alley or gospel music. He acted in three more films, *Loving You*, *Jailhouse Rock*, and *Kid Creole*, all of which were successful. His suggestive performing style as presented in recordings, films and personal appearances generated a firestorm of critical approbation, which did nothing to dim his popularity. Presley's induction into the US Army in early 1958 removed him from the public eye for two years, during which time recordings made previously continued to be released. Upon his return to civilian life in 1960, he recorded and released *Stuck on You*, a song in the rock and roll style of his pre-Army recordings. However, his next two hits represented a considerable change of direction: *Are you lonesome tonight?* and *It's now or never* (based on the Italian traditional *O Sole Mio* in the style of one of Presley's idols, Mario Lanza) were both ballads that showed Presley moving toward a middle-of-the-road blend of country and pop music. This move away from his raucous mid-1950s rock and roll style, and a simultaneous retreat from performing into a string of formulaic films, contributed to his waning popularity as a recording artist. Despite this, he continued to have numerous top ten songs up to 1963. The change in popular music tastes around 1964 with the sudden dominance of British bands such as The Beatles and The Rolling Stones and of artists recording for the Motown record label, such as The Supremes and The Four Tops, effectively ended his consistent success in the top 40.

In the late 1960s Presley attempted to re-establish himself as a creative artist. In 1968 he taped a television special clad in black leather in which he performed many of his older songs with a small, informal ensemble in front of a live audience. In 1969 he released the album *From Elvis in Memphis*, featuring his strongest material since his return to civilian life, and the two hit singles *In the Ghetto* and *Suspicious Minds*. He returned to live performing that year as well; however, after an initial burst of energy, these performances soon degenerated into formula and self-parody. Although he had a few sporadic hits over the succeeding years, most notably with *Burning Love* (1972), he failed to achieve artistic or commercial consistency with his recordings. From 1972 to the time of his death Presley's performances became

Elvis Presley, 1956

increasingly erratic as his health deteriorated and his behaviour grew more eccentric and reclusive. His rise and fall have been exhaustively documented, and perhaps no other celebrity has led such an active postmortem existence in the public imagination.

DAVID BRACKETT

Pressacco, Gilberto (*b* Turrida di Sedegliano, 19 Sept 1945; *d* Udine, 17 Sept 1997). Italian priest, conductor and musicologist. After a career as a schoolteacher in Codroipo (1970–73) and Udine (1973–80), he gained degrees in theology at the Lateran Pontifical University, Rome (1981) and musicology at Padua University (1986) under Bonfacio Giacomo Baroffio and Giulio Cattin. He then served as *maestro di cappella* at Udine Cathedral (1980–92) and began teaching choral conducting at Jacopo Tomadini Conservatory, Udine, in 1981. His interests spanned a wide range of sacred and secular repertories, in particular liturgical music in his native province of Friuli, elements of which he attempted to trace back to early Judeo-Christian practices in 1st-century Alexandria. Cognizant of continuing archaeological research on its 4th-century cathedral, he posited Aquileia and its divergent (i.e., non-Roman) musico-liturgical and iconographical practices with a significant role in the preservation of remnants of more ancient (possibly pre-Christian Essene) practices. Among these divergences was the celebration of Pentecost as the paramount feast of the Christian year. Some evidence for his views came from surviving music by Mainerio and transcripts of 16th- and 17th-century witchcraft trials.

Pressacco's activity resulted in books, papers, concerts, festivals, recordings and films. A popular summary of his thinking is found in the posthumous *Viaggio nella notte della Chiesa di Aquileia*. The Don Gilberto Pressaco Cultural Association (Udine) was founded in 1997 for the publication of his compositions and writings and the promotion of research along the lines of his interests.

ELEANOR SELFRIDGE-FIELD

Pressburg (Ger.). *See* BRATISLAVA.

Pressenda, Giovanni Francesco (*b* Lequio Berria, nr Alba, 6 Jan 1777; *d* Turin, 12 Dec 1854). Italian violin maker. He first worked in his home town as a farmer and labourer until after 1802; by 1807 he had moved to Carmagnola, where he remained until after 1815, and by 1821 he was making violins in Turin. The long-held assumption that his first instruments were made under the direction of Alexandre d'Espine appears to be misfounded, as d'Espine claimed that Pressenda was his teacher. Similarly, the supposition of Pressenda's having travelled to Cremona to study with Storioni is not borne out either by documentary evidence pertaining to Cremona or in Pressenda's approach to violin making. He was probably trained in one of the French instrument-making workshops then functioning in Turin, possibly by Joseph Calot or Nicolas Lété-Pillement, both natives of Mirecourt who were active in Turin during the years immediately following the Napoleonic Wars. He won his first medal at the Turin Exposition of 1829, and gained subsequent awards in 1832, 1838, 1844, and 1850. He was patronized by eminent musicians of the Court ensembles in Turin, most notably G.B. Polledro and Giuseppe Ghebart, both of whom served as concertmasters. He taught Giuseppe Rocca, and it is thought that Pietro Pacherele (*b* Mirecourt, 7 Sept 1803; *d* Nice, 31 Dec 1871) worked for him during the 1840s; several examples of Pacherele's work from these years bear labels of Turin and record Pressenda as his teacher. Pressenda retired in about 1850; the maker Benedetto Gioffredo, called Rinaldi (*b* Novello d'Alba, 1821; *d* Turin, 21 March 1888) claimed to have succeeded

to Pressenda's workshop, but there is no surviving documentary evidence to support this other than Rinaldi's own assertions in the 1870s and 80s.

Always strongly influenced by Stradivari, Pressenda's style changed markedly over the years. His first instruments follow a broad, flat model with long square corners that project outward. The soundholes are usually rather small, and the backs are mostly in a single piece; those dating from the mid-1820s often have a prominent sapmark to one side or the other. By the late 1820s the corners were smaller, though still set square, and the arching was becoming much fuller. These early instruments were covered with the varnish which he used all his working life, a thick, rich orange to deep red mixture, apparently applied without sealer, penetrating well into the wood, and on the soundtable usually showing the hard grains to be light in colour. After 1830 the squareness of the centre bout gradually became less pronounced, though the model continued to be full. The scroll has a wide ear, and the centre line of the fluting is deeply scratched. The soundholes hardly vary at all in appearance, and by now seem almost on the long side. The darkest red varnish is from these years, though in many instances it has been polished down to lighten the colour and improve the transparency. The workmanship of the young Giuseppe Rocca can occasionally be found in instruments from the late 1830s. In the 1840s there was a gradual shift towards a flatter, broad-edged pattern of violin, some of Pressenda's late instruments being among the most successful. Many are quite striking in appearance, with broad-flamed maple and orange-brown varnish.

Tonally there is some variation, but the best of Pressenda's violins fully justify his reputation. His cellos, though extremely rare, are also fine, but his violas were built on a small pattern and have not commanded the same degree of popularity. Pressenda had a far-reaching effect on Italian violin making of the late 19th and early 20th centuries, Fagnola being chief among his copyists. Indeed, Fagnola's earlier copies have often been taken for Pressenda's work, though later on, because of commercial demand, the facsimile Pressenda label was the only feature that bore much resemblance. His labels bear the latinized form of his name, Joannes Franciscus Pressenda. (*LütgendorffGL*; *VannesE*)

CHARLES BEARE/PHILIP J. KASS

Presser. American firm of music publishers. It was founded in Philadelphia in 1883 by Theodore Presser (*b* Pittsburgh, 3 July 1848; *d* Philadelphia, 28 Oct 1925), a musical philanthropist who had studied at the New England Conservatory in Boston. Earlier that year he had begun publication of a monthly magazine, *The Etude*, devoted to the interests of music teachers and students. In 1906 he opened in Philadelphia the Presser Home for Retired Music Teachers, the only such institution in the USA. In 1916 the Presser Foundation was established, with funds of over $1,000,000, for the support of the home, a department of scholarships (given directly to institutions and not to individuals), and a department for the relief of deserving musicians. After his death the firm was expanded by the acquisition of Church (1930), Ditson (1931) and the Mercury Music Corporation (1969), which included the catalogues of Beekman Music and Merrymount Music. In 1970 Elkan-Vogel became a subsidiary and in 1981 the firm purchased the bulk of the copyrights of American Music Edition. Other subsidiaries include Merion Music, New Music Edition and Society of the Publications of American Music. Through Ditson, the company traces its history to 1783, making it the nation's oldest continuous music publisher.

Presser is the sole agent in the USA for a number of American publishers, including Columbia Music, Coronet and Peer-Southern Concert Music, as well as for foreign firms such as Durand, Transatlantiques, Jobert and Novello. The company serves the needs of dealers, teachers and musicians, drawing from a huge stock of classical, educational and light music. It also maintains a large library of works for hire, including opera, ballet and orchestral music. Among the many American composers represented by Presser are Cowell, Erb, Getty, Ives, Lazarof, Persichetti, Rochberg, Ruggles, Sapieyevski, Schickele, Schuman, Sessions, Shapey, Stucky, Wiesgall, Wernick, Yardumian and Zwilich. In 1949 the company's main office was moved to Bryn Mawr, Pennsylvania.

W. THOMAS MARROCCO, MARK JACOBS, WARREN STOREY SMITH

Pressing, Jeff (*b* San Diego, 30 Nov 1946). Australian-American composer and writer. Born and educated in the USA, he moved to Melbourne in 1975 to teach jazz, electronic and computer music, and composition at La Trobe University (1975–93). Parallel with this, he pursued a career as a research scientist in cognitive psychology: from 1994 he has been Senior Lecturer in Psychology at the University of Melbourne. His compositions have spanned a wide range of styles and influences, including fusion jazz, African drumming, chamber music in the tradition of Western art music, computer music, sound poetry, multi-cultural music and multimedia presentations. As a performer he has founded and performed with ensembles such as the World Rhythm Band, which specializes in jazz improvisation, the African drumming ensemble Adzohu, and the live-electronics ensemble OZDIMO. His compositions have been performed in Australia, the USA, Japan, Sweden and elsewhere. Pressing's work is always marked by freshness and curiosity. His exploratory urge is strong, and his best work is marked by rhythmic liveliness, elaborate textures and a sense of timbral fantasy, as illustrated by such electronic works as *The Butterfly's Dream* and *Zalankara*. His sound poetry and verbal performances also contain humour and satire, an example being *The isms infecting musical thought*.

WARREN BURT

Pressl, Hermann Markus (*b* Altaussee, 26 May 1939; *d* Nea Mouchri, Greece, 12 Aug 1994). Austrian composer. He studied the violin, the viola and composition at the Musikhochschulen of Vienna, Graz and Salzburg. After teaching for a short time, he was invited to Afghanistan to assist in the development of music education and to collect folk music. (His large collection of recordings is held in the sound archive of the Austrian Academy of Science). He returned to Austria in 1971 to work as a violin teacher and an orchestral player in Graz. After studies in Warsaw in 1972, he taught composition and theory at the Graz Musikhochschule (1974–94).

Pressl's first period, before his departure for Afghanistan, is strongly influenced by the neo-classical style of his teachers, particularly Otto Siegl. In his second period, Afghan folk material became a prominent influence. Written after his study in Warsaw, works of the third period employ experimental elements, such as sound-surfaces, noise and collage. In his last period (from around 1980), he wrote serial pieces that rely on aleatory processes to determine musical details. His sometimes 'infinite' works aim to dissolve a sense of time, create a state of meditation and 'represent sacred nothingness'. He divided his output into eight groups, each characterized by a particular influence or technique; these include: Drangiana (works showing Afghan influence), Jesien (experimental works), Arsis (spiritual music), Ronde (cyclic works and works of long duration), Asralda (works incorporating natural sounds), Neubearbeitungen (revised works), Objekte (works employing untraditional 'instruments') and N.N. (works released from the composer's subjective control).

WORKS
(selective list)

for complete list see LZMÖ

the categorization is that of the composer

I. Drangiana (1966–70): Conc., fl, drum, str; Divertimento, tpt, hn, trbn; Fanfarenmusik, wind; Musik, str orch; Pf Trio; Sonata, vc, pf [rev. as Sonata nova, 1983]; Trio, fl, vn, va; Sym., E, orch; Toccata and Fugue, trbn, str orch; lieder on texts by O. Chaigam, S.A. Akbari, T. Köchert; 2 pf works; 3 serenades, 2 vn, zir-baghali; 2 str duos; 4 str qts; 2 str trios; *c*7 works for solo inst; 4 works, tpt, trbn; *c*10 other chbr works

II. Jesien (1970–74, unless otherwise stated): Anatasis, capriccio, vn, chbr orch, rev. 1980; ETSÜM G, mixed chorus, fl, vc, perc, tape; 3 Khasiden, A, chbr orch; Kurmusik I–VI, orch; Retrospektakel, wind, perc; Selbstgespräche, S, accdn; Conc., tpt, tam-tam, str; So ist das Lebe, fl, ob, hpd; Traumgekrönt (cant., anon., H. von Hofmannstahl, R.M. Rilke, C.M. Brentano), female vv, insts; Morgue, T, va, 1975; Kreuzweiskreisschweigquartett, str qt, 1976; Chor der Geretteten, 2 tape, 1978; Sym. no.4, 11 ens, 1980–84; AARNOCH, Irrlicht und Findling (Sym. no.2), orch, 1981; *c*13 other works, incl. chbr works, works for solo inst; kbd

III. Arsis (1974–6, unless otherwise stated): Sym. no.3, wind; Poimenike litourgia (mass), vv, insts, org; Nieszpory, vv, insts; Requiem für HM; Choralpredigt, spkr, female vv, male vv, wind, 2 org; Ode an niemand, T, org, 1979; 3 Orgelpunkte, org, 1979–87; Ode an niemand, 2 spkrs, 1v, chbr orch, 1984; ARSIS (Sym. no.5), 84vv, 48 insts, 1988

IV. Ronde: nos. 1–7, 12 (12 x 12), 48, 1976–9: incl. works for chbr ens; orch; vv, insts; kbd, perc; rec ens; no.50, 1980

V. Asralda (1982–8): incl. 12 works for vv, insts; chbr ens; pf 4 hands; rec ens

VI. Neubearbeitungen: Canons, vn, va, 1993

VII. Objekte: Hausmusik, wind, ivy, ice, 1976–9; Objekte, *c*50 objects, 1976–9

VIII. N.N.: nos. 1–5, 8, 12/6/3 (1985–8): incl. works for cl; kbd; chbr ens; insts, tape; no.50, pf, 1992; no.53, 2 hpd, 1992

Insellieder (1992–4): incl. 8 works for 4–16vv; chorus

Other: H/F (H. Wolf), fl, cl, bn, hn, vn, va, vc, db, 1977; 6 Litaneie, mixed chorus, 1989; Str Sextet, 1989; Sym. no.6, 1990–94; Strang 1, a sax, org, 1991; Strang 2, sax qt, org, 1992; IATOA, str qnt, 1993; Ich höre keine Glocken mehr, 4vv, org, 1993; Strang 3, sax qt, tam-tam, db, org, 1993; Sonnenuntergänge nach meinem Tode (G. Klinge), spkr, a sax, crotales, 1994; Sym. no.7, 1994; Verweile noch (K. Weill, B. Brecht), S, a sax, trbn, vib, org, 1994; Zisternen, fl, vc, hpd, 1994; *c*8 other chbr works; *c*8 works for solo inst

KLAUS LANG

Pressus (? from Lat. *pressim*: 'compactly'). In Western chant notations, a special neume, usually consisting of a neume with added ORISCUS and a final PUNCTUM. If the initial neume is a VIRGA with *oriscus* (also known as a VIRGA STRATA or a *gutturalis*), a three-note group results; if the initial neume is a PES (ii) with *oriscus* (*pes stratus*), a four-note group results, and so on. Suñol and Cardine, among others, distinguished a *pressus minor*, where a foreshortened form of the *virga strata* and *punctum* are added to other neumes. As with all neumes that include the *oriscus*, the exact significance of the *pressus* is unclear. With the change to staff notation, the *oriscus* was usually represented as a note of the same pitch as the preceding one. Mocquereau originally believed that the unison notes should be sung with special emphasis, but later renounced this view. (For illustration *see* NOTATION, Table 1.)

DAVID HILEY

Prestant (Fr., Ger.). *See under* ORGAN STOP (*Praestant, Principal*).

Presten, [Preston], **Jørgen** [Jörgen, Georgio] (*d* Copenhagen, before 28 Nov 1553). Composer, presumably of Scottish origin, active in Denmark. There can be little doubt that he is the 'Georgius Preston Scotus' who graduated as magister from the University of Copenhagen

on 14 May 1545, and it may be assumed therefore that he studied under the first 'lector musices', Matz Hack (Glahn, 1986). He was leader of the *kantori*, the choir of the royal chapel of Christian III, in 1551, and two years later died of the plague. According to an entry in *Kancelliets brevbøger* dated 28 November 1553, negotiations were started with his widow for the sale to the king of a set of 'song-books' owned by Presten; these apparently have not survived. His works are known from another, perhaps corresponding, set of manuscript partbooks prepared under the direction of the chief trumpeter, Jørgen Heyde (or Georg Hayd), for the instrumentalists of the royal chapel, the copying of which is presumed to have begun in 1541 (or possibly 1547). Two of the eight-part pieces, *Nun bitten wir den heiligen Geyst* and *Ach Herr sehe uns gnaedig an*, were sent by Heyde from Copenhagen to his former master Duke Albrecht of Prussia on 30 May 1545. Since the second of these is based on Christian III's motto 'Ach Gott schaff deinen Willen', which appears both as an acrostic and as a refrain, it seems likely that Presten was by then employed at the Danish court. A motet *Commoda res*, inscribed in the manuscript 'a Georgio P ... anno XLIII redditum' and therefore also attributed to Presten, is a five-part canon on Duke Albrecht's motto 'Vertrau Gott allein'; this has been taken to suggest that Presten, like a number of other musicians such as Heyde and Adrianus Petit Coclico, had been in the service of Duke Albrecht before going to Denmark. However, the Königsberg and Copenhagen courts were so closely related at this period that it cannot be taken as certain. On the other hand, the presence of five of Presten's pieces in the incomplete set of Swedish partbooks from about 1560, the only other known source of his music, can probably be attributed to the migration of musicians such as Heyde and Johan Paston (? Josquin Baston) who went, in 1556 and 1559 respectively, from service with Christian III to the court of Erik XIV.

Presten was the most productive of the foreign composers at the Danish court: 19 works attributed to him survive, comprising six Latin motets, ten German hymns and three instrumental *fugae* or canons. In the Copenhagen source all the vocal pieces are untexted except *Peccavimus tibi*, which has the text in the bass. Ten of the pieces are cantus-firmus settings, with the cantus firmus in short phrases, without ornamentation, in the tenor. Imitation is sometimes used at the beginnings of phrases but is not pursued, and there is rarely any overall sense of structure. In the eight-voice *Christ ist erstanden* the melody is sung by the two highest voices in canon while the other voices accompany them with free counterpoint. The three instrumental canons, with their lively rhythms and wider ranges, are musically more interesting.

WORKS

MARGARET MUNCK (with JOHN BERGSAGEL)

Presti, Ida [Montagnon, Yvette] (*b* Suresnes, Paris, 31 May 1924; *d* Rochester, NY, 24 April 1967). French guitarist of part Italian parentage. She was arguably one of the greatest guitarists of all time. Her father, a piano teacher, gave her her first music lessons and she turned to the guitar when she was six years old. Her father learnt enough to impart the rudiments of guitar technique to his daughter, but to the end of her life she had no further instruction in music or guitar playing. She first played in public when she was eight, gave her Paris début when she was ten, and while still in her teens made several successful tours abroad and appeared briefly in a film *La petite chose*. In commemorative concerts for Paganini and Berlioz she played on the composers' own guitars. Her first recordings were made when she was just 14. During World War II she was unable to follow her international career, but she resumed it soon afterwards. In 1948 she gave the French première of Rodrigo's *Concierto de Aranjuez*. In 1952 she married Alexandre Lagoya and thereafter played only in duo with him. Their celebrated global tours ended with Presti's tragic death (the exact cause remains undisclosed) during a tour of the USA. Her instinctive musicality was remarkable, her sound was uniquely beautiful, and her unorthodox and innovative technique (shared by Lagoya) was prodigious.

Numerous works were dedicated to Presti and to the Presti-Lagoya Duo, including Poulenc's *Sarabande* (1960) and Castelnuovo-Tedesco's *Les guitares bien temperées* – 24 preludes and fugues for two guitars – (1962).

JOHN W. DUARTE

Prestige. American record company. Established in New York in 1949, it quickly embarked upon an ambitious programme of recording famous young jazz musicians of the day. The catalogue included bop, cool jazz and hard bop by such musicians as Wardell Gray, Miles Davis, Thelonious Monk, Sonny Rollins, Stan Getz and John Coltrane; some recordings were issued on the New Jazz label. In 1960 the company began to diversify, setting up new labels: Swingville (mainstream jazz by older musicians); Moodsville (muted, atmospheric recordings by swing and bop musicians) and Bluesville (blues). From the late 1950s to the late 1970s Prestige was chiefly

associated with soul jazz, issuing recordings by the organists Brother Jack McDuff, Groove Holmes, Shirley Scott and Johnny Hammond with various tenor saxophonists. In 1967 the company transferred its headquarters to Bergenfield, New Jersey; in 1971 it was acquired by FANTASY (II), which ran the catalogue and label from Berkeley, California, and later initiated ambitious series of reissues.

BARRY KERNFELD

Prestissimo. *See* PRESTO.

Presto (It.: 'ready', 'prompt'). Quick, fast; one of the earliest tempo designations in music. Nicola Vicentino (1555) gave it as the speed of a crotchet; and Banchieri used it specifically as a tempo mark in *La battaglia* (from *L'organo suonarino*, 1611) along with *adagio*, *allegro* and *veloce*. But on the whole it appears in other sources from the first half of the 17th century as the single alternative to the slow tempo, be it *adagio*, *tardo* or *lento*. In Giovanni Priuli's *Sacrorum concentuum pars prima* (Venice, 1618) there are no tempo marks for the motets nor for the two instrumental sonatas (nos.35 and 36); but all the instrumental canzonas are marked *presto* at the beginning, and most have the subsequent contrasting instruction *tardo*. This is typical and is very similar to the pattern of its uses by Michael Praetorius (*Polyhymnia caduceatrix*, 1619; *Puericinium*, 1621), by Monteverdi, whose *Chiome d'oro* (1619) includes the marking *presto honestamente*, by Schütz, who preferred the form *praesto*, and by other early 17th-century composers. In practically all such cases *presto* may be taken as the equivalent of *tempo giusto*, against which the *adagio* or *tardo* could be inserted as deviations, just as *forte* was often the normal dynamic against which *piano* and *pianissimo* could provide echoes and contrasts. So *presto* did not necessarily imply any particular hurry in the 17th century. As late as the middle of the 18th century it was often used interchangeably with *allegro*: three different versions of the first movement of J.S. Bach's Sixth Violin Sonata are marked respectively *presto*, *vivace* and *allegro*; and Grassineau (1740) defined *presto* as 'fast or quick, gayly yet not with rapidity'.

But the tradition by which *presto* became a faster tempo than *allegro* grew alongside the older tradition, in which it was merely a moderately fast tempo. Brossard (1703) said 'the speed must be pressed on, making the beats very short'; and the anonymous *A Short Explication* (London, 1724) placed it faster than *allegro* or even *più allegro*. All early examples of *presto* must be approached with caution. As the 18th century progressed *presto* became more and more the accepted word for the fastest of all tempos except *prestissimo*. But Mozart, for instance, tended to avoid *prestissimo*, and in his letter about the Haffner Symphony (7 August 1782) stated that its finale, marked *presto*, should go as fast as possible.

Prestissimo, the superlative form ('very fast', 'as fast as possible'), appeared at about the same time as *presto*: it occurs in Johann Vierdanck's *Pavanen* (1637) and in Schütz's *St John Passion* (1665); and it is even used as the tempo designation for sarabands in the manuscript *GB-Lbl* Add.31424. But even though it is defined in most dictionaries from Brossard on, the word was not very often used. Handel used it occasionally, as in the section 'For he is like a refiner's fire' in *Messiah*, and Beethoven for the finale of his Piano Sonata in C minor op.10 no.1 and the second movement of his Sonata in E op.109. There seems always to have been a feeling that too frequent use would lead to a cheapening of the extreme effect implied. Schumann was surely a little less than serious, from this point of view, when he marked the first movement of his G minor Piano Sonata *il più presto possibile* (*so rasch wie möglich*), but later in the movement gave the indication *più presto* (*schneller*) and shortly before the end *ancora più vivo* (*noch schneller*). The point here, of course, is that changes of figuration on each occasion make faster tempos possible: there is no absolute fastest possible tempo, because not only the abilities of the performer change but also the nature of the music. And most composers have accordingly been content with *presto*.

Presto and *prestissimo* also occur as marks of expression or mood. Thus Verdi, for instance, rarely used them as tempo marks except in his last opera, *Falstaff*: otherwise he confined them to such formulations as *allegro prestissimo* (just before the end of Act 1 of *I due Foscari*) or *tutto questo recitativo molto presto* (in *Il trovatore*). His fast tempos were *velocissimo*, *allegro agitato* or *allegro assai mosso*.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Preston, Christopher (*d* before 1 Jan 1690). English keyboard player and composer. On 7 January 1668 he was appointed to the royal household as a musician-in-ordinary for the virginals with the right of succession to Christopher Gibbons's place and fee on the latter's death; his succession was ratified on 25 October 1676 after Gibbons's death. Preston was dead by 1 January 1690, when his widow, 'Mary Preston of York', appointed somebody to receive all arrears owed to him for his service to Charles II. His extant compositions amount to six short keyboard pieces in Locke's *Melothesia* (London 1673/*R*). These include a four-movement suite in G, which begins with a prelude, and two single hornpipes. (*BDECM*)

PETER DENNISON/B.A.R. COOPER

Preston, Jørgen. *See* PRESTEN, JØRGEN.

Preston, Robert [Meservey, Robert Preston] (*b* Newton Highlands, MA, 8 June 1918; *d* Montecito, CA, 21 Mar 1987). American actor and singer. He grew up in Los Angeles and was a trained instrumental musician before joining the Pasadena Community Players. He was discovered by a talent scout from Paramount Pictures and signed a contract with the studio, appearing in numerous minor roles. He eventually moved to New York and made his Broadway début succeeding José Ferrer as Oscar Jaffe in *Twentieth Century* (1950). In 1957 he created the character of Harold Hill in *The Music Man*, his most famous role, for which he won a Tony award and subsequently reprised in the 1962 film. Further Broadway roles included Michael in *I Do! I Do!* (1966), a two-person show which co-starred Mary Martin and for which Preston won his second Tony award, and Mack in *Mack and Mabel* (1974). His film credits included *Mame*

(1974) and *Victor/Victoria* (1982). A dramatic bass-baritone, Preston could make a very smooth transition from speech to song. His voice was very flexible and articulate and exuded power, strength and masculinity. His distinctive sound was always immediately recognizable for its clarity, expression and depth.

WILLIAM A. EVERETT, LEE SNOOK

Preston, Simon (John) (*b* Bournemouth, 4 Aug 1938). English organist and conductor. A boy chorister at King's College, Cambridge, he returned as organ scholar in 1958 after two years of organ studies at the RAM under C.H. Trevor. After taking the MusB he became sub-organist at Westminster Abbey, and began to expand his recital work to include the harpsichord. He was organist at Christ Church, Oxford (as well as lecturer at the University) from 1970 to 1981, when he returned to Westminster Abbey as organist and master of the choristers. In 1987 he left to pursue a freelance career as a recital organist and conductor.

At Christ Church, Preston developed the choir through a livelier approach to concerts and recordings and replaced its English cathedral-style organ with a new instrument by the Austrian firm of Rieger, whose continental clarity of voicing brings an unfamiliar accent to Anglican worship. He was also involved in the specifications for the Klais organ at the St John's, Smith Square, concert hall and the Marcussen organ at Tonbridge School. He has served as jury member for major international organ competitions and has advised on music for the Arts Council of England and the BBC. As a recitalist Preston has toured East Asia, Australia, South Africa and the United States. He has made numerous recordings, including the complete organ works of Bach, a set of the Handel organ concertos notable for its freshness and verve, Saint-Saëns's Organ Symphony with the Berlin PO, the Copland Organ Symphony, and the Poulenc Organ Concerto with the Boston SO. With the Christ Church choir he recorded several of Purcell's and Handel's choral works and masses by Lassus, Palestrina, Haydn and Dvořák.

IAN CARSON

Preston, Stephen (John) (*b* Skipton, Yorks., 24 May 1945). English flautist and choreographer of historical dance. He studied at the GSM from 1963 to 1966 with John Francis and Geoffrey Gilbert, and later with Wieland Kuijken in Amsterdam. His technical skill and interpretative insight into period flute playing led to principal positions in the Academy of Ancient Music, English Baroque Soloists and London Classical Players in their pioneering years. Preston was also a founder member of the English Concert, and has made acclaimed recordings of works including Bach's flute sonatas and concertos by Vivaldi. Alongside his active playing and teaching career he is artistic director of the MZT dance company and has choreographed operas by composers ranging from Purcell to Gluck.

JONATHAN FREEMAN-ATTWOOD

Preston, Thomas (*d* ?Windsor, after 1559). English composer. It is possible that he is the Preston recorded in 1543 as organist and instructor of the choristers at Magdalen College, Oxford. A Preston, again without forename, is recorded in the archives of Trinity College, Cambridge, as an organist and choirmaster between 1548 and 1552, and again from 1554 to 1559. The payments of 1558 and 1559 are of allowances due to absent Fellows, and are consistent with his presence as organist and instructor of the choristers (jointly with John Marbeck) at St George's, Windsor, in those years. Preston of Windsor is listed, with Sebastian Westcote of St Paul's and Thorne of York, as a musician deprived of his office because of his faith, in Nicholas Sanders's *De visibilia monarchia* (Leuven, 1571, p.702). It is just possible that it is this Thomas Preston who wrote the play *Cambises* (produced *c*1560 and printed by John Allde, *c*1570); other London musicians such as Redford, John Heywood, John Taylor and Westcote himself were all at some time concerned with dramatic productions.

The style of Preston's organ music is consistent with a creative career centred around the reign of Mary. All the authenticated keyboard compositions are for the Latin liturgy. The oldest of them, the offertory *Reges Tharsis*, is found in the earliest (pre-1549) section of *GB-Lbl* Add.29996, though this may be the work of John Preston, organist of St Dunstan-in-the-West in 1544–5. The rest are from a section of Add.29996 entirely devoted to Thomas Preston's music. Its characteristics include a command of flowing counterpoint in four parts, the use of rhythmic intricacy and the exploitation of a virtuoso keyboard technique. His most significant work is the setting of the Mass for Easter Day, which unfortunately breaks off in the manuscript in the middle of the sequence. The one anonymous piece in this section of Add.29996, the ground *Uppon la mi re* (ed. in MB, lxvi, 1995), may be by him; and the series of hymns based on faburdens on ff.158–178*v* may also be by him.

JOHN CALDWELL

Preston & Son. English family of music publishers. The firm was started by John Preston (*d* Jan 1798), who by about 1774 was established as a guitar and violin maker in London. In 1789 his son Thomas entered the business, and continued it alone after his father's death until about 1834, when it was acquired by COVENTRY & HOLLIER.

The Preston firm rapidly rose to become one of the most flourishing in the trade. Its publications covered music of every kind, and included a long annual series of country dances begun in 1786, popular operas by Arnold, Hook and Reeve, and works such as Bunting's *General Collection of the Ancient Irish Music* (1796) and J.S. Smith's collection *Musica antiqua* (1812). It was also the printer of George Thomson's collections of national songs from 1793. In addition the Preston firm bought the plates and stock of several other firms, including ROBERT BREMNER (1789), Thomas Skillern the elder (*c*1803), H. Wright (*c*1803), and Wilkinson & Co. (*c*1810). From these it did a vast reprint business, the most notable items of which were oratorios and other works of Handel acquired from H. Wright (formerly WRIGHT & WILKINSON), the successor of Walsh and Randall.

FRANK KIDSON/WILLIAM C. SMITH/PETER WARD JONES

Preti, Alfonso (*b* ?Mantua; *fl* 1586–92). Italian composer. According to Eitner he was 'a nobleman at Mantua and a virtuoso'. His active career as a published composer began in 1586 with his *Primo libro de madrigali* for five voices (Venice, 1587), described in the dedication to the Duke of Mantua as 'the first offspring of my weak and sterile imagination'. This publication contains 15 madrigals, one of which is an extended cycle in five sections. Preti fostered madrigal composition in his own works and in the organization of a circle of madrigal composers, consisting of both enthusiastic amateurs and professionals, and in the publication of a collection of madrigals assembled from the members of this group. The anthology, *L'amoroso caccia* (RISM 1588[14]), contains, as its title-page proclaims, works 'by native Mantuan composers', including Preti himself, dedicated to 'the most excellent musicians of Rome'. Many of the composers represented were employed at Mantua Cathedral. Pallavicino, a long-time resident of Mantua, must have known Preti well and he clearly thought sufficiently highly of him to include one madrigal, *Tra mille fior*, in his fourth book of madrigals for five voices (RISM 1588[28]). It is a well-wrought, thoroughly imitative work, with little concession to the 'modern' chordal style of Andrea Gabrieli or the lighter works of Marenzio. Preti's last known composition, *Ninfe a danzar venite*, appeared in *Il trionfo di Dori* (RISM 1592[11]). (*FenlonMM*)

STEVEN LEDBETTER/IAIN FENLON

Pretorius, Conrad. *See* PRAETORIUS, CONRAD.

Prêtre, Georges (*b* Waziers, 14 Aug 1924). French conductor. He studied the trumpet and composition at the Paris Conservatoire and conducting with Cluytens. His début was in 1946 at the Marseilles Opera in Lalo's *Le roi d'Ys*, and he worked there and at the opera houses of Lille and Toulouse until 1955. After his Paris début the next year at the Opéra-Comique, in the first performance in the city of Strauss's *Capriccio*, he became its music director until 1959. He conducted the première of Poulenc's *La voix humaine* (1959, Paris) and the Paris première of his *Gloria* (1961, Boston), and was briefly associate conductor of the RPO (1962–3). From 1960 he worked frequently at the Opéra, where he was director of music from 1966 to 1971. His American début was at the Chicago Lyric Opera in 1959, followed by débuts at the Metropolitan Opera (1964), La Scala and Covent Garden (1965) and at the Salzburg Festival (1966). Thereafter he was regularly active in those centres and elsewhere, reopening the Théâtre des Champs-Elysées in Paris in 1988 with a concert performance of *Benvenuto Cellini* and conducting the inaugural concert at the Opéra Bastille in 1990. From 1986 to 1991 he was chief guest conductor of the Vienna SO.

Prêtre was a favoured conductor of Maria Callas, and recorded *Tosca* and *Carmen* with her in 1964. He has also recorded several other operas, including *Samson et Dalila*, *Werther* and *Les pêcheurs de perles*, Poulenc's *Gloria*, *Stabat mater* and other works, and the symphonies of Saint-Saëns. His conducting is vital and dramatic, but has been criticized for excessive use of rubato and lack of precision. He was made an Officier of the Légion d'Honneur in 1984 and is also an Italian Commendatore.

CHRISTIANE SPIETH-WEISSENBACHER/NOËL GOODWIN

Preumayr. German family of musicians, active in Sweden.

(1) **Johan Conrad Preumayr** (*b* Koblenz, Dec 1775; *d* Stockholm, 20 March 1819). Bassoonist, son of Severin Preumaier. He settled in Stockholm and played in the royal orchestra from 1811 until his death.

(2) **Carl Josef Preumayr** (*b* Koblenz, 2 July 1780; *d* Stockholm, 20 July 1849). Singer, cellist and bassoonist, brother of (1) Johan Conrad Preumayr. He played the cello and the bassoon in the royal orchestra in Stockholm, and also appeared there as an actor and a bass; his operatic roles included Sarastro in *Zauberflöte*, Osmin in *Die Entführung aus dem Serail* and the Commendatore in *Don Giovanni*. He was a member of the literary and musical society Par Bricole, and was elected a member of the Swedish Academy of Music in 1841.

(3) **Frans Carl Preumayr** (*b* Ehrenbreitstein, 24 April 1782; *d* Stockholm, 15 Feb 1853). Bassoonist, brother of (1) Johan Conrad Preumayr. The most celebrated member of the family, he was the leading bassoonist in the royal orchestra from 1811 to 1835 and was director of music to the Swedish Lifeguards and to the Kalmar Regiment. He was also a member of Par Bricole. Frans Carl played in the première of Berwald's *Konzertstück* op.2 for bassoon and orchestra in Stockholm (1828). Bernhard Crusell, whose daughter Sofie he married, composed several concert works for him, including a *Concertino* written for an extended concert tour of France, Germany and England undertaken between October 1829 and November 1830). A set of variations for three bassoons and double bass written by Crusell for the three brothers is lost.

WILLIAM WATERHOUSE

Preussner, Eberhard (*b* Stolp [now Słupsk], 22 May 1899; *d* Salzburg, 15 Aug 1964). German educationist and writer on music. He studied at the Berlin Hochschule für Musik and concurrently studied musicology with Johannes Wolf, Schünemann and Hermann Abert at Berlin University. He took the doctorate in 1924 with a dissertation on singing in Protestant *Lateinschulen* in the 17th century. He then worked under Leo Kestenberg at the Berlin Central Institute for Education until 1934, when he took over the organization of German choral singing, for which he was responsible until 1938. He was subsequently (1939) appointed executive director and lecturer in music education at the Salzburg Mozarteum, succeeding Paumgartner as its president (1959); he revived and directed its annual summer academy held at the time of the Salzburg Festival. He was a member of the directorate of the Salzburg Festival and of many international committees, and was a visiting professor at the University of Michigan (1952) and Oberlin College (1960). He edited the periodical *Die Musikpflege* (1930–43) and *Die musikpädagogische Bibliothek* (1959–64), which had been founded by Kestenberg in 1928.

RUDOLF KLEIN

Previn, André (George) [Priwin, Andreas Ludwig] (*b* Berlin, 6 April 1929). American conductor, pianist and composer of German birth. Son of a prosperous lawyer who was also a talented amateur musician, he showed exceptional musical talent from his earliest years. Playing piano duets with his father, he quickly developed phenomenal sight-reading ability, and at the age of six entered the Berlin Hochschule für Musik, studying the piano with Rudolf Breithaupt. In 1938 his family (of Russian-Jewish origin) left Germany for Paris, where he studied briefly at the Conservatoire. Emigrating to the USA the following year, the family settled in Los Angeles, where in 1943 he became an American citizen. While still at school he quickly learnt to use his talents as a pianist, playing accompaniments to silent films in a cult movie house and later becoming an orchestrator at the MGM film studios. This led to commissions to write film music of his own, which – following the practice of the studios – he had to conduct himself. This, in turn, fostered an ambition to conduct more widely, and he was soon conducting local performances of the classical repertory with players from the studio orchestras. Meanwhile he was developing a talent for playing jazz, and while still at school was performing in clubs, soon afterwards making his first recordings. At the same time he took composition lessons, with Joseph Achron, Ernst Toch and Castelnuovo-Tedesco among his teachers, and was invited by the violinist Josef Szigeti to play in private performances of chamber music. Previn was called up for army service in 1950, and when stationed in San Francisco took conducting lessons with Monteux, then music director of the San Francisco SO. Both before and after army service he had great success with his film music, receiving four Academy awards for his film adaptations of *Gigi* (1958), *Porgy and Bess* (1959), *Irma la Douce* (1963) and *My Fair Lady* (1964).

By the early 1960s Previn had established a reputation both as a jazz pianist and as a classical concert pianist. He still harboured an ambition to become a conductor, and in 1962 made his official conducting début with the St Louis SO. Defying the then regular description of him as 'Hollywood's André Previn', he quickly built a formidable reputation, and in 1967 became conductor-in-chief of the Houston SO in succession to Barbirolli. The following year, having already made several orchestral recordings in Britain, he became the LSO's adventurous choice of principal conductor. Over the next 11 years he proved outstandingly successful in the post. Having developed a deep affinity with British music during his schooldays in Los Angeles, he became a passionate advocate of such composers as Vaughan Williams, Walton and Britten, making a series of distinguished recordings, including the complete symphonies of Vaughan Williams. What sealed Previn's success during his years with the LSO was his popularity in presenting and conducting music programmes on television, following the example of Bernstein in the USA. In addition to British music, his natural sympathies have been above all with colourful Romantic scores: his performances and recordings of Rachmaninoff setting new standards. Yet he never neglected the Classical repertory, and regularly included Haydn symphonies in his programmes, as well as directing Mozart concertos from the keyboard. As a pianist, too, he made a point of playing chamber music in concert with members of the orchestras with which he was associated. He also returned to playing jazz in concert and on disc, not just with regular associates like Shelly Manne, Jim Hall and Red Mitchell, but with artists such as the violinist Itzhak Perlman.

When in 1979 Previn ceased to be principal conductor of the LSO, he was given the title of conductor emeritus. In 1985 he became music director of the RPO, ceding that title to Ashkenazy two years later. He remained the RPO's principal conductor until 1991, when he resumed his relationship with the LSO as conductor laureate. He was music director of the Pittsburgh SO from 1976 until 1985, when he became music director of the Los Angeles PO in succession to Giulini, remaining in the post until 1990. With the Los Angeles orchestra he made outstanding recordings of symphonies and other orchestral works by

André Previn conducting the LSO, 1996

Prokofiev, another composer for whom he has a particular sympathy.

As a composer, Previn's early successes were all film scores, many of them based on Broadway musicals. More characteristic are his completely original film scores, which include *Elmer Gantry*, *Inside Daisy Clover* and the sharply dramatic score he wrote for John Sturges's *Bad Day at Black Rock*. He also composed original scores for the stage musicals *Coco* (1969, New York) and *The Good Companions* (1974, London). His earlier concert works also include a Symphony for strings (1962), as well as concertos for cello (1968) and guitar (1971). During his years with the LSO he wrote pieces for specific groups, such as the *Four Outings* (1974), composed for the Philip Jones Brass Ensemble. In collaboration with Tom Stoppard he wrote the 'play for actors and orchestra' *Every Good Boy Deserves Favour* (1978). Previn's score, with its parodies of Shostakovich, wittily matches the humour of Stoppard's satire on eastern European totalitarianism. During his Pittsburgh years he wrote *Principals* (1980) specifically for the principals from different sections of his orchestra.

In more recent years, as he has eased his conducting schedule, Previn has turned more to composition, usually prompted by the playing or singing of a particular artist. His impressive Piano Concerto (1985) was written for Ashkenazy, and he has also written a darkly intense cello sonata for Yo-Yo Ma (1993) and a violin sonata for Gil Shaham (1994). In 1977 Previn turned to serious song-writing, composing for Janet Baker his Five Songs, to words by Philip Larkin. Since then singers have frequently inspired him. For Barbara Bonney he wrote an extended narrative song to words by Michael Ondaatje, *Sallie Chisun Remembers Billy the Kid* (1994), and for Sylvia McNair he composed his Four Songs with cello obbligato, to words by Toni Morrison (also 1994). Even more striking is the cycle written for Kathleen Battle, *Honey and Rue* (1992), six atmospheric songs with accompaniment for chamber orchestra, including jazz drums and bass. There are echoes here of spirituals as well as of Barber's *Knoxville: Summer of 1915*, but generally Previn's unashamedly eclectic idiom owes more to Walton and Britten than to American models. September 1998 brought a landmark in his composing career, with the première in San Francisco of his biggest work to date, the opera *A Streetcar Named Desire*, based on Tennessee Williams's play with a libretto by Philip Littell.

Following the pattern set by Bernstein, Previn throughout his career has defied the cult of specialization predominant in the modern world of music. If his achievement cannot quite match that of Bernstein, his success and influence – as conductor, as pianist, as composer and as a witty and charismatic media personality – has given him a rare status as 'the compleat musician', in the 18th-century sense. His autobiographical *No Minor Chords: My Days in Hollywood* was published in 1991.

EDWARD GREENFIELD

Previtali, Fernando (*b* Adria, 16 Feb 1907; *d* Rome, 1 Aug 1985). Italian conductor. He studied at the Turin Conservatory with Alfano (composition) and Pietro Grossi (cello), and joined the orchestra of the Teatro Regio, Turin, as a cellist. In 1928 he moved to Florence to work with Gui at the Teatro Comunale, and helped to establish the orchestra of the Maggio Musicale Fiorentino. Gui encouraged Previtali's interest in contemporary music, and he became a leading interpreter of Busoni's music, as well as conducting the premières of many works including Ghedini's *Re Hassan* (1939) and Dallapiccola's *Volo di notte* (1940). As chief conductor of the Rome RSO (1936–43 and 1945–53) he was responsible for

many fine opera broadcasts and recordings. In 1953 he was appointed conductor and artistic adviser to the Accademia di S Cecilia, with whom he made several tours in Europe and the USA (where he made his début with the Cleveland Orchestra in 1957). He conducted opera frequently at Buenos Aires from 1959, was appointed principal conductor at the Teatro S Carlo, Naples, in 1972, and subsequently became artistic director of the Teatro Regio, Turin, and the Teatro Comunale, Genoa. He made his American opera début at Dallas in 1975 (with Donizetti's *Anna Bolena*). An accurate interpreter, an authoritative orchestral trainer and a skilled teacher of conducting, he published editions of early music and a manual, *Guida allo studio della direzione d'orchestra* (Rome, 1951). His own works include a ballet, *Allucinazioni* (1945, Rome), *Gloria victis* for choir and orchestra, and chamber music.

LEONARDO PINZAUTI

Prévost, (Joseph Gaston Charles) André (*b* Hawkesbury, ON, 30 July 1934). Canadian composer. He entered the Montreal Conservatoire in 1951 where his teachers included Isabelle Delorme, Jean Papineau-Couture and Clermont Pépin. In 1959 his First Quartet won the Sarah Fisher composition prize and in 1960 *Poème de l'Infini*, his first work for orchestra, won the first prize for composition at the Conservatoire. Grants awarded by the governments of Canada and Quebec (1960) enabled Prévost to attend Messaien's analysis class at the Paris Conservatoire. In 1961 he joined Dutilleux's composition class at the Ecole Normale de Musique. While in France he began to integrate a humanistic outlook with rigorous formal structures. The *Scherzo* for string orchestra, Sonata for violin and piano, four preludes for two pianos and First Cello Sonata date from this period.

In 1963, on Prévost's return to Canada, the Montreal SO commissioned *Fantasmes*, a posthumous tribute to John F. Kennedy, which won a composition prize from the Montreal SO and the Fondation des Amis de l'Art. Prévost also won the Prix d'Europe (1963), allowing him to study at ORTF with Michel Philippot (1964) and at Tanglewood (1965), with Kodály, Copland, Schuller and Elliot Carter. In 1964 he became a professor of analysis and composition at Montreal University, a post he held until his retirement in 1996.

The tragic events at the Olympic village in Munich inspired Prévost, in 1972–3, to write the first of four works for orchestra. *Chorégraphie I* (1972) bears witness to the Olympic massacre; *Chorégraphie II (E=MC²)* (1976) is based on the idea that humankind's only certainty is its relativity; *Chorégraphie III* (1976) is a creation in sound made up of contrasting colours and articulations; *Chorégraphie IV* (1978) is inspired by nostalgia and a pastoral mood. Since the 1980s Prévost's works have become increasingly varied stylistically. *Ahimsâ* (1983), which takes its name from a Sanskrit word meaning non-violence draws inspiration from writings by Fernand Ouellette and Gandhi. *Cosmophonie* (1985), illustrates the immensity of the universe and the smallness of mankind. The Third String Quartet is dedicated to the memory of the 14 women who died in the massacre at the Ecole Polytechnique (Montreal) in 1989. His *Cantate* for strings (1987) is the result of an encounter with Menuhin, who conducted its première at the Guelph Festival (Ontario). Société Radio-Canada's documentary about this occasion ('Menuhin-Prévost, a creative adventure') won both a Special Mention in the Prix Italia (1990) and the Rodgers Communication Media Award (1991).

Prévost received the Medal of the Canadian Music Council in 1977, the award of the Canadian Performing Rights Society in 1985 and a medal celebrating the 125th anniversary of the Canadian Federation. He was made an Officer of the Order of Canada in 1986.

MARIE-THÉRÈSE LEFEBVRE

Prévost [Prévost d'Exiles], Abbé **Antoine-François** (*b* Hesdin, Artois, 1 April 1697; *d* Paris, 25 Nov 1763). French novelist and journalist. He studied at the Jesuit college in Hesdin, but vacillated between holy orders and a military career. In 1721 he was admitted to the Benedictine congregation at St Wandrille, near Rouen; five years later he was ordained priest. Falling foul of the ecclesiastical authorities, he fled to England in 1728 and became a tutor in the household of Sir John Eyles. He lived in the Netherlands and again in London before returning to Paris in 1734, more or less reconciled with the Church.

Prévost's most famous work, *L'histoire du Chevalier des Grieux et de Manon Lescaut* (1731), has inspired a number of stage works, including Balfe's *The Maid of Artois* (1836), *opéras-comiques* by Auber (1856) and Massenet (1884), Kleinmichel's *Das Schloss de l'Orme* (1883), Puccini's *Manon Lescaut* (1893) and Henze's *Boulevard Solitude* (1952). Two ballets are based on the story, devised by J.-L. Aumer in 1830 (with music by Halévy) and by Kenneth MacMillan in 1974 (with music arranged by Leighton Lucas and Hilda Gaunt from scores by Massenet, but not from his *opéra-comique*).

CHRISTOPHER SMITH

Prévost, Eugène-Prosper (*b* Paris, 23 April 1809; *d* New Orleans, 19 Aug 1872). French composer. He entered the Paris Conservatoire in 1827, studying composition with Le Sueur; Berlioz was a colleague of his there. He wrote two *opéras comiques* during his student days, *Le grenadier de Wagram* and *L'hôtel des princes*, both of which were produced in Paris in 1831. He won the second prize in the Prix de Rome in 1829 with his cantata *La mort de Cléopâtre*, and first prize in 1831 with *Bianca Capello*. On his return from Italy in 1835, his *Cosimo* was produced at the Opéra-Comique and was very well received. He became the conductor at the theatre in Le Havre, where his wife, Eléonore Colon, was a singer. His conducting career took him to New Orleans, though his operas continued to be staged in Paris as well as in the USA. He returned to Paris as conductor of the Bouffes-Parisiens in 1863 before settling permanently in New Orleans in 1867.

Prévost wrote about ten comic operas, most of which remained unpublished. The critic Gasperini, in his review of Prévost's last work *L'illustre Gaspard* (1863), made the reasonable judgment: 'It is all clever, light, totally unpretentious: yet it is all written in a masterly fashion'. He also composed a few pieces for orchestra and a mass for chorus and orchestra. The latter work shows the influence of his older contemporaries Cherubini, Le Sueur and Plantade; it contains many choruses in syllabic style and its melodies are charming and expressive, though there is a total absence of fugue and a strictly limited use of counterpoint. Prévost is also often credited with three settings of the *Te Deum*, works composed by his teacher Le Sueur which he arranged in a piano reduction in 1829, in collaboration with Ermel, a fellow pupil at the Conservatoire.

WORKS

OPERAS

unless otherwise stated, all are opéras comiques and first performed in Paris

L'hôtel des princes (1, A. de Ferrière and H. Leblanc de Marconnay), Ambigu, 23 April 1831
Le grenadier de Wagram (1, H. Lefebvre and Saint-Amant [A. Lacoste]), Ambigu, 14 May 1831
Cosimo (opéra bouffe, 2, Saint-Hilaire and P. Duport), OC (Bourse), 13 Oct 1835, vs (Paris, ?1835)
Les pontons de Cadix (1, Duport and F. Ancelot), OC (Bourse), Nov 1836
Le bon garçon (1, A. Bourgeois and Lockroy [J. Simon]), OC (Bourse), 22 Sept 1837
Esmeralda (after V. Hugo: *Notre-Dame de Paris*), New Orleans, ?1840
La chaste Suzanne, New Orleans, 1845
Alice Clari (op, 3), New York, 1846
Blanche et René (2), New Orleans, 1861
L'illustre Gaspard (1, F.-A. Duvert and A. Lauzanne de Varoussel), OC (Bourse), 11 Feb 1863

JEAN MONGRÉDIEN/HERVÉ LACOMBE

Prey, Claude (*b* Fleury sur Andelle, 30 May 1925; *d* Paris, 14 Feb 1998). French composer. After studies at Rouen (piano and organ) and an Arts degree at the Sorbonne, he entered the Paris Conservatoire in 1947 to study with Messiaen (harmony) and Milhaud (composition). State scholarships enabled him to travel to Brazil (1953) and Canada (1958) where he engaged in anthropological research. One of the most prolific composers of works for small theatrical groups, he uses literary, musical and dramatic resources to challenge conventional notions of operatic forms.

His concern with the total integration of music and theatre is reflected in the compositional process; Prey gives a detailed staging plan with instrumental layout in most of his works, and apart from *Le coeur révélateur* (1961) for which he won the Prix Italia, he has written all of his own texts. His musical writing draws mainly on serial techniques: *Mots croisés* (1964) uses a crossword puzzle to generate melodic material. However, he also incorporates snatches of Beethoven, Wagner, Fauré, Poulenc, Verdi and Mozart. When Valmont in *Les liaisons dangereuses* (1973) wishes to impress Mme de Tourvel he resorts to the grandiose statements of Beethoven; similarly when the 'Femme' in *L'homme occis* (1963) sings of love she parodies Wagner, using a series derived from the first bars of *Tristan*.

Many of Prey's works are based on French history and literature. Rather than simply transferring the texts into a theatrical medium, Prey creates a commentary by manipulating the sequence of time. Language plays a central role both as a musical and a dramatic resource. In a number of his works he voluntarily limits the number of phonemes, for example in *L'escalier de Chambord* (1981) he uses only the 12 letters of the title and the 13 phonemes that they construct. *O comme eau* (1984) is more extreme, taking as its central subject the 'drowning' of Venice. After the disaster the inhabitants, now living under the sea, lose all knowledge of their language apart from the sound 'o'. The text in its entirety is written in an Italian macaronic based upon their only remembered sound.

WORKS

texts by composer unless otherwise stated

Le phénix ou Ramage et plumage (opera buffa), 1957; Lettres perdues ou La correspondance des gens du monde (opera radiophonico-épistolaire), 1960; La dictée ou Les barbares sont dans la classe (monodrame lyrique), 1961; Le couer révélateur ou Les voliges (opéra de chambre, P. Soupault, after E.A. Poe), 1961; L'homme occis ou Un tunnel sous le Mont-Blanc (opera con variazioni), 1963; Jonas ou La colère des non-violents (opéra-oratorio), 1963; Mots croisés ou Animus et anima mieux: Animaüs et animusa (opéra cruciverbal), 1964; Donna mobile (prima) ou Epouse et n'épouse pas ta maison (opéra d'appartement), 1964; Métamorphose d'echo ou Réponse à tout (mono-mimo-mélodrame), 1965

La noirceur du lait ou Le testeur testé (opéra-test), 1966; On veut la lumière? Allons-y! ou La véridique histoire d'une vérité historique (opéra-parodie en deux procès), 1968; Fêtes de la faim ou Le chien de Pavlov se rebiffe (opéra pour comédians), 1969; Jeu de l'oie ou Qui gagne perd (opéra de passage), 1970; Théâtrophonie ou Petit traité de phonologie théâtrale (opera a cappella), 1971; Donna mobile II ou Femme contre gamme (opéra-kit), 1972; Les liaisons dangereuses ou Eros et révolution (opéra épistolaire), 1973; Young libertad ou Goodbye, Mr Sherif! (opera-study), 1975; La grand-mère française ou A.T.333 (opéra illustré), 1976; Les trois langages ou Autre jeu de l'oie (triple opéra de hasard pour et/ou par enfants), 1978

Utopopolis ou Musique et dialogue (opéra-chanson), 1980; L'escalier de Chambourd ou Double révolution (opéra en deux actions), 1981; Scénarios VII ou Colloque Club de Rome (motet: opéra pour haut-parleurs), 1981; Lunedi blu ou Le Krach (opera breve), 1982; Paulina ou La chambre bleu (opera de camera), 1983; O comme eau ou L'ora dopo (ode homophone), 1984; Paysages pacifiques ou Hommage à Linné (mélo-cycle), 1986; Le rouge et le noir ou Sur le rouge et le noir (opera-opéra en deux actes, after Stendhal), 1988; Sommaire soleil ou Le finisterre-club (melodrama), 1991; Parlons Fric ou Parlons fric (O.p.a-comique), 1992; Sitôt le septuor ou Beauté du ciel à Paris un soir d'alerte en 1917 (opéra opus Proust), 1993

ANDREA MUSK

Prey, Hermann (*b* Berlin, 11 July 1929; *d* Krailling vor München, 23 July 1998). German baritone. He studied in Berlin and made his début in 1952 at Wiesbaden as Moruccio (*Tiefland*). Engaged at Hamburg (1953–60), he created Meton in Krenek's *Pallas Athene weint* (1955). A regular guest in Vienna, Berlin and Munich, he first appeared at Salzburg in 1959 as the Barber in *Die schweigsame Frau*. In 1960 he made his Metropolitan début as Wolfram, returning as Count Almaviva, Papageno and Rossini's Figaro, the role of his San Francisco début in 1963, when he also sang Olivier (*Capriccio*). In 1962 he sang Don Giovanni at Aix-en-Provence; in 1965 he made his Bayreuth début as Wolfram and sang Storch (*Intermezzo*) with the Munich company in Edinburgh. Having made his Covent Garden début in 1973 as Rossini's Figaro, he returned as Guglielmo, Papageno, Eisenstein and Beckmesser, which he first sang at Bayreuth in 1981. Prey was also a well-schooled interpreter of lieder, of which he made many recordings, and a noted concert singer, especially in Bach. His mellifluous tone and keen phrasing, allied with a genial, relaxed manner on stage, were particularly apt in Mozart, as his recordings of Figaro, Guglielmo and Papageno reveal. He published an autobiography, *First Night Fever* (London, 1986).

Hermann Prey as Papageno in Mozart's 'Die Zauberflöte', Covent Garden, London, 1983

ALAN BLYTH

Prez. *See* YOUNG, LESTER.

Price, Curtis (Alexander) (*b* Springfield, MO, 7 Sept 1945). American musicologist. He studied at Southern Illinois University (1963–7) and with David G. Hughes, Nino Pirrotta and John Ward at Harvard, where he took the AM in 1970 and the doctorate in 1974, with a dissertation on musical practices in Restoration plays. He taught at Washington University, St Louis (1974–81), and then at King's College, London (reader 1985, professor 1988). He became principal of the RAM in 1995. Price's work, chiefly in English dramatic music from Purcell's time to the early 19th century, is concerned with the broader issues of theatrical history, including social and political cross-currents and their influence, as well as the music itself. His vigorous scholarship has thrown much fresh light on the musical theatre of Purcell's time and on London operatic life of the late 18th century.

PAULA MORGAN

Price [née Smith], **Florence Bea(trice)** (*b* Little Rock, AR, 9 April 1887; *d* Chicago, 3 June 1953). American composer. She was the first black American woman to win widespread recognition as a symphonic composer, rising to prominence (with William Grant Still and William Dawson) in the 1930s. After early training with her mother she studied composition at the New England Conservatory in Boston with Wallace Goodrich and Frederick Converse (1903–6) and privately with George Whitefield Chadwick. She gained an Artist's Diploma (organ) and a piano teacher's diploma. She returned to the South to teach at the Cotton Plant-Arkadelphia Academy (1906–7) and Shorter College (1907–10) in Little Rock, then headed the music department of Clark College in Atlanta until 1912, when she returned to Little Rock to marry. In 1927, presumably to escape the increasing racial oppression in the South, the Price family moved to Chicago. There she began a period of compositional creativity and study at the American Conservatory and with Carl Busch, Wesley LaViolette and Arthur Olaf Anderson at the Chicago Musical College. In the 1920s she began to win awards for her compositions, and in 1932 she achieved national recognition when she won first prize in the Wanamaker competition for her Symphony in E minor. With the symphony's première in 1933 by the Chicago SO under Stock, Price became the first black American woman to have an orchestral work performed by a major American orchestra. Her music was taken up by other orchestras, and she won further recognition after Marian Anderson's performance of her arrangement of the spiritual *My soul's been anchored in de Lord* and *Songs to the Dark Virgin*. The latter, a setting of a text by Langston Hughes, is one of her most powerful art songs and was hailed by the *Chicago Daily News* as 'one of the greatest immediate successes ever won by an American song'. She remained active as a composer and teacher until her death.

Price played the theatre organ for silent films, wrote popular music for commercial purposes and orchestrated arrangements for soloists and choirs who performed with the WGN Radio orchestra in Chicago. She is best known for her songs: her art songs and arrangements of spirituals were sung by many of the most renowned singers of the day including, besides Marian Anderson, Blanche Thebom, Etta Moten and Leontyne Price. Although her music was widely performed, her output, comprising over 300 compositions, remains unpublished, apart from a handful of songs and piano pieces. In her large-scale works Price's musical language is often conservative, in keeping with the Romantic nationalist style of the 1920s–40s, but it also reflects the influence of her cultural heritage and the ideals of the 'Harlem renaissance' of the 1920s–30s. She incorporated spirituals and characteristic dance music within classical forms, and at times deviated from traditional structures in deference to influences which are implicitly African-American, for example call-and-response techniques and Juba dance rhythms. To her art songs and piano music she brought a thorough knowledge of instrumental and vocal writing, colourful harmonies and exotic modulations.

WORKS
(*selective list*)

Orch: Sym. no.1, e, 1931–2; Ethiopia's Shadow in America, 1932; Mississippi River, sym., 1934; Pf Conc., d, perf. 1934; Sym. no.2, g; Sym. no.3, c, 1940, *US-NH*; Sym. no.4, d; Vn Conc. no.2, D, 1952; Chicago Suite; Colonial Dance, sym.; Dances in the Canebrakes [arr. of pf piece]; 2 concert ovs. [based on spirituals]; Rhapsody, pf, orch; Songs of the Oak, tone poem; Suite of Negro Dances

RAE LINDA BROWN

Price, John (*fl* *c*1605; *d* Vienna, June 1641). English instrumentalist. He was resident at the Württemberg

court in Stuttgart from 1605 to at least 1625 (and possibly until 1629), at the Saxon court in Dresden from 29 April 1629 to 1633, where he directed the 'Kleine Cammer-Music', at the Danish court in Copenhagen in 1634 and at the imperial court in Vienna (probably in the service of the empress) from 1637 until his death. His son Johann (who was Imperial Kammermusikus in Vienna) sought, as late as 1650, payments due to his father from Prince Johann Georg I of Saxony.

Mersenne admired Price's skill in securing a range of three octaves from a three-hole flute, and Price impressed Philip Hainhofer (in Dresden and Stuttgart) by playing the viola da gamba with one hand and an 'English *pfeifflin*' (perhaps a flageolet) with the other. His performances in 1611 on the cornett and the viola bastarda won him extravagant praise and a salary much greater than that of B. Froberger, the Kapellmeister. In 1629, in Dresden, Schütz much resented the fact that Price received a salary of 300 thaler, considering him no more than a charlatan. Price, however, knew the French, English and Italian styles of the day and performed music not only for the prince elector's court but at plays, masques and on other occasions. None of his own compositions survives.

E. FRED FLINDELL

Price, John Elwood (*b* Tulsa, 21 June 1935; *d* Tuskegee, AL, 9 May 1995). American composer. He studied composition with David Baker at Lincoln University, Bela Rozsa at the University of Tulsa, and Paul Pisk and Robert Wykes at Washington University in St Louis. He taught at Karamu Theater, Cleveland, Florida Memorial College, Eastern Illinois University and Tuskegee University.

Price was committed to realizing an African-centred philosophy in his compositions, expressed through conventional Western musical notation. His works are characterized by polyrhythmic and polycentric structures, in which conflicting rhythmic and tonal patterns share equal prominence, a resistance to sharp formal definitions, and repetition (particularly of two- or three-note patterns) designed to achieve altered consciousness. His work also acknowledges a collective memory shared by successive generations of black Americans and stresses the importance of the communal over the individualistic. The majority of his *c*200 works have not been published.

JACQUELINE L. PICKETT

Price, Jorge Wilson (*b* Bogotá, 20 May 1853; *d* Bogotá, 9 Oct 1953). Colombian music educator. His father, Henry Price (*b* London, 5 March 1819; *d* New York, 12 Dec 1863), a composer and painter, took him to New York in 1855; after Henry's death the boy's mother took Jorge back to Bogotá in 1864. Having completed his college studies there, Price divided his time between a business career (1869–89) and music. Aided by a grant from President Rafael Núñez he founded on 22 February 1882 the Academia Nacional de Música (Conservatorio Nacional de Música from 1910). While he was its director (1882–99, 1909–10) he translated seven texts by Stainer, Cummings, Pauer and Ridley Prentice, and in 1889 inaugurated the degree of Maestro en Música. After his retirement he published a valuable summary of events leading to the foundation of the national music academy. His 72-page brass instruments method (1882) and 126-page treatise on acoustics (1897) were pioneer works in the Spanish language.

ROBERT STEVENSON

Price, (Mary Violet) Leontyne (*b* Laurel, MS, 10 Feb 1927). American soprano. While training as a teacher, she sang with her college glee club. In 1949 she won a scholarship to the Juilliard School, New York, where she sang Alice Ford. In 1952 Virgil Thomson chose her for a Broadway revival of his opera *Four Saints in Three Acts*; thereafter she was immediately engaged as Bess in a new production of Gershwin's opera at the Ziegfeld Theatre (1953) and on a two-year world tour. A concert career (including first performances of works by Barber and Sauguet) was interrupted by a highly successful television appearance as Tosca (1955). This, and appearances at San Francisco in 1957 (as Madame Lidoine in Poulenc's *Dialogues des Carmélites* and as Aida), decided the course of her career. At her débuts at the Verona Arena, Vienna and Covent Garden (all 1958) and La Scala (1960), she had further triumphs as Aida. In 1960 she first appeared at the Salzburg Festival, as Donna Anna, returning there in 1962–3 as Leonora in *Il trovatore*; in the latter role she had made an acclaimed Metropolitan début in 1961. A notable appearance among many in New York was as Cleopatra in Barber's *Antony and Cleopatra*, commissioned for the opening of the new Metropolitan (1966); in 1975 she played Puccini's Manon there, and she made her farewell appearance as Aida in 1985. Though her repertory embraced Poppaea, Handel's Cleopatra, Tatyana, and Mozart and Puccini roles, it was principally in Verdi that she achieved fame as one of the world's

Leontyne Price in the title role of Verdi's 'Aida'

foremost sopranos. Her voice was a true *lirico-spinto*, able to fill Verdi's long phrases with clean, full, dusky tone. Musically she was a subtle interpreter, though her acting did not always evince dramatic involvement. Many recordings, of Mozart, Puccini and, especially, Verdi operas, faithfully document her career.

ALAN BLYTH

Price, Dame **Margaret (Berenice)** (*b* Blackwood, Mon. [now Gwent], 13 April 1941). Welsh soprano. She studied in London, making her début in 1962 with the WNO as Cherubino, then singing Nannetta, Amelia (*Boccanegra*) and Mimì. She first sang at Covent Garden in 1963 as Cherubino; later roles there included Pamina, Marzelline, Donna Anna, Fiordiligi, Countess Almaviva, Desdemona, Norma and Amelia (*Ballo in maschera*). At Glyndebourne she sang the Angel (*Jephtha*) in 1966, then Konstanze and Fiordiligi. In 1967 she appeared as Titania at Aldeburgh. She made her American début in 1969 at San Francisco as Pamina, followed by Nannetta, Fiordiligi and Aida. In 1971 Price made a sensational German début when she sang Donna Anna in Cologne; the same year she first appeared at Munich as Amelia (*Boccanegra*), returning there in Mozart roles and as Ariadne, Adriana Lecouvreur and the Marschallin. She sang in Chicago, at La Scala and at the Paris Opéra, with which she visited New York in 1976, as Countess Almaviva and Desdemona, the role of her Metropolitan début in 1985. Her repertory also embraced Verdi's Joan of Arc and Elisabeth de Valois. Her operatic recordings include several of her Mozart roles, Amelia (*Ballo in maschera*) and Desdemona (both with Solti) and Isolde with Carlos Kleiber. Price was a thoughtful, full-throated interpreter of a wide range of lieder, continuing to give recitals and make recordings after she gave up the stage in 1994. She retired in October 1999. In her earlier years her voice was sweet and brilliant in tone, highly flexible and capable of great dramatic power. Latterly the tone lost something of its bell-like purity, but acquired a new warmth and expressiveness. She was made a CBE in 1982 and a DBE in 1993.

ALAN BLYTH

Price, Robert (*d* Herefordshire, 2 Nov 1761). English amateur musician and music theorist. He was the son of Uvedale Price (*b* 1685; *d* after 1761). Some time before 1737 he travelled to Rome to study composition with Andrea Basili and painting with G.B. Busiri. About 1738 he went to Geneva, where he took part in amateur theatricals with Gaspard Fritz, R.N.A. Neville, J.C. Smith, Benjamin Stillingfleet, William Windham and others. Price superintended the orchestra, painted the scenes, composed airs for the pantomimes and acted various roles. About 1742 he returned to London, where he participated as a gentleman performer at the Apollo Academy. He married Sarah (*d* 1759), a sister of the Hon. Daines Barrington, and in 1746 they retired to Price's country estate at Foxley. Their eldest son, Uvedale (1747–1829), was author of *An Essay on the Picturesque* (London, 1794). Frequent musical entertainments took place at Foxley, with the participation of both relations and friends, including musicians such as J.C. Smith – for whose oratorio *Judith* Price wrote the text – and John Malchair. Price produced a systematization of, and commentary on, Rameau's *Démonstration du principe de l'harmonie* (Paris, 1750); the manuscript (extant in 1811) is now lost.

Price also composed music, and in 1759 he was a steward of the meeting of the three choirs in Hereford. On the death of his friend Windham in 1761, Price, with Stillingfleet, David Garrick and Thomas Dampier, was appointed guardian to his son; shortly after this appointment, Price died from an illness brought on during a visit to his father at Bath.

WORKS

Arias: Aspri rimorsi, for N. Porpora's op Temistocle (A. Zeno), 22 Feb 1743; La destra ti chiede, for N. Jommelli's op Demofoonte (P. Metastasio), 9 Dec 1755; Se mai turbo, for pasticcio Alessandro nel India (Metastasio), 11 Dec 1755 [all first perf. at King's Theatre, London]

6 sonatas, 2 vn, bc (London, *c*1760)

WRITINGS

Correspondence: to Thomas, Earl of Haddington, 19 Dec 1741 (Ketton MSS), quoted in J.R. Clemens: 'Handel and Carey', *The Sackbut*, xi (1930/31), 156, and O.E. Deutsch: *Handel: a Documentary Biography* (London, 1955/*R*), 528–9

JAMIE C. KASSLER

Prick-song. A term current during the late 15th century and the 16th to signify the notation of mensural music, and hence by association polyphonic music itself (as distinct from plainchant). Shakespeare (*Romeo and Juliet*, Act 2 scene iv) had Mercutio describe Tybalt as one who 'fights as you sing prick-song, keeps time, distance, and proportion; rests me his minim rest, one, two, and the third in your bosom'. The expression 'pricking of music books' was used to denote the writing of them. Details of payment for such work are often found in the accounts of cathedral and college choirs; both terms may be used even when, as was usually the case before the Reformation, the accounts were in Latin. Thus from a Worcester acount of 1521–2 we have 'Pro le prykinge unius libri de prikesong ad usum officii hoc anno vis. viiid.', and so on (I. Atkins: *Early Occupants of the Office of Organist ... of Worcester*, Worcester, 1918, p.11).

The word 'prick' was also used to denote the dot of addition and possibly other early uses of the dot, as described in Dowland's translation of Ornithoparchus's *Musicae activae micrologus* (London, 1609): 'A *Pricke* is a certaine indivisible quantity, added to the notes, either for Division or for *Augmentation*, or for *Certainty* sakę. Or it is a certaine Signe lesser than any other accidentally set either before, or after, or betweene notes'.

JOHN CALDWELL

Priest [Preist], **Josias** [Josiah] (*b c*1645; bur. Chelsea, 3 Jan 1735). English dancing-master and choreographer. He may have been the 'Mr Priest' who danced an entrée with Mary Davis in *Sir Martin Mar-All* at the Lincoln's Inn Fields Theatre in 1667 (Downes) and probably the Josiah Preist (the form of the surname often preferred in early sources) who was arrested with four others in 1669 for 'teaching, practising and exercising musick' without a licence. The Joseph Preist who, with Luke Chanell, made the dances for Davenant's *Macbeth* at Dorset Garden Theatre in 1673 and was involved in John Crowne and Nicholas Staggins's masque *Calisto* at Whitehall in 1675 may not be the same person. Established by 1668 as a dancing-master in Holborn, Josias Priest moved to Leicester Fields in about 1675 to run a boarding-school for gentlewomen. In November 1680 he and his wife took charge of a similar school at Gorge's House, Chelsea, where he hosted performances of Blow's *Venus and Adonis* (1684) and Purcell's *Dido and Aeneas* (1689). Although it is widely presumed that he devised the dances for these productions and for Purcell's later semi-operas, the evidence is inconclusive. It appears that several dancing-masters named Preist were active at this time. Downes referred to a 'Mr Priest' and a 'Mr Jo: Priest' in connection with *Dioclesian*, *The Fairy Queen* and *King Arthur*. A collection of dance music published by Thomas Bray in 1699 includes several pieces for dances by 'Mr Preist', 'Mr Josias Preist' and 'Mr Thomas Preist' (Josias's eldest son was called Thomas); some of these were set to music by Purcell (*The Fairy Queen*, *The Indian Queen*) and Jeremiah Clarke (i) (*The Island Princess*), although it is uncertain whether the dances formed part of the original productions or simply borrowed the music. No choreographies for the stage by any of the Preists survive, though individual dances are referred to in the music sources. There is, however, a surviving ballroom dance notation attributed to Josias Priest: a 'Minuet by Mr Preist', for 12 ladies, appears in a collection of figured minuets published by Edmund Pemberton in *An Essay for the Further Improvement of Dancing* (1711).

JENNIFER THORP

Priestman, Brian (*b* Birmingham, 10 Feb 1927). English conductor. After studying at the University of Birmingham and at the Brussels Conservatory, he founded the Orchestra da Camera, Birmingham, and performed an enterprising repertory. He was music director of the Royal Shakespeare Theatre, Stratford-upon-Avon, from 1960 to 1963, music director of the Edmonton SO, Canada, 1964–8, resident conductor of the Baltimore SO, 1968–9, and music director of the Denver SO, 1970–78. In 1973 he became principal conductor of the New Zealand Broadcasting Corporation SO, and music director of the Miami PO, 1978–80. He was principal conductor of the Cape Town SO, 1980–86, during which time he was also professor of the University of Cape Town College of Music. In 1986 Priestman became a visiting artist at the Swedish Royal Academy of Music, Stockholm, and, after a spell as principal conductor of the Malmö SO (1988–90) became artist-in-residence at the University of Kansas in 1992. He has been a guest conductor with orchestras throughout Britain, the USA and elsewhere.

Priestman combines a sound classical style with a strong interest in contemporary music and a scholarly grasp of Baroque performance. He has given the premières of works by Gerhard, Ginastera, Joubert, Josephs and others and has conducted operas for the BBC, ABC and CBC. His recordings include three major Handel works – *Hercules*, *Rodelinda* and *Serse* – and he has published useful performing editions of *Messiah* and the Water Music.

BERNARD JACOBSON

Priest vicar. A member of the Anglican Church clergy. *See under* ANGLICAN AND EPISCOPAL CHURCH MUSIC.

Prieto, Claudio (*b* Muñeca de la Peña, Palencia, 24 Nov 1934). Spanish composer. He first studied composition in Spain with Luis Guzmán Rubio, Samuel Rubio and Ricardo Dorado; later he was a pupil of Petrassi, Porena and Maderna in Italy, and Ligeti, Stockhausen and Earle Brown in Germany. On his return to Spain in 1963 he produced music programmes for Spanish National Radio and worked as a freelance composer; among many prizes, he won the National Prize of the Sindicato Español the following year.

Prieto's career has fallen into three phases: exploration and freedom (1963–75), constructivism and formalism (1976–82), and creative maturity (after 1982). Since *Movimientos* (1962) for violin and chamber ensemble, he has evolved a highly personal musical language which

defies specific aesthetic or conceptual categories. *El juego de la música* (1971) for wind quintet marked a modernist point of arrival in its constructive virtuosity and use of instrumental colour. His large orchestral output is at once innovative, daring and avant-garde, but also contains rich textures of tender beauty. Prieto's work combines precision of form with freedom of expression, and has, throughout, remained characterized by its expressive severity, atmosphere of dramatic tension and extensive timbral experimentation. The communicability of his music has made him one of Spain's most popular contemporary composers.

MIGUEL DE SANTIAGO

Prieto (Arrizubieta), José Ignacio (*b* Gijón, 12 Aug 1900; *d* Alcalá de Henares, 11 Dec 1980). Spanish composer and conductor. He studied the piano and harmony with Pedro Martínez in Bilbao. From 1924 until its disbandment in 1969 he was director of the schola cantorum of the Universidad Pontificia in Comillas, apart from a period (1927–30) when he undertook further studies with Lamote de Grignon, Lambert and Zamacois in Barcelona. He raised the schola to a high standard, continuing the work of its founder Otaño; he took it on tour to most European countries. In 1954 he made a long tour of Japan as a choral and orchestral conductor, and in the same year was appointed to teach harmony at the Pontificio Istituto di Musica Sacra in Rome, a post he held until 1960. He also conducted the chorus of Madrid University (1969–73). His works, which make use of advanced harmony and techniques of scoring, established him as one of the leading Spanish composers of religious music of his time.

JOSÉ LÓPEZ-CALO

Prigozhin, Lyutsian Abramovich (*b* Tashkent, 15 Aug 1926; *d* St Petersburg, 21 Feb 1994). Russian composer and teacher. He studied at the Tashkent Music School from the age of ten and then at the Music College of the Leningrad Conservatory, which was evacuated to Tashkent during World War II. In 1945 he graduated in piano from the Music College of the Leningrad Conservatory and entered V. Shcherbachyov's composition class at the conservatory; he was a pupil of Kochurov from 1949 until his graduation. He joined the Composers' Union in 1950, and in 1964 he was appointed a board member of the Leningrad branch, whose chamber orchestral section he headed between 1969 and 1972. In 1967 he was appointed to teach theory and composition at the Leningrad Conservatory, then in 1979 he became an assistant professor and gained the title Honoured Representative of the Arts of the RSFSR. In 1990 he was appointed professor, and in 1991 he was awarded the title People's Artist of the RSFSR.

Prigozhin's mature works begin with the cantata *Sten'ka Razin* (1949–50), presented as a graduation piece; it reveals his inclination towards epic and dramatic subjects and other important aspects of his style. During the following decade he composed in the most varied genres, especially vocal and instrumental ones (the Sinfonietta and the two symphonies met with great public success). The oratorio *Nepokorennïy Prometey* ('Prometheus Unbound') of 1960 was the first work that fully displays his distinctive style and this is exhibited in more concentrated form in the oratorio *Slovo o polku Igoreve* ('Lay of the Host of Igor") of 1966. In this work epic myth is brought to life by laconic thematicism into which *znamennïy* chant has been absorbed, by lyrical 'protracted' song, choral psalmody and ritual laments. The chamber oratorio *V'yuga* ('The Snowstorm') and the chamber cantata *Predtechi* ('The Precursors') continued in this direction. Emotional restraint, concentration, severity of colour and sharpness of rhythmic-melodic outline are also typical of Prigozhin's chamber pieces, among which the two violin sonatas and the string quartets are outstanding.

A. KLIMOVITSKY

Příhoda, Váša (*b* Vodňany, 22 Aug 1900; *d* Vienna, 26 July 1960). Czech violinist. He was given childhood lessons by his father, who ran a music school, and at the age of ten he became a private pupil of Jan Mařák, professor at the Prague Conservatory. He began giving public concerts when he was 12, appeared at the Prague Mozarteum in 1913, and made his début with the Czech PO in 1915. He appeared in Switzerland, Yugoslavia and Italy in 1919, but the tour failed financially and he was obliged to join a Milan café orchestra. A subscription concert brought him to the attention of Toscanini, whose praise opened the way to a successful tour of Italy early in 1920, followed by appearances in the USA, South Africa, South America and Europe. He also began teaching privately in Prague, and from 1936 at the Salzburg Mozarteum. During World War II he continued to give concerts in Germany, Austria and Bohemia, and taught at the Munich Akademie der Tonkunst in 1944.

After being charged with collaboration with the Nazis, Příhoda left Czechoslovakia in 1946 and settled in Rapallo. In 1950 he took Turkish nationality; he moved to St Gilgen, and became a professor at the Vienna Music Academy where he taught until his death. He returned to Czechoslovakia in 1956 for concerts at the Prague Spring Festival and elsewhere, and shortly before his death he sold his Stradivari violin, the 'Camposelice' dated 1710, to the Czechoslovak state. Příhoda was a romantic virtuoso whose subjective approach to music sometimes went beyond good taste and was not always completely in harmony with a work's stylistic demands, but his vibrantly expressive phrasing communicated spontaneous and passionate feeling. His excellent technique was best displayed in the works of Paganini. He made a number of recordings from the 1930s onwards, and composed several works for violin.

ALENA NEMCOVÁ

Prima (It.). *See* UNISON and PRIME (i).

Prima donna (It.: 'first lady'). The leading female role in an opera, often though not always a soprano; by extension, the leading female singer on the roster of an opera company (although a prima donna role could be played by a castrato); later, a vain, capricious person. The term seems to derive from Italian *commedia dell'arte*, where members of the company fitted into set categories, such as 'first lover' ('moroso'), second comic servant ('zanne') etc. A Venetian salary list of a commedia company from the second half of the 17th century lists a 'Prima Donna', 'Seconda Donna' and 'Terza Donna', receiving 300,

300, 160 and 70 ducats respectively (N. Mangini: *I teatri di Venezia*, 1974, p.71). In contrast to the *commedia*, Italian opera from the middle of the 17th century had large casts that did not follow so rigid a pattern. Discussions of status turned on whether a role was a *prima parte*. For example, the *virtuosa* Vincenza Giulia Masotti insisted in her 1669 contract with the impresario Marco Faustini that she see the operas she was to sing in ahead of time in order to ensure that she had been assigned the *prime parti*.

The establishment of the term 'prima donna' in opera came largely with the rise of *opera seria*, in which a smaller cast of more regular constitution generally included two women, both with substantial parts but one as a rule more prominent. In 1679, Alessandro Stradella was able to describe the 'exquisite' opera company in Genoa in terms of fixed roles that reflect the earlier commedia parts: a prima donna and seconda donna along with two castratos (called 'primo soprano' and 'secondo soprano'), a contralto, tenor and bass, as well as a *buffo* (a male comic role) and *vecchia* (a male singer playing an old woman) (C. Gianturco: *Alessandro Stradella, 1639–1682: his Life and Music*, 1994, p.286). In 1738, a possible cast list for an opera company in Palermo written up by the impresario Luca Casimiro degli Albizzi looks strikingly similar: it included a prima donna (contralto), seconda donna (soprano) and four male voices (two sopranos, one contralto, one tenor) for the *seria* roles and one woman and one man for the *buffo* roles (W. Holmes: *Opera Observed: Views of a Florentine Impresario in the Early Eighteenth Century*, 1993, p.100).

In the early 18th century, the term expanded to mean not just the role but also the singer who performed such roles. Faustina Bordoni, for example, is identified as a prima donna. The self-important and temperamental behaviour of many leading female singers led further to the association of this term with those character traits. Caricatures and satires of such singers began to appear in the early 18th century, although the terminology was still not universal. Benedetto Marcello's *Il teatro alla moda* (*c*1720) retains the older terms of MUSICO and VIRTUOSA for the male castrato and female leading singers, except in the advice, referring to roles, that 'the prima donna should not pay the least bit of attention to the seconda, nor should the seconda to the terza, and so forth'. Gottlieb Stephanie's satirical libretto *Der Schauspieldirektor* set by Mozart in 1786 uses an equivalent German phrase, 'erste Sängerin'. When conflicts arose as to which donna was prima, managerial ingenuity devised such expressions as 'altra prima donna', 'prima donna assoluta', and even 'prima donna assoluta e sola'. In some cases prima donnas made it a point of status to be difficult. For example, into the contracts of Adelina Patti (1843–1919) at the height of her career went not only the stipulation that her name appear on posters in letters at least one-third larger than those used for other singers' names, but also a clause excusing her from attending rehearsals.

Today the term is no longer exclusively associated with leading roles but may be used of any leading woman singer. It has also entered the general vocabulary as an expression for anyone (not necessarily a singer) who carries on in an outrageously egotistical manner.

Primal Scream. Scottish rock group. It was formed in Glasgow in 1986 by Bobby Gillespie (*b* 22 June 1964; vocals), who had previously played the drums with the Jesus and Mary Chain, and has featured a number of changes in its line-up. They originally had a guitar-based indie sound that hinted at 1960s rock, but their main contribution to popular music will forever be associated with one epochal album, *Screamadelica* (Creation, 1991). It instantly became a cult classic, and was one of the benchmarks for much of British pop in the 1990s. The album's success lay primarily in the production of Andy Weatherall and others who remixed the majority of the tracks. On *Loaded* and *Movin' on Up* Weatherall created a slow-tempoed dance feeling, adding house-style piano, horns, gospel vocals and sequenced percussion to the band's guitars and drums, while *Higher than the Sun* (produced by The Orb) and *Inner Flight* moved towards a more ambient, psychedelic sound. *Screamadelica* was one of the finest and most complete marriages of indie-style minimalist rock and American hip hop rhythms, and paved the way for the hybridization of sampled sounds with guitar-based pop in the UK. The follow-up album, *Give Out but Don't Give up* (Creation, 1994; produced by Tom Dowd), was much less impressive with its more strident and derivative gospel and rhythm and blues stylings, but on the acclaimed *Vanishing Point* (Creation, 1997) the band brought their sound up to date and embraced dance music once again.

DAVID BUCKLEY

Prima pratica (It.). The terms *prima pratica* ('first practice') and *seconda pratica* arose during the controversy between Claudio Monteverdi and G.M. Artusi in the early years of the 17th century about the new style of composition and, in particular, its dissonance treatment.

The expression *seconda pratica* first appeared in print in a letter which must have been written in about 1601 signed 'L'Ottuso Academico', reproduced by Artusi in *Seconda parte dell'Artusi* (1603). The term occurs in reference to the practice of rising after a flattened note and descending after a sharpened one, which l'Ottuso defends, saying that all the moderns are doing it, 'most of all those who have embraced this new second practice'. Artusi had criticized this and other melodic licences as well as the free introduction of dissonances in *L'Artusi, overo Delle imperfettioni della moderna musica* (1600). Only in 1605 did Monteverdi reply briefly to this public attack; in a prefatory letter to his fifth book of madrigals he promised to defend his new practices by considerations based on both the reason and the senses in an essay he would entitle *Seconda pratica, overo Perfettione della musica moderna*. The second part of the title parodies Artusi's; the phrase *seconda pratica*, on the other hand, may have originated in the circles around Monteverdi or in Ferrara as a designation of the modern madrigal style.

Giulio Cesare Monteverdi, the composer's brother, attributed the term to Monteverdi in an explication

('Dichiaratione' in *Scherzi musicali*, 1607) of Claudio's brief preface which is a veritable manifesto for the new style. Giulio Cesare stated that in the first practice, for which Gioseffo Zarlino codified the rules, the paramount consideration for the composer was the 'harmony' or beauty of the contrapuntal part-writing, whereas in the second practice, for which Claudio hoped to sum up the rules, it is the text that reigns, and this obeys the precept of Plato, who proclaimed that in a song (*melos*), the *harmonia* (agreement or relation of sounds) and the *rhythmos* (time and rhythm) should follow the *logos* (word or thought) (*Republic*, 398*d*). Giulio Cesare interpreted these words to mean that counterpoint and rhythm should be subordinated to the text. Thus, if the text demands certain crudities of harmony and melody or irregularities of rhythm, these departures from the correct usages of the first practice are justified for the sake of expressing the meaning and rhythm of the text.

Giulio Cesare named as masters of the first practice Ockeghem, Josquin, Pierre de La Rue, Jean Mouton, Crecquillon, Clemens non Papa and Gombert, and he considered it to have reached its perfection with Adrian Willaert. According to Giulio Cesare the second practice was 'revived' from that of the ancient Greeks by Cipriano de Rore, who then was emulated by Gesualdo, Emilio de' Cavalieri, Fontanelli, a 'Conte di Camerata' (possibly Bardi or Girolamo Branciforte), Giovanni del Turco, Tomaso Pecci, Ingegneri, Marenzio, Wert, Luzzaschi, Jacopo Peri and Giulio Caccini.

Although these terms for the two practices were new, recognition of two diverse approaches to composition was apparently current when the controversy began. Girolamo Diruta (*Seconda parte del Transilvano*, 1609) distinguished between *contrapunto osservato*, strict counterpoint, and *contrapunto commune*, a freer modern style; Adriano Banchieri followed suit in *Cartella musicale* (1614). Both authors treated the two styles as if they existed side by side. The Monteverdi brothers, on the other hand, implied that the *seconda pratica* replaced the *prima*, although in fact a number of Monteverdi's sacred works are written in an idiom adapted from and adhering to the rules of the latter.

Marco Scacchi later pointed out (*Breve discorso sopra la musica moderna*, 1649) that unlike the composers of *musica antica*, who had available only one practice and style, modern composers could choose between two practices – the first, *ut harmonia sit domina orationis* (in which harmony is mistress of the word), and the second, *ut oratio sit domina harmoniae* (in which the word is mistress of harmony) – and three styles, the church (*ecclesiasticus*), the chamber (*cubicularis*) and the stage (*scenicus*) or theatrical (*theatralis*). Scacchi's classification was further developed by his pupil Angelo Berardi and by Christoph Bernhard and J.J. Fux. It eventually served Johann Mattheson as the basis for a comprehensive classification of musical styles in *Der vollkommene Capellmeister* (1739).

CLAUDE V. PALISCA

Primas, Hugh. *See* HUGH PRIMAS OF ORLÉANS.

Primavera, Giovan Leonardo (*b* Barletta, *c*1540–45; *d* ?Naples, after 1585). Italian composer and poet. About 1560 he left Barletta for Naples where he served Fabrizio Gesualdo, to whom he dedicated his earliest madrigals. He probably worked in Venice from 1565 to 1578 with a brief sojourn in Milan. On the title-page of *I frutti* (1574), he is described as *maestro di cappella* for Luis de Requesens, Spanish governor of Milan (April 1572–September 1573). Primavera dedicated this book to Nicola Antonio Caracciolo, a former Neapolitan patron who had moved to Venice. Most of Primavera's publications from this period are signed in Venice and dedicated to Venetians or residents of the city, and he set numerous madrigal poems by Venetian aristocrats such as Gabutio, Gradenico, Guidi and Zampesco. Moreover, some of his *napolitane* have texts that recall the villotta. Cerreto's claim (*Della prattica musica*, 1601) that Primavera and Carlo Gesualdo founded a 'Camerata di propaganda per l'affinamento del gusto musicale' in Naples cannot be substantiated. Primavera had, however, returned to Naples by 1585 and was on good terms with Gesualdo, to whom he dedicated his seventh book of madrigals in that year.

Primavera shared the title-page of his first book of *napolitane* with Giovanni Leonardo dell'Arpa, whose *arioso* style he evidently admired. Their settings of couplet-based *villanelle* are quite similar, with lively syllabic declamation on short note values including consecutive texted *fusae*. The three voices are disposed in close position and move within a range that seldom exceeds a 10th. Homorhythmic textures with long chains of parallel 5ths predominate, although Primavera's third book includes some imitative pieces.

His first two madrigal books consist mainly of settings of Petrarch's sonnets in the customary two parts. The writing for five voices is assured and fluid, especially in the use of melismas descending in parallel 3rds or 10ths. The music of the final line is often repeated; word-painting devices are used sparingly, although words signifying darkness are often symbolized by black notation. An early six-part madrigal, *Nasce la gioia mia* (RISM 1565[16]) was the model for a parody mass by Palestrina. Later books contain poems by Tansillo (*A caso un giorno*), Tarquinia Molza and a few by Primavera himself (in his third book he apologized for his 'little and badly composed rhymes'). He composed homage madrigals for noblemen (Don Giovanni of Austria and Vincenzo Gonzaga), noblewomen (Chiara Pisani) and courtesans. The seventh book opens with a canzonetta-madrigal in the composer's most modern vein (Sannazaro's *Fillide mia*) and includes a complete sestina (Petrarch's *Chi è fermato*).

DONNA G. CARDAMONE

Prima volta (It.: 'first time'). *See* VOLTA (iii).

Prime (i) (Lat. *prima, hora prima, ad primam*). The first of the LITTLE HOURS of the DIVINE OFFICE, recited at sunrise. It is combined with the monastic *officium capituli*, or prayers for God's blessing on the day's work. The martyrology is read at Prime. *See also* LITURGY OF THE HOURS.

Prime (ii). *See* UNISON.

Primo (It.: 'first', 'principal'). In piano duets, the part for the player seated on the right and playing the upper parts of the piece.

Primo musico (It.: 'first musician'). In the 17th century, MUSICO meant a professional singer or musician of either sex; it later came to mean a castrato. With the decline and then the disappearance of the operatic castrato after 1800, the practice of assigning a leading male part (*primo uomo*) to a high voice continued from about 1800 to 1850 with a woman singing in breeches, described as *primo musico* (or simply *musico*). As with the older *primo uomo* part for castrato, the *primo musico* role was usually that of a lover or aristocratic friend (such as Tancredi in Rossini's opera or Maffio Orsini in Donizetti's *Lucrezia Borgia*). A *musico* was often but not invariably a contralto or mezzo-soprano; Giulia Grisi had a contract as both prima donna and *primo musico* and demanded that it be rewritten to specify *primo musico soprano* (to Alessandro Lanari, 9 July 1830, *I-Ms* Coll. Casati 659).

The tradition of having the parts of children and adolescent boys sung by women is distinct; *see* BREECHES PART.

JOHN ROSSELLI/R

Primo uomo (It.: 'first man'). The leading male part in an opera or on the roster of an opera company. In the 18th century, the term developed alongside PRIMA DONNA. By convention the primo uomo was a young prince or leading rebel, and almost invariably a lover, but not necessarily the title role, which might be a ruler or tyrant. For example, in Handel's *Tamerlano* (1724), the leading castrato Senesino played the young lover's role of Andronico and the second castrato took the title role. The impresario Luca Casimiro degli Albizzi wrote in 1740, 'Do not hire any of the other singers until you have signed the prima donna and the primo uomo; it is around them that the company is built' (W. Holmes: *Opera Observed: Views of a Florentine Impresario in the Early Eighteenth Century*, 1993, p.103). Leading casatratos were often identified by vocal range rather than by role. In 1679, Alessandro Stradella wrote of an opera company in Genoa, 'The primo soprano is Signor Marcantonio Orrigoni . . . who sings most well, is not too favoured in voice, but is nevertheless quite liked; and what is admired more, acted and acts like an angel of paradise. The secondo soprano is Signor Francesco Rossi of Rome, who was not liked and because of this we made him sing little, so that it didn't matter much' (C. Gianturco: *Alessandro Stradella (1639–1682): his Life and Music*, 1994, p.288). In 18th-century *opera seria*, the role of primo uomo was generally assigned to a castrato, but on occasion to a woman (*see* BREECHES PART and TRAVESTY). With the decline of the operatic castrato after 1800 the leading male role of the lover or young rebel came to be cast first as a woman (*see* PRIMO MUSICO) and thereafter (around 1850) as a tenor. Riemann (*Musik-Lexicon*, 1882) defines 'primo uomo' as 'first tenor'.

ELLEN T. HARRIS

Primrose (*fl c*1650). English composer. He was possibly employed as a household musician. From the muniments of Sir William Boteler (Butler) of Biddenham, Bedfordshire (*d* 1656), an eminent local patron, a prominent parliamentarian and apparently a keen musician, comes a manuscript partbook containing the bass parts of over 60

consort pieces for three viols by Jenkins, William Lawes, Hingeston, Blondill and 'Mr Primrose' (*GB-Lbl* Add. 62152A). The 11 consecutive Primrose pieces, all binary dances, are grouped into three-movement suites comprising Allmaine-Corant-Saraband, the final suite lacking a saraband (completed in the manuscript by a matching saraband by Jenkins). One of the complete suites also survives in full score, on three staves, on an accompanying sheet of paper, apparently in the same hand (*GB-Lbl* Add. 62152B). This D minor suite, simple in harmony and texture, is less tautly constructed than Jenkins's work and is noteworthy only for some interesting hemiola rhythms in the corant (ed. in Viola da Gamba Society, suppl. pubn no.103).

An almande and some 'brandes' by Primrose are included, with music by other English composers, in the Dutch dance collection *'T uitnement kabinet* (RISM, 1646[12]). (*DoddI*)

RICHARD MARLOW/ANDREW ASHBEE

Primrose, William (*b* Glasgow, 23 Aug 1904; *d* Provo, UT, 1 May 1982). Scottish viola player. He studied the violin in Glasgow with Camillo Ritter, then at the GSM in London, and in Belgium under Ysaÿe (1925–7), who advised him to change to the viola. He toured as a soloist and in the London String Quartet (1930–35). Toscanini chose him as principal viola in the NBC SO (1937–42). He appeared as a soloist with orchestras in Europe and the USA, becoming the foremost viola virtuoso. In 1939 he formed the Primrose Quartet. In 1944 he commissioned Bartók to write a viola concerto, and in 1949 gave the first performance of the work, which was completed by Tibor Serly after Bartók's death. Other composers who wrote for him were Britten, Milhaud, Rochberg, Edmund Rubbra and P.R. Fricker. He formed the Festival Quartet (1954–62) from the faculty of the Aspen Music School. In 1962 the University of Southern California, Los Angeles, invited Heifetz, Piatigorsky and Primrose to teach their respective instruments and chamber music. The three also made recordings together.

In 1963 Primrose suffered a heart attack, and from that year onwards devoted most of his time to teaching, first at Indiana University (1965–72), and later at the Tokyo National University of Fine Arts and Music (1972). In Japan he was also associated with Tōhō Gakuen School in Tokyo and Suzuki's institute in Mutsumoto. He gave masterclasses in the USA and Europe, judged many international music competitions, then taught at Brigham Young University from 1979 until his death. He wrote *Technique is Memory* (1960), and also edited works from the viola repertory and made numerous arrangements for viola. His memoirs, *Walk on the North Side*, were published in 1978. He was made a CBE in 1953 and received an honorary doctorate from Eastern Michigan University.

Generally Primrose played on a viola of moderate size, producing a tone of rare sweetness and beauty. His first viola was an Amati of 1600, but he also played on a viola by Andrea Guarneri (1697) and two Stradivari instruments, the 'Gibson' (1734) and the 'MacDonald' (1700).

WATSON FORBES/R

Prin, Jean-Baptiste (*b* England, *c*1669; *d* Strasbourg, after 1742). French performer, composer, teacher and dancing-master. He was taught the trumpet marine by an English teacher and by his father, a French émigré bookdealer in England. His father must have been the M Prin that Samuel Pepys mentioned having heard at Charing Cross on 24 October 1667.

Jean-Baptiste is known to have been married in Lyons in January 1689. After 1698 he was a dancer in Paris as well as a performer on the trumpet marine. In 1704 he returned to Lyons, where he married again. Until his retirement to Strasbourg in 1737 he found employment as a teacher and player of the trumpet marine in Lyons, noting in his memoirs that he had caused more than 150 of the instruments to be constructed during these years. Church records show the baptism of a child of his third marriage in July 1735. One of his sons achieved some fame as a dancer and actor in Paris early in the century, and another became the director of the Comédie in Bordeaux in 1755.

In 1742 Prin donated his trumpet marine and his manuscripts to the academy at Lyons. The instrument was sold in 1792, but the manuscripts were deposited in the municipal library, where they still remain. In all they contain 216 different works for the trumpet marine. Of these, seven are attributed specifically to Prin, 56 to Lully, and one each to Hotteterre and Philidor. Those remaining, whether original or arrangements, are presumably by Prin. Altogether the manuscripts represent about 85% of the known literature for the instrument. His *Traité sur la trompette marine* treats its history, construction and performance.

Prin's music, much in the vein of the simpler instrumental pieces of the period, is written idiomatically for the trumpet marine. His melodies basically move stepwise; the few skips are harmonically orientated and are restricted to crotchet or longer rhythms because of the difficulty of performance. Similarly the slurs, carefully notated in the manuscripts, are restricted to two-note patterns. The only ornament discussed and employed by Prin is the trill, which is always indicated by a small cross.

About 80% of his music is cast in a binary dance form; about half of these works are non-modulating. Prin was particularly fond of the rounded binary form and the rondeau. In the latter form the trumpet marine does not play during the episodes, which are in other keys. In the former, however, modulations are made either to the dominant or subdominant, both of which are possible on the instrument.

WORKS

Livre de la musique du roy, 1702, *F-LYm* Res.133651 (165 pieces including 17 duets and Prin's 4 concerts)

Airs de trompette et viollons, 1718, *LYm* Res.133934 (75 pieces; vn 2 part missing)

Concert de trompette, haubois et viollons, 1724, *LYm* Res.133671 (4 vols. containing the accompaniment for the concerts)

Traité sur la trompette marine, 1742, *LYm* Res.133670 (includes 86 pieces, of which 16 are duets)

CECIL ADKINS

Prince [Nelson, Prince Rogers; The Artist Formerly Known As Prince; TAFKAP] (*b* Minneapolis, 7 June 1960). American rock and pop singer, instrumentalist, songwriter and producer. As a teenager he began playing the guitar, drums and piano and formed his first band while still at school. Over the next few years he made a number of recordings and became acquainted with studio production skills. In 1977 he signed a deal with Warner Bros. Records that allowed him complete creative freedom, which at the time was almost unprecedented among black solo artists. His first album *For You* (1978) failed to enter the charts, but *Prince* (1979) fared a little better and contained the hit 'I wanna be your lover'. Around this time he formed his first touring band which established his precedent for using black, white, male and female musicians. His third album *Dirty Mind* (1980) lost much radio airplay owing to its sexually explicit themes and it was not until *1999* (1982) that Prince received widespread recognition, helped by the promotion on MTV of the hit single 'Little Red Corvette'. The soundtrack album to his film *Purple Rain* (1984) featured his new band the Revolution and was even more successful, producing three hit singles (the title track, 'When Doves Cry' and 'Let's Go Crazy') and winning three Grammy awards. In 1985 he established his own record label and studio complex, Paisley Park, in Minneapolis.

During the 1980s and 90s Prince has continued to write, record and perform at a tremendous rate, including the albums *Parade* (1986) and *Love* (1993). In 1989 he contributed to the soundtrack of Tim Burton's film *Batman*. However, pressure from Warner Bros. to release more material than he was willing led Prince to adopt the symbol introduced on his 1992 album as his name and eventually split with that company in 1996: he has recently readopted the name Prince, however. Throughout his career he has augmented his own work by frequently writing and producing for other performers, including Mica Paris, Sheena Easton, Sinéad O'Connor, the Bangles and Cyndi Lauper.

Prince's music shows the strong influence of such funk performers as Sly Stone, George Clinton and Rick James, but always maintains its own distinctive character. After the light funk of his early albums, Prince gradually incorporated more diverse styles into his work. The 'solo' album *Sign o' the Times* (1987) and *Lovesexy* (1988) are his most varied and perhaps best works, where minimal, hip hop-influenced and Parliament-style funk, melodic pop, American rock, soul ballads, jazz and blues were reconciled and characterized by Prince's contemporary production, skilful songwriting and unusual arranging. He employed complex vocal arrangements, whether the unusual doo-wop-style harmonies of 'It' and 'Starfish and Coffee' or the multi-part collective lead singing of 'Glam Slam'. In 'Housequake' he placed the conventional elements of funk in an unusual harmonic context. *Diamonds and Pearls* (1991) had a tighter sound, owing in part to musicians of the New Power Generation, and drew on styles and practices of the early 1990s. Using more natural-sounding production in place of the processed sounds and minimal drums of previous albums, Prince created busier, heavier grooves lifted by additional percussion and sequenced material (notably 'Gett off'). While using the horns less often, the gospel-influenced vocals of Rosie Gaines (on the title track) and the rapping of Tony M ('Jug Head') lent a new dimension to Prince's sound. *Emancipation* (NPG, 1996) made use of more sequenced and sampled material and showed the continuing influence of dance music.

As well as being a composer and producer, Prince is an accomplished performer, playing the bass and lead guitar, the latter in a style derived from Hendrix. He has a distinctive voice and employs an exceptionally wide range of vocal effects. By combining traditionally black and white styles, he has attracted a broad audience and become one of the most successful solo performers in popular music. Unlike many other artists, however, Prince maintains control over virtually every aspect of his music, which is thus branded with his own unmistakable character.

CHARLIE FURNISS

Prince, George A. (*b* Boston, 17 Feb 1818; *d* Buffalo, NY, 3 March 1890). American manufacturer of melodeons (reed organs; *see* MELODEON, (1)). About 1840 he established the firm George A. Prince & Co. in Buffalo. It was one of the first to attempt large-scale production of reed organs in the USA, employing 150 men and producing 75 instruments a week by 1846. Prince took out several patents that year for improvements to melodeons. In 1847 Emmons Hamlin, then working for Prince, discovered a method of improving tone by slightly bending and twisting the reed tongues. In the early 1850s Hamlin also introduced the double bellows, but he left Prince in 1854 and, with Henry Mason, founded the MASON & HAMLIN firm, which dominated reed organ manufacturing in the USA in the late 19th century. In the 1860s Prince introduced a line of larger reed organs, including the 'New Organ Melodeon', which had two manuals, four sets of reeds, and one and a half octaves of pedals. The firm went into bankruptcy in 1875.

BARBARA OWEN

Prince, Hal [Harold] (**Smith**) (*b* New York, 30 Jan 1928). American director and producer. At the age of 20 he began a theatrical apprenticeship with George Abbott,

Ex.1 The registers of the natural trumpet

learning from Abbott's staging of Berlin's *Call Me Madam* (1950) and Bernstein's *Wonderful Town* (1953). In 1954 he went into production with Robert E. Griffith and scored an immediate hit with *The Pajama Game* by Adler and Ross, whose *Damn Yankees* (1955) also ran for more than 1000 performances, establishing Prince as a creative force. With Bernstein and Sondheim's *West Side Story* (1957), and Bock and Harnick's Pulitzer prize-winning *Fiorello!* (1959), he combined commercial success with innovation. His greatest influence at the time was Jerome Robbins; *West Side Story* had been their third collaboration, but the next, *Fiddler on the Roof* (Bock and Harnick, 1964), demonstrated through Robbins's staging how a particular, almost conventional musical-comedy story can take on a universal significance. The search for the universality or metaphor in any show became a priority for Prince.

In 1966 he created his first masterwork with Kander and Ebb's *Cabaret*, the first in a series of concept musicals where Prince used his directorial input to explore the darker side of a traditionally light form. With Sondheim he created six ground-breaking shows between 1970 and 1981, *Company*, *Follies*, *A Little Night Music*, *Pacific Overtures*, *Sweeney Todd* and *Merrily We Roll Along*. In 1979 he staged Tim Rice and Andrew Lloyd Webber's *Evita* as a Brechtian parable, while Hart and Lloyd Webber's *The Phantom of the Opera* (1986) was visualized by Prince as a lavish homage to 19th-century theatre, and for which he created a series of stunning romantic tableaux with designer Maria Bjørnson. He was reunited with Kander and Ebb for *Kiss of the Spider Woman*, and the show's triumphant arrival on Broadway in 1993 signalled a renaissance of the Broadway musical. In the same year he revived *Show Boat*, after 40 years creating new works, and restored its darker elements, considered unpalatable in 1927. The success of the production was indicative of the fact that Prince, continually drawn to unconventional material and new staging methods, had changed audiences' perception of the musical: racism, along with fascism, murder, colonialism and even cannibalism could be discussed seriously within the form.

Principal. *See under* ORGAN STOP; *see also* PRINCIPALE.

Principale [Principal, Prinzipal, Prinzipale]. A trumpet register and a style of playing from the 16th century to the 18th. The term refers to the low register of the natural trumpet, from *g* or *c′* upwards, as opposed to clarino, from *c″* upwards. The terms 'Principale' (the register) and 'Principalblasen' (playing in the principale register) were German, and were not used in other countries. Ex.1 shows the range of the natural trumpet, together with the Italian and German designations both of the individual notes and also of the various registers of the instrument, each centred on a certain note.

The natural trumpet was used in two ways: as a solo instrument for signalling purposes, it was played in the principale register (*see* SIGNAL); and for ceremonial purposes several players banded together in a 'corps'. From about 1585 to 1685, according to Bendinelli, Monteverdi, Fantini, Praetorius, Schütz and Speer, the trumpet corps consisted of from five to seven players, who improvised in specific registers of their instrument, termed – from top to bottom – clarino, quinta, alto e basso, volgano and basso (to use the Italian terminology). From about 1685 to 1800 three parts, two clarinos and one principale, became common; the best example of this kind of writing is Handel's 'Dettingen' *Te Deum*. If a fourth part was added, it had the same notes as the kettledrums and was called toccato, dugetto or the like. (Or, in the writing of Austrian composers, the two lower parts were called tromba 1 and 2 and the two upper parts clarino 1 and 2.)

The principale player had to develop a strong and blasting tone (Ger. *schmettern*: 'to blast'). He also had to excel in the use of double and triple tonguing, regarded by many as the noblest aspect of trumpet playing. In the field, where he was used for signalling purposes, the trumpeter was also entrusted with courier duties, carrying messages to the enemy; the dangers of such assignments are vividly recounted by J.E. Altenburg: *Versuch einer Anleitung zur heroisch-musikalischen Trompeter- und Pauker-Kunst* (Halle, 1795/*R*, pp.41ff; Eng. trans., Nashville, TN, 1974).

REINE DAHLQVIST, EDWARD H. TARR

Prinner [Preiner], **Johann Jacob** (*b* ?Münzbach, 1624; *d* Vienna, 18 March 1694). Austrian composer, organist, poet and music theorist. He was educated partly in Italy, studying in Siena in 1651. He appears to be identical with the J.J. Preiner who was organist at the abbey church at Kremsmünster, Upper Austria, from 1 July 1652 to 1 September 1659. At the end of 1670 J.H. Schmelzer, praising Prinner as composer, organist and poet, described him as Kapellmeister at the court of Prince Eggenberg at Graz. The latter was dismissing his musicians at the time, so Schmelzer recommended Prinner for the post left vacant by Biber at the court of the Prince-Bishop of

Olomouc at Kroměříž, but P.J. Vejvanovský was appointed; since, however, some suites by Prinner, one dated 1676, survive at Kroměříž, he may nevertheless have lived there for a time. The petition he addressed to Emperor Leopold I on 7 November 1680, asking to be made chamberlain to Archduchess Maria Antonia, in Vienna, discloses that he taught her the harpsichord. The petition was granted, but when in 1685 the archduchess moved to Bavaria on her marriage to the Elector Maximilian Emanuel, Prinner remained in Vienna. He drew an annual pension of 420 florins from the imperial court until his death.

Prinner's 47 arias for soprano and continuo are settings of verses in several stanzas; he himself probably wrote the texts, some of which are in dialect. They are unpretentious songs in the popular Viennese style, similar to the German songs of Leopold I and Schmelzer. Some of the melodies may have originated in Viennese dance music and street songs and have been provided with new texts. The influence of French instrumental music is also discernible. In his suites Prinner added to the standard movements introductory and closing movements as well as a gavotte or aria between the saraband and gigue.

Prinner's *Musicalischer Schlissl* presents the fundamental principles of his teaching of theory. The treatise contains an outline of the rudiments of music and thoroughbass, but this is unimportant compared with the contemporary treatises on the latter subject by Poglietti and Georg Muffat. The most valuable section of the volume is that containing detailed instructions for the technique of playing string instruments. The most notable of these is Prinner's recommendation that the violin should be held by the chin as the only means of leaving the left hand free to execute the fingering correctly without needing also to support the instrument. He expressly condemned players who rest their violins on the chest. He followed French practice in the technique of bowing, but was acquainted only with Italian *ondeggiando* technique and not with its French equivalent. The sections on counterpoint and rhetorical figures follow closely – often word for word and with the same examples – Christoph Bernhard's *Ausführlicher Bericht vom Gebrauche der Con- und Dissonantien*. Prinner condemned as fashionable folly the preference shown in Austria for foreign artists. (That the Emperor Leopold I shared this view is illustrated by his appointment of Fux as composer to the imperial court in 1698 despite the opposition of the Italian musicians there.)

HELLMUT FEDERHOFER

Printemps [Wigniolle], **Yvonne** (*b* Ermont, Seine-et-Oise, 25 July 1894; *d* Neuilly, nr Paris, 18 Jan 1977). French soprano. She made her début in revue at the Théâtre Cigale in Paris at the age of 12. A career at the Opéra-Comique seemed possible, for she had a voice of delightful quality with prodigious breath control; in 1916, however, she joined the company of actors run by Sacha Guitry, whom she married three years later. Together they enjoyed a great international success in the theatre in plays and *opérettes*, including Messager's *L'amour masqué* and Hahn's *Mozart*, until their divorce in 1932, after which Printemps appeared in films and two musicals – Noël Coward's *Conversation Piece* (1934) and Oscar Straus's *Les trois valses* (1937). In 1949 she appeared as Hortense Schneider, with her second husband (Pierre Fresnay) as Offenbach, in Marcel Achard's film *La valse de Paris*. Several composers wrote specially for her, including Poulenc and Hahn. Her recordings of song and operetta reveal a light voice managed with skill, charm and imagination.

J.B. STEANE

Printing and publishing of music. Printing is a technique for producing many single sets of copies taken from raised, incised or plane surfaces: that is, from type or from wood or metal blocks cut in relief; from copper, pewter or other metals engraved and punched; from stone or metal plates bearing an image imperceptibly raised. These, generally called letterpress, intaglio and lithographic printing, have each been used for printing music, and each has enjoyed a period of pre-eminence.

I. Printing. II. Publishing.

I. Printing

The waxing and waning of different printing processes was not in the lineal order of a successor taking the place of its antecedent: over long periods the processes were in use side by side, the unique qualities of each of which was employed for some particular purpose. At the beginning of the 19th century, for example, Breitkopf & Härtel were printing music from type, from engraved plates and from lithographic stones concurrently. It is only since the late 1960s that music type has all but disappeared from the case rooms of printing offices and hand engraving has been supplanted by computerized production of visual text from which photographic plates are prepared.

Before the technique of printing was established and exploited widely, music was preserved and circulated in manuscript, or survived as a repertory carried in oral tradition among priests and professional lay musicians. During the latter part of the 15th century printing became the accepted means by which works of literature, history, philosophy and scientific speculation were multiplied and disseminated in hundreds of copies – school primers by the thousand; but almost all music was still circulated in handwritten form. Manuscripts were prepared for sale in this way at least until the beginning of the 19th century: the names of Foucault in Paris, Traeg in Vienna, Breitkopf in Leipzig and Ricordi in Milan recall the continuity and significance of this tradition. The dichotomy between the means chosen to perpetuate the 'word' on the one hand and the 'note' on the other arises more from social and economic factors than from technological ones: and it raises questions about the spread of musical literacy, about the regulation of printing by state institutions, about the size and nature of the musical public and the scale of the market – national and international – at any given time. These issues have to be borne in mind, for each was one of the forces influencing, and reacting with, changes in technology. The following article outlines a history and a series of techniques which are discussed in much more detail elsewhere (Krummel and Sadie, B1990).

1. Early stages. 2. Woodblock printing. 3. Printing from type (i) Basic techniques (ii) Early history (iii) 18th-century innovations (iv) 19th-century developments. 4. Engraving: (i) Early history (ii) Techniques and later history. 5. Lithography and more recent processes: (i) Lithography (ii) Transfer and photographic processes (iii) Stencils and dry transfer (iv) Musical typewriters. 6. Music publishing by computer: (i) Methods (ii) History.

1. Early stages. The early stages of music printing show a diversity of technical solutions, for it cannot be claimed that music adapted itself immediately to the printed page. It first appeared, albeit in manuscript, in the Mainz psalter issued by Fust and Schoeffer in 1457. Sir Irvine Masson in his study of the surviving copies of this superb book found evidence that 'although no music was printed the compositors made the most careful provision for its being added by hand', and after citing examples suggested that 'no doubt the compositors of the psalter worked from manuscript which was musically complete'. If that is so, then those who subsequently wrote the music – using different styles of notation – were very careless. For example in the exceptionally fine copy in the library of Queen Elizabeth II at Windsor a splendid red printed initial on folio 29*b* driven well into the vellum has been unskilfully erased to accommodate a melody notated in Gothic style: in the British Library copy the corresponding initial has been written over.

This pattern with its resulting infelicities was characteristic of many liturgical books printed during the 15th century and even into the 16th. Sometimes space for music was left blank on the page, sometimes the staff lines were printed (in red, only exceptionally in black). Presumably the music necessary to complete the text was added by professional scribes attached to the court, cathedral or monastery where the books were to be used, but the result favours the words over the music, which, while often beautifully written, elsewhere uses dull ink or is modestly drawn or omitted entirely. The space allotted to music, while usually adequate, was still determined by compositors whose standards and ideals were those of the literary text, and whose achievements in this speciality are typically very impressive, on occasion spectacular and noble.

The principal reason for the survival of this makeshift technique has often been assumed to be that liturgical usage in music, even in the words of the Office, was not uniform throughout the Western Church in the 15th century. Dioceses and monastic establishments introduced variants of the accepted text of Rome and the musical expression of the different uses diverged even more. It was common sense for the printer, therefore, to omit from his books – expensive as they were to produce – those elements that would restrict his sale to one market. Even though many titles exist which suggest that only one diocese could use them, they were in fact often suitable for sale elsewhere, if the music were not printed. For example, in 1840 a Veronese printer (probably Pierre Maufer) printed a *Missale ultramontanorum*, for the Hermits of St Paul. Some time later, he took the unsold copies and changed their title, so that they could be sold as if for the Archdiocese of Esztergom.

However, at least as important a reason for the continued dominance of manuscript copying of music lies in a technical feature of notation, the manner in which one element – the notes – occupies the same space as another – the staff lines. The basic procedure of superimposing one on the other using wholly typographic means was solved in the 1470s, most notably and probably first in a south German gradual often associated with the Konstanz diocese and extant in a single copy (*GB-Lbl*), in which staves, clefs (F and C), two vertical lines that abut on to the staves at each end, and text were all printed in black at two impressions (fig.1). Large initials for which the printer left space have been rubricated by hand and an additional red line has been drawn on the staves to indicate the position of F. Unfortunately the book does not bear a date, nor is the printer or the place of printing known, but the pages themselves are eloquent: they have been planned and achieved by a rational mind thinking in typographic terms. The relationship between the depth of the type area and the measure between the vertical lines that extend above and below the seven five-line systems is nicely judged; so is the interval between the individual staff lines in relation to the size of the Gothic notes and the size and the visual 'weight' of the text type, although it appears from the irregularity of the fount that the matrices were not well struck and justified.

A passage on leaf vii*a* of Jean Charlier de Gerson's *Collectorium super Magnificat* (Esslingen: Conrad Fyner, 1473) shows five identical black squares – often but incorrectly thought to have been printed from inverted type sorts – descending in regular steps above the names of the principal notes of a scale: this qualifies only in a minimal way as music printing. Probably about contemporaneous with the south German gradual is a missal printed in Rome by Ulrich Han; in its colophon, dated 12 October 1476, he claimed to be the first to copy music 'non calamo ereove stilo: sed novo artis ac solerti industrie genere Rome conflatum impressumque unacum cantu: quod numquam factum extitit' (not by the pen or copper stylus but by a new method ingeniously and carefully devised and printed in Rome, together with music, such as has never before been done). Han's work is outstanding in quality. The text of the Office is printed with a superb type in two columns in red and black. The notes in Roman

1. Page from the first printed music: the Constance Gradual, ?southern Germany, c1473 (GB-Lbl IB 15154, f.1r)

notation are printed in black on red staff lines made up from pieces of rule the length of the column measure. Initials in red or blue, with touches of yellow in some capitals, are added by hand. As in the south German gradual, but here in a masterly way, the relationship of the parts is calculated to achieve a unity that satisfies, and one which is wholly efficient.

The missal was Han's only book containing music, but his methods were copied throughout Europe. Damiano da Moilli printed a *Graduale* in Parma in 1477; Bernhard Richel printed a *Missale constantiensis* in Basle before 1481; Reyser printed a *Missale herbipolense* at Würzburg in 1481; Scotus printed two missals in Venice in 1482, and in the same year Valdarfer printed a *Missale ambrosianum* at Milan. In 1489 in Paris Jean Higman and Wolfgang Hopyl printed a *Missale andegavense*; two years later the Compañeros Alemanes produced an *Antiphonarium Ord. S. Hieronymi* in Seville. It was not until 1500 that Han's technique reached England, but the *Missale Sarum* printed by Pynson in London in that year was a splendid book worthy to be set alongside the finest of its precursors.

Altogether, liturgical books with music – notes and staves – printed at two impressions were produced in at least 25 towns by 66 printers between 1476 and 1500. Most of the printers are represented by only one or two books, but others clearly were specialists: Ratdolt, the splendid printer of Venice and Augsburg, was responsible for 13; Emerich in Venice printed no fewer than 13 in seven years; Higman, a most refined craftsman, produced 12 in Paris; Hamman printed at least 11 in Venice; Planck, Han's successor, printed eight; Sensenschmidt of Bamberg produced seven; and Wenssler of Basle produced five.

2. Woodblock printing. Those who needed printed books for the celebration of religious Offices were well served, as were the authors of works on the theory of music, though by different technical methods. For historical reasons, discussions of music theory during the Middle Ages and early Renaissance were built on an arithmetical basis: thus manuscripts contain diagrams of ratios and relationships as well as notes. When these treatises and polemical discourses were printed, the diagrams and sometimes simple arithmetic were reproduced by woodcuts. The process involved cutting away unwanted material, so that the design was left raised above the level of the rest of the block: this was widely practised throughout Europe by the end of the 15th century, having been used for bulk production of books even before Gutenberg's time. Many early printed books had been decorated with splendid woodcut initials and borders, and with representations of buildings, animals and people. It was therefore easy to extend the practice to music, though in some texts spaces were left in the printed page for the notes and staves to be written in. The technique offered great advantages. The musical material was not complicated and the examples were often short; many models of the required notation were available. Since the printers of these treatises were usually not involved with liturgical books, they would have had little access to the skills or musical type involved; therefore, it was natural that the printer should turn to a wood cutter.

It is nevertheless difficult to account for the poor quality of much early woodcut music. While the technique was essentially simple, it demanded judgment and manual dexterity and control from the operator to produce a block with the text and music reading from right to left, precise in every detail on a flat surface with everything else cut away. The graphic nature of music – a system of horizontal and vertical lines crossing at right angles with associated elements, notes, clefs and other signs, imposing shapes and angles of their own – presented difficulties. Unless the point of intersection of staff and note stem were cut very cleanly, and subsequently inked and printed with care, the ink tended to blob or spread at the junction. To avoid this some cutters left a small nick breaking the surface at the intersection, to reduce the density of the film of ink at this point. For the same reason it was not easy to cut open (white) notes with a staff line at its proper thickness running through.

Woodcut music from the 15th and 16th centuries varies enormously in extent and quality; this is to be expected, taking into consideration the large amount that was produced. By 1500, 12 works with woodcut music had been issued in Italy: nine theory books, two missals (one with 46 pages of music) and a four-part song. From 1500 to 1600, well over 300 separate works on the theory of music were issued in more than 600 editions by 225 printers in 75 towns throughout Europe (see Davidsson, B1947–8, 3/1965). A few of the texts were remarkably popular, running through 30 editions in 49 years, or 40 editions in 63 years, repeated sometimes in the same form by the first printer, sometimes with new blocks for the music, sometimes with the originals, and sometimes by a different printer in the same town or elsewhere. Relatively few books of music (other than treatises) were produced from woodblocks after 1500, although one distinguished example is mentioned below, and the collections of chant, such as Coferati's *Il cantore addottrinato*, continued to use woodblocks well into the 17th century, sometimes alongside typeset music. The first music to be printed in the British colonies of North America, in the ninth edition of the Bay Psalm Book (Boston: Green and Allen, 1698), was taken from woodblocks. They were also used, even into the 19th century, for the small amounts of music included in librettos and similar pocket books.

The earliest example of music printed from blocks may be the second edition (Basle, *c*1485) of the *Brevis grammatica* of Franciscus Niger, which has a few pages with four lines of notes without staves (but with a clef) to illustrate the rhythms of five different poetic metres, using verses from Virgil, Lucan, Ovid and Horace. This was followed by the *Musices opusculum* of Nicolò Burzio, printed in Bologna by Ugo de Rugeriis for Benedictus Hectoris in 1487 (fig.2*a*). Woodcuts were used to show the hymn *Ut quaeant laxis*, specimens of note forms and ligatures and, in the section on counterpoint, a short complete composition for three voices, all with staves. The cutting is thick and unskilful. The hesitant performance continues well into the 16th century in some treatises published in northern Europe, and even as late as J.A. Gorczyn's *Tablatura muzyki*, published in Kraków in 1647. By contrast the treatment of the music in *Flores musice omnis cantus Gregoriani* by Hugo Spechtshart of Reutlingen, printed in Strasbourg by Johann Prüss in 1488, is accomplished. As its title suggests, the practice of plainchant is treated in detail: the music, in Gothic notation on five lines with clef and directs, appears on 67 pages mostly occupying the whole panel. The second edition (*c*1490) is usually overlooked, but the cutting and

2. Two examples of music printed from woodblocks: (a) page showing note forms and ligatures from the 'Musices opusculum' of Nicolò Burzio, printed by Ugo de Rugeriis for Benedictus Hectoris (Bologna, 1487); (b) beginning of the Kyrie from Pipelare's 'Missa "L'homme armé"', part of a page from the 'Liber quindecim missarum' (Rome: Andrea Antico, 1516), exemplifying woodcutting of the highest technical and artistic achievement [(a) 47%, (b) 27% of actual size]

printing of new blocks for the music in quite different notation is equally accomplished.

The last two pages of *Historica beatica* (a play by Carolus Verardus) printed by Euchario Silber (Rome, 1493) are followed by a four-part song, which is the first printing of dramatic music, although the cutting of the block is not good. As King wrote, 'what is probably the earliest German secular song, found in *Von sant Ursulen schifflin* (Strasbourg, 1497) is also reproduced by an unusual use of this process – the notes (in Gothic form), the staves, and the text all being cut on wood' (KingMP). Perhaps Andrea Antico was unaware of these examples when in *Liber quindecim missarum* (RISM 1516[1]) he said that he cut the notes in wood which nobody before him had done. This splendid folio of 161 pages is set off with fine initial letters, and the work is a remarkable technical achievement, though the impression is rather flat and heavy (fig.2*b*). Antico cut the blocks for a number of smaller volumes of music, but he had no imitators in printing large-scale collections of music from woodblocks. Woodcutting of the highest artistry may be seen in Luther's *Geistliche Lieder* printed by Valentin Bapst (Leipzig, 1545), and there is much to admire in the decorative touches that enliven many more workaday theoretical treatises.

It is normally stated of such works that the blocks were cut in wood. It might be more precise to say 'wood or perhaps metal', for it is very difficult to resolve which is used by inspecting a well-printed page. In theory, an ill-prepared woodblock, inadequately inked, might show grain, though no examples are known. Nor is evidence for the use of metal easier to come by. Comparison of numerous copies of a book in a single edition, or of copies in different editions, sometimes yields results. In the first edition of *Practica musice* by Gaffurius, printed by Guillermus Le Signerre for Johannes Petrus de Lomatio (Milan, 1496), the examples of plainchant and mensural notation are well cut and printed without blemish. The editions of 1497 and 1508 (Brescia: Angelo Britannico) were printed using the same blocks, but small circles appear in association with music on two folios. This suggests that the music was cut on a plate nailed to a wooden mount, and that a careless beater inked the heads of the nails, which printed. In the edition of 1512 (Venice: Agostino Zani) some music examples are slanting, which again suggests that the printing surface was mounted – and carelessly – because the forme could not have been locked up unless all the type, furniture and associated material were properly squared: this suggests a metal plate rather than a woodblock. Such plates for illustrations in 16th-century books have survived with flanges pierced to take mounting nails, and evidence of the nail-heads has survived occasionally on the impressions of the

decorative intitials which regularly ornament the openings of polyphonic compositions.

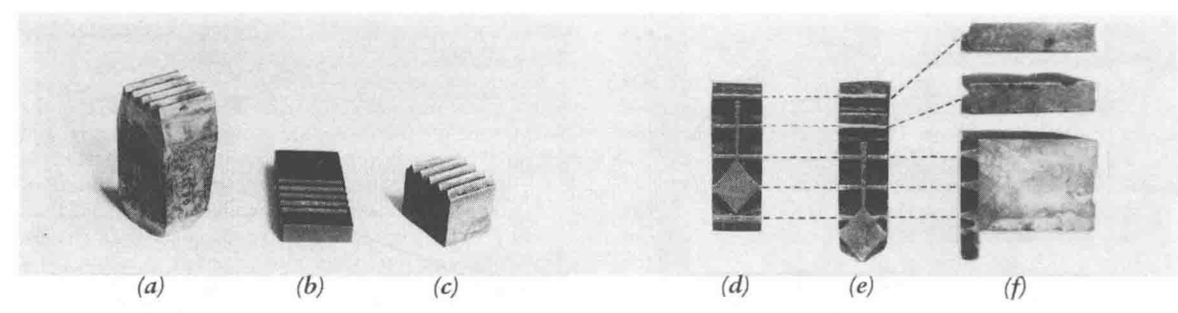
The use of wood or metal blocks to print music was more extensive than the complexities of musical notation might be thought to allow. The early 1470s saw not only the first European printed music, but also the earliest music printing in Japan. A recently discovered book of *shōmyō* (Buddhist hymns chanted in the services of the Shingon sect), printed by the priest Kaizen at Kōyasan on 21 June 1472 and now at the Research Archives for Japanese Music at Ueno Gakuen College in Tokyo, employed blocks that were re-used in an edition of 1478, and again in 1541 and 1561. Block printing was temporarily supplanted in the late 16th century by the Korean method known as 'old typography' and by the European-style typography used by Jesuit missionaries, but as early as 1601 secular music was again being printed from blocks; the process was used widely thereafter in the extensive production of *utaibon* (*nō* texts with music). In the West, librettos and other small books continued into the 19th century to include music printed from blocks.

3. PRINTING FROM TYPE.

(i) Basic techniques. In 1450 Johann Gutenberg established a system of taking copies from single types, ordered according to the text to be printed, grouped into pages and printed on paper or vellum with a press using a varnish-based ink; the same process was adopted several decades later to make the first music types. The process involves two essential stages, each with its own particular materials. The type itself has to be arranged in an orderly manner, by a typesetter or 'compositor', who needs to have available a large number of copies of each letter or musical symbol, each of which will fit exactly with its neighbours. Then the sets of arranged type, or 'formes', have to be printed accurately by a press designed to align them with the paper to be printed, and also to ink the type consistently each time. These processes have been increasingly mechanized with the passing centuries, but the early stages involved much manual labour.

While there are manuals for the type founder and printer, from the 16th century onwards, none discusses the making of type specifically for music or the manner in which it was used. Fortunately some type and type-making materials survive, notably in the Plantin-Moretus Museum in Antwerp, but otherwise we believe that the procedures were essentially the same as those followed for verbal texts.

There were three stages to the making of type (fig.3). Firstly, the type-cutter cuts the required design – a letter, a note, a section of staff – on to the end of a piece of mild steel, cutting away the unwanted metal. The finished tool is then tempered hard and becomes a 'punch' (fig.3*a*), which becomes the master copy of the symbol. The punch is then driven into a piece of copper to make a 'strike'. The strike has to be cleaned, smoothed and squared up, when it becomes a 'matrix', a copy of the design, but recessed into the metal (fig.3*b*). This matrix is used to make each piece of type; placed in the bottom of a mould, into which molten type-metal is then poured, the matrix will produce a raised version of the symbol on the end of the solidifying metal. This metal, when cold, turned out of the mould and cleaned of waste metal or rough edges, forms a single piece of type (fig.3*c*). The matrix and mould can then be re-used to make more copies of the symbol, or a new matrix can be inserted in the mould, to start making type sorts for a new symbol.



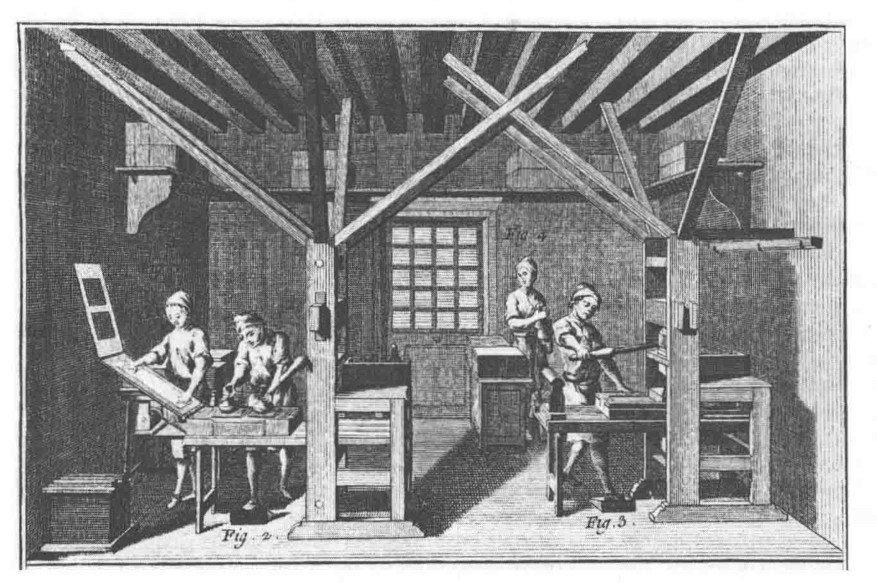
A complete set of type, a 'fount', is stored in a 'case'. This shallow tray has compartments arranged so that the most frequently used sorts are grouped in the centre, and the rarer to the edges. The sizes of the compartments vary, because they contain different numbers of pieces of type: in music, for example, more minims were used than breves generally speaking, and more flats than sharps. Pieces of black staff were also required to allow for a variable spacing of the notes across the page.

In practice, fewer matrices were needed than the total number of symbols to be cast: the same matrix could be used for notes at different positions on the staff (see figs.3*d* and *e*). Some founts seem to have been cast from matrices with six or seven staff lines. According to the placing of the matrix in the mould, the same matrix could produce notes at two or three different places on the staff.

All the sorts – characters – and spaces in a fount will vary in width, according to the size of the symbol on them ('w' taking more space than 'i', and a breve more than a minim rest), but both the other dimensions had to be absolutely consistent from sort to sort, or they would not fit well together or stay in place under the pressure of the press. Type sizes – defined by such terms as 'pica' and 'petit canon' – were in fact not standardized before the 18th century, and music types have never been widely regulated in that manner.

The first task of the compositor was to plan the layout of the music as it would appear on the printed page. He marked the exemplar to show where page-breaks and line-ends would occur. This process of 'casting off' was essential: it ensured that the music was well spaced, that it could be printed economically without wasting paper, and (particularly for instrumental parts) that page-turns fell at convenient places in the music. Once the compositor had decided the layout, he was ready to begin setting the type. This involved three pieces of equipment: the case of type, with the text to be set placed next to it; the galley, into which the type would be placed, as a whole page ready for printing; and the composing stick, into which the compositor arranged the type. This stick was a narrow, open-fronted box, with one end adjustable to the length of the line of music to be set and held in the left hand so that it was not completely horizontal. The compositor placed the type in the stick, line by line, until it was full with a few rows of type. These were then slid carefully into the galley, and the process begun again. Once the galley was full, the type of the page was tied round with cord, and could be removed and stored until ready for the press. The compositor would then start on the next page.

In practice, early sections of a book would be printed before the compositor had finished setting the rest. This is because there was necessarily only a limited amount of type: the number of minims or crotchets required to set a whole volume would have been prohibitively expensive to acquire. Indeed, the compositor might well not set pages consecutively. Books were printed on sheets that were then folded, so that more than two pages appear on each sheet. Thus, for a book in quarto, the format often used for music, one side of the sheet of paper contained pages 1, 4, 5 and 8, and the other pages 2, 3, 6 and 7. In order to use type as economically as possible, the compositor could set the music for one side of the sheet,



3. Steps in making music type illustrated by material from the 'grande musicque' cut by Hendrik van den Keere for Christopher Plantin, 1577: (a) steel punch with a five-line staff system engraved in relief on its end; (b) matrix produced by striking the punch into a billet of copper (here c20 mm wide) to leave the staff lines recessed; (c) type cast from the matrix; (d) type cast with the matrix in 'normal' position in the mould; (e) note head from the same matrix projecting below the normal position of the lowest staff line; (f) type shown in (e) turned on its side to show that the projecting note head was cast with only three lines attached and completed by two additional types, each carrying a separately cast segment of staff line; (d), (e) and (f) illustrate the principle of 'kerning' or overhang

and that could be printed while he was setting the other side. In effect, he would then need about half as many sorts as would be needed if he set consecutively. Of course, such a procedure required very precise 'casting off' of the text beforehand.

After all the pages for one side of a sheet of paper were set in type, they would be laid out in the correct arrangement, inside a rectangular iron frame called a 'chase'. The type was fixed in place, with pieces of wood – 'furniture' – and wedges – 'quoins' – to prevent the pages moving about, or the type falling out. The filled chase, with all the text for one side of the sheet of paper and with furniture and quoins, was called a 'forme' and was ready for the press. At this stage, a proof would normally be taken – 'pulled' – and any necessary corrections made to the type.

The printing press has to allow for three distinct processes: it has to hold the material to be printed (the forme) exactly in place, so that each copy will be printed evenly and correctly placed on the paper; it has to ensure that the forme is freshly inked before each impression; and it has to place precisely the sheet of paper to be imprinted, and then press it against the forme of type. In modern presses, each of these processes is automatically controlled, and done in a smooth mechanical sequence at high speed. In the early hand-press, each was done by hand and relied on details of the construction of the press (fig.4). First the complete forme was placed and secured in the body of a sliding carriage, called the 'coffin'. In the left press in fig.4 this has already been done, and one of the two pressmen is applying ink evenly to the surface of the type using two padded balls of leather. (The same man can be seen behind the right press re-inking the two balls for the next impression.) At the same time, the man to his left is aligning a clean sheet of paper on a 'tympan' so that it will receive the inked impression precisely where it should. Above the tympan is another frame holding a sheet of parchment with holes cut in it for the type. This 'frisket', when folded over the tympan and its clean sheet of paper, ensured that no ink from the untexted parts of the forme onto the paper and marred the cleanness of the impression. The tympan and frisket were then folded together over onto the coffin holding the forme of type, and slid under the press proper. As fig.4 shows, at this point the pressman pulled on a lever mounted on a large wooden screw-cut spindle; this forced down onto the tympan a large platen, a heavy wooden block cut to the size of the coffin and tympan. The tympan itself was forced against the type, and the enclosed sheet of paper was thereby printed with ink. Releasing the lever raised

4. The printing press in operation: to the left, the pressman is fitting a clean sheet of paper on to the tympan, prior to folding over the frisket. His second is inking over the type with two ink balls. To the right, a pressman is 'pulling', forcing the platen down against the forme to make a clean inked impression, while his assistant is 'beating' the ink balls together to spread the ink over them

the platen and allowed the coffin, tympan, paper and frisket to be moved back; the paper could be removed and a new sheet inserted at the same time as the type was freshly inked. When the required number of copies were printed, the forme was removed, and the type cleaned and returned to its case ready for re-use on a different page. Meanwhile, the forme for the other side of the sheet of paper was put in place, and the whole process repeated. The exact alignment – 'register' – of the two sides was facilitated by the presence of two short pointed spikes in the long sides of the tympan: these perforated the outer margins of the paper when printed. When printing the second side, 'perfecting the sheet', the pressman merely had to align the holes with the two spikes to know that the paper was correctly aligned. Whenever possible, the two sides of a sheet were printed in close succession. Paper had to be moistened to take good impressions since if it was allowed to dry out, it would shrink and warp slightly so that the second side would not be aligned correctly. This must also have been true for multiple-impression music printing where, if anything, the need for precise register was even greater.

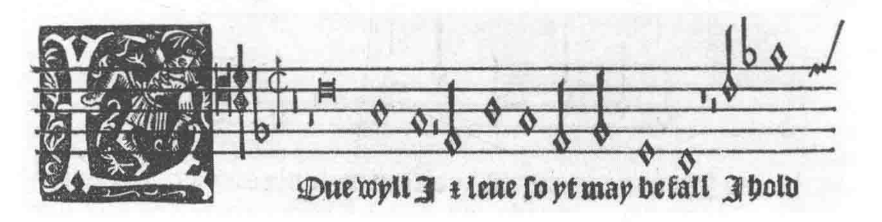
This highly simplified account of the main procedures of typographic printing applies broadly to the 17th and 18th centuries, but as tradition is so strong in the craft the description may well hold in essentials for 16th-century practices too: certainly early woodcuts showing printers at work support this view. The press itself changed little until the 19th century. From 1800 to 1803 Earl Stanhope built one with an iron frame which would accommodate a larger sheet than the wooden press. Other iron presses followed and were much used for book printing until about 1830, but gradually the hand-press was replaced by the cylinder and later the rotary press, machines of different construction powered by steam and in time by electricity.

(ii) Early history. The techniques of printing plainchant were highly developed by 1500 following the pattern described in the preceding section, but there was no corresponding evolution in the printing of mensural music from type during the same period: attempts were isolated and restricted in scope. The first example, four lines of music on a single page, appeared in the first edition of Franciscus Niger's *Brevis grammatica* (Venice: Theodor of Würzburg, 1480): only the notes and clef were printed, accurately aligned for anybody to rule the staves. Other examples appear in two books printed by Michel de Toulouse in Paris, both undated and assigned to about 1496. One was an edition of *Utilissime musicales regule* by Guillermus Guerson and the other an anonymous treatise *L'art et instruction de bien dancer* (a unique copy is in *GB-Lrcp*). Music appears on 18 pages of the latter, mostly in chant notation, printed black on four red lines, but there are almost two pages of music in mensural notation. At first glance the achievement is not impressive but closer examination shows that, although the type from which the notes are printed has been badly cast, their typographical arrangement was workmanlike. A slightly later example is a mensural Credo printed by Johann Emerich of Speyer in his *Graduale* of 1499.

In Venice Ottaviano Petrucci transformed music printing and started the process which made polyphonic music generally available in greater quantity and over wider areas than ever before. In 1498 he obtained from the Signoria of Venice an exclusive 20-year privilege for printing and selling music for voices, organ and lute throughout the Venetian Republic. His first book was published in 1501: *Harmonice musices odhecaton A* (RISM 1501), a collection of 96 pieces arranged as partsongs with the cantus and tenor on the left-hand page of an opening and the altus and bassus on the right – a layout modified satisfactorily for three-part items. A second edition appeared in 1502/3 and a third in 1503/4. Altogether he printed some 40 or more musical titles in Venice, the latest in 1509. It is probable that Petrucci's type was designed by Francesco Griffo of Bologna, and actually cut and cast by Jacomo Ungaro. Both were working in Venice at the time, and had contacts with Petrucci or with music.

Petrucci's music printing was splendid. He continued the practice of prints of liturgical music, with staff lines and notes on separate pieces of type: his note forms were elegant and with their equivalent rests varied enough to set the most elaborate works of the composers of his day. The presswork was so meticulous that he was consistently able to achieve perfect register of notes, staves and text though (at least initially) three impressions were required: first for the notes, second for the staves, and third for the text, initial letters, signatures and page numbers. The whole achievement immediately conveys typographical conviction which on analysis is found to derive from a skilful choice of size for the individual elements, and from the manner in which they are related. For example, the length of a note stem is the depth of four spaces on the staff, a relationship that has persisted to our own day; the stem of the B♭ key signature is longer than the stem of a note and in this way maintains its role as a flag. The directs are very noticeable, serve their purpose and balance the large initials and other display material at the left of the staves. Only by the use of notes, letters and spaces, all cast in sizes that worked exactly together without bodging, could such results be achieved. Petrucci had equal success with his system of tablature, the first to be printed from movable type (fig.5.)

The shining example of Petrucci encouraged other printers into imitation. The first was Erhard Oeglin of Augsburg, who issued *Melopoeiae sive harmoniae* (1507: settings by Petrus Tritonius and others of Horace's odes) and a few later titles. The books do not achieve the elegance of Petrucci, in part because Oeglin's staff lines are assembled from short pieces of type. A book on the grand scale (folio: 44 x 28·5 cm) which approaches Petrucci's quality is the *Liber selectarum cantionum quas vulgo mutetas appellant, sex quinque et quatuor vocum* (Augsburg: Grimm & Wirsung, 1520[4]). The hand of a master is seen in *Rerum musicarum opusculum*, a treatise by Johannes Frosch (Strasbourg, 1532; 2nd edition: Peter Schoeffer jr and Mathias Apiarius, 1535): the scale of the work is much along the lines of Petrucci's and the achievement, by two impressions, is comparable. The sole surviving part (triplex) of *XX Songes* printed 'at the sign of the Black Morens' in London in 1530 (1530[6]) is equally elegant and well printed (fig.6).



In 1532 Jean de Channey printed at Avignon, at the composer's expense, the first of four volumes of sacred music by Carpentras. Although oval note heads had appeared in the woodcut music of J.F. Locher's *Historia de rege frantie* (Freiburg: F. Riederer, 1495; copy in *GB-En*), the Carpentras books are remarkable as the first to use type cast with a rounded, almost oval note form

5. Part of a page from Joan Ambrosio Dalza's 'Intabolatura de lauto' (Venice: Petrucci, 1508, f.3v); the decorative initial and unbroken staff lines indicate that the sheet was passed through the press at least twice, as in the method devised by Petrucci for printing mensural music

instead of the traditional lozenge and square. Cut by Etienne Briard of Bar-le-Duc, the open notes have stems with a strong downward stroke followed through with a splendid calligraphic swing, swelling and diminishing to reconnect with the stem. The black notes are rather lifeless by comparison. Briard not only abandoned the accepted note forms but cast aside the whole system of proportional notation and replaced complicated ligatures with single notes. As with earlier examples, this music was printed in two impressions (fig.7).

Much more significant for the success of music printing and publishing was the development of music type which could print both staves and notes at a single impression. This was made possible by casting the note and a fragment of a complete set of staff lines together on the same type body. The first experiments towards developing such music type are to be found in Salzburg missals printed by Liechtenstein (1507 and 1515 in Venice) and Winterburg (1510 in Vienna), both of whom developed a series of single-impression types to cope with special problems in small sections of the Salzburg liturgy. These experimental types were of limited use, and they do not seem to have had any influence on other printers or repertories. More significant are the fragments of two anonymous pieces printed by John Rastell in London (perhaps in 1523) each of which survives in a unique copy (in *GB-Lbl*). One, printed on part of a broadside, is an incomplete song for one voice; the other is a three-part song 'Tyme to pas with goodly sport' which is in Rastell's play *A New Interlude and a Mery of the Nature of the iiii Elements* (for illustration *see* RASTELL, JOHN). The fragments are remarkable because all the music was printed together at one impression. The type, not undistinguished in design, looks rather shaky on the page, and as far as is known was used only once more – in Myles Coverdale's *Goostly Psalmes* (*c*1535–6); but if the date assigned to the type by King is accepted – and his argument is closeknit and persuasive – Rastell 'can be credited with several achievements: the earliest mensural music printed in England; the earliest broadside with music printed from type anywhere in Europe; the earliest song printed in an English dramatic work. Rastell also made the first attempt at printing a score, by any process in any country'.

If this survival has no known successor, the same cannot be said of the work of Pierre Attaingnant in Paris, who finally established the technique of printing music from type at one impression. He issued his first such book, *Chansons nouvelles en musique a quatre parties:*

6. Part of a page from 'XX Songes' (London, 1530), showing the beginning of Taverner's 'Love wyll I' [67% of actual size]

7. Part of a page from the 'Liber primus missarum' of Carpentras (signature A2), the first printed music with rounded note heads (Avignon, 1532; cut by Etienne Briard, printed by Jean de Channey)

naguere imprimees a Paris, on 4 April 1527/8 (1528[3]) and until 1550 maintained a steady output of music from the collections of the finest composers of the late 15th century and of his own day. Attaingnant's typographical apparatus was accomplished in design and finish, and he used it with neat authority, demonstrating his powers as a publisher as well as a printer who gave to posterity a system that was to survive, little altered, for more than 200 years (fig.8).

The techniques of Attaingnant were much imitated, and his repertory of music was raided. The high estimation in which both were held, as well as the considerable savings in labour costs, can be measured by the speed with which printers inside and outside France procured types for single-impression music. Jacques Moderne, in Lyons, produced his *Motetti del fiore* in 1532 (1532[10], 1532[11]), printed in elegant note forms based on those of Petrucci rather than upon the squatter types of Attaingnant (for illustration *see* MODERNE, JACQUES). The enterprising Christian Egenolff of Frankfurt printed at one impression *Odarum Horatii concentus*, by Petrus Tritonius, in 1532. In Nuremberg Hieronymus Formschneider ('Grapheus') issued Senfl's *Varia carminum genera* in 1534. Georg Rhau of Wittenberg printed more than 60 primers and works of musical theory with examples cut in woodblock, and also music at single impression from 1538. Joanne de Colonia, in Naples, is said to have been the first in Italy (in 1537) to print music at one impression, but it was Antonio Gardano (from 1538) and the Scotto family in Venice who established that city as the pre-eminent centre of Italian music printing. Though the printing of music at one impression was not practised in the Low Countries until 1540 (by Willem van Vissenaecken at Antwerp), the process flourished in the hands of Tylman Susato. Susato used a splendid character which aligned very well with the staves and may be seen to advantage in his *Premier livre des chansons a quatre parties* (1543[16]). He was soon joined by Pierre Phalèse at Leuven and by Christoffel Plantin, who published important partbooks in the 1570s at Antwerp.

Throughout this period, and for at least the next century, virtually all printed music used the lozenge-shaped and square notes that were developed by Attaingnant. This continued in France until the end of the 18th century, although there were few exceptions. The most elegant was the work of Robert Granjon, one of the great French punchcutters, who developed a music type that follows generally the style of the notes used for Carpentras's music at Avignon, though scaled down: the open notes are freely cut and calligraphic, the black notes rounded. Granjon's refined and elegant types match very well his *civilité* letter ('lettre françoise d'art de main') in which he set the words of Beaulaigue's songs published in 1559 (fig.9). His work was copied by Philippe Danfrie, who called his version 'musique en copie' or 'musique d'escriture'.

In 1559 the elder Guillaume Le Bé started to cut a system with rounded notes, large and small, for a 'tablature d'espinette', but designed for double impression. They were used for two tablatures by Adrien Le Roy and Robert Ballard, founders of a dynasty of French music printers. Towards the end of the 17th century Pierre Ballard had a character engraved in which the points at the corners of the lozenge and the open notes were rounded and the black notes were completely circular, with the stem central (for illustration *see* GANDO).

So far it has been assumed that (in general) the methods of setting and printing the type in music volumes were the same as those used for text, always bearing in mind that the nature of music might well call for modifications in detail. Books are set vertically because the reading eye is more efficient in dealing with short lines (10 to 12 cm according to the size of character) than with long ones. For aesthetic and practical reasons musicians have often liked their music lines long, with the depth of the page less than its width. Because of these preferences, special layout patterns have been used for music notation, calling in turn for peculiar formats. The practice of printing music in this oblong or 'landscape' format, which was adopted by Petrucci, survived very generally throughout the 16th and 17th centuries, gradually becoming

8. Two examples of music printed by one pass through the press: (a) extract from Janequin's 'Fyez vous' in the 'Tiers livre contenant XXI chansons musicales a quatre parties' (F-Pm 20, f.152v), printed and published by Pierre Attaingnant (Paris, 1536); (b) part of the discantus of Byrd's 'Miserere mihi, Domine' from 'Cantiones sacrae' (with Tallis; London, 1575), printed by Thomas Vautrollier with type imported from France; both demonstrate the simplicity and logic, but also the shortcomings, of the one-note-one-type system with note head and stem cast on a single type containing segments of a complete staff system: observe also Attaingnant's use of alternative, 'squatter' type to print notes one above the other [(a) 85%, (b) 80% of actual size]

9. Granjon's types for words and music in Beaulaigue's 'Chansons nouvelles' (Lyons, 1558–9) [95% of actual size]

10. Purcell's song in 'When Teucer from his father fled' from the second edtion of 'Orpheus Britannicus' (London, 1706), printed by William Person; the stems of quavers occurring in groups of two or more are 'tied' with a beam and the quavers are cast in two parts, looking forward to the 'mosaic' music types of the 1750s [86% of actual size]

associated with specific repertories – keyboard music, solo cantatas, operatic scores – while other genres, such as orchestral scores and parts, were increasingly printed in book formats. The distinction survived well in to the 19th century (and indeed is still preserved for much organ music). As a result, in the first edition of *The Letter-Press Printer* (London, 1876), Joseph Gould showed among his schemes of imposition 'A sheet of Quarto the Broad Way commonly used in Works of Music'; in the second edition (1881) a sheet of octavo was shown arranged the broad way to meet the same need.

While single-impression music printing from type was economical, it did have one or two drawbacks, intrinsic to type itself. Because each piece of type carried both staff lines and note head, it was precisely located on a staff; the printer needed to have a fount of type that included examples of every note value (breve, semibreve, minim etc.) for each pitch, from above the staff to below it, and for some pitches on leger lines. The same was true for accidentals, for rests, and (to a lesser extent) for clefs. Even though some of these could be inverted, a note at *g′* on the treble staff, for example, serving for the *d″* as well, the fount was larger and more complex than one used for multiple-impression printing.

In addition, these types were harder to make: the details of superimposing a note precisely and cleanly on the staff lines, and of aligning these lines from one piece of type to the next, required skilful cutting and casting. Despite this, many printed pages of music show frequent breaks in the staff lines as the alignment slipped a little or as fragile edges of staff lines on each sort became bruised and chipped. To some extent, the effect could be reduced or prevented: a system of 'bonding' or fitting was developed, using longer pieces of single or double staff line above or below a note cast on fewer staff lines. This was widely used, for example, in *Kirchengesäng darinnen die Heubtartickel* (1566) and *Selectae cantiones quinque et sex vocum* by Jacob Meiland (Nuremberg: Dietrich Gerlach, 1572).

Apart from the examples mentioned earlier, note heads were still cut as lozenges or squares and stems were centred almost to the end of the 17th century; by that time it was so much at variance with the taste of the day that punches were cut in the pattern of written notes, with the heads oval or roundish with stems to the left or right. The innovator of this style was the London printer John Heptinstall, who first used the face in the setting of John Carr's *Vinculum societatis* (1687[6]). The notes were cast with fractions of staves, and so were tails. Fractions of beam cut at a suitable angle – sometimes with a fragment of stem attached – were also provided to join successive quavers and semiquavers moving upwards and downwards. This feature gave the character its name 'the new tied note'. The note heads are overlarge and the type ill-fitted, but it continued in use until at least 1699.

The new style rapidly spread in England: Peter de Walpergen in Oxford cut two splendid examples which were used only once or twice. In 1699 William Pearson published *Twelve New Songs* (1699[5]), a collection of pieces by various composers, issued chiefly to encourage his 'new London character'. Smaller in scale than Heptinstall's, the type was better fitted and better cast and was used extensively by Pearson, most notably perhaps in *Orpheus Britannicus* (2/1706; fig.10), and by his successors into the mid-18th century.

(iii) 18th-century innovations. By this time, however, the mainstream of music printing was increasingly served by the engraver and the offerings of the type printer were found in the backwaters of hymnbooks, small songbooks and the like. The mid-century, however, saw a revival of typeset music, largely owing to a series of innovative founts, which are now generically called 'mosaic types'. In these, most musical symbols were usually made up of more than one piece of type, each with fewer than five staff lines. The act of typesetting therefore consisted of fitting together the various pieces that make up each single symbol exactly in the manner of a mosaic.

While in 1749/50 Jacques-François Rosart cut a series of punches for a revolutionary method of music printing, it was J.G.I. Breitkopf, working to the same principles, who took the credit for the innovation and brought the

system to fruition. In 1754 Breitkopf started to have his punches cut and in February 1755 he published a *Sonnet* to demonstrate the quality of his system. In a preface to the *Sonnet* he commended his work to 'lovers of the musical art' and to printers. He continued:

> the method used until now has fallen somewhat into disrepute, since it possesses neither the beauty demanded nowadays nor is it adequate to meet the needs of the art of music which has been brought to a state of perfection. The printers themselves are not very satisfied with the old method, partly because its intricacy is burdensome, but mainly because the typesetting is not so regular that it can be achieved without a lot of ingenious devices and botching which the compositor first of all has to work out for himself.

P.-S. Fournier (Fournier *le jeune*) described the essentials of Breitkopf's system in his *Traité historique et critique sur l'origine et les progrès des caractères de fonte pour l'impression de la musique, avec des épreuves de nouveaux caractères de musique présentés aux imprimeurs de France* (1765). All the types were cast on the same-sized body, 'being the fifth part of the body of each line of music' (i.e. the size of only one staff line). All symbols used were formed to this dimension, so that the clefs, notes and other characters which were necessarily larger than the body were made up of several pieces 'set skilfully one above the other. A note, for example, is made up of three and four pieces; a clef of two, the upper part formed by one punch, the lower part formed by another punch, and these parts joined together form the character of the complete clef'.

The first major work in which Breitkopf used his type was *Il trionfo della fedeltà* by Electress Maria Anna Walpurgis of Bavaria, issued in score in three volumes in 1756. In the same year he published a *Recueil d'airs à danser*, and thenceforth his output was extensive: according to Fournier, Breitkopf issued 51 musical works including operas, keyboard works and songs between 1755 and 1761. This output continued in bulk and variety well into the 19th century.

In 1756 Fournier published an *Essai d'un nouveau caractère de fonte pour l'impression de la musique, inventé et exécuté dans toutes les parties typographiques* as a specimen of a new character which aimed at rendering music from type as if it had been printed by copperplate engraving. It offered short dance movements, printed at two impressions to demonstrate the elegance and logic of the system. Fournier later developed this experimental character into a second music fount, this time for single-impression printing. It was based on a different system from that perfected by Breitkopf. While Breitkopf's type was designed on one body size and could be assembled into composite pieces as required, in Fournier's system the symbols were cut for casting on five different bodies, according to size. The minims, crotchets and simple quavers, key signatures, measures and other symbols of the same height were made in one piece (with segments of three or four staff lines incorporated), instead of in the three or four pieces that other systems required. In addition Fournier provided a wide range of characters which worked with the composite pieces. Fournier claimed that this arrangement made typesetting simpler, more reliable and quicker. The number of types required was reduced by half: as he wrote, his 'character being only about 160 matrices instead of at least 300 that other systems carry'. Fournier's type was used in the 1765 *Anthologie françoise* (for illustration *see* FOURNIER, PIERRE-SIMON) and continued to be used for vocal music throughout the rest of the century.

Several imitations of Breitkopf's fount were also developed: the most important were by J.M. Fleicshmann, used by Enschedé of Haarlem from 1760; by Johann Jakob Lotter in Augsburg, from 1766; and by Henric Fougt working in England from 1767. The most stylish of these was used by Enschedé: music printed from his type had the clarity and elegance of engraved music. Fougt's type was extensively used for songsheets during the 1760s.

Two other systems of mosaic music are worthy of note. One appeared in a *Manifesto d'una nuova impressa di stampare la musica in caratteri gettati nel modo stesso come si scrive* published by Antonio de Castro (Venice, 1765). To show the capabilities of his type he printed a *Duetto* by Giuseppe Paolucci. The 'manifesto' type 'Inciso et Gettato dal M. Rev. Sig D. Giacomo Falconi' is ramshackle and loose but it holds together well enough to be read without confusion; it was used for extensive works – Paolucci's *Preces octo vocibus* (Venice, 1767), for example, and his *Arte pratica di contrappunto* (1765). The other was developed by W. Caslon & Son of London who printed a specimen book of 1763. Sturdy and economical, it was used widely during the latter part of the 18th century, notably on songsheets, and is well represented on inserts in the *Lady's Magazine*, the *Hibernian Magazine* and elsewhere. Caslon's types were much used in America. Christopher Saur of Germantown, Pennsylvania, was the first to print music from movable type in America with his *Kern alter und neuer ... geistreiche Lieder*, a collection of 40 tunes that he printed in 1752 from types he had apparently cast himself. In October 1783 the *Boston Magazine*, printed and published by Norman & White, issued 'A New Song', *Throw an apple*, set to music by A. Hawkins. According to Isaiah Thomas, the famous Massachusetts printer, 'Norman cut the punches and made every tool to complete the ... types'; he also cast them. Thomas himself had a complete series of the Caslon founts, including music, for in 1786 he issued *The Worcester Collection of Sacred Harmony*, 'printed typographically at Worcester, Massachusetts'. In addition to hymns and psalm tunes the collection includes the four-part vocal line of the 'Hallelujah' chorus from Handel's *Messiah* very competently set in score, eight lines to the oblong page.

Given a knowledge of music and the advice of an editor, the compositor setting types with note and staff incorporated would have few major difficulties, though the fitting together of sorts cast on different bodies would have been time-consuming. In effect, music type before Breitkopf was set line by line as ordinary text. Mosaic music had to be set in blocks across the staff systems and the compositor needed cool judgment and an intimate knowledge of his cases, fitted as they were with hundreds of different characters, in order to build his musical jigsaw accurately. Some of the problems he faced were examined by Christian Gottlob Täubel, a Leipzig printer, in his *Praktisches Handbuch der Buchdruckerkunst für Anfänger* (Leipzig, 1791). The setting of music, he warned, is much more difficult and needs more care than the setting of ordinary text; anybody proposing to become a music compositor must not have an irascible temperament or be in too much of a hurry; if he is too eager to get on he will overlook detail; music typesetting calls for the tedious

and painstaking construction of involved pieces of music using only very small units; the compositor must be able to reproduce in type exactly what the author has drawn with his pen. Caution against hasty work runs through his advice about casting off copy, maintaining optical and musically even spacing, ensuring good underlay of words and arranging convenient turn-over breaks.

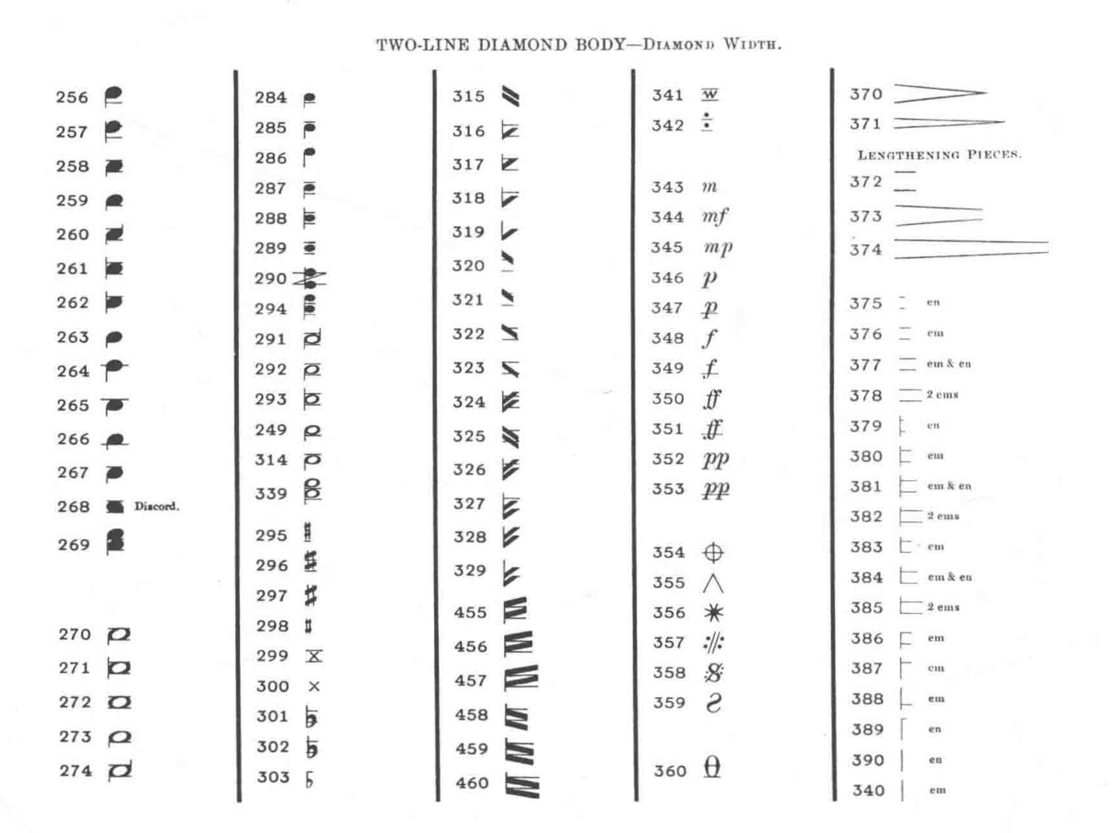
(iv) 19th-century developments. Mosaic type was expensive and used large quantities of metal, and the fine-cut pieces were easily damaged. As a result, the types seldom looked convincing and unbroken across even a narrow page. There was a great deal of experiment in the early 19th century to counter these difficulties. Many of these trials used notes with head and tail complete. In 1802 François Olivier obtained a patent for ten years to protect the development of a system in which punches without staff lines were used to make the matrices. The staves were then carefully cut by hand, with a steel saw. This, with other similar experiments, had limited success.

In 1820 Eugène Duverger of Paris obtained a 15-year patent for a system which also separated the staves from the rest of the notation, though at a later stage in the process. He set his types, sometimes using notes with complete stems, sometimes with part only, in their correct positions vertically and horizontally, and added the other ancillary signs, the text and so on. The matter was proofed and corrected. The whole was then brushed over with oil and covered with a fine plaster that was allowed to set and then carefully removed from the type. Staff lines were then cut in the plaster producing a completed notation. The plaster mould was baked in an oven, put into a casting box and type metal alloy poured in. When the metal was solid and cool enough to handle, the casting was separated from the plaster. After a final inspection and finishing, the plate was ready for printing at one impression. The system, which received a 'Brevet d'addition et de perfectionnement' in October 1838, was widely used, and when skilfully manipulated produced very satisfactory results; but it was found costly and suitable only for editions in large numbers.

In England, Edward Cowper, a prolific inventor of machinery and processes in printing technology, patented in 1827 a revolutionary method of music printing, in which the printing surface consisted mainly of the ends of pieces of copper wire passed through a three-ply block of wood and made to stand 1·6 mm above the surface of the block. The ends of the wire formed the black notes; white notes were made up from two curved pieces, which were pushed into the surface of the wood to form the elliptical character. The edges of small pieces of brass were used for the stems of notes, slurs, beams and the like and were tapped into the wooden block to stand at the same height as the notes. The staves, with their clefs, were made and laid out separately. The two pages, one of notation and the other of staves, were placed head to head in the bed of the press, in precise alignment. Two pages were printed at once, one receiving the staves and the other the notation. After the pages had been rotated through 180°, each received the other component, completing the score. This method was much used in the 1830s.

A second patent from which much was expected was taken out in 1856 by Gustav Scheurmann, a music seller and publisher of Newgate Street, London whose aim was to separate the staves from the notes and other necessary symbols and words into two formes, printed one after the other by a specially adapted press. Scheurmann also devised a special mould that would cast beams at any angle for sequences of quavers and shorter values.

It is notable that each of these innovations returned to the early pattern of separating notes and staves. But they (and many other experiments) did nothing to displace the descendants of Breitkopf. It is remarkable how many different complete systems of type in different sizes were offered during the 19th century, in England, Germany and America, most of them demonstrating in the accuracy of their fit and the superb quality of the punchcutting, matrix-striking and letter-founding of their day. These types, however, were not created merely to demonstrate technical brilliance: they were made to serve a market.



Despite the virtues of engraving and lithography for printing music, they were evidently not suited to supplying the needs of a growing musical public. This may be illustrated by two quotations from the *Musical Library* of 1834. In the preface to the first volume, 'Instrumental', it is stated that:

> the Musical Library was commenced with a view to afford the same aid in the progress of the musical art that literature has so undeniably received from the cheap publications of the day ... before this work appeared, the exhorbitant sums demanded for engraved music amounted to a prohibition of its free circulation among the middle classes; at a time too when the most enlightened statesmen saw distinctly the policy of promoting the cultivation of the art in almost every class of society.

In an account of the 'various processes applied to printing music' on the first four pages of the first 'monthly supplement' (April 1834), the writer said:

> In each process [intaglio and lithography], the manual labour of printing off the copies involving considerable nicety and attention, is a source of constant recurring expense. In printing music from the *surface* of moveable types, or stereotype plates, either by the printing press or printing machine, the operation is rapid and certain; the market may be supplied at once to the extent of the demand; and the consumer may receive the full benefit of mechanical improvements, in the diminished cost of the article produced. Such a work as the 'Musical Library' could only be undertaken with the aid of musical typography.

The wisdom of this commercial argument was brilliantly demonstrated in practice by Alfred Novello some years later. His exploitation of the lower cost of typeset music was in great measure responsible for the growth of middle-class music-making in Britain during the second half of the 19th century. Joseph Bennett's *A Short History of Cheap Music* (London, 1887), effectively a history of Novello's publishing endeavours, stated that type was more economical for the large print-runs he was increasingly able to sell: 'for hundreds, plates are best; for thousands, type is preferable'. As late as June 1899, the *Musical Opinion* reported on the 'expensive editions from pewter plates' when compared with typeset editions. Therefore, from 1820, when William Clowes, printer of *The Harmonicon* and other music, imported from Germany punches and matrices for music type, a number of type founders offered a wide range of founts to the music publisher, often of great complexity (fig.11), and in such variety that by 1876 manuals of instruction could give no reliable general information about typesetting. There was so much music printed from type in London during the latter half of the 19th century that the compositors engaged exclusively in music typesetting were numerous enough to establish and maintain their own trade union, the London Society of Music Compositors (1872).

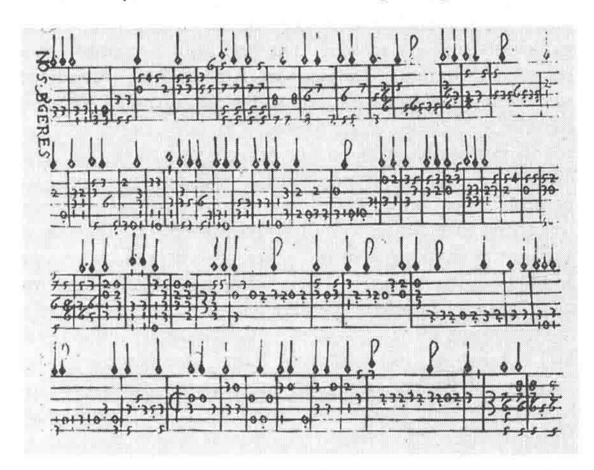
11. By the 19th century 'mosaic' music type systems had reached their maximum complexity: part of the specimen sheet of Diamond Music, offered by V. & J. Figgins in London, containing 452 separate types in the fount which had to be supplemented by a large supply of specially cast spacing material

A major disadvantage of using type, when set alongside the other available processes, was that the prepared-pages type had to be broken up and redistributed after printing, for the material would be needed to prepare other pages of music. By contrast, plates or lithographic sufaces could be stored and re-used, sometimes as much as 100 years later. This disadvantage was largely overcome by the development of stereotyping and electrotyping, both processes that prepared a plate from the typeset forme, thus allowing for extended print-runs, and also releasing the undamaged type for use elsewhere. A stereotype is made by taking a plaster impression of the typeset forme, and then pouring molten type-metal over the plaster to create a metal plate which is used as the printing surface. In the 1820s, plaster was replaced by papier-mâché called 'flong', which had several advantages: it dried more quickly; it could be re-used, to make a second metal plate; and it could be curved to make curved metal plates for the new rotary presses, increasingly used for the large print-runs of newspapers and journals. The essentials of the process were discovered in Holland in the early years of the 18th century, and a patent was taken out by William Ged of Edinburgh in 1725. However, the process seems to have become widely used only at the end of the century, and adopted by Firmin Didot in Paris, followed by Duverger.

Electrotyping was discovered later, in Russia and England, and became a standard resource for printing illustrations, as well as for much book printing in America. The intention is similar, to make a plate using an intermediate stage. Here, the mould is made of beeswax, which is then suspended in a solution of copper sulphate close to a copper plate. When a current is passed through the solution, a process of electrolysis produces a copper coating, or 'shell', on the beeswax. This can then be backed with molten type-metal and a wooden mount, after which it is ready for printing. Electrotyping is more expensive and complex as a process, and has remained less popular than stereotypography. Both, however, helped to ensure the continued use of type. In 1923, Gamble could report of England that 'type-set pages of music are invariably sterotyped or electrotyped instead of being printed direct' (Gamble, C1923).

The demand for typographical music was not a wholly British phenomenon. The publication of manuals of instruction, taking the beginner step by step through the rudiments of notation to the setting of scores and other intricacies, much more thoroughly than Täubel had done in 1791, provides some evidence of this. In Germany there were three such books, one in two editions, between 1844 and 1875. In America Thomas Adams (*Typographia*, 1856) devoted a page to music, with examples set in the

type of L. Johnson & Co., Philadelphia. Thomas MacKellar (*The American Printer*, 1873 and 1879) was much more thorough, using the types of MacKellar, Smiths & Jordan of Philadelphia, and as late as 1904 Theodore Low de Vinne devoted 18 pages of his treatise *Modern Methods of Book Composition* to music. In both countries, type founders continued to offer new and 'improved' founts of music type, well into the 20th century.



Any account of printing music from type will be largely concerned with the history of method and changing solutions to problems. While the outstanding printer could produce superlative results, there were many others whose editions were poorly set, often in a mediocre fount of type that had suffered damage during previous uses. At the same time, the use of type imposed restrictions on even the most artistic or diligent printer: each fount had only a limited number of different characters, and each provided something of a stylistic straitjacket, enforcing a particular visual appearance as well as specific restrictions on details of presentation.

4. ENGRAVING.

(i) Early history. For as long as music was normally presented (in manuscript or printed edition) with one part per staff, and without many indications of chords, slurs or ties and the like, type was adequate for most printed editions. Many of the innovations outlined in earlier sections of this article represented attempts at extending the usefulness of type to keyboard music and vocal scores, and to 18th-century and later editions requiring phrasing and the addition of ornaments. Even earlier, Attaingnant arranged moving parts together on the same set of staves in some of his keyboard volumes; the unknown German printer of an early collection of *Kirchengeseng* of the Bohemian Brethren (1566) used the same technique and William Godbid managed to print Thomas Tomkins's *Musica Deo sacra* (1668) in four parts on a two-staff system. But the hand equipped with the nimble and flexible pen was better able to meet the challenges of elaborate keyboard music or florid song, and it was the hand-driven line engraved in copper that furnished the needs of the composer and the connoisseur from the latter part of the 16th century onwards.

The earliest date known on any intaglio engraving is 1446, although there is evidence that plates were being produced at least ten years earlier. It is not known how they were printed. The first mention of a copperplate printing press is probably that in a document of 1540 in the Antwerp archives (cited in *GoovaertsH*); but the hand mangle had been developed commercially in the 14th century. The maps for editions of Ptolemy's *Geographia* issued in Bologna (1477), Rome (1478) and Florence (1482) were printed from copper plates and show place names splendidly cut in various sizes of roman capital. It it is not surprising that no music was prepared by engraving. The notation was still stylized, using relatively few symbols: woodblocks were used for the simple examples needed in treatises, and type soon proved its ability to present most Renaissance music. Perhaps too the techniques of copperplate engraving and, particularly, printing were not widely known, for, after the editions of Ptolemy's *Geographia* and a map of central Europe printed in 1491, very few maps were produced from engraved plates until about 1540. The earliest known practical music to be produced by copperplate engraving was perhaps *Intabolatura da leuto del divino Francesco da Milano novamenta stampada* (fig.12), published without printer's name or date. Francesco Marcolini's lute anthology *Intabolatura di liuto di diversi* (RISM 1536[11]) seems also to have been engraved. However, he returned to type for his other extant musical volume, containing masses by Willaert; he also seems not to have used engravings for the decorative title-pages of his other books. This is not surprising, for the engraved plate could not be printed using the same press as type: it needed a greater pressure and special treatment, and was therefore more suitable for individual artistic production. Throughout the 17th century, for example, title-pages of typeset musical books might include a design (or the patron's heraldic device) printed from an engraving, at a separate impression, after the typeset title and publication details had been printed on the page.

There was therefore some lapse of time before any other books of music were prepared from plates. The table showing the finals and dominants of the 12 modes in Vincenzo Galilei's *Dialogo della musica antica et della moderna* (Florence: Giorgio Marescotti, 1581) is not fully mensural music. Otherwise, engraved music is next found in a number of devotional prints made after paintings or drawings by Marten de Vos and other Flemish artists. In some of the engravings a whole score is shown as an open book; in others the separate vocal parts – nine in one case – are disposed about the picture on scrolls or on tablets held by angels. The engravings contain complete works, some of them by known composers such as Andreas Pevernage, Cornelis Verdonck and Cornelis Schuyt, some by composers otherwise unknown, such as D. Raymundi. The earliest example, the Virgin and St Anne with Jesus, engraved in masterly style by Jean Sadelar after de Vos, appeared in Antwerp in 1584 (for illustration *see* SADELAR, JEAN) and was reprinted in Rome (1586) and in Antwerp (1587). Others (all but one by the same engraver) were published in Mainz (1587) or Frankfurt (undated). The engravings are superb as pictorial compositions, and the notation of the music, though small, is clear and accurately reproduced. In the same vein is *Encomium musices*, a book made up of 18 plates, each illustrating a different scene from the Bible (Antwerp: Philip Galle, *c*1590). The designs by Jaen von de Straet provide a mass of information about musical instruments of the day which the brilliant engraving of Adriaen

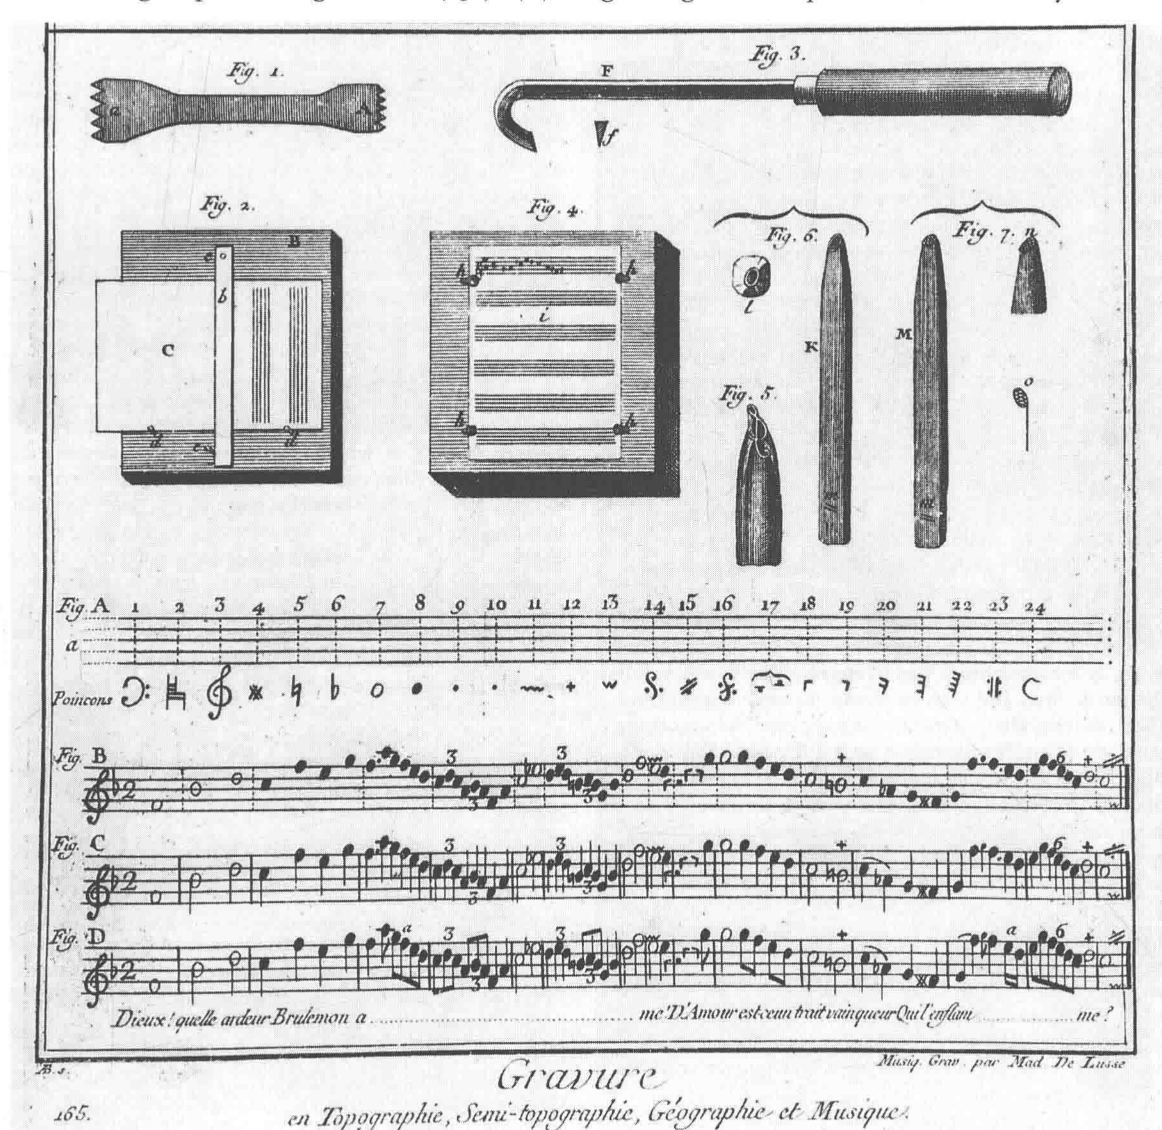
12. Part of a page of 'Intabolatura da leuto del divino Francesco da Milano', said to be the first music printed from engraved plates (c1535)

Collaert and others has preserved in the copper. The title-page shows three female figures, Harmonia, Musica and Mensura, framed by a fine show of musical instruments and supporting an open score of a motet for six voices by Pevernage (for illustration *see* PEVERNAGE, ANDREAS).

This expansion in the use of plates, not restricted to musical subjects, was the result of the invention of the rolling press, specifically designed for copperplate engraving. The press was in use in the Low Countries by this time and seems to have spread through Europe very rapidly.

In 1586 Simone Verovio, a calligrapher and engraver in Rome, issued two collections of pieces printed from engraved copper plates. The first was *Diletto spirituale: canzonette a tre et a quattro voci composte da diversi ecc.mi musici, raccolte da Simone Verovio, intagliate et stampate dal medesimo: con l'intavolatura del cimbalo et liuto* (1586[3]), a folio of 23 leaves (for illustration *see* VEROVIO, SIMONE). The title describes the nature of the work. Each two-page opening shows the separate vocal parts with words, a version for keyboard in three or four parts and another for lute in Italian tablature, all elegantly engraved and skilfully printed. Verovio produced similar works until 1608 and his methods were adopted by his successors in Rome, some anonymous (as was the printer of J.H. Kapsberger's *Libro primo di mottetti* of 1612), but one of whom, Nicolò Borboni, was as accomplished as Verovio himself. He is best known for his *Musicali concenti a une' et due voci ... libro primo* (1618), which he composed and engraved, and for the editions of Frescobaldi's keyboard works, superbly engraved by Christofori Bianchi (from 1615), which he published. The elegance of the engraving may to some extent conceal how such music was impossible to print from type.

Meanwhile, music printed from engraved copper plates had appeared in England (1612–13) and the Netherlands (1615) and examples of engraved music appeared in typeset books in France and Germany in the 1620s and 30s. The English work was *Parthenia, or The Maydenhead of the First Musicke that Ever was Printed for the Virginalls: composed by Three Famous Masters: William Byrd, Dr John Bull and Orlando Gibbons* (1613[14]) engraved by William Hole for Dorothy Evans, and printed by G. Lowe. It is an accomplished piece of engraving showing a command equal to Verovio's, but with the parts so condensed that the music would have been extremely difficult to play. The first Dutch example was issued by Joannes Janssen in Amsterdam: *Paradisus musicus testudinis* by Nicolas Vallet, engraved by Joannes Berwinckel (*Le secret des Muses*, i; 1618[16]). In France, the royal monopoly on music printing given to the Ballard family covered only typeset music and did not extend to printing from copper plates: composers who did not wish to entrust their music to Ballard published it on their own account or through a music seller. The first of these was Michel Lambert who, in 1660, published in Paris *Les airs de Monsieur Lambert* engraved by Richers. Eventually the technique spread across the Atlantic where it was used in 1721 for *A Very Plain and Easy Introduction to the Singing of Psalm Tunes* by John Tufts, published by Samuel Gerrish in Boston, and for *The Grounds and Rules of Musick Explained* by Thomas Walter (Boston: J. Franklin).



(ii) Techniques and later history. Engraving is distinct from etching, even though certain elements of the processes are virtually identical. Both were used at various times for preparing music for printing, although etching seems to have always been less common and effectively died out by the end of the 18th century. Engraving remained in use, with certain specific changes in technique, well into the 20th century.

The etching process presupposed the use of acid to eat into the copper plate, already coated with wax, to ensure that the acid only acted where wanted. The plate was covered with a thin coating of wax, after which the music was laid out with a sharp point, drawing staff lines and all other elements. The plate was then immersed in a bath of acid, which could eat into it only at points where the wax had been cut through; the acid therefore left the notation incised into the plate. The process seems to have been invented soon after 1500, by Daniel Hopfer in Augsburg or by the Italian printer Parmigiano, according to different authorities. It was certainly used by Dürer after 1515 and was perhaps being used for music from the end of the century. Verovio, in one of his 1586 volumes (Peetrinus's *Melodie spirituali*), describes the music as 'scritto da Simone Verovio: Martinus van Buijten incidit'. This at least asserts that Verovio drew the music on the plate, while someone else cut it in.

In England, Roger North described (*c*1695) how he bought a copper plate 'polish't and grounded' and etched some music on it. He used too strong an acid and the result was not satisfactory. Later (*c*1715–20), he related how 'etching, with a litle graving (and perhaps worse ways) have been used' to meet the demand for printed music. Later in the century, Mme Delusse wrote in the *Encyclopédie* that when music was first printed from copper plates, the notes were drawn with a steel point and were then bitten in with acid. She cited collections of organ music, many of the operas of Lully and Mouret, the motets of Campra and Lalande and the cantatas of Bernier and Clérambault.

In practice, it is not usually possible to tell whether music has been printed from etched or engraved plates since both produce a plate on which the music has been incised. With engraving, the musical notation was cut directly into the plate, using special tools. At first all the symbols, including solid note heads for crochets or quavers, as well as words such as tempo indications were cut freehand, and the results show a pleasing and artistic irregularity of detail. However, a significant development led to the adoption of punches for recurring symbols, note heads and clefs in particular, though dynamic indications, accidentals and time signatures were increasingly punched.

Each engraver owned a set of tools, which were distinctive, and treble clefs in particular seem to have acted for some as signatures. The individual craftsmen working for Walsh, for example, can be distinguished as easily by their clefs as by any other aspect of the engraving and layout, and the same is true with some of the much later engravers working for Ricordi. The use of punches seems to have begun before 1700, for Thomas Cross advertised (*c*1690) that 'Gent may have their works fairly engraved, as cheap as Puncht and Sooner'. Hawkins referred to Estienne Roger and other Dutch craftsmen who made an amalgam to soften the copper in order to 'render it susceptible of an impression from the stroke of a hammer or punch, the point whereof had the form of a musical note' (*HawkinsH*).

13. 18th-century music engravers' tools, reproduced from the 'Encyclopédie': 'Fig.1' shows the five-pointed tool for pricking the position of staff systems (in two sizes) on the metal engraving plates; in 'Fig.2' a squared-up plate rests flat on a stone under a straight edge (b), with two systems already cut by a scorer ('Fig.3'); 'Fig.4' shows the plate completely scored, with some characters (made by the punches indicated in 'Figs.6–7') already in position; 'Figs.A–D' show a variety of punches; the text in the last line was engraved with a burin

These printers certainly used the rolling press, essential for careful printing of engraved prints. This worked essentially in the manner of a kitchen mangle, so that the plate, the paper to be impressed, the frisket and the necessary support were passed between two rollers. These were able to exert considerably more pressure than that available with the conventional press for typeset music, and could draw out the detail of fine lines more precisely.

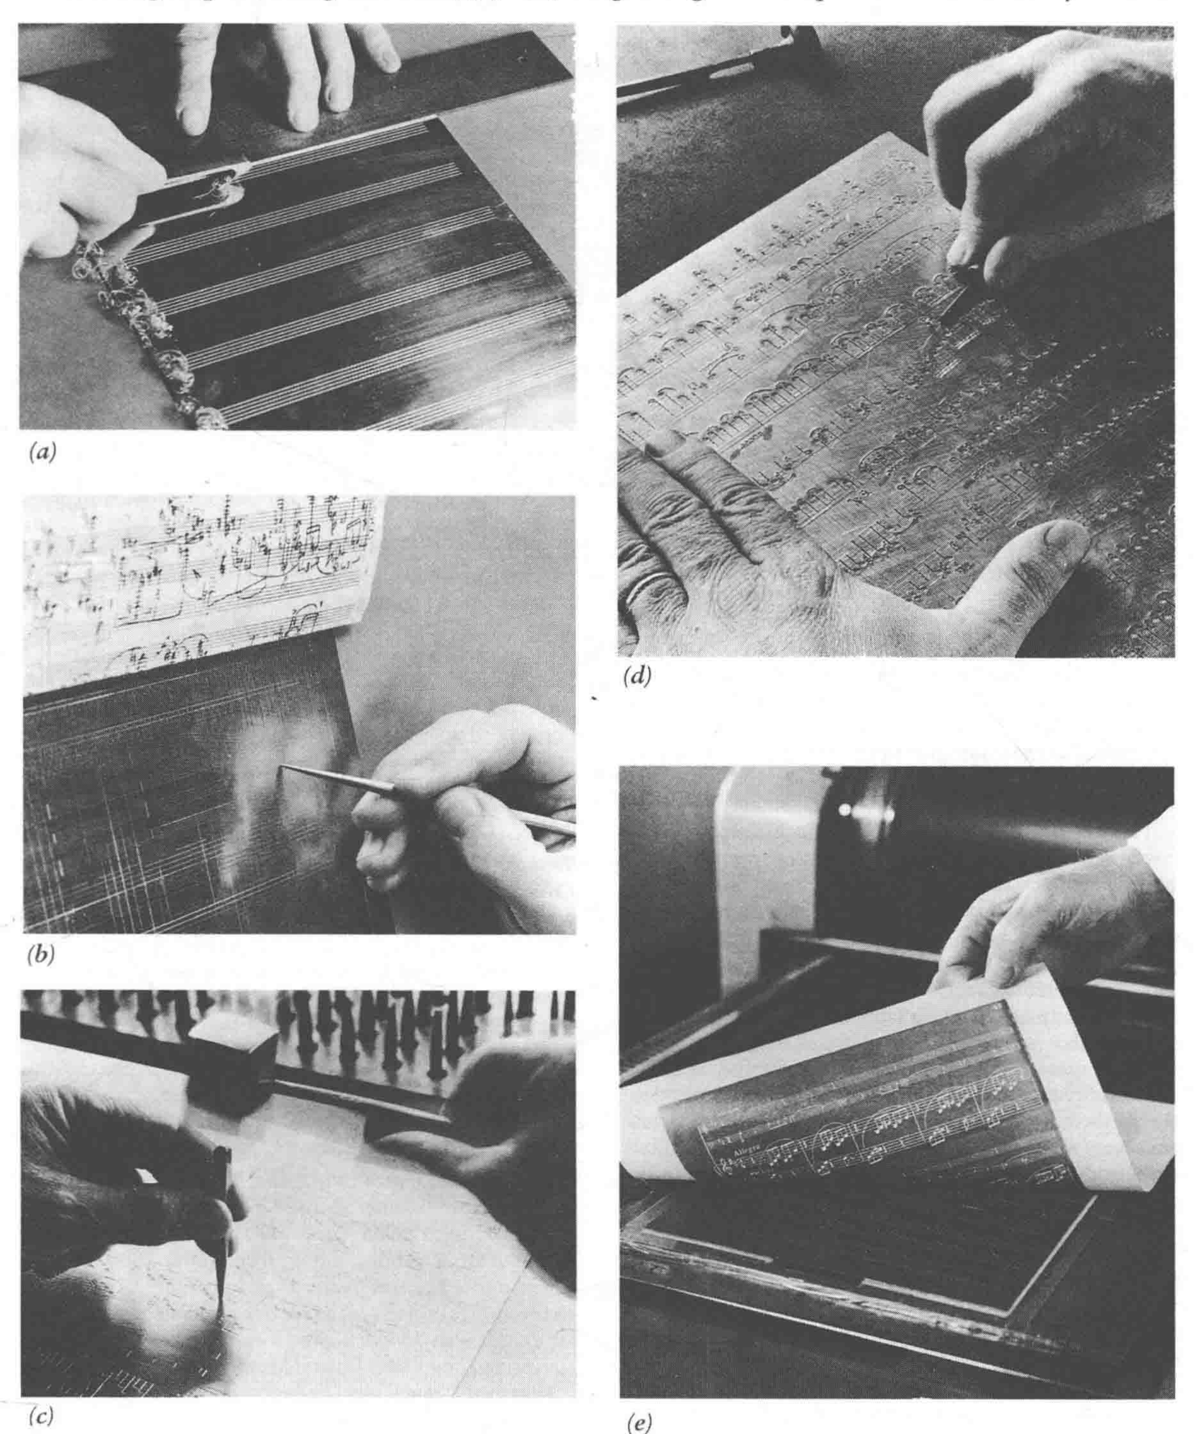
The other significant development was the adoption of pewter plates rather than the copper that had been normal at first. This change, which substituted a softer metal, was certainly in place by the middle of the 18th century. It made the task of cutting and of correcting errors much easier, and enabled a lower pressure to be exerted by the rollers of the press. Copper plates seem to have been retained for artistic work but, eventually, virtually all music was engraved on the cheaper material.

It is surprising that there are no early discussions of the processes of printing from engraved plates. Moxon, in his *Mechanick Exercises* (London, 1683–4), does not discuss the techniques, although he was well aware of them and had himself signed at least one engraved plate. The first valuable account does not appear until almost a century later with the commentary by Mme Delusse in the *Encyclopédie* to the second of two plates concerned with 'Gravure en lettres, en géographie et en musique' (fig.13).

At the outset of her description of the current technique, Mme Delusse stated that the aim of the engraver was to reproduce the manuscript copy exactly, on a copper or pewter plate, freehand; the methods that she summarized persisted, with slight modification, to the 20th century. They began with a detailed planning of the layout of the music: this involved consideration of the style of the music and the format that corresponded to the genre, decisions

about the number of staves on a plate and where the line ends might come, and provision of space for leger lines, for texts and for titles. This was not a simple mechanical count because the planning had to take account of the logic of the music, allowing space, as far as possible, in proportion to the value of the notes. This proved relatively simple in the quicker movements, but there are many indications in the manuscripts of second thoughts and recalculation in the slower movements. The next stage was to layout the staff lines on each plate, cut with either a single-tooth burin or a five-line rastrum. When the ruling was finished, the burr raised by the cutting tools was removed with a scraper, working across the lines with a light hand. This done (Mme Delusse wrote), everything on the manuscript was lightly drawn on the plate with a steel point, working from right to left so that all would appear the correct way round when printed. The pitch and the value of each note were shown by conventional signs at the end of the mark indicating the position of their stems. At this stage, the engraver might well have had to modify some of the detail written on the manuscript at the planning stage.

Once the plate was completely marked, the copy could be laid aside. Apparently the favoured practice in France in the late 18th century was to engrave any words below the music first, and then to stamp the note heads, rests, clefs, sharps, flats, naturals, directs and so on, using punches driven by a hammer with a flat face. This done, the plate was transferred from the thick, smooth stone that supported it during the punching and laid on an anvil, where it was planished or flattened using a hammer with a slightly convex face, to remove the distortions and bulges in the metal caused by the action of the punches. The plate was then laid on a smooth surface to be finished. The note stems, bar-lines, slurs, tails to single quavers, beams connecting the stems of groups of quavers, and subdivisions of quavers, were put in with a burin or with a scorer. To enable all cutting to be done from right to left the plate had to be turned around and about; indeed to cut slurs the engraver often held his graver still and turned the plate on to it.



When the cutting was finished staves were re-cut to open any lines that might have been closed up during punching. The plate was examined carefully, touched up as necessary, burrs scraped, and unrequired scratches and dots burnished away. A proof copy was pulled and any errors noticed by the composer and the printer's reader were marked for amendment. For correction, the plate was rested on the edge of the bench, between the arms of correcting callipers, each of which carried a point turned inwards at its end. The point of the arm over the face of the plate was placed on the character to be changed and pressed down; the point of the arm resting on the bench under the plate met it and located the position of the fault through the metal. The mark on the back was ringed, the plate was turned over face down on the stone and the area around the error was struck with a dot punch. The plate was turned over again, and the metal raised on the surface was burnished to obliterate the defective work. The back was also gently tapped with a hammer over the same area. Once the surface was smooth and flat, the corrections were made; care was taken not to disturb the original work around it. The plate was then ready for printing at the rolling press (fig.14).

Some printers engraved each page on a single plate. The pressure exerted by an engraver's press habitually flattened the paper being printed by the plate, so that the edge of the plate shows as a change in texture on many extant pages of 18th- and early 19th-century editions. (In addition, the area of the plate is often slightly darker in colour on the paper, as the repeated inkings and pressings of the plate gradually led to a roughness of texture and a consequent laying of traces of ink on the paper.) These marks are by no means always present: for one thing, some printers, such as Estienne Roger, printed two pages on a single plate, and others could put four pages on one plate if the format was quarto or smaller.

The first comprehensive account of the printing of music from engraved plates is in *Nouvel manuel complet de l'imprimeur en taille douce* by Berthiaud, revised by P. Boitard (1837), in which a whole section is devoted to music. By this time, music was rarely engraved on copper with a burin but was usually worked on pewter with a hammer and punches. If music came to the printer on copper plates then it was printed as any other copperplate engraving, but the printing of music from pewter plates required different procedures: among them, the force of the press was reduced, and the top roller had to be of sufficient diameter to prevent the plate from bowing as it passed through the press and curving upwards to take the shape of the roller. The printing quality of pewter plates depended on the alloy from which they were made. Generally the alloys were more brittle as the proportion of antimony was greater. This, taken with the reaction of the metal to the punch and working at the press, may explain the cracks that disfigure some music printed direct from plates, particularly during the 19th century.

These imperfections give rise to bibliographical distractions, because cracks, missing or damaged notes and faint copies suggest late impressions taken from worn metal or new editions taken from 'the original plates'. Instead, many faults arose from causes intrinsic to the metals and processes, and might have declared themselves early as well as late or arisen too from human shortcomings. Cracks may be attributable to any one of several causes: they might have been in the blank plate before working, they might have been opened by a burin where the metal was weak, or they might have spread under machine pressure at any stage of the printing run. Although some plates could survive through very long print runs, others could easily suffer from such damage very early in their lifetime. This is particularly true for pewter plates, for cracks rarely appear in plates engraved on copper. On the other hand, 'the abrasive action of the plate printers' wiping canvasses … could break down fine work on a copper plate within a hundred impressions' (Bain, E1974, quoting Pye). Thus, damage on plates cannot be taken as even a general indication of the age of the plate, any more than an apparent replacement plate can mean that its orginal had seen long service.

Discrepancies in engraving style that occur through the parts of any large work might stir thoughts of cancelled and re-engraved plates, but, if other evidence is lacking, it is safe to attribute such differences to trade practices. Much evidence shows that most engraved books of music were the work of more than one craftsman and, indeed, this makes good sense, for only by this means could the pressmen be kept busy. Thomas Cross, who appears at the foot of many editions as 'T. Cross *sculp.*', had 'good

14. The basic processes used in engraving from the 18th century to the present (showing the German practice, with punches): (a) cutting the staff lines on the metal plate; (b) translating the music from manuscript on to a spaced plate (working from right to left); (c) striking punches (music or lettering) into the plate; (d) cutting a slur; (e) pulling a proof

hands' to assist him, and William Forster shared the work of punching his editions of Haydn symphonies among a number of engravers. The editions of Ricordi and other publishers document the number of engravers involved with the addition of assigned initials to the plate numbers at the feet of pages, and Ricordi's own documents of his work, in the *Librone*, often indicate that a book was divided between different workers. In 18th-century France engraved music, with its decorative title-pages and engraved illustrations, was normally the work of more than one person, the music engraver being supported by specialists in illustration or lettering.

Predictably, music came in the 19th century to be increasingly standardized in its graphic character. Lines became finer in their execution, presumably because of the use of harder pewter with less lead in its alloy. The visual contrast between thin and thick lines could thus be emphasized, for instance between the endings and the middle of a tie or slur, or between the verticals and the diagonals attached to note heads or, most notably, in sharp signs.

In subtle ways the standard appearance of musical signs changed over the years: the G clef, for instance, rounded at the top around 1800, by 1850 was typically pointed. The musical page acquired a more dramatic appearance, but always short of interfering with the demands of performers. (These demands perhaps explain why music had no William Morris.) Standardization aside, engravers no doubt argued over the ideal layout and placement on the page for optimum legibility. Distinctive engraving house styles gradually replaced the distinctiveness of the individual craftsman, enabling the workmanship of particular firms to be identified, whether by contemporary persons in the trade (for instance as evidence of piracy in litigation) or by later scholars (as evidence of the date and source of particular exemplars). Priority and authenticity of editions can sometimes be inferred from such particulars, sometimes even by the evidence of the printing process itself. German music after 1850, for instance late Schumann or early Brahms, often exists in two forms, an earlier one printed directly from the plates and a later one printed by lithographic transfer, to be discussed below.

This general standardization of appearance seems to have been matched by a consistency in the craft of music engraving, once the pattern had been established with 18th-century punches and pewter plates. It was a true craft, of course, and most of the skills and detailed practices remained secrets of the craft, to be handed down through apprenticeship and to be recovered only from detailed study of surviving editions and the few extant sets of tools.

At the same time, the craft also remained remarkably decentralized, and it seems not unreasonable to speculate that at the highpoint of production, just after 1900, music engravers were active in several hundred cities throughout the world. To be sure, large firms often did the work for smaller firms and personal publishers, undertaking the engraving, running off copies and storing the plates for later press-runs. Late 19th-century publishers as far away as London, St Petersburg and Latin America, for instance, were served by specialist engravers in Leipzig, of whom Röder, Johann Brandstetter and Engelmann were the best known, and whose warehouses were largely destroyed in World War II. Other major engraving firms included Lowe & Brydone in London and the New York publisher G. Schirmer.

Engraving held its own well into the 20th century as a medium for almost all musical repertories. The strictures expressed by Novello (and others) about its expense certainly encouraged the parallel development of typeset music, but the engraving process was always more elegant and fluent, and seemed much better suited to music. Lithography was developed in order to achieve the same ends, but the various offset and transfer processes developed with lithography in mind also served to keep engraving alive as a force in music printing.

5. Lithography and more recent processes.

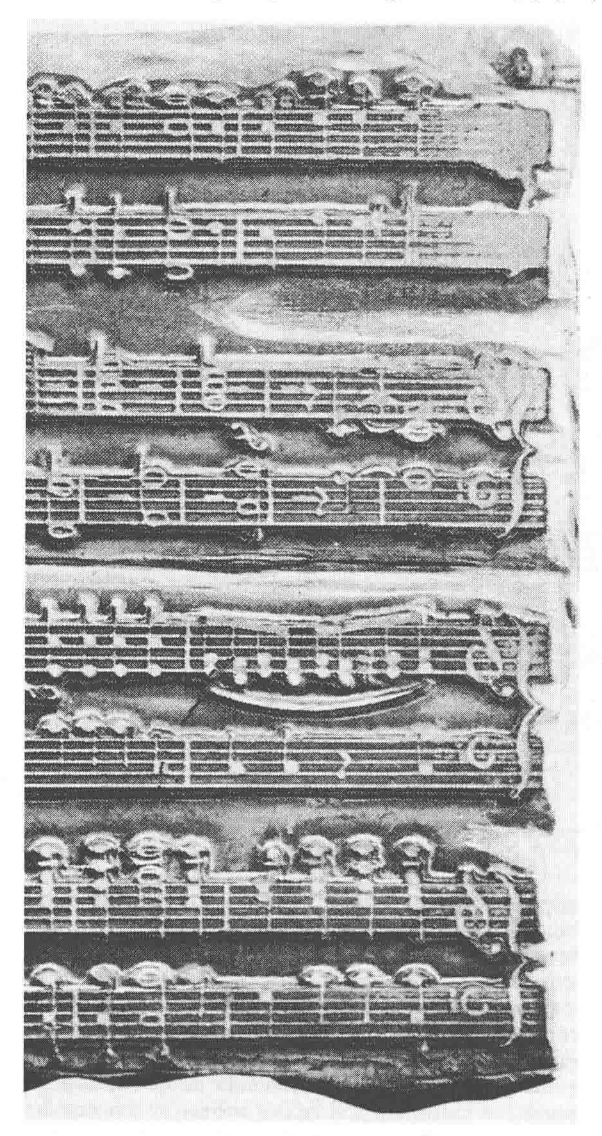
(i) Lithography. Lithography is similar to woodblock printing in that it involves printing from a text raised on the surface, with the surrounding material cut away; in this instance, the block is of stone, and the matter to be printed appears raised after the unwanted stone has been partly eaten away with acid. The practice is based on the fact that one greasy substance will receive another but any greasy substance will repel a water-based liquid. The man who used this principle to develop a quite novel method of printing was Alois Senefelder. He wanted to be a playwright but could not afford to publish at his own expense through the trade; so he took up the study of printing techniques. He began by etching with acid on a copper plate. He later substituted a piece of kellheim limestone and found that he could write with more command and more distinctly on the stone than on the copper plates. He used his own ink prepared with wax, soap and lampblack and decided to try the effect of biting the stone with 'aqua fortis' (nitric acid), wondering 'whether, perhaps, it might not be possible to apply printing ink to it, in the same way as wood engravings, and so to take impressions from it'. After pouring off the acid he found the writing 'elevated about a tenth part of a line', or about 2 mm, and that satisfactory impressions could be taken. A page of poorly printed music in a prayer book persuaded him that his 'new method of printing would be particularly applicable to music printing' and he began with the work of a friend, Franz Gleissner. It is usually accepted that the first of Gleissner's compositions to be printed was the *Feldmarsch der Churpfalzbayer'schen Truppen* (1796; fig.15), but in the first part of his *Complete Course of Lithography* (C1818; Eng. trans., 1819 – from which the above quotations are taken), Senefelder gave primacy to Gleissner's 12 *neue Lieder für's Klavier* (1796). He copied the music on stone and, using a copperplate printing press, assisted by one printer, took 120 copies. The composing of the songs and the writing, engraving and printing took less than two weeks.

These early techniques of relief etching and printing from stone, refined and developed by Senefelder, were used for music printing in Augsburg and Munich for at least ten years. In his study of Senefelder's life and work, *Aloys Senefelder: sein Leben und Wirken* (Leipzig, 1914, 2/1943), Carl Wagner showed a stone plate with music etched in high relief from the printing office of H. Gombart of Augsburg, dating from about 1800 (fig.16). Music printed by this method can sometimes be identified by the impression left in the paper by the raised characters, for example in *Sonate à quatre mains pour le pianoforte ... oeuvre II* by Franz Danzi (Munich: Falter, *c*1797).

However, Senefelder had continued to experiment, observing the chemical and physical affinities between different substances. He noticed that gum-water prevented the chemical writing ink (made of soap and wax) from adhering to the stone; he drew lines with soap on a polished stone, moistened the whole surface with gum water and applied oil-based ink which adhered only to the soap lines. He described his experiments:

> In trying to write music on the stone, with a view to print it in this way, I found that the ink ran on the polished surface; this I obviated by washing the stone with soap water, or linseed-oil before I began to write; but in order to remove again this cover of grease which extended over the whole surface (so that the whole stone would have been black

15. Part of Gleissner's 'Feldmarsch der Churpfalzbayer'schen Truppen' (Munich, 1796), traditionally accepted as the first piece of music successfully reproduced by Senefelder from etched stone [54% of actual size]



on the application of the colour [printing ink]) after I had written or drawn on the stone, it was necessary to apply aqua fortis, which took it entirely away, and left the characters or drawings untouched.

Out of these principles, rationalized in 1798, Senefelder developed the 'chemical printing' of true lithography, which allowed impressions to be taken from lines barely raised above the flat surface of a stone. He quickly extended the range of his procedures, or 'manners' as he called them. With the engraved manner the drawing was engraved in the surface of the stone with needles without being etched; this was used in the first work he produced after his discovery of chemical printing, *Eine Symphonie von vier obligaten Stimmen* by Gleissner, where, to make the title-page as neat as possible, the engraved manner was used. It was possible to combine the engraved manner with the elevated (surface) manner. In his *Rapport sur la lithographie ... adressé a la Societé d'encouragement de Paris* (20 October 1815, p.3), G. Engelmann showed a piece of music in which the notes had been written in ink and the staff lines engraved; and Senefelder combined the methods in title-pages, 'where the finest hair strokes [were] drawn in first with the needle, and the thicker, or shade lines, added with the pen'. By 1800 Senefelder had demonstrated that the chemical printing process was not limited to stone; other substances 'as wood, metal, paper, even fat substances, as wax, shellac and rosin' could be used under certain circumstances.

Senefelder regarded his process as of universal application – apt for quick reproduction, in any quantity, of originals as various as orders of the day struck off on the battlefield, bill heads, advertising copy and works of art. The early development of lithography was very much associated, however, with the printing of music, largely because of Senefelder's own interests and needs, and because of his association with Gleissner (and Gleissner's wife), Falter, J.A. André and S.A. Steiner.

During his experiments Senefelder laid out his music complete and in detail direct on the stone, working from right to left with a sharp black-lead pencil; pen-work remained the basis of the technique in its commercial development. It may well be that the early lithographers followed the procedures of the pewter-plate engravers: ruled their staff systems first (line by line), established clefs, key signatures and indications of pulse, laid the note heads in position and, aided by drawing instruments, completed stems, beams, slurs, binds, indications of dynamics and the like as required. The note heads in early lithographic music are often circular, and various devices were developed which allowed the craftsman to produce consistent note heads evenly and rapidly.

(ii) Transfer and photographic processes. The procedures required for writing directly on the stone were arduous. Senefelder himself, in various experiments, tried 'transferring [to the stone] from paper, upon which drawing or writing is previously executed with ink'. This much easier process was much used, particularly for ephemera. In this, the writing or drawing was copied from left to right with a flexible pen (using chemical ink) on to transfer paper, which had a specially prepared surface on one side. When the work was finished and the ink dry, the back of the paper was sponged with very weak nitric acid and the leaf put between sheets of dry blotting paper to absorb superfluous liquid and ensure that the paper was uniformly

16. Part of a stone plate etched with music in high relief, from the printing office of H. Gombart in Augsburg

damp. While still moist the sheet was laid face down on the surface of a highly polished stone and, protected with backing sheets, was passed two or three times through the press. The stone was then removed from the press and bitten in, and pure water was poured over it until the paper was disengaged, leaving an exact image, reversed right to left in the correct sense for printing. The stone could then be used for printing in the normal manner.

Although Senefelder acquired a British patent for this process in 1801, he was still writing in the future tense, urging its adoption for music printing, in his *Complete Course* in 1818–19. It is impossible to judge by looking at printed sheets to what extent, and when, the transfer process became an accepted practice for music. It was certainly increasingly used in commerce and law from the 1820s onwards, and Wagner's writing of the full score of *Tannhäuser* in 1845 (fig.17) shows that the technique had by this time become reliable even in the hands of amateurs. In the same year, Wagner wrote, he had 25 copies made of the scores of *Der fliegende Holländer* and *Rienzi*, 'by means of the so-called autographic transfer process, although only from the writing of copyists'.

The transfer process was not limited to using paper. In his British patent Senefelder described how 'plates of copper, tin, pewter, and various metallic compounds already etched or engraved' could be charged with a specially prepared ink and passed through a rolling press to yield impressions which could be readily transferred to stone. Although we do not know when or where this combination of engraving and lithography was first practised, it was a crucial development, and it set a pattern which has persisted in some guise or other.

Dans le temple d'industrie, a song dedicated to Louis XVIII on the Exhibition of the products of French industry, 'drawn, written and printed on the lithographic plates of A. Senefelder & Co., rue Servandoni no.13' (Paris, *c*1820), shows a splendid portrait and some accomplished writing, but the music 'engraved by Madame Pannetier' was printed from intaglio plates in a rolling press. In France the 1830s and 40s produced some examples that seem to have been transferred from intaglio plates to stone for printing. In London, D'Almaine & Co. anounced that they had 'recently introduced a new and very superior mode of printing music at a charge infinitely lower than by the old processes, whilst the notation is rendered beautiful and agreeable to the eye'. This might well have been derived from a combination of the intaglio and lithographic methods. *The Official and Descriptive Catalogue* of the Great Exhibition provides clear evidence that such a combination was being worked in London in 1851, for it is recorded in Class 30 that Jullien & Co. of 214 Regent Street exhibited 'specimens of ornamental printed music: three of the titles are printed in oil colours, and three printed in colours from stone. The music was engraved on pewter, and afterwards transferred and printed from stone'. During the 19th century developments in the design of printing machinery led to experiments with metal plates treated to give the same results as lithographic stone. Although zinc, for example, offered satisfactory properties for lithography, its adoption for music printing was belated. Lowe & Brydone, one of the largest British music printers, used stone until 1895, when they started to print from zinc.

It is often difficult to tell with certainty whether music from the latter 19th century was printed from engraved plates or by a lithographic process. Illustrations such as appear on title-pages are easier to distinguish, given the ability of the stone to indicate half-tones and subtle shading; in any case, they are often signed with some indication of how they were printed, such as the inscription 'Lith Formentin & Cie.' This, however, does not necessarily mean that the music was also printed by lithography. Formentin's signature appears on the title of music that was printed in Paris by Meissonnier, directly from engraved plates. Printers in other countries, Italy and England in particular, continued to use stones for the music.

We also can not tell how many pages were printed on each stone. In 1797 Senefelder was using stones of about 2500 cm² in surface area for his music, but as presses improved it was possible to use larger stones and by the latter part of the 19th century stones and zinc plates were giving 16 pages in full music size or 64 pages in octavo,

17. Beginning of Act 1 of Wagner's 'Tannhäuser', printed from the composer's autograph; the score was written on lithographic transfer paper which was then laid down on to the stone

imposed by the same principles as those governing imposition in letterpress printing.

The next great step forward came with the introduction of the camera into the field of the reproductive graphic arts. As soon as photography had become a practical process in 1839 as a result of the work of J.N. Niepce, Louis Daguerre and W.H. Fox Talbot, attempts were made to apply it to lithography; but it was not until 1852 that R.J. Lemercier and his colleagues succeeded in devising a process – difficult and hazardous in its operation – which they described in *Lithophotographie: ou, Impressions obtenues sur Pierre à l'aide de la photographie.* Alphonse Poitevin's process, in which the lithographic stone was sensitized with bichromated albumen, was perfected in 1855 and won general acceptance; it still persists in certain applications. In 1857 Eduard I. Asser of Amsterdam succeeded in making transfers from photographic prints on to a nonsensitized stone, and in 1859 Henry James was the first to make photographic transfers on to grained zinc. Instead of being written on stone or on transfer paper and then chemically 'fixed', music could now be derived from any original that could be photographed, the negative printed down on to stone or zinc and subsequently treated to yield a printing surface.

It is not surprising that this technology gave tremendous impetus to the development of new methods or old methods – in new guises – in the origination of music for printing. Instead of writing and drawing in reverse on stone or from left to right on special paper it was now possible to write from left to right on ordinary smooth paper, photograph the result and transfer it on to the stone or zinc plate for printing. Instead of punching and engraving metal plates it was possible to adapt traditional practices to paper, using (instead of gravers) pens and drawing instruments, and special stamps carrying note heads, clefs, letters and even complete frequently used words (for example *piano*, *accel.*, *ped.*). As a result of this development, the range of lithographic processes was greatly increased, without requiring new skills from the copyist. The music to be printed could be laid out either on lithographic transfer paper for direct transfer to stone or metal; or on ordinary papers for the camera and subsequent printing down for lithography; or for line engraving in relief. In the 1920s and 30s the photographic process was much used in France, where it was known as *similigravure*: its late developments are represented in the work of the Grafische Industrie, Haarlem, Netherlands, and Caligraving of Thetford, England.

The Halstan Process, a system unique to the company of that name in Amersham, England, was also graphical in essence. It was devised by Harold Smith, a master music engraver, and developed from 1919 onwards by him and his brother Stanley, a photographer and engraver; it was last used in 1997. The basis of the process was a meticulously planned original, four times the finished size, marked out in light blue pencil which would not reproduce photographically. Care was taken at this stage to ensure that the layout of the whole manuscript took account of the nature of the music, with suitable page turns and correct spacing of individual symbols; this required a mixture of musical and engraving skills. The image was then created in dense black ink using a variety of specially devised rulers and stencils, standard drawing instruments and pens. Any text on the page was set by photocomposition and laid down in position. After internal proofreading the original was reduced photographically to produce either a proof or final bromide or film. Emphasis on quality and flexibility ensured a strong worldwide following for the process. All the music examples in *Grove6* were set by Halstan, as were the Britten scores printed for Faber & Faber and the Verdi Edition published by Ricordi and the University of Chicago Press.

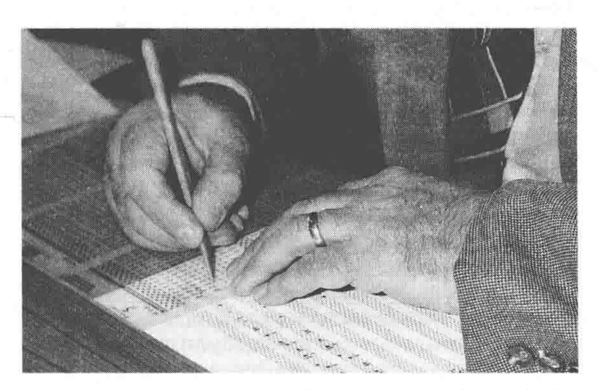
Each of these processes is to some extent limited by the range of symbols available to the lithographer. If a set of stencils, punches or other formalized symbols is to be used, the end result must necessarily lie within the conventions of 19th-century notation. These limits were considerably strained by much music written and printed during the middle third of the 20th century. Scores which merely required new layout on the page, or new relationships of conventionally notated parts, could be accommodated easily: famous examples include Stockhausen's *Klavierstücke XI* or Cage's proportionally spaced notations. Even more complex situations can be succesfully overcome by the use of traditional printing processes: the requirements of Lutosławski's aleatory works, the complexities of Boulez's *Le marteau sans maître*, or the new notations of Berio's *Circles* or Stockhausen's *Zyklus* can all be met by an expansion of the range of standard symbols or stencils, or by using a straight edge. However, other composers have made demands on notation and layout that can not easily be met by any of the processes described above. The elegant arrangements of lines and notes that are intrinsic to the notation of Bussotti, the dense blocking of Ligeti's *Volumina*, or the endless range of graphical symbols in other scores all led to a different use of photography. The simplest solution to these scores was to take the composer's holograph as the prepared printer's copy, eliminating the need for the printer's own engravers or copyists. It is photographed and treated like any other prepared score, transferred to zinc or stone ready for printing.

This emancipation of notation through the printing process has spilled over into conventionally notated scores, for the costs to printer and publisher are evidently much lower. Thus, parts of the score of Ives's Fourth Symphony were printed as reproductions of the composer's autograph, and other editions use fair copies prepared by the composer or a specialist copyist. The experiments in notation which encouraged the emergence of this practice seem to have largely been abandoned, which no doubt accounts for the survival of other practices, to be described in the rest of this article, all of which rely to a greater or lesser extent on the preponderance of conventional signs.

(iii) Stencils and dry transfer. The Halstan process is not alone in using stencils for some of its notation. Indeed, stencils have been used for copying music for centuries and the results can be elegant, as in the case of the 18th-century volume of chant now in the Toledo Museum of Art, Ohio. However, stencils did not speed up the process of printing multiple copies before the invention of lithography. But they were well suited to transfer processes, especially once photography had taken a hand. The stencil would ensure consistency of shape and design, not only for note heads, but also for clefs, dynamic indications and standard words. Slurs and beams still had

to be drawn by hand as they were neither standardized nor predictable in advance.

The stencil itself was largely replaced by the technique of dry transfer. In this, multiple copies of individual music symbols are printed in a dense black substance (plastic 'ink') on one side of a thin transparent film. When the face of the sheet is turned down on to paper and the form of any character is rubbed from the back, the 'ink' leaves the sheet and adheres to the paper. In this way a succession of note heads, clefs, rests and a wide range of other units in any quantity – each individual character in every respect uniform with its fellow – can be rubbed down in any position. Letraset in Great Britain offer music sheets, but the most comprehensive system was developed in the Netherlands as Notaset, and was much used (fig.18); such systems were also extensively used by Bärenreiter. As with all these processes, the technique demanded care in practice. Each work started as a detailed layout made on previously ruled paper by a musically trained planner and was then developed by operators using transfer sheets, rubbing down the necessary characters in place as they appeared. The whole was finished with a pen as required, after which it was photographed and printed down on to a zinc plate.



As will be apparent, the processes described in this section involve an extra step when compared with engraving or even typeset music; after the music has been laid out and copied, there is the additional stage of transferring it to the printing surface. All are therefore relatively slow, and also call for additional skills and many craftsmen, yet they and variants of them survived and sometimes prospered, while the amount of work done by the engravers of pewter plates has declined catastrophically. The shift from punching and engraving was much accelerated by the rapid development of efficient music typewriters.

(iv) Music typewriters. To print from a typewriter requires the existence of a transfer process, usually photographic, for the typewriter does no more than prepare a copy of the music, laid out on the page ready to be copied. It also presumes a fairly conventional notation: if too many additional signs or characters have to be added by hand, any advantage that musical typewriting may have will soon be lost.

Attempts were made in the 18th century to use the action of a piano to record on paper notes as they were struck, but it was not until 1833 that the first practical typewriter for music was described in a French patent (no.3748) awarded to Xavier Progin of Marseilles for what he called 'une machine ou plume typographique'. Other machines followed, by Berry (1837) and Guillemot (1859), but the first serious, commercially distributed machine was probably the Tachigrafo Musicale introduced by Angelo Tessaro in 1887 and marketed in Italy by Ricordi. During the next 60 years there were literally hundreds of patents granted throughout the world, particularly in America, for music typewriters. Most, for one reason or another, fell by the wayside; some were developed; a few succeeded, as for example the machine patented by Lily Salmon (later Pavey) which was manufactured for a time by the Imperial Typewriter Co. in England. Two or three types of machine enjoyed wide and continuing use over a long period. One of these was the Keaton Music Typewriter, invented and developed by Robert H. Keaton of San Francisco, formerly a professional violinist. Intended for the individual musician and the small publisher, it was highly successful throughout the USA; the makers made no attempt to promote sales elsewhere, though some machines found their way to Europe.

If Keaton's machine served a domestic market only, the typewriters invented and developed by Armando Dal Molin and Cecil Effinger each attained a wide influence in the commercial sphere. Dal Molin, Italian engineer and amateur musician, invented a music typewriter for his own use in 1945. The following year he patented it in Italy and went to the USA to develop it further, exhibiting it as the Music Writer at the New York World's Fair of Music. He started a business to manufacture the machine, and also set up a music typing studio. Refinements were added in 1955, and by the late 1950s the system was so successful that Dal Molin stopped making the machine for sale in order to develop his music origination business. Effinger, a composer and professor of music at the University of Colorado, conceived the idea of a music typewriter in Paris in 1945. He had made his first model the 'size of a large table – not functional' by November 1947. It was patented in March 1954 and the first production model was shown at Denver, Colorado, in July 1955; the machine was in demand throughout the world for 35 years. It was simple and robust in construction and engineered to fine limits (fig.19). It was best used by professionals working with previously planned copy.

19. Musicwriter (1973 model) designed by Cecil Effinger

6. Music publishing by computer. The task of automating music printing attracted much attention in the last quarter of the 20th century. Although there were many obstacles to overcome, the proportion of newly published music produced by computer has risen from near zero to about 75%. This shift and its inevitable completion have changed the dynamics of music publishing in many ways and promise to stimulate further changes in the conduct of musical transmission in the years ahead. These dynamics are traced here first by looking at the range of methods employed, and then by considering some of the most important milestones and their implications for further change.

(i) Methods. The process of publishing music by computer has three methodological components: input, editing and output. Output is the only one to date which is fully automatic. Editing by its very nature cannot be expected to be automatic. Input is the area in which the greatest variety of techniques has been employed. The physical methods by which all three processes are implemented are largely hardware-dependent, but the logic of the software that drives these processes is dependent on the views of the developer.

The complexity of the overall task of designing systems to print music is complicated by the fact that the methods available for implementing any one of these processes may influence the other two. The rapid pace of the evolution of computer hardware, which affects all three components, has produced a series of ever-changing limitations within which notation-software authors must work. Given the complexity of the software and the consequent length of time required to write and debug it, this speed has worked somewhat against the efforts of the authors. Too often some technical requirement on which a program depends has become commercially obsolete before the program has become fully functional.

(a) Input methods. The essential elements of a musical work that must be available to a computer in order for it to produce musical notation are pitch and duration. Many other elements of information may be required. The principal methods of input that have been employed to date are symbolic encoding from a computer keyboard, interpretation of sound data (usually from a MIDI hardware device) and optical recognition of scanned bitmaps (a grid of filled and unfilled dots). Schemes for symbolic encoding within the domain of computer applications can be traced to the 1960s; outside it they have a long prehistory particularly in pedagogical systems (e.g. Sarah Glover's Tonic Sol-fa system of 1835 and its popularization by John Curwen in 1875) and Braille musical notation, of which a skeletal version was in place by 1838. There are two principal advantages of symbolic encoding. First, the data, in addition to supporting the generation of visual notation, are usable for multiple purposes including sorting and searching. Second, excepting any intellectual limits owing to the intellectual design of the system, the data are explicit and unambiguous. Since a widespread criticism of symbolic encoding schemes has been that the systems are difficult to learn and remember, many special devices (electronic tablets, keypads, redefinitions of the computer keyboard, and so forth) have been introduced. However, none have stood the test of time.

The establishment of the MIDI (Musical Information Digital Interface) occurred in several stages. A provisional hardware standard was devised in 1983 and constantly improved in succeeding years; the Standard MIDI File Format was officially adopted in 1988. This flow of developments led to an avalanche of MIDI-input systems for notation programs. Earlier programs based on symbolic input were frequently retrofitted with MIDI input and output capabilities. The advantages of MIDI input are that the task is easily learnt, insofar as it involves playing a familiar instrument (usually an electronic piano keyboard) which generates the data, and that the data are much easier to check for errors than symbolic encodings, because the resulting sound-files can be played back for

'proof hearing'. However, MIDI data are machine codes that identify keys of the input device by number and record the exact amount of time (in milliseconds) for which the key was depressed. They do not record true pitch or duration. In relation to conventional notation MIDI data can be ambiguous, incomplete or too precise to support accurate construction of a score. For example, the black key a semitone above middle C is not explicitly C♯ or D♭; it is simply note number 61. The human interpreter can make an educated guess about the correct interpretation based on a previously learnt music-theoretic framework, but an enormous amount of program code is required to enable computers lacking that framework to make correct interpretations.

In relation to the data for the duration of notes, MIDI is optimized for the user, who is confined to the sound context for input, editing and output. To this user some graphical symbols (beams and slurs, for example) that support the mental grouping of notes by the performer are irrelevant. Bar-lines have no representation in MIDI data, and beams have no meaning in sound and thus no representation; no human threshold for hearing the effect of slurs consistently and unambiguously is defined. Rests are similarly without meaning; they must be inferred by software from an absence of data. Ties cannot be inferred at all, since the individual values of two consecutive notes that are tied will be represented as the sum of the two values. Consecutive rests are similarly undetectable.

In other ways MIDI data may be too finite to be accurately accommodated by notation software. Once again, the pedagogical tradition that supports the human interpretation of common musical notation is at the core of the difficulty. Scores do not tell us explicitly how loud a *forte* is on a continuum from 0 to 127, for example; performers adopt relative values that suit their taste and circumstances. Therefore score-writing software cannot safely infer much about dynamics from MIDI 'velocity' data except by using arbitrary ranges; these in turn must accommodate continua of arbitrary spans (e.g. from Gabrieli's *p–f* range to Verdi's *pppp–ffff*). Different problems result from a disjunction between sound information that has meaning only in time and its symbolic representation in musical notation. The fermata symbol does not change the nominal durational value of a semibreve, but in playback it does alter the sounding value in milliseconds. The lengthening of a note with an associated fermata in keyboard input to a notation program will not produce a note of the correct duration plus an associated fermata; captured as 'one sound', it will produce an overly long durational value without the associated symbol. Staccatos, which reduce the actual sounding time without altering the pulse, are problematical for related reasons. For accurate printed music they are best added to MIDI input as part of the editing process.

As a method of data acquisition, optical recognition (which should not be confused with the unintelligent scanning of data for the purpose of producing a mere facsimile) was still in its infancy at the beginning of the 21st century. Just as MIDI input requires that each sound be translated to a meaningful symbol, optical recognition requires that each object first captured as a bitmap be translated to a meaningful symbol. Although accuracy rates of as much as 95% have been reported, the numbers should not be interpreted to mean that 95% of the time required by other methods is saved, because scanning errors are time-consuming to correct (Selfridge-Field, F(i)1993–4). Some common scanning errors are the misinterpretation of hollow items (e.g. semibreves) and large items (clef signs); the misinterpretation of accidentally discontinuous lines (as in poorly drawn or preserved staves) and uncompleted ellipses (e.g. note heads); and the construal of incidental specks of dirt as items worthy of being represented in the score.

Effectively, the range of music that can be scanned at a level of competence that is practical for later use is limited to short examples on the order of a Bach minuet (i.e. possessing simple metres, rhythmic regularity, uncomplicated rhythmic values and a low requirement for additional editorial marks). The scanned original must be of high graphic quality and consistency. Optical recognition has thus far proved more useful for the production of MIDI files, which represent few features, than for printed notation, which incorporates a great many features.

(b) Editing facilities. All notation programs provide some method of editing the data. Generally the editing is done on the computer screen with a mouse. What the user sees on an editing screen is the program's first impression of what the score should look like; this impression is based on an intermediate representation that has attempted to convert the input to the selected output format. The intermediate files that produce the output must contain explicit information not only about the objects to be created (notes, rests, bar-lines etc.) but also about their absolute vertical and horizontal placement. These absolute measures are applied from the rules of relative placement inherent in the visual grammar implicit in common musical notation. That is, the program must know when to put a dot at the right side of the note (to prolong its durational value) and when to put a dot above or below the note (to produce a staccato indicator). It must know that a cue-sized note is smaller than a regular note but larger than a grace note. It must know that in the production of parts, multi-bar rests are expressed in a form of shorthand not appropriate in the corresponding bars of the score. Some programs permit direct access to the internal files that produce the output. These files are usually difficult to read without some training, but to those who persist they offer the advantage of a fine-grained control of positional information.

Some of the editorial chores that result from the data-acquisition methods described above may be unfamiliar from manual experience in score preparation. Almost all notation programs have occasional difficulties with the vertical alignment of items in polyphonic scores. These difficulties can be compounded by such requirements as multiple simultaneous subdivisions of the beat (e.g. 3:4); non-concurrent metres (e.g. 4/4 against 3/4); concurrent ornament signs (e.g. a turn with chromatic alterations indicated; both of the above with associated fingering numbers); unmeasured cadenzas; and the complexities of text underlay (Selfridge-Field and Correia, F(i)1994). The correct presentation of beams and slurs in complex textures, particularly in piano music of the 19th century, the accommodation of many 20th-century innovations in notation, and the reconstruction of scores of many early repertories will inevitably require editing by hand. Grace notes, the durational values of which lie outside the counted range of beats in a bar, often require repositioning. Some manual editing may be necessary to restore the

optical illusions to which we have grown accustomed (the dimming of staves to a 'background' level in order to render them 'balanced' with a 'foreground' of notes and rests); the computer's consistency and impartiality are sometimes offensive to human perception.

(c) Output. The last quarter of the 20th century saw a rapid evolution of output devices. Teletype machines, plotters, impact printers, dot-matrix printers, ink-jets and laser printers have all been employed to print music. The last two have become available in colour models, and programs that colour-code specific musical features of a piece are on the horizon. Programs that produce dot-matrix output rely on libraries of symbols formed of predefined patterns of dots and are not scalable. Although this kind of specification can be used to facilitate laser printing, most programs in current use define objects in terms of their splines (outlines), which are scalable. Scalability is important in adapting a score to different page sizes, layouts, levels of readability and so forth. Colour printing promises to support pedagogical uses (for example to highlight themes, subjects etc.). Laser output is generally preferred for professional work. Impact printing is necessarily retained for producing scores in Braille musical notation, where the dots of a cell must be raised to be detected by touch.

(ii) History. Efforts to employ the computer in the production of musical scores can be traced to about 1960. During the era of mainframe computers, when computer memory, data storage and processing times fell far below those customary on desktop computers, all input was symbolic and most output was produced by plotters. Plotter output used splines, just as the PostScript page-description language (destined to support most current graphics applications) does today. The most articulate schemes for symbolic input devised in the 1960s and 70s have proved to be an enduring contribution not only to efforts to print music by computer (Hewlett and Selfridge-Field, F(i)1991) but also to the more general notion of representing music symbolically. This has happened because the path from any input system to any output system requires an intermediate step in which data must be organized into files that describe the objects to be produced. Often this intermediate phase is invisible to the user.

The two schemes that have survived are DARMS (1964) and SCORE (1972). The survival of DARMS, initiated by Stefan Bauer-Mengelberg (in association with Columbia University), owes to the availability of extensive and open documentation, compiled in 1976 by Raymond Erickson. The value of DARMS's original virtue – compactness (essential in a time of very limited computer memory) – has gradually withered as machines have become more competent. Although in 1966 the DARMS encoding language operated in the absence of an actual printing program, Jef Raskin (then a graduate student at Pennsylvania State University) produced provisional plotter output from DARMS code one year later. Overall, DARMS has been allied with research applications as much, if not more, than with printing (Selfridge-Field, F(iii)1997). Among these are the music-bibliographic projects of such scholars as Harry B. Lincoln (16th-century madrigals and motets) and Jan LaRue (18th-century symphonies), while Jim Stanley's Web-based application for hymn-tune searching shows not only the durability of DARMS but also the persistence of tune-matching questions. The analytical possibilities of DARMS have been broadly explored by Brinkman (F(iii)1990).

SCORE, in contrast, is a flourishing program which has been developed solely by Leland C. Smith. SCORE software sustains the production of many of the collected editions of classical music (including those of Wagner, Verdi, Schoenberg and Berg). It also sustains a significant percentage of all popular-music editions produced in the United States. Its symbolic input code has been used relatively little in bibliographical and analytical applications. Its chief virtues are extensibility, finite control of spacing, overall aesthetic superiority and open documentation. The SCORE program has also been adapted countless times to the exigencies imposed by the evolution of operating systems and printing devices.

Other important pioneers of notation programs include Thomas Hall, Donald Byrd and Lippold Haken, whose efforts began in the 1970s. Hall devised the dialect of DARMS that supports the computerized printing system of A-R Editions (functioning since 1977). Hall experimented with mensural notation in the 1970s and explored the use of symbolic codes as a basis for source-filiation studies (F(i)1975, 1977). Byrd (F(i)1984) catalogued a great number of the problems inherent in generating musical notation and has continued to look at the broader challenges of ever-expanding hardware, editing and operating systems (F(i)1994). He has written a series of programs to print music; the most recent one is Nightingale. Haken's work at the University of Illinois has been of a more practical nature. From 1975 he devised a system that integrated musical transcription, interactive editing, playback and printing capabilities, principally for use in educational applications. Haken's LIME program (1993) is to date the only one of those mentioned here which supports the Notation Interchange File Format (NIFF) and the production of Braille musical notation. Interactive editing was a principal emphasis of several systems that followed.

Some important schemes that can be traced to the early 1960s but have now disappeared are Princeton's IML-MIR language, developed by Michael Kassler and others, and Indiana's MUSTRAN (1962), of which Jerome Wenker was the chief architect. The multifaceted work of Norbert Böker-Heil at the Staatliches Institut für Musikforschung in Berlin (*c*1970–1995) resulted in myriad programs addressing particular problems in printing and analysis; many of his solutions, such as his colour-coded 'piano roll' notation familiar today from sequencer programs, anticipated later commercial developments elsewhere. Interested primarily in music of the Renaissance, he seems to have been the first to produce white mensural notation (F(iii)1971). Another distinguished printing system from Germany was Kurt Maas's Amadeus, based in Munich from the mid-1980s.

While the systems described above continued to evolve in the 1980s, a series of extraordinary advances in hardware devices redefined access to notation software. All the programs cited above were developed in research laboratories and were initially available to only one user at a time. Processing time was slow and access charges were prohibitively high. The development of the desktop computer (1982), buttressed by the advent of desktop laser printers (1985), the establishment of the PostScript

Sonata font (1987), the MIDI interface and standard file format (1988) and desktop scanners (1990), unleashed a spate of new approaches to the production of music notation which continues to the present day. The first wave of these, such as the Mockingbird system developed by Ornstein and Maxwell (F(iii)1983), emphasized interactive editing; although an important prototype, Mockingbird was never commercialized. By around 1990, some 80 notation programs (predominantly for the Apple Macintosh and IBM-type personal computer) were reportedly under development (Correia, F(i)1992), and many more can be assumed to have come into existence. The majority of these relied on MIDI input. The wide variation in the aesthetic quality of the output is photographically documented in the journal *Computing in Musicology*, volumes i–ix (1985–93).

Since most programs initiated in this era were proprietary, their underlying codes have not been published. This lack has discouraged the development of auxiliary applications in bibliographical searching and analysis. The most significant survivor of this era is the popular Finale program, which has been developed (since 1987) by a series of programmers. Finale is noted for its excellent MIDI data capture and interpretation and has been popular with composers and arrangers. Sibelius, which was developed in the 1990s in Cambridge, UK (the home of at least two other music-notation programs), exhibits many of the same strengths as Finale with notational quality that some regard as superior. Capella, which comes from Söhrewald, Germany, emphasizes pedagogical use.

Among programs more orientated towards research applications, the SCRIBE system (1986) of John Stinson and others at La Trobe University in Melbourne, Australia, featured the transcription, editing and analysis of medieval and early modern music (see Selfridge-Field, F(iii)1990); it also could produce coloured output for mensural notation. Of the several music printing systems developed in Japan, the Toppan Scan-Note System (1983) employed elements of a symbolic representation system developed by Mogens Kjaer (Denmark, late 1970s), while the Dai Nippon Music Processor (1987) used dedicated hardware. Specialized needs for setting early, recent and non-Western repertories have also been met by a wide range of smaller programs developed in the 1980s and 90s. An auxiliary need to place short snippets of notation in textual material have led to the creation of numerous special-purpose font sets. Among these Yo Tomita's Bach Font (F(i)1993–4) has facilitated the inclusion of rhythmic figuration in running text as well as spreadsheets and databases, while chant fonts such as that produced at St Meinrad's Abbey in Indiana, USA, support the integration of Solemnes-style notation in liturgical programs.

After 1990, optimism about the practicality of optical recognition as an input method led to many efforts to make recognition technology practical as an input method for musical notation. This technology has foundered for several reasons. One is that some three-dimensional phenomena inhere in the two-dimensional page that we see in black and white. When a note head and a staff line overlap, which one is on top? Object-identification tends to proceed on the basis of subtraction. If one of a set of overlapping images is removed, the other may be rendered insufficiently complete to enable accurate recognition. Of currently available programs, the acquisition engine designed in the early 1990s by Nicholas Carter, for example, produces SCORE intermediate files; thus the editing involves the use of SCORE. The Sibelius and Capella programs produce files in their own proprietary file-formats. The SmartSCORE program developed by Wladyslav Homenda was initially designed to produce MIDI files but has since been broadened to support NIFF. The impetus for the creation of NIFF was in fact the interest of many vendors in an ability to exchange data between printing, scanning and MIDI software. The foundations for this interchange format were laid by Cindy Grande in the mid-1990s and have been furthered in recent years by Alan Belkin and others (F(ii)1996).

The latest stimulus to the further evolution of notation software has been the rapid development of the World Wide Web as a medium for the distribution of files containing both sound and notation. By changing the model of distribution, the Web poses a challenge to the social conventions associated with both publishing and recording. Self-publishing of scores, first made possible by desktop printing, led to the creation of many small presses for the production of music, which has in turn led to the diffusion of editorial control (and, some would argue, a diminution of critical standards). This trend can be expected to continue. Since the Web has the capability of offering an extensive and efficient distribution system which could operate independently of these established models, a current question is whether established publishers of music will survive as the purveyors of editions that exist only on paper. Publication on the Web essentially means providing electronic materials from which the user may produce his or her own printed copy, in some cases emending it before printing it. For the user there are many potential compensations in a new paradigm that is now only faintly realized. The Web offers the possibility of enabling collaborative work on common projects from multiple physical locations, which could improve consistency and greatly reduce the amount of time required to produce critical editions. In the case of sound files on the Web, however, music-redistribution sites often pool the voluntary contributions of a virtual group of anonymous suppliers; they thus offer no promise of quality or consistency.

Computer-based media in general and the Web in particular facilitate the creation of virtual editions – compositions (editions, arrangements etc.) that may exist in multiple versions in order to accommodate the interpretations of different editors or users and which may be 'updated' from time to time. In the hypothetical distribution model in which the master copy resides on only one computer and users download the music only when they need it, control of content may come to reside with the person controlling the website files, the editor who supplied the information, or a virtual community of users who can automatically update the content from some remote locations. Computers can support all of these lines of authority and many more besides.

In addition to the legal and commercial issues which use of the Web raises, it also calls into question many philosophical premises that underlie more than a century of musical scholarship. In contrast to the Urtext of yesterday we are likely to see a more phenomenal sense of the musical work evolve. Dumitrescu's Java-based system for mensural notation (F(iii), forthcoming), for example, comprises a primary visual layer that provides

direct description of manuscript contents and a secondary editorial layer which provides a particular interpretation of the contents. This prospect raises fundamental questions about the identity of discrete musical works. While at each stage of the development of computer tools, various threats to the established order have been perceived, it would appear that overall their increasing use has brought corresponding benefits to rank-and-file musicians, teachers, students, composers and arrangers. There is every likelihood that on balance this will continue to be the case, but hard-fought battles may be expected to accompany every gain.

II. Publishing

1. Definition and origins. 2. The age of letterpress printing, 1501–1700. 3. The age of engraving, 1700–1860. 4. The age of offset printing, 1860–1975. 5. Music publishing today.

1. Definition and origins. The music publisher issues musical editions that consist primarily of musical notation, whether for performance or study; a publisher who issues books about music, certain kinds of instructional material, librettos and other primarily verbal texts but does not also issue musical editions, is not generally regarded as a music publisher. As with general publishers, the music publisher's activities involve obtaining a text and working with the composer or editor, financing the printing, promoting, advertising, storing and distributing the copies and, increasingly over the past century, negotiating and administering performing rights.

The present survey of music publishing describes the changing environment in which music publishers worked and inevitably comes close to being a summary of the cultural history of music in general, seen from the perspective of the student of musical documents. Music publishing is part of the history of society and commerce. It owes its existence to three phenomena that date back to the Renaissance: the invention of printing; the growth of modern mercantile practices which provided publishers with a framework for their economic and promotional activities; and the rise of the professional composer, who needed the services of the music publisher. Music printing is part of the history of technology, although printing and publishing are necessarily related and in fact many music publishers – before 1700 almost all, subsequently only a few – did their own printing.

Musical texts may be printed but not published. Luxurious editions were often prepared as keepsakes for private and limited circulation, as, for example, were the earliest copies of *Parthenia* (London, 1613/14); later impressions of this book, however, were intended for sale and should therefore be regarded as having been published. Other music was printed but not published in order to ensure control over performances. Ten partbooks make up John Barnard's *Selected Church Musick* (RISM 1641[5]), but there is no extant continuo part; apparently the vocal parts were printed so that the singers could learn the music, but no performance could take place without a continuo. In the 19th century full scores and instrumental parts for operas and some large symphonic works were often printed but not published, so that the owner could more effectively demand royalties or specify conditions of performance. Vocal scores, which were both printed and published, could be used to familiarize the public with a work and to train singers, but full-scale performances with orchestra could not be given until arrangements were made with the publisher, involving royalty payments in return for the rental of the instrumental parts and the conductor's score.

The opposite condition can also exist: music may be published but not printed. Through history there have been music copyists whose manuscripts were presumably intended to be equivalent to a printed copy. William Byrd and Thomas Tallis secured a patent in 1575 for music printing that also specified control over music paper; this implies that they had a special working relationship with copyists. Reports suggest that the money they made came mostly from the paper; and when Thomas Morley renegotiated the patent in 1598 he took pains to retain the coverage of music paper. In the early 18th century, Italian opera was rarely printed; yet, through manuscripts, it came to dominate European musical taste. Provincial newspaper announcements of the 18th and 19th centuries tell of men who made a living by copying music 'cheaper and more accurately' than printed editions. Today, through photography and lithography, any manuscript can be duplicated and hence can become the basis for a published edition. Various blueprint processes were also widely used, especially from 1920 to 1960, to copy and circulate contemporary music. The manuscript copy is an appropriate means of publishing a musical text of which few copies are likely to be needed.

Before Gutenberg's invention of printing, books were extensively distributed in manuscript; and the origins of book publishing are commonly seen as beginning well before that time. No evidence has been uncovered, however, of any copying shops that specialized in music. Music scribes were attached to courts and chapels, such as those at Mechelen or Ferrara; the music they copied was often widely circulated and much used, but their activity is distinct from the processes of publication.

During the period of incunabula, several dozen printers issued theoretical treatises, but few issued more than one such book. The printers of liturgical music, on the other hand, usually issued more than one book, perhaps because they had invested in music type. By 1480 liturgical books containing music in plainchant notation were being issued throughout Europe at the rate of several dozen a year.

Among the Italian printers who worked with music were Ulrich Han and Stephan Planck in Rome; Damiano and Bernardo Moilli in Parma; Christoph Valdarfer, Leonard Pachel and Antonio Zarotto in Milan; and, in Venice, a German lineage including Theodor of Würzburg, Johann Hamman, active later in Speyer, and Johann Emerich from Speyer. Books for service use in Germany and central Europe were produced by Bernard Richel in Basle, Johann Sensenschmidt and later by Johann Pfeyl in Bamberg, Georg Reyser in Würzburg and Georg Stuchs in Nuremberg. For a few years just before 1490 about a dozen books a year came from the press of Michael Wenssler in Basle. The most prolific German printer of music incunabula was Erhard Ratdolt in Augsburg. Steffen Arndes, working between Italy and north Germany, also produced major liturgical music texts. In Paris in the 1480s several dozen missals were printed for various French bishoprics by Jean Du Pré, who left space for manuscript music; in the 1490s Jean Higman issued such books, using music type. These men were still essentially printers. There were two stimuli to the separation between printing and publishing; first, printers had to sub-contract the work to other printers; and second, financial support

was sought outside the trade, in order to cover the costs of materials as well as labour, whether as manifestations of the desire to circulate a text (as with centralized distribution of diocesan service books or, later, congregational hymnals and psalters), to demonstrate patronage (as evidence of the munificence associated with the courtly chapels) or to invest capital (as in the case of reprinting, typically of anthologies). The first music publishers who were not also their own printers appeared after 1480, when the Venetian merchants Luc'Antonio Giunta and Ottaviano Scotto called on local printers, notably Johann Emerich and Johann Hamman, to print music books, mostly Roman missals. The Giunta family was to be the major Italian publisher of liturgical music books throughout the 16th century.

The history of Roman Catholic liturgical books in the 16th century has yet to be studied in detail, but it appears that the output in the Low Countries and Germany declined sharply about 1515; in France it flourished longer and did not disappear until after 1550. England produced liturgical books for a few years around 1500 and again during the reign of Mary Tudor. Elsewhere, Jan Haller in Kraków issued a splendid missal in 1503, and was succeeded by Hieronim Wietor, while Christoffel van Ruremund produced significant books in Antwerp at about the same time. Even so, more 16th-century liturgical music books probably came from the Giuntas than from all other publishers combined.

2. THE AGE OF LETTERPRESS PRINTING, 1501–1700. Petrucci has been called the Gutenberg of music printing. The comparison is not quite appropriate, since he was not the first to print music; but in matters of craftsmanship and artistry the comparison is apt. Besides being the first printer to use multiple-impression movable type, he deserves to be recognized as the first publisher of polyphony. Between 1501 and 1509 in Venice he issued the three *Canti* volumes of the *Odhecaton* and five books of *Motetti* as well as mass books, collections of popular frottolas and lutebooks. Through them, the music of Josquin and his contemporaries became the earliest art-music repertory to appear in print. In 1511 Petrucci resumed printing in his native Fossombrone, with less exceptional results. His publications, the last dated 1520, provide an invaluable record of the musical works of Franco-Flemish polyphony and a testimony to their contemporary reputation.

Petrucci's success seems to have stimulated other printers to issue music. In Germany, Erhard Oeglin in Augsburg in the 1500s, and the itinerant Peter Schoeffer over the next two decades, used double-impression typography in direct imitation of Petrucci, as did Jean de Channey in Avignon in the 1530s. In Italy, on the other hand, Caneto, Sambonetto and particularly Dorico used woodblocks, as did Arnt von Aich in his noteworthy songbook from the 1510s, and Grimm & Wirsung in Augsburg in their sumptuous motet collection of 1520. Petrucci's most important successor, Andrea Antico, was, however, neither a printer nor a publisher but a woodcutter or engraver whose blocks were used by music printers in editions subsidized by others. The blocks can be identified in about a dozen books, most of them vocal canzoni, first issued when Antico was in Rome between 1510 and 1518. From 1520 to 1539 he worked in Venice, after 1532 in partnership with Ottaviano Scotto. About two dozen more music books were issued during this period, using his blocks. Blocks were also used in treatises and in instrumental anthologies such as Girolamo Cavazzoni's tablature book of 1543, now thought to be the work of Bernardino Vitali.

The first really successful music publishing concern was established in Paris during the reign of François I, at the time of the so-called scholar printers, by Pierre Attaingnant, who issued his first anthology in 1527/8. His typefaces are not without precedent but they contributed to the distinctive appearance of his editions and determined the speedy production of them, through which the chansons of Janequin, Costeley and their contemporaries were disseminated. Attaingnant flourished for a quarter of a century. His books follow formulae of many kinds – in their appearance, their content and even their titles for numbered series. Although he specialized in the early French chanson, which he issued in oblong partbooks, at first octavo and later quarto, he also issued several books of tablature and over a dozen folio mass collections, for which special music type was made.

Venetian music publishing after Petrucci and Antico is the story of two great names, Gardano and Scotto. Their output, devoted almost entirely to sacred and secular partbooks, was prodigious. Antoine Gardane (Antonio Gardano), originally from southern France, began printing in Venice in 1538, specializing in the music of Arcadelt and featuring series such as the *Motetti del frutto*. By 1545 he was issuing a dozen or more new titles every year; by 1600 the total had reached 30. His heirs continued to publish music up to 1685, sometimes retaining the name of Gardano, elsewhere using that of Magni, the founder's grandson-in-law. Over its long history the Gardano dynasty issued some 3000 musical editions. The firm Girolamo Scotto produced perhaps half this total. It began in 1539 and for a time rivalled Gardano in the quantity and quality of its output. But before 1570 it had waned, and after 1590 its occasional publications were mostly reprints of Palestrina masses. Lesser Venetian publishers included Francesco Rampazetto (1561–8), who issued reprints in the 1560s; the composer Merulo ('Claudio da Correggio'), whose editions, from the same decade, were regarded as models of accuracy; and Alessandro Raverii, who printed over a dozen music books a year during his short career (1606–9).

The innovatory products of the 'nuove musiche' around 1600 were favoured by two younger Venetians, Ricciardo Amadino and Giacomo Vincenti, who were partners between 1583 and 1586 but worked separately thereafter. Amadino's firm disappeared during the economic decline of Venice and is last heard of in 1621; but the name of Vincenti persisted until 1667 and appeared on well over a thousand musical editions. The prolific Venetian trade in books, like Venetian commerce in general, enjoyed its greatest prosperity between 1540 and 1610: it was almost inevitable that the music publishers would also be important, although the quantity of their output is astonishing. The vast output of Venice – at its peak in the 1590s it was publishing more music than the whole of the rest of Europe – probably helped significantly in the spread of developments as different as polychoral and monodic styles.

The centre of early German music publishing was Nuremberg, thanks to two type cutters who also used their own type as printers: Hieronymus Formschneider ('Grapheus') and Johann Petreius. From 1532 onwards

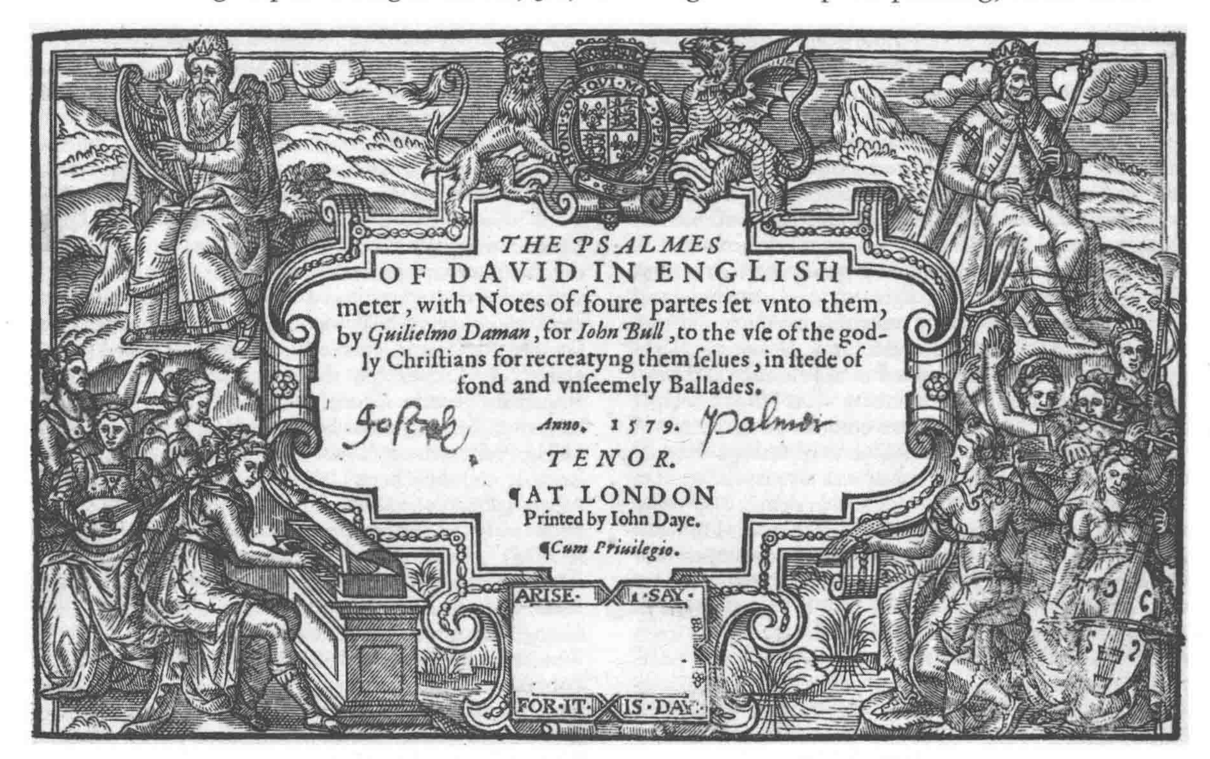
Formschneider issued works by Hans Gerle, using woodcuts. He then cut a music face and used it in about a dozen music books that he printed between 1534 and 1539. (His name also appears in the imprint of Henricus Isaac's *Choralis Constantinus*, dated 1550–55.) He is also important because his music type was used by most of the Lutheran printers in north Germany later in the century. Petreius issued several dozen music books between 1536 and 1550; but he too is important as a designer of music type, which was used in south Germany, central Europe and as far away as Antwerp and Paris. His two music faces are particularly attractive and complex in their construction. The most prolific of the Nuremberg houses, however, was the partnership of Johann Berg ('Montanus') and Ulrich Neuber. They issued over a hundred editions, mostly partbooks and vernacular song collections, using Petreius's type (1542–71), while their successors, Dietrich Gerlach (1567–75), Catharina Gerlach (1575–91) and Paul Kauffmann (1594–1617), issued several hundred more.

Other music publishers became established in Paris after the death of Attaingnant. Of these, Nicolas Du Chemin issued about 200 music books (1549–76), including two series of chansons in the style of Attaingnant and about 30 folio mass books. Michel Fezandat issued several tablature books and Calvinist psalm books (1550–58). But it was the partners Adrian Le Roy and Robert Ballard who in 1551 obtained the exclusive royal privilege for music printing; this monopoly was to remain in force for over two centuries, determining the course of French music publishing up to the time of Lully and, indeed, as far as the French Revolution. Their earliest editions were mostly tablature books and psalters; in 1557–9, 22 folio choirbooks appeared. Thereafter secular partbook anthologies predominated in their catalogue. At first they used type from Petreius in Nuremberg, but shortly before 1560 they began to use founts, commissioned from the master punchcutter Guillaume Le Bé. These were to serve as a distinctive hallmark of the firm's music for the rest of its long existence. After the death of Le Roy in 1598, the Ballard name alone was used.

The fourth major music publishing centre in the mid-16th century was Antwerp. Though the first *Souterliedekens* was printed there by Symon Cock in 1539, the history begins effectively the following year with a privilege issued to Willem van Vissenaecken, who had music type specially cut for him but seems to have issued only one collection. His competitor and successor was Tylman Susato, whose shop issued about 60 music books between 1543 and 1561; most were devoted to reprints of chansons and motets, but some were Flemish songbooks and psalm books. Jean de Laet and Hubert Waelrant produced about 20 attractive vocal collections (1554–65). The major music publisher in the Low Countries was Pierre Phalèse (i), who began his career in Leuven in 1545 and then set up a partnership with Jean Bellère in Antwerp. After his death his son Pierre Phalèse (ii) moved to Antwerp, where the family continued to publish music up to 1691. The Phalèse imprint appears on nearly 200 chanson, motet and lute collections. It must be assumed that the Antwerp reprints reflected a considered judgment of market demands, thus providing us with a useful perspective on the popularity of different kinds of music. Music was also issued in Antwerp by Christoffel Plantin, famed for the printing shop which survives today as a museum in Antwerp; his books are impressive and distinctive both visually and musically (fig.20).

Like book publishing, music publishing favoured commercial centres in preference to university towns. Mostly before the ascendancy of the four cities discussed above, Frankfurt, Lyons and Augsburg also housed music publishers. The Frankfurt printer Christian Egenolff worked for several decades from 1532, issuing collections of German folksongs and of settings of Horatian odes. Following sporadic activity in Lyons, including woodblock efforts by Antoine Du Ry in 1525 and Etienne Briard's double-impression round-note typography of 1532, Jacques Moderne began printing there with a folio missal and three motet collections, also in 1532. After five years of inactivity, he resumed with a series in the style of Attaingnant called *Le parangon des chansons*; 'Grand Jacques' (as Moderne called himself) also issued about a dozen other music books during his last years between 1541 and 1556, mostly reprints of Venice or Paris editions. His major successor was Godefroy Beringen, whose several extant music books, neat in appearance, are distinctly Calvinist in their repertory. In Augsburg anthologies were printed by Melchior Kriesstein (1540–49) and Philipp Ulhart and his son, also Philipp (1537–79), devoted mostly to music taken from other publishers' books. Other printers around 1550 included Mathias Apiarius in Berne and the Zürich punchcutter turned lute intabulator Rudolf Wyssenbach; the itinerant Jacob Baethen, whose music books were printed successively at Leuven, Maastricht and Düsseldorf; Johannes Honterus, the Romanian humanist scholar whose press at Braşov

20. Title-page of George de La Hèle's 'Octo missae', (Antwerp: Plantin, 1578)



produced a songbook in 1548; and the Hungarian György Hoffgreff, who printed a songbook in 1553 at Kolozsvár (now Cluj-Napoca, Romania).

The commercial centres, in the mainstream of activity, could be expected to produce editions of a musical repertory that was stylish and distinguished but also essentially conservative. The character of the music produced in each centre was distinctive, but activity elsewhere varied much more widely in character and in quality, reflecting decisions that typically were either less informed or made in the light of local demands and circumstances. Because of religious conflict and the political decentralization of the country, German publishing was particularly diversified in appearance and scattered geographically. Nuremberg was the principal exception, producing attractive editions of the music of well-known composers and never completely losing its cosmopolitan outlook. But music was also issued by over a thousand different music printers in nearly 200 other German cities in the 16th and 17th centuries. Lutheran music books, at first using woodcuts, bear the imprints of more than a dozen different cities, most of them producing only a single title or two before 1540. Hans Hergot in Nuremberg was the first to print music to Luther's mass (1526), while his widow Kunegunde also printed pamphlets including music, as did her second husband, Georg Wachter. Wittenberg became the earliest important centre: Georg Rhau, who had printed some musical treatises as early as 1517, obtained a fount of music type from Formschneider in the 1530s and produced several dozen of the most important early Lutheran service books (from 1538). His successors included such men as Johann and Andreas Eichorn in Frankfurt an der Oder (1556–1615), Andreas Hantzsch in Mühlhausen (1583–99), Johann Schwertel (1565–80) and Matthäus Welack in Wittenberg, Georg Baumann in Erfurt (1573–90) and in Breslau (1590–1607), and Gimel Bergen in Dresden (1570–97, his heirs to 1716). In south Germany the major publishers included the shop of Adam Berg in Munich (1564–1629), whose many Lassus editions include the folio *Patrocinium musices* (1573–89), one of the most sumptuous musical editions ever produced; later collections of Lassus were issued by Nikolaus Henricus. In Frankfurt, Sigmund Feyerabend produced several major collections (1570–85), while to the east interesting editions were also produced, in Latin or the vernacular. These included sacred anthologies from Kraków from 1550 on, printed at first by the firm of Florian Ungler using woodcut music, later by Maciej Wirzbięta and the lineage of Szarfenberg, in whose editions movable type came to be intermixed; several elusive editions of the hymns of the Bohemian Brethren, in which the recurring music typefaces identify a fount that moved with the itinerant printers; and over a dozen collections issued by Jiří Černý (Nigrin) in Prague (1578–1604), either composed or at least encouraged by Jacobus Handl.

In Germany around 1600 courtly patronage supported extensive music publishing activity by the Saxon printers Justus Hauck (1604–18) and Johann Forkel (1624–35, his successors to 1713) in Coburg, Johann Weidner in Jena (1605–29) and Nikolaus Stein in Frankfurt (1602–21, working mostly through the printer Wolfgang Richter); to the north by the Fürstliche Druckerei in Wolfenbüttel (1607–14) and by Phillipp Van Ohr (after 1597) and Heinrich Carstens (1609–25) in Hamburg; and to the south in Augsburg, Valentin Schönig (1591–1614) and Johannes Praetorius (1600–35). A great many 'occasional' works (*Gelegenheitskompositionen*), for events such as weddings, baptisms and funerals, appeared throughout the 17th century. The leading centre of such publishing in the 1620s was Leipzig, where Johann Lanckisch (1619–56) and Johann Gluck (1618–24) issued many of the works of Schein, among others. Jakob Rebenlein in Hamburg (1632–60, his heirs to 1684) was the major printer of the 1630s. By far the most prolific centres for the publishing of occasional music, however, were those on the Baltic Sea, in Lübeck, Rostock, Greifswald, Stettin (Szczecin), Danzig (Gdańsk) and, above all, Königsberg (Kaliningrad), which included among its printers Georg Osterberger (1577–1602, his heirs until 1609), Lorenz Segebade (1623–38, his heirs to 1671), Pascha Mense (1643–51) and Johann and Friedrich Reusner and their heirs (1639–93), who issued Heinrich Albert's song collections. Publishers of Lutheran hymnbooks included Georg Runge in Berlin (1616–39, his heirs to 1685), who issued many editions of Johannes Crüger's *Praxis pietatis melica*, Balthasar Wust in Frankfurt (1656–1702) and the Endter family in Nuremberg (1617–99). Major printers of the Catholic south included Georg Widmanstetter in Graz (1587–1614), Matthäus and later Tobias Nenninger in Passau (1602–19, succeeded by the shop of Georg Höller later in the century), Adam Meltzer in Dillingen (1603–9, his widow until 1610), Michael Wagner in Innsbruck (1639–68), Andreas Erfurt in Augsburg (1655–72), Rudolph Dreher in Kempten (1660–81), Johann Kaspar Bencard in Frankfurt and later Augsburg (1670–1720, his heirs at least until 1723), and the Salzburg firm of Mayer, whose occasional output extended from the 1670s to past 1800. Frankfurt and Cologne were among the major centres producing Catholic service books. Among the earliest music distributors were Georg Willer and Caspar Flurschütz, both active in Augsburg early in the century, and responsible for particularly interesting early dealers' catalogues.

German music publishing declined during and after the Thirty Years War; but the disappearance of a number of large firms around 1600, particularly in Nuremberg, suggests that the war hastened rather than caused the decline. Decentralized as they were, German music publishers were also book publishers, to a greater extent than those of Italy or France: one also finds, particularly after 1630, imprints which name two men – a printer and a publisher – occasionally in different cities. From Germany, Lutheran music publishing spread to the east and north, to Prussia and Poland with Georg Rhetus in Danzig (now Gdańsk) and Thorn (Toruń; 1634–43, his heirs to the end of the 17th century) and Andreas Hünefeld in Danzig (1609–47); to Copenhagen in 1537, where the major press was that of Henrik Waldkirch (1602–40); and to Stockholm in 1586 and Iceland in 1594. The Viennese firm of Cosmerovius (1636–1715) produced sumptuous librettos for court productions, often with engraved illustrations.

Calvinist psalm books were also printed in great quantities. Those dating from before 1560 are modelled largely on Lutheran service books. In 1560, at Calvin's request, Antoine Vincent of Lyons arranged for various printers to issue 20,000 psalm books for service use. In recognition of the noteworthy tradition of punchcutting in France and Flanders at the time, a distinctive appearance

21. William Daman's 'The Psalmes of David in English Meter': title-page of the tenor partbook (London: John Day, 1579)

came to identify both the psalm books themselves and a lineage of later books. Physically the latter are neat and well proportioned and printed from very small type. Examples include the lutebooks of Simon Gorlier and the partbooks of Godefroy Beringen, both in Lyons in the 1550s, along with the diminutive sets of Simon Du Bosc and Guillaume Guéroult in Geneva. Among the major punchcutters of the day whose music faces earned them brief careers as music printers were Michel Du Boys, who issued several early books of Philibert Jambe de Fer; Jean Le Royer, whose work was issued under the name of the Lyons bookseller Charles Pesnot; Jean II de Laon, responsible for the 1582 edition of L'Estocart; Robert Granjon, famous for his typefaces even today, who issued music in various locations from Flanders to Rome; and Pierre Haultin in La Rochelle, whose aesthetic is reflected in the English madrigal partbook tradition begun by Thomas Vautrollier. Another printer whose repertory and printing style suggest a Calvinist character, and who thus presumably enjoyed an exemption from the Ballard monopoly, was Jacques Mongeant, whose several anthologies date from the decades around 1600. The rich typographical resources of this tradition no doubt facilitated and inspired the Calvinist predilection for solfège music typefaces, manifest most notably in the 1560 psalm book of Pierre Davantes.

Editions of Calvinist psalms appeared in great profusion. Modest in scale and in time distinctly crabbed in appearance, they were at first largely modelled on Lutheran service books. Several hundred editions of the Marot and Bèze versions, many with music, were issued over the next two centuries, at first from Paris, Lyons (Jean de Tournes was the notable printer of them), Geneva and elsewhere, most frequently around 1650 in Charenton, near Paris. Geneva also produced a number of Italian psalm books for use by Piedmontese Calvinist congregations. Dutch psalm books, mostly in the Dathenius versions, were issued in the 17th century by Plantin in Antwerp and Gislain Manilius in Ghent, among others, usually in small format and with painfully tiny and ill-printed notation. The leading German printer of psalm books was Christoph Rab at Herborn in Nassau, who around 1600 brought out not only Lobwasser's German versions but also George Buchanan's Latin paraphrases and at least one Hungarian psalm book. In England, the psalms of Sternhold and Hopkins, which had first been printed in Geneva, went through many editions, based on Dutch models. While William Seres issued the forerunners of these in 1553, it was John Day – apparently exiled to Emden during the reign of Queen Mary but later returning to London – who in 1559 received a royal patent to print those psalm books that included music (fig.21). He printed nearly 40 editions of the Sternhold and Hopkins psalms before his death in 1584; his son Richard inherited the patent and worked with several London printers in issuing nearly 50 more. In 1604 the Company of Stationers bought up the Day patent and used it to provide work for their printers. Until 1650 several hundred more editions of the psalm book were printed with musical notation. John Playford later attempted to revitalize the music of the psalm book. In Scotland the publication of psalm books culminated in the edition printed by Andro Hart in Edinburgh in 1635.

Venice may have been the dominant centre of Italian music publishing before 1600, but it was not the only one. In Ferrara in the late 1530s a partnership of Johannes de Buglhat, Henrico de Campis and Antonio Hucher issued several admirable sets of partbooks. In Rome the brothers Dorico and their heirs issued several dozen music books between the 1530s and 1572; the shops of Antonio

Blado (1551–80) and Antonio Barrè (1555–64) printed editions that were distinguished both musically and visually, while Alessandro Gardane (from the Venetian Gardano family) issued several dozen editions in the 1580s. Some interesting madrigal partbooks came from Vincenzo Sabbio in Brescia (1579–88) and Vittorio Baldini in Ferrara (1582–1614), while Francesco Franceschi in Venice is named in the imprints of Zarlino's treatises (1562–99). Music printing in Bologna began with a 1584 partbook from the shop of Giovanni Rossi, whose heirs issued several collections by Banchieri in the 1610s.

In Florence the Marescotti family (1580–1611) produced epoch-making editions of Galilei, Caccini and Peri; their successors included Zanobi di Francesco Pignoni (1607–41) and Pietro Cecconcelli (1623–30). In Milan the Tradate family were succeeded by the prolific lineage begun by the heirs of Simone Tini, eventually managed by Filippo Lomazzo (1583–1628). Later Milanese publishers included Giorgio Rolla (1610–51) and the families Camagno (*c*1650–86) and Vigoni (1680–*c*1750). This period also saw typographic adaptations of alphabetic notational systems, by Giovanni Ambrosio Colonna in Milan for guitar music and by Nicolò Tebaldini in Bologna. Music also appeared occasionally from Perugia, mostly from Pietroiacomo Petrucci (1577–1603); from Palermo, largely from the press of Giovanni Battista Maringo (1603–35); and from Naples, at first from Constantino Vitale (*fl* 1603–23) and Gargano & Nucci (1609–21), later from Giovanni Giacomo Carlino (1597–1616), whom Gesualdo engaged to print his own madrigal partbooks; and from Vicenza, where Angelo Salvadori issued several items in the 1620s. To sum up: around 1600 Venice was still the most prolific centre; Milan came second, albeit remotely; and printing took place in about a dozen other cities. As Venice waned, Rome became a centre for editions of the elaborate music of the Counter-Reformation; among the major publishers were Nicolo Mutii (1595–1602), Bartolomeo Zannetti (from 1607), Luca Antonio Soldi (1619–25), Giovanni Battista Robletti (1609–50), Andrea and Giacamo Fei (1615–85), Antonio Poggioli (1620–68), the Mascardi family (*c*1620 – after 1719), Paolo Masotti (1621–37), Lodovico Grignani (*c*1630–50), Giovanni Battista Caifabri (1657–95) and Giovanni Angelo Mutij (1670–89). After 1650 Bologna slowly supplanted Rome as a printing centre (particularly for instrumental music), as Rome had supplanted Venice. The composer Maurizio Cazzati was particularly assiduous in seeing that his works were published; the printers of them included Vittorio Benacci (1659), Alessandro Pisarri (1660–62), the heirs of Evangelista Dozza (1663–4) and Gioseffo Micheletti (1687, also works by other composers in the surrounding decade). Giacomo Monti was active from 1639, and his successors issued large amounts of music between 1668 and 1702, often in partnership with the publisher Marino Silvani (1665–1711). Venice re-entered the scene with Giuseppe Sala (1676–1715), also mainly a publisher of instrumental music, and the Bortoli family, active mostly in the decade after 1700.

English secular music publishing began with Thomas Vautrollier, who in 1570 printed a Lassus anthology; apparently it was commercially unsuccessful. As we saw above, five years later Tallis and Byrd received a royal patent, covering music printing and music paper. Their own *Cantiones sacrae* (1575[3]), also printed by Vautrollier, sold badly too. A hiatus of 12 years followed; by 1585 Tallis was dead, and Vautrollier's music type had been acquired by the printer Thomas East. Between 1588 and 1596 East printed for Byrd well over a dozen important partbook collections, mostly of madrigals. Byrd's patent expired in 1596, and Peter Short then began printing music (as well as Thomas Morley's *Plaine and Easie Introduction to Practicall Musicke* in 1595); William Barley also sponsored music books. In 1598 Morley became the successor to Tallis and Byrd, by obtaining another royal patent (although psalm books were excluded). Barley became his associate, and East and Short were forbidden to print music. But in 1599 Morley failed in an attempt to take over part of Richard Day's psalm book patent, and he died in 1602. This allowed East and Short to resume their music printing, and in 1607 John Windet entered the field as a printer, as did the publisher Thomas Adams as a claimant to the Barley patent. Their various successors were Humfrey Lownes (1604–13), Thomas Snodham (1609–24), William Stansby (1611–38) and Edward Allde (1610–15), all of whom printed madrigal partbooks. Folio books including lute tablature appeared alongside madrigal partbooks from 1597, but by 1610 the momentum to sustain an English music publishing industry was fading, and by 1620 new music was rarely published in England.

In northern and western Europe in the 17th century there arose a new kind of 'gentleman's musical edition', secular in its repertory, quiet, tasteful, often highly allusive in its texts in the manner of the emblem books of the day, and correspondingly neat and skilful in its printing. French *airs de cour*, issued by the Ballards in annual numbered series, were profitable enough to dominate the firm's production throughout the century; they also issued much French dramatic music, beginning with Cambert's *Pomone* (1671), continuing with more than a dozen tall folio scores of Lully operas (1679–88), and ending with another dozen by other composers (1688–94), mostly in large oblong quarto. In both of these genres one detects an aristocratic aura, in contrast to the mercantile character of their counterparts in other countries. German illustrated poetical-musical anthologies, for instance, challenge rather than flatter the reader to delight in them. Many of these songbooks, involving the poet Johann Rist and his circle of friends in the Elbschwanenorden, were issued after 1650 by the Stern family of Lüneburg. Much the same nationalistic spirit informs Adriaen Valerius's famous Dutch folksong collection, the *Neder-landtsche gedenck-clanck*, published in Haarlem in 1626 (1626[14]), as well as the later anthologies of Hendrik Aertssens in Antwerp, and the Czech songs issued by Jiří Labaun in Prague at the end of the century. Distinctly italianate gentlemanly tastes, on the other hand, are reflected in the music issued around 1600 by Pierre Phalèse (ii) in Antwerp and by Jean Bogard in Douai, in the 1640s by Paulus Matthysz in Amsterdam and in the 1650s by Jan van Geertsom in Rotterdam.

English music printing resumed with John Playford (i) (1651–84), who sensed the distinctive spirit of England's middle-class audience. He deserves to be recognized as the first great promoter among music publishers; and, judging from the quantity of his output and the extent to which many of the volumes seemed to be directed at a new musical market, he was one of the most successful. Printed at first by Thomas Harper and later by William

Godbid, Playford's output ranged widely over song anthologies, psalm books, instrumental works and instructional books (*see* PLAYFORD family, fig.3). It served to establish England's musical identity in the period culminating in the music of Henry Purcell, and enhanced the country's musical literacy in the generation before the advent of the popular sheet-music edition just after 1700. Among Playford's imitators were John Carr and his son Robert in London, sometimes in partnership with Playford; John Forbes and his son, also John, in Aberdeen (1662–1704/5), whose songbooks suggest an instructional market; and the little-known Robert Thornton in Dublin (*fl* 1682–1701). On Playford's death his son Henry continued his work, but with notably less success. Whereas John Playford's books had few competitors, Henry's shared the market with those of John Heptinstall (1686–1700) and William Pearson (1699–1735), both of whom used 'new round-note' music type in creating editions more legible and stylish than Playford's. Minor printers, mostly anonymous, issued broadside ballads with musical notation, many of them political in their messages, particularly during the days of the Popish Plots and conflicts over the succession during the final years of the century. The division of labour between printing and distribution is further reflected in the proliferation of music booksellers; John Hudgebut and in his later years Henry Playford were among the distributors, Edward Jones and Thomas Moore among the printers.

Music printing in the New World dates from the 1540s, when several plainchant books were issued in Mexico by Juan Pablos, followed by several other immigrant printers from Spain. In 1631 Juan Perez Bocanegra printed a ritual in Lima, in which polyphony appears in woodcuts on two pages, set to a vernacular text. The earliest surviving book printed in the English-speaking New World, the Bay Psalm Book, was issued in 1640 by Stephen Day at Cambridge in the Massachusetts Bay Colony. Containing no musical notation, it names the tunes to which the texts were to be sung, and the many editions that appeared during the next few decades showed a strong English influence in both content and method of production. Musical notation appeared for the first time only in the ninth edition ('printed by B. Green and J. Allen for Michael Perry' in Boston in 1698); crude woodcuts were used to produce the eight-page tune supplement and were re-used in several later editions.

Isolated single engravings notwithstanding (among them the superb picture motets executed by Jean Sadeler in the 1580s), the credit for being the first publisher to use engraving successfully belongs to Simone Verovio, who issued about 20 editions in Rome between 1586 and 1608. Although some were reprinted, he seems not to have recognized the powerful advantages of the process. Before the 18th century, music engraving was largely a luxury; it was useful because it conveyed better than letterpress printing the peculiarities of manuscript music notation, but it lacked the potential for the wide market of which merchants and earlier patrons assumed typeset music was capable. Music was printed from engraved plates before 1700 in several parts of Europe, almost all of it of considerable visual and musical distinction. Among Verovio's successors in Rome was Nicolò Borboni, who issued several lavish collections (1615–41). In Holland, the sumptuous Dutch *Bildmotetten* of about 1580 were followed in the 1610s by several delightful books by Nicolas Vallet called *Le secret des Muses*. The venerable *Parthenia* and parts of *Parthenia In-violata*, along with other collections, by Orlando Gibbons and Angelo Notari, were also engraved during this decade by William Hole in London. Occasional functional productions from around the mid-century (like William Slatyer's polyglot psalm book of 1652 and John Playford's edition of *Musick's Hand-Maide* of 1663) were followed by such sumptuous productions as the volumes of songs by Henry Bowman (1677) and Pietro Reggio (1680). In Germany, though broadside music engravings from the Augsburg shop of Lucas Kilian date from the early 17th century, extensive engraved editions, devoted mostly to instrumental music, do not appear to predate Sebastian Anton Scherer's *Tabulaturam* (Ulm, 1664). In France engraving seems to have been viewed at first as an alternative to the typography controlled by the Ballard patent. Most of the engraved music is instrumental; it includes collections by Michel Lambert (1660–61), the Gaultiers (*c*1670), Chambonnières (1670), Corbetta (1671), Lebègue (?1678), Marais (1686–92), Raison (1688), D'Anglebert (1689), Nivers (1689) and Jacques Boyvin (1689–90). Hiérosme Bonneüil is named among the engravers. The hiatus during the 1690s reflects Ballard's successful injunction against the engraver Henri de Baussen and his publisher Henry Foucault. Resumption of engraving just before 1700, in editions that superseded the pretentious typeset Ballard editions of Lully operas of the previous decades, and in other works by Foucault and Pierre Ribou (1704–20), suggests that the commercial advantages of the process were now generally recognized.

In summary, the history of music publishing before 1700 is one of early brilliance and extended decline. The peak was reached before 1580, in Venice, Nuremberg, Paris and Antwerp. The decline was apparent by 1600 and is reflected in a diminished output, and in printing that was less spacious, less skilful and less original. Throughout the 17th century not only the same faces but, judging from the worn images, the same type was used, well past readability. The quality of the printing should be seen as a reflection of social conditions, which themselves reflect the changing interrelationships between composer, performer, patron and publisher as well as printer. Patronage was no doubt declining as a means of subsidizing music; thus, while lavish performances of new compositions continued to take place, publication of the scores was less frequently considered necessary (Lully's were the conspicuous exception).

The demise of music publishing over the course of the 17th century raises the question of why printed scores might have been deemed necessary and desirable in the first place – especially in view of the apparently modest degree of musical literacy at the time. The belief that performers (chapel singers especially) were taught by rote and the absence of signs of use on most extant copies (a counter-argument as much as a point in its own right) further support the speculation that early musical editions were printed less with the intention of circulating a composer's repertory, than as a demonstration of a patron's munificence and taste. Some works were clearly issued on the basis of guaranteed distribution of copies – hymnals, psalters and other service books for use by particular congregations, dioceses or churches, for instance, as well as *Gelegenheitskompositionen* – in order to obviate much of the need for formal publishing

circumstances at all. Patronage, involving art music and made evident through a dedicatory text following the title-page, is presumably reflected in the great majority of other publications, although we still know little about the precise relationship between patron and musician (for instance as reflected in performance or other forms of subsistence rather than in subventions for publication) or about the precise forms of intervention by the music publisher. Venture publishing, as generally understood today, may thus be indisputably evident only in reprints, presumably prepared at the publisher's own expense and thus issued on the basis of his calculated speculation that copies could be sold. It is noteworthy, moreover, that the production of reprints follows a curve that, if anything, reinforces the production curve of music publishing in general: few reprints at first, many just before 1600 (and most of these from the four commercial centres), a rapid decline in production soon after 1600, and very few for the rest of the 17th century. Petrucci and his immediate followers had shown that music could be printed and published; it remained for the publishers of the following century to learn how this could be done to the best advantage.

3. THE AGE OF ENGRAVING, 1700–1860. Music publishing during the next period – from the start of the careers of Bach and Handel to the height of the careers of Verdi, Wagner and Brahms – begins with the extensive commercial use of engraving and continues up to the first extensive use of offset lithography. It is a story of four cities: London from around 1700; Paris from between 1740 and 1760; Vienna from just before 1780; and Leipzig from around 1800. The activity in each city continued after the next rose to prominence; and the quantity of published music became cumulatively greater, as did the competition between publishers and the stimulation of general public interest in music.

In spite of the development of engraving, letterpress printing and manuscript copying continued to be used extensively throughout the 18th century. As late as the 1730s, Lelio Della Volpe in Bologna and Francesco Moücke in Florence were still issuing oblong anthologies of Italian cantatas badly printed from movable type. German publishers, chief among them Lotter in Augsburg, issued a variety of musical editions, notably treatises but also including a few instrumental collections and songbooks, using crude but complicated movable type, most of which had been cut around 1680 for use in Nuremberg. In Vienna, Van Ghelen and, later, Trattner issued handsome typographic music books after 1750. Throughout the 18th century and into the 19th, in France, Spain and Italy, typeset liturgical books and treatises on plainchant were still printed from movable type, as were the many Dutch and Genevan psalm books and German and Scandinavian hymnbooks. In certain circumstances, letterpress printing remained the most desirable method: when the musical notation was simple (or, in some cases, complicated but not requiring speed in performance); when fixed and generally large press-runs were involved; and when most of the volume consisted of text, as in treatises. After 1700 the publishing of typeset music thus came to be associated largely with pedagogic and amateur music and, to a degree, with the provincial more than with the cosmopolitan press. Conservative linear music type continued to be provided, notably by such firms as Gando in Paris and Caslon in London. Music typography was revived around 1750 through refinements introduced by men working in four countries; of these, however, Fournier in France and Enschedé (along with Rosart) in Holland produced little as publishers, while the English editions of Fougt and his successor, Robert Falkener, were mostly imitations of those of Leipzig engravers. The impact of Breitkopf throughout Germany and central Europe was much greater, since this firm was the only one of this group to survive into the next century and to involve a publishing programme built around the use of other graphic processes besides.

The competition between the various processes for disseminating musical documents involved not only letterpress and intaglio printing but also the manuscript-copying trade. One of the chief virtues of music 'publishing' in manuscript form, such as was used for 18th-century Italian opera, was that the use of manuscript offered the opera house or the composer a measure of control over the text that was unavailable when copies were printed and widely distributed. Before any forms of copyright were established, such a system of limited distribution seemed highly desirable. Furthermore, an opera house considering performance of a particular work that needed adjustments to suit local conditions could alter a neatly assembled typeset edition only with some difficulty; and because of the needs of singers and others involved in opera production, changes were always being called for. Instrumental music also came to appear often in manuscript rather than in typeset form, but for notational reasons. Type was harder to read than handwriting – short note values were particularly troublesome, since the beams were seldom continuous, and chords were impossible without breaking individual sorts of type. Such problems did not exist with manuscript or engraving. By 1700 most of the current musical repertory had moved outside the world of music publishing as it involved letterpress printing. Italian music, if it was printed at all, was printed abroad, usually in Amsterdam or London. J.S. Bach saw little of his music printed, almost all of it instrumental, with utilitarian titles such as 'Übung', while aspiring German publishers themselves, such as Johann Wilhelm Rönnagel, met with little success. In contrast, a study of the documents of the two dominant musical styles that were widespread throughout Europe in the 18th century – Neapolitan opera at the beginning and Viennese Classicism at the end – shows that manuscripts served the purposes of publication (in its widest functional sense) very effectively.

Extensive music publishing from engraved plates began in London and Amsterdam. Estienne Roger set up his shop in Amsterdam about 1690 and was soon engraving small oblong quarto piracies of Bolognese instrumental music. By 1700 his editions were large oblong folios, well executed with hand-drawn music on copper plates. His emphasis on Italian music suggests an international distribution of copies through northern and western Europe. After Roger's death in 1722, his son-in-law, Michel-Charles Le Cène, continued to publish until 1743. Dutch music publishing declined thereafter, although there were some important firms, among them Amédée Le Chevalier (1689–1702), Gerhard Fredrik Witvogel (1731–44), Joseph Schmitt (*c*1772–1791) and, especially, the family of Hummel (Amsterdam, by 1753–1822; The Hague, 1755–*c*1801; also in Berlin from 1770; for illustration *see* VANHAL, JOHANN BAPTIST). Nicolaas Barth

(1775–1805) was succeeded by Lodewijk Plattner (1805–43) in Rotterdam, while the leading Belgian publisher from later in the century was Benoit Andrez in Liège.

London music publishers, inspired by the success of John Playford, experimented with new ways of printing and distributing music. While popular music was favoured by letterpress printers and their associates in London, engravers were attracted to Italianate instrumental music. Thomas Cross, who had engraved Purcell's *Sonnata's* in 1683, also prepared many single songsheets, undated but probably almost all from the last decade of the century; he later did the printing for the publisher Daniel Wright. He apparently used hard copper plates on which the signs were drawn by hand; in contrast John Walsh (i), who began publishing in 1695, later in partnership with Joseph Hare, seems to have used soft plates of pewter or lead, on which the signs were impressed with punches. Although their catalogues consisted at first of songsheets (sometimes collected into periodical series) and works of other publishers which he sold at his shop, Walsh soon began to issue instrumental music, much of it taken from continental sources. His speciality, however, was the anthology of 'Favourite Songs' from the London stage; in time he became the principal publisher of Handel's music. By 1736, when the elder Walsh died, London music publishing was well established.

Few competitors challenged Walsh during his lifetime. John Young was active just after 1700, while John Cluer, mostly in the 1720s, issued some handsome scores of Handel operas, neatly engraved by hand rather than punched, and in small format; so did the younger Richard Meares and, somewhat later, Benjamin Cooke. English letterpress printers, such as John Watts, also issued early ballad-opera librettos and song anthologies that included crude woodcuts of the tunes. There also appeared a multitude of songsheets naming no printer or publisher, which must have been sold casually at music shops, much like the earlier broadside ballads. George Bickham, famed for his engraved drawings and writing book, also engraved music, drawn free-hand and decorated with delicate illustrations; his style served as a model for Benjamin Cole. The French engraver Fortier also did striking work on several books, perhaps most notably the superb 1739 edition of Domenico Scarlatti's *Essercizi*. James Oswald, active in Edinburgh in the 1730s, later published Scottish music in London, as William Thomson had done in the 1720s, while in Dublin John Neale was active in the 1730s, William Manwaring in the 1740s, and Samuel Lee from 1752.

Walsh's son John maintained the firm for another 30 years after his father's death. Other publishers came into prominence, notably John Simpson (1730s and 40s); John Johnson (*c*1740–1762, his widow to 1777); the Thompson family, including variously Ann, Peter, Charles, Samuel and Henry (*c*1750–1805); Robert Bremner (by 1757–1789); Peter Welcker and his heirs (1762–85); William Forster, the violin maker, with his son (*c*1762–1821); the firm of William Randall, the heir to Walsh (1766–83, in turn succeeded by Wright & Wilkinson, and Wright alone to 1803); William Napier (1772–1809), Robert Wornum and his heirs (*c*1772–1900, also a piano maker); John Preston (*c*1774–1798), whose son Thomas ran the firm for the next 36 years; James Harrison (1779–*c*1803); Joseph Dale and his heirs (1783–1837); James Longman (beginning *c*1767) with various partners, most notably Francis Broderip (1776–98), important as the first music publisher to deposit his new publications at Stationers Hall for copyright purposes, and probably the most prolific of all London music publishers in the 1790s; Robert Birchall (1780–1819), whose catalogue is distinguished by music from the Continent, including early Beethoven editions of notable textual authenticity; and John Bland (*c*1776–1795), famous as one of the first publishers to announce his new editions through thematic catalogues. The editions of these publishers consisted of instrumental music in imitation of the editions which were appearing at this time from Paris and Amsterdam (including, for example, series of 'Periodical Ouvertures') and songs from English comic operas and from the pleasure gardens. Prominent music engravers whose names are occasionally inscribed in the editions include Henry Roberts (*c*1737–*c*1765) and John Phillips (*c*1740–1775).

English music publishing continued to flourish during the 19th century as firms sprang up, dissolved, merged and separated, and sold their titles, plates and stocks. Thompson was succeeded by Robert Purday (with S.J. Button, 1806–8, thereafter as Button & Whitaker), Preston by Coventry & Hollier (*c*1833–1849). George Goulding (*c*1786–1798) merged with Thomas d'Almaine, who after further partnerships eventually managed the firm alone (1834–67), while Lewis Lavenu's firm (1796–1818) underwent several changes of ownership before passing to Addison & Hodson. The flautist Tebaldo Monzani worked alone (1787–1800), then in partnership with Giambattista Cimador and Henry Hill, the latter eventually managing the firm alone (1829–45). Several workmen early in the century began firms that are still active, notably Samuel Chappell (1810–), Vincent Novello (1811–), Thomas Boosey (working in music from 1816) and Johann Baptist Cramer (from 1824). The last of these was one of several London firms established by a virtuoso pianist, the most important earlier one being that of Muzio Clementi; the Corri family and J.L. Dussek are among the other notable composer-publishers. Other firms included Metzler (1812–1931), and Keith, Prowse & Co. (1815–). By the 1840s special emphases were beginning to emerge: George Henry Davidson (*c*1833–81) concentrated on cheap editions of popular music, as Novello did with serious music; Robert Cocks (1823–1904) maintained a large circulating library; Leader & Cock (1842–87) issued art songs of William Sterndale Bennett; while Joseph Williams (1843–1961, based on his mother's firm, founded 1808) emphasized light opera. John Distin (1845–74) specialized in brass music, as did Boosey, which eventually acquired the firm. Christian Rudolph Wessel (in business with William Stodart from 1823, with Frederic Stapleton 1839–45, alone 1845–60, succeeded by Edwin Ashdown) specialized in foreign music and issued important Chopin editions, while Ewer (*c*1823–67, merged to become Novello, Ewer & Co. to 1898) specialized in Mendelssohn. Augener (1853–), initially also an importer, at first issued only lithographed editions.

British music publishing was not confined to London. Samuel and later Philip Knapton worked in York (*c*1796–1829), while the elusive firm of Wheatstone was active around 1815 in Bath. Country psalmody printers flourished particularly in the 1740s, among them the itinerant Michael Beesly in the Berkshire-Oxfordshire area, and

Michael Broome in Birmingham. Smollet Holden, specialist in military music, issued several collections in Dublin shortly after 1800. The Dublin haberdashery shop of Benjamin Rhames and his heirs (1756–1810) and later the family of Hime (before 1790–1879), active in Liverpool, Dublin and Manchester, specialized in songsheets, many of them copied from London editions. William Power in Dublin, with his brother James in London, was responsible for two of the most famous editions of folk music, the *Irish Melodies* (1808–34) and *National Melodies* (1818–28) of Thomas Moore. Equally important were the editions of national songs by George Thomson in Edinburgh (1793–1845), to which Pleyel, Haydn, Beethoven, Weber and Hummel contributed. The Edinburgh firms of Bremner and Corri – branches of London firms bearing these names – often published their own music. Other Edinburgh publications bear the imprints of the cellist J.G.C. Schetky (mostly 1780s and 90s), Muir & Wood (1798–1818, in time succeeded by Penson, Robertson & Co., *c*1807–37) and Purdie (*c*1809–1887). James Johnson (1772–1811) served as the engraver for most of these editions, although he also published several major works. The firm of Paterson (*c*1819–1964) eventually expanded from Edinburgh to several other Scottish towns as well as to London (it was taken over by Novello in 1989). Glasgow's music publishers began with James Aird, working around 1780, and culminated with J. Muir Wood (1848–99, earlier a branch of an Edinburgh shop begun in 1798 by John Muir and Andrew Wood). Irish music publishers included Dennis Connor, who issued harp music in the late 18th century, and Anthony Bunting, who was active around 1820.

British music publishing never forgot its origins in the popular songsheet. The annual output of several hundred such editions a year, a level established soon after 1700, appears to have persisted throughout the 18th century and into the 19th. Gradually the single sheet, printed on one side, was expanded into two sheets, printed on inside pages. A cover was often added; later, especially with the advent of lithography, a picture was sometimes included. Most publishers were happy to include in their catalogues both songsheets and other popular forms, as well as more ambitious forms such as sonatas and symphonies. Through agreements for simultaneous publication between British publishers and continental publishers or composers, a kind of international copyright was effected. British music publishers remained largely committed to the process of engraving, and thus they tended to maintain their identity (apart from the publishers of religious service books and song anthologies issued in small format and in large press-runs with movable type). Three 19th-century uses of movable music type by music publishers, however, deserve mention. Editions using solfège notation promoted by such firms as Curwen (founded 1863) were printed with type: they played a large part in the spread of the English choral tradition. William Clowes in London, later in Beccles, also used type for such popular publications as Charles Knight's *Musical Library* (1834–7). Novello used type for its 'cheap music' programme begun in 1847, through which major vocal works were widely circulated for many years.

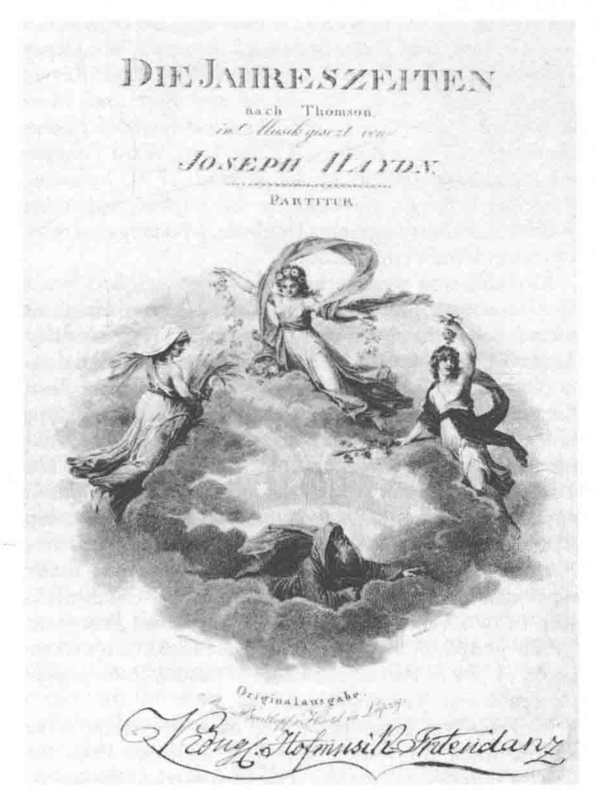
In 18th-century France the Ballard family continued to hold its royal monopoly for music printing up to the Revolution. But the output of its press was neither particularly large nor central to Paris music, consisting mainly of popular songs and treatises. Music publishers were again established in Paris, on the basis of a court decision that engravings fell outside the Ballard privilege, in effect thereby destroying its monopoly. Extensive activity did not flourish until the second third of the century, when some composers arranged for their music to be issued by Charles-Nicolas Le Clerc (1736–74), a violinist who served as publisher, and distributed by François Boivin (1721–33, his wife, who was of the Ballard family, to 1753). Typically, these editions are small oblong folios, devoted to anthologies of dances, *airs* and cantatas and to current dramatic music.

The 'classical' period of Parisian music publishing, which began well before 1750, reached its peak in the 1770s and 80s. The main early operatic publisher was La Chevardière (1758–84); other publishers, such as Le Menu (1740s–1790), Marie-Anne Castagneri (1748–87), Jean Baptiste Venier (1755–*c*1784), the Bureau d'Abonnement Musical (1765–*c*1783), Antoine Bailleux (1760s–1798) and Georges, and later Jacques-George, Cousineau (1760s–1822, the family later important as harp makers and harpists), specialized in instrumental music. François-Joseph Heina (1773–*c*1785) specialized in chamber music by his fellow Czechs. Whether issued serially, in annual cumulations, or as 'periodical' symphonies or overtures, editions from this period are mostly in large folio format, usually upright for operas but oblong for instrumental music. Many of the leading engravers of the period were women, among them Mme Leclair (wife of the composer) and Mlle Vendôme. This was the time when publishers' catalogues – expandable lists engraved on separate plates which called attention to other available titles – were commonly added to their editions.

Parisian classical editions proved successful enough to be widely imitated in London and Amsterdam and eventually in Germany. In Lyons, Guéra (*c*1776–88) and Castaud were active; through Anton Huberty, an engraver in Paris in the 1760s, French music publishing practices were transplanted to Vienna when he moved there in 1777. In Paris, the classical style persisted until the Revolution, after which three changes gradually took place: single songsheets began to be issued more frequently; the slender and well-spaced pre-Revolution opera score, with few instruments and on large staves, was replaced by a full score, thicker and with more parts exactly specified; and the method book, usually for specific instruments but also for singing and solfège, gained importance while the editions of chamber music parts slowly declined. Among the firms that particularly flourished in the decades after the Revolution were Jean-Georges Sieber (*c*1770–1822), Naderman (1770s–*c*1835), Lemoine (from 1796), Leduc (Pierre and, later, Auguste, 1775–1837), Imbault (*c*1782–1812), Pleyel (1795–1834) and the Gaveaux (1795–1829). This period also saw the establishment of two firms named Magasin de Musique, the first (1794–1825) resulting from government decree and later associated with the Conservatoire, the second (1802–11) based on a partnership between six composers.

Soon after 1750 the Breitkopf shop in Leipzig began to show an interest in music. His importance in music typography apart, Johann Gottlob Immanuel Breitkopf deserves mention for his music publishing strategy. His remarkable plan involved the three major methods of the day for committing music to paper: manuscript copying, engraving and letterpress printing. He chose to do battle

with the engravers, now well established in London and Paris and beginning to appear in Amsterdam and various German cities, by using the other two graphic processes instead. His typeset music had the disadvantages and advantages of typeset books: the size of the edition needed to be determined in advance before copies were sold, and internal changes were difficult; but presswork was likely to be much cheaper once the type was set, and thus Breitkopf could print editions in large numbers and distribute them widely at a low price, creating his own market. His contribution to the rise of the sentimental German song of the *Sturm und Drang* period is probably considerable. He was also willing to sell his type to other printers and to print music for other publishers – among them Winter (1750–87) and Rellstab (1779–1812) in Berlin, Hartknoch (1763–1803) in Riga and Schwickert in Leipzig (1776–92) – thus increasing the use of his kind of musical edition. He developed his own copying programme, through which he provided on demand a very wide repertory of music that would not have justified large, typeset editions; his great thematic catalogues were issued for these manuscript copies. Breitkopf thus attempted, in effect, to head off the efforts of the music engravers: with his popular editions, set in type, he undersold them, and with his manuscript copies he circulated a larger repertory than they could afford. This strategy apparently succeeded for a time. Its effectiveness had declined by 1800, probably because the music engraving industry had become too extensive and thus was much closer than Breitkopf to the musicians themselves in Paris, England, the Netherlands and Italy. Even so, the firm was now well established as a music publisher, and much of the groundwork was laid for Leipzig to become the centre of European music publishing a few years later.



During the second half of the 18th century, music publishing spread from Paris and London to Amsterdam and various German cities. Several Nuremberg engravers from around the mid-century, including Balthasar Schmid and his heirs (1725–*c*1786), Johann Ulrich Haffner (*c*1740–1767) and members of the Weigel family (active through most of the century), produced only a few editions, but with interesting music and distinctive appearance. The Dutch firm of Hummel, established in Amsterdam about 1754, competed strongly with Paris and London for many years, especially through its extensive chamber music catalogue. Particularly important about 1780, the firm declined around 1800, and Amsterdam ceased to be an important music centre. In several German cities music publishing was established before 1800, based on practices derived from Parisian engraving rather than from Breitkopf's typography. Among the important men who began to work at this time were Johann André in Offenbach (1774), Bernhard Schott in Mainz (1780), J.M. Götz, mostly in Mannheim (1780), H.P. Bossler, mostly in Speyer (1781), F.E.C. Leuckart in Breslau (from 1782, later in Leipzig), Macarius Falter in Munich (1788), Nicolaus Simrock in Bonn (1793), J.A. Böhme in Hamburg (1794), J.P. Spehr in Brunswick (1791) and G. Gombart in Augsburg (1795). Of these, André and Falter were additionally important in the first years of the 19th century as early users of the lithographic process.

Vienna became the earliest major centre of German music engraving, and the third important European centre, thanks mostly to the diversity of its musical market – manuscripts from Italy, engravings from Paris, typeset editions from Leipzig – but also because its music shops had been affiliated more closely with art dealers than with booksellers. Parisian-style engravings were first available in Vienna after about 1770, and the Parisian publisher Huberty settled there in 1777. No less important as an engraver was Christoph Torricella, and through the efforts of two other Italians, Carlo and Francesco Artaria, Viennese music publishing began to flourish in 1778. Artaria's editions were immediately successful, and this firm dominated Viennese music publishing until the end of the century. The composer Franz Anton Hoffmeister, who founded a firm in 1784, ranks alongside Artaria both for his important and ambitious editions and for his varied dealings with other publishers, notably his sale of selected titles to Artaria in the 1780s, his ties to Kühnel in Leipzig from 1800, and his eventual merger with Senefelder in 1807. Other early Viennese music publishers included Hieronymus Löschenkohl (*c*1770–1806), a specialist in cheap engravings; Johann Traeg (active as a dealer in manuscript material from 1781), later Breitkopf's agent as well as his own publisher; Laurenz Lausch (1782–?1801), also a copyist; the composer Leopold Kozeluch, trading as the Musikalisches Magazin (active 1784–1802); Joseph Eder, who was later in partnership with and eventually succeeded by his son-in-law, Jeremias Bermann (1789–*c*1840); the several partners who made up the Hoftheater-Musik-Verlag (1796–1822); Ignaz Sauer (1798–1825, latterly in partnership with Maraus Leidesdorf, who was sole owner 1826–32); and Carlo Mechetti, succeeded later by his nephew Pietro and Pietro's widow (1799–1855).

By 1798 Tranquillo Mollo had left Artaria and set up his own shop, and three years later Giovanni Cappi did likewise. In 1801 the Kunst- und Industrie-Comptoir (or Bureau des Arts et d'Industrie) opened, managed by five men including Joseph Sonnleithner, the librettist of Beethoven's *Leonore*(1805). In 1803 the inventor of lithography, Alois Senefelder, moved to Vienna to establish his Chemische Druckerey, in competition with the various engravers of music, maps and other documents. Thus a period of diversification in Viennese music publishing began, as publishers experimented with new technical processes to challenge the established firms. Major aspirants from the next few years include Thaddäus Weigl (1803–31), Pietro Cappi (founded 1816), Ludwig Maisch (1810–16), Anton Paterno (founded 1820), modest in his ambitions, and Anton Pennauer (1825–34). Not until after 1820 did clear leaders begin to emerge. Anton Diabelli (founded 1817, jointly with Cappi in 1818) is also known for the famous piano waltz on which many composers, notably Beethoven, wrote variations. Sigmund Anton Steiner acquired Senefelder's shop in 1812 but soon returned to engraving for his editions, moving the lithographic production to the short-lived Lithographisches Institut. By the mid-century the main publishers were S.A. Spina (partner of Diabelli 1824–51, succeeded by his nephew Carl Anton Spina, publishing alone to 1879) and Tobias Haslinger (1826–42, his heirs to 1875; successor to Steiner), whose catalogues were rich in earlier publishers' titles but also distinguished by ambitious and imaginative projects of their own. After 1874 the firm of Doblinger became important in the city's musical life. Viennese publishing owed much to the local community

of composers, not only Mozart, Beethoven and Schubert, but also the many *Kleinmeister* whose efforts were devoted more to amateur instrumental music than to the songs so popular in Paris and London, and prepared the way for the lucrative properties of the Strauss waltz repertory. In appearance the early Viennese editions – clumsily punched with crudely designed signs, and printed from plates that were frequently cracked and were seldom wiped completely clean – recall the 18th century, in contrast with the handsome, well-executed London and Paris editions. As the centre of music publishing moved to Leipzig, Viennese editions improved in appearance, at a time when their repertory was moving in the direction of virtuoso keyboard music and Strauss waltzes.

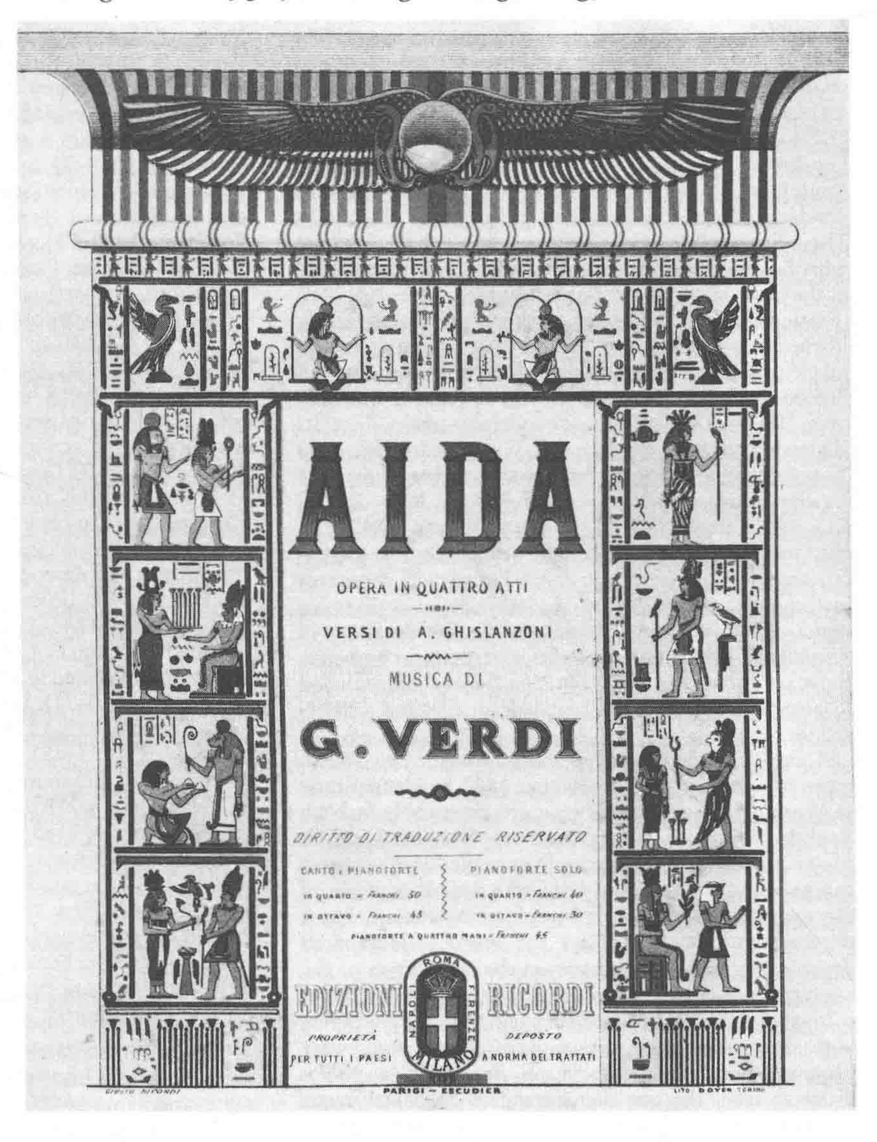
About 1800 Leipzig began to emerge as a fourth centre of music publishing, and in due course the greatest. Breitkopf's firm, now Breitkopf & Härtel (and managed by G.C. Härtel), still experimented with different methods of printing, including lithography, but finally settled on engraving around 1811 (fig.22). In 1801 the Viennese publisher Hoffmeister entered into a highly successful partnership with Ambrosius Kühnel as the Bureau de Musique: it was acquired by C.F. Peters in 1814. In 1807 Friedrich Hofmeister (not to be confused with Hoffmeister) began his activity as a publisher; he later acquired from Carl Friedrich Whistling the rights to the great bibliography of new German printed music now commonly known by his name. Other major Leipzig firms founded before 1860 include Heinrich Albert Probst (1823–36, thereafter in partnership with Carl Friedrich Kistner; in 1919 it merged with the firm of Siegel & Stoll, 1846–50, thereafter C.F.W. Siegel), Bartolf Senff (1847–1907), Merseburger (1849–, specializing in Lutheran church music), C.F. Kahnt (1851–) and A.R. Forberg (1862–, important for its affiliation with the Moscow firm of Jürgenson). The firm of F.E.C. Leuckart moved from Breslau to Leipzig in 1870. Leipzig, drawing its support from the local book-publishing industry and from the Gewandhaus and the conservatory, inevitably became the centre of German music publishing at a time when German tastes prevailed in most of the Western world.

22. Haydn's 'The Seasons': title-page of the first edition with engraving by Amadeus Wenzel (Leipzig: Breitkopf & Härtel, 1802); title-page engraving by W. Böhm after G.V. Kininger

Established German firms outside Leipzig continued to flourish, among them André in Offenbach, Schott in Mainz (which in due course acquired the rights to Wagner) and Simrock (which moved from Bonn to Berlin in 1870, having established a close relationship with Brahms and, through him, Dvořák); so too did Spina, Mechetti and Haslinger in Vienna. Berlin challenged the primacy of Leipzig through Simrock as well as important new firms such as A.M. Schlesinger (1810–64, succeeded by Robert Lienau), Traugott Trautwein (1820–1902), C.A. Challier (1835–1919, succeeded by Richard Birnbach), Bote & Bock (1838–), Adolph Fürstner (1868–1986, whose operatic properties included many by Richard Strauss) and Ries & Erler (1881–; Hermann Erler from 1872, Franz Ries from 1874). Important firms elsewhere were Gombart (1795–*c*1844) and Andreas Böhm (1803–) in Augsburg, Joseph Sidler (1812–28/9) and Joseph Aibl (1825–1904) in Munich, August Cranz in Hamburg (1814–, later in Leipzig, and, through acquisition of the Spina firm, publisher for the Strauss family), Anton Benjamin in Altona (1818–, later in Hamburg, Leipzig and London), Tonger in Cologne (1822–), Julius Schuberth in Hamburg (1826–91, at times in Leipzig and New York), F. Pustet in Regensburg (1826–1978, specialists in Catholic church music, with offices in the USA and Rome), Karl Ferdinand Heckel in Mannheim (*c*1822–, who issued Hugo Wolf editions), Heinrichshofen in Magdeburg (active from 1797, but in music only from the mid-19th century), Henry Litolff in Brunswick (1828–1940, owned originally by E.M. Meyer), Adolph Nagel in Hanover (1835–) and the brothers Pazdírek (in Vienna, 1868–80, also in Moravia, and creators of the massive *Universal-Handbuch*, 1904–10, listing music in print). Music publishing involved both the music of famous composers like Schumann, Mendelssohn and Liszt and a vast output of salon orchestrations, arrangements of operatic favourites, sentimental songs (singly and in series) and instructional pieces.

Important new firms active in 19th-century Paris included Erard (1798–1840, an adjunct to the harp factory), Richault (1816–98), Carli (*c*1805–1919), Pacini (1808–46 and later), Janet & Cotelle (1810–91), Frey (1811–39), Maurice Schlesinger (*c*1821–1846, affiliated with the Berlin family firm), Troupenas (*c*1825–1850), Georges Schonenberger (1830–75), Heugel (1839–1980), Alphonse Leduc (*c*1842–; not related to the earlier firm of Pierre and Auguste), Escudier (1842–), Choudens (1854–), Brandus (1846–99), Flaxland (1847–69), Georges Hartmann (1866–91) and Costallat (founded in 1880 with the acquisition of the earlier firm of Enoch, 1867–, and known as Enoch Frères & Costallat). The musical repertory of Parisian publishing broadened considerably, although the three basic forms persisted. Songs, for instance, enjoyed a vogue after 1830 with the rise of lithography, although, as in England, works with rudimentary accompaniment and printed on a single sheet

were replaced by songs with a florid vocal line and sentimental text, heavily accompanied by piano or often guitar, printed in an edition of several pages with a decorative cover. Thanks to current interest in music pedagogy, and stimulated by the Paris Conservatoire's acting as a publisher in its own right, the method book enjoyed great popularity. The published opera full score, on the other hand, did not prove feasible and declined during the first quarter of the century. About 1840 it was succeeded by the smaller vocal score in so-called Parisian format, which served to circulate the music of French and Italian Romantic grand opera.



Before 1810 there were very few music publishers in Italy, where the scene was dominated by copyists, and those who did attempt to publish, such as Luigi Marescalchi (*c*1770–99) in Naples and Alessandri & Scattaglia (*c*1770–1803) and Antonio Zatta (1786–*c*1806) in Venice, encountered great difficulties. The control was not broken until 1808, when Giovanni Ricordi began issuing the operas of Rossini and his contemporaries. His firm's pre-eminence among Italian publishers was assured with the advent of his son Tito Ricordi, and their most successful composer, Giuseppe Verdi (fig.23); since then the name of Ricordi has been virtually synonymous with Italian opera, with rights to major works of the *verismo* period and onwards. Other firms included Luigi Bertuzzi (1820–47), Ferdinando Artaria (1805–37), Luigi Scotti (*c*1815–1845), the Carulli family (1822–32), Lucca (1825–88), Giovanni Canti (*c*1835–1878) and Sonzogno (active in music from 1874) in Milan; Lorenzi (1812–19) and Guidi (1844–87) in Florence; Girard (1815–70) and his successor Teodoro Cottrau (1848–84), also Clausetti (*fl c*1850), in Naples; Ratti, Cencetti & Comp. (1821–?1844) in Rome; and Giudici & Strada (1859–1930) in Turin. Ricordi and Sonzogno in particular extended their activities beyond the work with scores into matters of production, reputedly involving the choice of singers and the inevitably convoluted politics of the opera house.

In Switzerland the firms of Hans Georg Nägeli in Zürich (1791–, renamed Gebrüder Hug in 1817) and Rieter-Biedermann in Winterthur (1848–84, later in Leipzig) followed the practices of their German and Viennese counterparts. Germans were also responsible for the important early work in countries to the east. The Kunst- und Industrie-Comptoir in Pest (1805–22), for instance, began as a branch of the Vienna shop with the same name. Other shops in Pest (later in Budapest) included those of József Wagner (1839–58) and József Treichlinger (1844–74, successor to several earlier Budapest publishers), as well as Julius Rosenthaler (Gyula Rózsavölgyi, 1850–), who acquired most of the earlier firms and whose shop survives to today; Gusztáv Heckenast (1834–78); and Nándor Táborszky, who issued many Liszt editions. In Warsaw the leading early publishers were Franciszek Klukowski (*c*1816–1858), Antoni Brzezina (1822–31) and his successor, Gustaw Sennewald (1828–1905), and Rudolf Friedlein (1839–65) and his successors, Gebethner & Wolff (1857–1939); in Kraków, Stanisław Krzyżanowski (1870–1964) developed a catalogue strong in contemporary Polish music. Prague's earliest important publisher was Karel Vilém Enders (?1809–1832). Marco Berra (1811–1853), who began work in Vienna before returning to Prague to become its major publisher, was succeeded by his son-in-law Jan Hoffmann and Hoffmann's heirs (*c*1841–?1918); also important in Prague were Emanuel Starý (1870–1949) and Urbánek (1872–1949). In Bucharest Anton Pann specialized in psalmody and native music publications around 1850; the firm of Gebauer also flourished there for nearly a century (1859–1945). In St Petersburg, J.D. Gerstenberg (1792–) acquired the stock of most of the smaller firms to become the leading publisher of his day. Among Swedish publishers, Olof Åhlström (1783–1835) was the earliest, while J.C. Hedbom (1827–52), Abraham Hirsch (1829–84) and Abraham Lundquist (1837–1915) were the most prolific; Carl Warmuth began publishing in Christiania (Oslo) in the 1840s. In Copenhagen, Søren Sønnichsen (1783–1826) was highly productive, as were the composer C.C. Lose (1802–79) and Horneman & Erslev (1846–79). Music publishing in the Hispanic world was slow to be established. The Lisbon firm of Sassetti began in 1848, while around 1900 the Bilbao firm of Ernesto Dotesio acquired many smaller Spanish firms and in 1914 became the Unión Musical Española.

Freehand music engraving was introduced into English colonies in New England as part of the reform movement of congregational singing, and in two celebrated instruction books published in Boston in 1721: John Tufts's *A Very Plain and Easy Introduction to the Singing of Psalm Tunes* (the first extant edition is the third, 1723, 'printed from copper-plates, neatly engraven ... for Samuel Gerrish'), and Thomas Walter's *The Grounds and Rules of Musick*, printed by James Franklin, also for the bookseller Gerrish. Freehand engraving continued to be used in the early Yankee tune books, which bear the names of America's prominent copperplate engravers: Thomas Johnston, who engraved his own booklet of rules for singing (1758) as well as several editions of Walter's *The Grounds and Rules of Musick* around 1760; Henry Dawkins (James Lyon's *Urania*, 1761); Paul Revere (Josiah Flagg's *A Collection of the Best and Most Approved Tunes*, 1764, and *The New-England Psalm-Singer* by William Billings, 1770); John Ward Gilman, who engraved several books around 1770, including American editions of works by the English psalmodist William Tans'ur; and Amos Doolittle, who prepared most of Daniel Read's compilations.

Movable type was introduced in the English colonies by Christopher Saur in Germantown, Pennsylvania; his sacred collection *Kern alter und neuer ... geistreicher Lieder* (1752) was the first of several German religious books with music issued from his press in subsequent decades. Although Saur is thought to have cast the type himself, his matrices came from Europe, probably Frankfurt. The music typeface used in William Dawson's *The Youth's Entertaining Amusement* (Philadelphia, 1754) appears to be unique; Wolfe identifies the printer as Anton Armbrüster, who also issued the collection *Tunes in Three Parts* in 1763. The last of the early American music typefaces, acquired from the Dutch firm of Enschedé, is seen in two books printed for the Reformed Protestant Dutch Church in New York; Francis Hopkinson's translation of *The Psalms of David* (1767) and *A Collection of the Psalm and Hymn Tunes* (1774).

Movable type began to be used more frequently in the 1780s, when the founts were first imported from the Caslon foundry in London. This also marked the rise of specialist publishing (exemplified by a broadside song-sheet printed by William Norman in Boston in 1783) and of religious music publishing. In 1785 Isaiah Thomas in

23. *Title-page of the first edition of the vocal score of Verdi's 'Aida', published by Ricordi in 1871*

Boston and Worcester and William McCulloch in Philadelphia imported founts, and the adoption of this practice eventually led to the decline of freehand engraving, as well as to the establishment of a formal repertory of religious music and the tune book as a distinct physical object. Set in movable type, such tune books were oblong in format and bound in heavy boards; a theoretical introduction generally preceded the music. Most of the several hundred different tune books that appeared around the turn of the century were printed in the Caslon typeface, in the special music type without staff lines developed by Andrew Law for his solfège system, or in a new and tidier face (which also had a special solfège version) introduced soon after 1800 by the Binney & Ronaldson foundry in Philadelphia. Centred at first in the cities of the East Coast, religious music publishing eventually spread to the west and south and resulted in the publication of collections of sacred music (especially hymns) by Lowell Mason and his contemporaries, as well as the shape-note tune books.

As early as 1768 John Mein and John Fleming prepared a broadside engraving of *The New and Favourite Liberty Song*, the plates for which were used in *Bickerstaff's Boston Almanack* for 1769. In 1786 Chauncey Langdon's *The Select Songster* was engraved in New Haven by Amos Doolittle, and during the course of the next few years a group of prominent Philadelphians – Alexander Reinagle the composer, John Aitken the engraver, Thomas Dobson the pressman, Henry Rice the bookseller and Francis Hopkinson the composer and patron – assembled their talents to produce several major anthologies: vocal and instrumental collections by Reinagle (notably a set of keyboard variations thought to be America's first purely secular musical publication), Hopkinson's famous *Seven Songs* (1788), and a Roman Catholic service book. The introduction of music engraving punches in America can probably be traced to these books.

Sheet-music publishing was firmly established in America by the mid-1790s. In 1793 J.C. Moller and Henri Capron established a music shop in Philadelphia and published four issues of *Moller and Capron's Monthly Numbers*, a periodical collection of vocal and instrumental music, although their business was soon taken over by George Willig (1794–1856). Benjamin Carr settled in

Philadelphia in 1793 and soon published music (1794–c1820); that year J.H. Smith and James Harrison founded short-lived companies in New York, as did the more successful James Hewitt (1793–1825) and George Gilfert (1794–1814). In 1794 Carr's father Joseph moved from London and opened a shop in Baltimore and Frederick Rausch established another in New York. Peter Albrecht von Hagen started his own firm in Boston (c1798–1803). These firms, all located in urban centres, had close ties with the theatrical companies that were also being founded at the time. Many of the publishers themselves had been theatre musicians, and their catalogues consisted largely of theatre songs. At the turn of the century two more major publishers were established, Gottlieb Graupner in Boston (by 1797–1835) and George E. Blake in Philadelphia (1802–c1850). While Philadelphia maintained its leadership through the shops of Willig and Blake, New York grew in importance through the work of somewhat smaller firms, including those of Edward Riley (1806–51), John Paff (1798–1817), Joseph Willson (1812–20), the Geib family (1814–58) and William Dubois (1813–54, successor to Paff). John Rowe Parker was important in the music trades in Boston (1817–24) as well as for many other musical activities, while Oliver Shaw in Providence (1817–48) was also a respected composer. Early publishers in Charleston, South Carolina, included Charles Gilfert (1817–27) and John Siegling (1819–1970).

A significant development occurred in the late 1820s, when lithography, first used about 1822 by Henry Stone in Washington, was taken up more extensively in New York by Edward S. Mesier, Anthony Fleetwood and G. Melkham Bourne. Notable early examples of the process can be found in editions of *Jim Crow* and other works in the emerging repertory of blackface minstrelsy. These developments further reflect the rise of 'Jacksonian democracy', with its emphasis on the new values of the western frontier rather than the more traditional values cultivated in the eastern cities. Early music lithographs, with their imperfectly drawn musical text but better prospects for music illustration, interested a public different from the one that purchased engraved music editions, now largely devoted to the fashionable repertories of Italian opera and guitar songs. While the London repertory thus ceased to dominate music publishers' catalogues, the fashions of guitar accompaniments, sentimental texts and illustrated covers suggest that America's music publishers still generally retained their London models. Lithographic sheet music virtually disappeared in the 1830s, perhaps because the engraved editions looked so much less amateurish. The process re-emerged, however, in the 1840s with the development of chromolithography for cover illustrations; notable among the specialist shops using this technique, by which several colours could be printed, were John H. Bufford, W.S. and J.B. Pendleton, and B.W. Thayer in Boston; Peter S. Duval and Thomas Sinclair in Philadelphia; and Nathaniel Currier (famous through his later partnership with J. Merritt Ives), George Endicott, and Napoleon Sarony of Sarony, Major & Knapp in New York.

In the 1830s Baltimore publishers were particularly active, notably John Cole (1822–39, including the production of sacred music) and the younger George Willig (1829–74, his heirs to 1910). The 1840s saw the emergence in Boston of Henry Prentiss (1825–47), Charles Keith (1833–47), Elias Howe (1843–50, 1860–1931) and George D. Russell (variously with George P. Reed, Nathan Richardson and Henry Tolman, 1849–88); in Philadelphia James G. Osbourn (1831–48), Leopold Meignen (alone and in partnership with Augustus Fiot, c1835–55), Lee & Walker (1848–75) and, more famous but less extensive, the brothers Winner (Septimus and Joseph, 1845–1918); and in Baltimore Frederick Benteen (later Miller & Beacham, 1838–73). Also in the 1840s the family of William Cumming Peters (1820s–1892) became active in Pittsburgh, as well as in Baltimore, Cincinnati and Louisville. Music publishing in San Francisco flourished during the Gold Rush years, the firms of Atwill (1852–60), Matthias Gray (1858–92) and Sherman (1870–, as Sherman & Hyde 1871–6, then as Sherman, Clay & Co.) being particularly important. While several important new firms were active on the East Coast in the 1850s (among them S.T. Gordon, mostly in New York, 1846–1941, Henry McCaffrey in Baltimore, 1853–95, and Horace Waters in New York, 1845–1940s), more significant activity was taking place in the west, involving such major firms as Balmer & Weber in St Louis (1848–1907), Root & Cady in Chicago (1858–72) and Silas Brainard in Cleveland (1845–1931). Smaller firms in the west included William F. Colburn in Cincinnati (1849–59), Henry N. Hempsted in Milwaukee (1851–98), John Sage in Buffalo (1850–71), David P. Faulds (1854–1903) and Louis Tripp (c1857–1875) in Louisville and H.M. Higgins in Chicago (1855–67). Confederate firms included A.E. Blackmar (in Vicksburg, Mississippi; Augusta, Georgia; and New Orleans, 1858–88) and W.T. Mayo (1841–54), Philip P. Werlein (1853–) and Louis Grunewald (1858–1969) in New Orleans. Foremost among America's music publishers by the middle of the century were the various partnerships in New York of Firth, Hall & Pond (1815–75 and later; they issued much of the music of Stephen Foster) and Oliver Ditson in Boston (1835–1931, perhaps the most important of all American music publishers in the late 19th century).

4. THE AGE OF OFFSET PRINTING, 1860–1975. The third main era in the history of music publishing began with the introduction of offset lithography. In Leipzig, established as the centre of music publishing, the firm of C.G. Röder, specialists in music engraving and printing from 1846, successfully used a lithographic steam press as early as 1863, and by 1867 was engraving and printing music for Peters as well as other publishers in Leipzig and throughout Europe. The effect in time was a vast increase in the amount of printed music, the output of which reached a highpoint around 1910, gradually receding thereafter in response to the advent of sound recording and broadcasting. Throughout much of the world, music publishing prospered as never before in the late 19th and early 20th centuries, although particular firms have waxed and waned under the impact of commercial events and fashions in the musical repertory. Whether in Paris, London, Milan or New York, affluence is evident from the vast quantity of published music. Generally, the successful publishers were either those who were perceptive enough to identify emerging musical tastes or those who were able to fix the graphic appearance of their editions and devote their content mostly to salon music or other works that would sell – what are now frequently disparaged as musical trivia. The basic format became the single songsheet, supported by arrangements for salon

orchestra or dance band. World War I stimulated the publication of patriotic songs, especially in the larger countries.

Qualitative considerations became interwoven with commercial considerations, however, as publishers promoted their titles beyond national boundaries. To the extent that quality is determinable through analysis, furthermore, the very function of the musical document may be seen to change. Before 1860 music was issued mostly for the use of performers, and thus was (as it still is) likely to be sold at stores that also sold violin strings, piano-tuning supplies, music stands, guitars, small instruments and the like, rather than at bookshops. Music designed for study purposes first appeared in the late 19th century, as a result of the rise of public concerts and, later, sound recordings, and the growth of the academic study of music and the rise of musicology. Public concerts and recordings contributed to the popularity of the miniature score, while musicology fostered historical and critical editions. Miniature scores, issued briefly in the mid-19th century by firms such as Heckel in Mannheim and Guidi in Florence, proliferated as the speciality of Albert Payne, who, working in his father's music shop in Leipzig, began his *Kleine Kammermusik Partiturausgabe* in 1886. Several years later he sold the series to Ernst Eulenburg (Leipzig, 1874–), whose editions have dominated the market ever since. Many of the small scores – variously designated as 'study', 'miniature', 'pocket' or 'reading' scores – are photographic reductions of conductor's scores; but in modern times some contain original material, such as analytical notes and scholarly corrections which are not found in print elsewhere. Other publishers slowly entered the market, including Ernst Donajowski in Leipzig (later Wiener Philharmonischer Verlag) and Hawkes in London, publishing the standard classics; by the mid-20th century nearly every publisher issued 'study scores' of the most important of its copyright works.

The modern historical edition, intended for study rather than for use in performance, has many ancestors, such as Arnold's Handel edition (1787–97) and Breitkopf's 'Oeuvres complètes' of Mozart, Haydn and Clementi (1806). Its modern beginnings derive from the mid-19th century and the collected editions by Breitkopf & Härtel of Beethoven, Mozart and other major composers. The same firm acted as publisher of the Bach-Gesellschaft edition. Other auspicious series also appeared about this time, some of them not sponsored by either a commercial publisher or government patronage; Friedrich Chrysander's great Handel edition, produced largely in the editor's home, is an example. Informal assemblages of enthusiasts who published useful editions included the Musical Antiquarian Society in the 1840s, and the Plainsong & Mediaeval Music Society, beginning in 1888, both in London. The publication of scholarly editions was well established throughout Europe by the end of the 19th century.

The impact of scholarship may also be seen in the 'scholarly performing' edition, which reflects the publisher's scrupulous concern for accuracy of detail and respect for the composer's intentions. The firm of Steingräber (Hanover, later Leipzig, 1878–) was long respected in this field, particularly for its variorum edition of Bach's keyboard music prepared by Hans Bischoff. In the 1950s Bärenreiter in Kassel (1923–) became preeminent in the production of scholarly performing editions, a reputation shared in particular instances with the firm of Henle (Munich, Duisburg, 1948–) and the newer Wiener Urtext Edition (Vienna, 1972–), so as to offer performers, at least for the most celebrated works, a gratifying if bewildering choice between alternative conceptions of authenticity. The private press of L'Oiseau-Lyre (Paris, Oxford, Monaco, 1932–) is also noted for its sumptuous editions, imposing in their scholarship, of specialized repertories, while the American Institute of Musicology (Rome, 1946–) has undertaken an ambitious publishing programme of scholarly editions of early music. Major publishers specializing in scholarly editions today include Arno Volk (Cologne, 1950–80), A-R Editions (Madison, WI, 1962–) and Garland (New York, mid-1970s–).

The increasingly historical character of the music repertory during the early 20th century was fostered by, as it also influenced the outlook of, the major German publishers, particularly those, such as Breitkopf & Härtel, Peters, Schott and Simrock, who invested in editions of leading composers. The major addition to the group was Universal Edition in Vienna (1901–), which began by acquiring several other major German firms, and after 1907, under the leadership of Emil Hertzka, entered into contracts with Mahler, Schoenberg, Bartók and many other major composers. Gustav Bosse in Regensburg (1912–) has been a major publisher of folk, school and church music. Max Brockhaus (Leipzig, 1893–) has promoted contemporary opera. Other firms came to be recognized for their particular niches in the rich and diversified world of central European music. Theodor Rättig in Vienna (*c*1877–1910) was an early champion of Bruckner; more diversified in its riches was the short-lived firm of Lauterbach & Kuhn (1902–8). Operettas were a speciality of Weinberger in Vienna (1885–1938) and the Drei Masken Verlag in Munich and Berlin (1910–), among others; Ars Viva (1950–53), founded by Hermann Scherchen to promote avant-garde composers, was acquired by Schott and contributed to that firm's strong presence in this field. Hänssler in Stuttgart (1919–) has emphasized Lutheran music, while Kallmeyer in Wolfenbüttel (1925–) has concentrated on scholarly works in general. Ugrino in Hamburg (1921–) catered originally to the Ugrino religious community. However much they are respected for art music, German publishers probably issue as high a proportion of popular tunes as does the rest of the world. Hans Sikorski in Hamburg (1935–) and Hans Gerig in Cologne (1946–) have served the pop and educational markets, while the Österreichischer Bundesverlag in Vienna (1771–) issues national folk and educational editions.

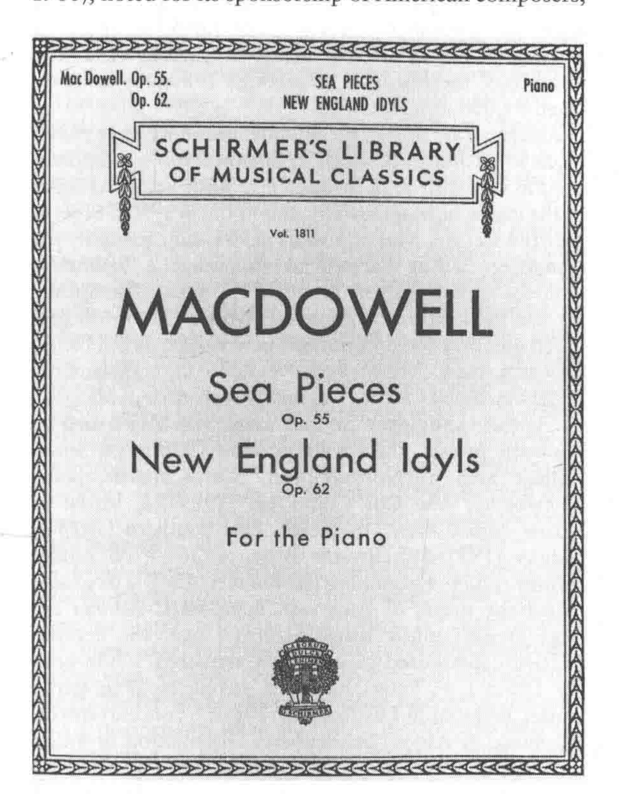
World War II devastated many German music publishers, many of whom moved to England or America, sometimes founding new firms but usually contributing to established ones. The bombing of German cities, Leipzig in particular, took a heavy toll of stocks and plates. In 1954 the Deutscher Verlag für Musik in Leipzig became the state music publishing house of the German Democratic Republic. Numerous firms had already moved to the West, for instance Benjamin and Fürstner to near London (the latter based on a pre-war office there), Breitkopf & Härtel to Wiesbaden, Brockhaus to Lörrach, Heinrichshofen to Wilhelmshaven, Kahnt to near Konstanz, Peters to Frankfurt (with separate firms as well in London, under the Hinrichsen name, and in New York)

and Steingräber to Frankfurt; some of them had counterparts or rival offices in East Germany, and enjoyed only short-lived success. The arrival in England and the USA of experienced music publishers escaping the Holocaust – many of them from Universal, including Hans W. Heinsheimer, Edwin and Alfred Kalmus and Ernst Roth – helped serve the increasingly sophisticated tastes of performers and listeners during the 1950s.

The German musical hegemony prevailed throughout the 19th century, although German music publishers themselves were probably not notably more prolific than their counterparts elsewhere, who flourished mostly by providing songs in the vernacular languages, the distinctive dance music of the community and other material of regional interest. While the early nationalist composers typically began by publishing at home, later success usually found them happy to promote the cause of their country's distinctive music through German editions: Smetana may have published most of his music through Urbánek in Prague, for instance, but Dvořák worked to a great extent with Simrock; Grieg began publishing with his friend Horneman in Copenhagen but much of his later music was issued with the support of Peters; Sibelius was published mostly by Breitkopf & Härtel. In time Leipzig became the home of publishers from abroad, among them Bosworth (1889–1998), set up to protect English copyrights, and Arthur P. Schmidt from Boston (1889–1910).

Among significant new firms in Victorian England were Hutchings & Romer (*c*1866–1916), Stanley Lucas, Weber & Co. (1873–93) and Murdoch, Murdoch & Co. (before *c*1880–*c*1946). Popular music publishing became highly lucrative in the late 19th century through two promotional devices, the illustrated cover and the royalty system of publicity by star performers. Music-hall ballads and theatre tunes flourished alongside Gilbert and Sullivan. Chappell, thanks to the Dreyfus brothers – Louis in London and Max in New York – effectively controlled much of the music of the London and Broadway stages, sharing the market with Francis, Day & Hunter (1877–1972) and Ascherberg, Hopwood & Crew (1906–70). Other firms were established by interests abroad, including Alfred Lengnick (1893–) by Simrock, Hinrichsen (1938–) as a branch of the Peters family and Galliard (1962–72) as a subsidiary of Galaxy in New York. Stainer & Bell (1907–) was originally established by a consortium. Recent British publishers of art music have been sustained by their major composers, for instance Oxford University Press by Vaughan Williams and Walton, Boosey & Hawkes and later Faber Music (1966–) by Britten, Novello by Elgar, the London office of Schott by Tippett, and Joseph Williams (1808–1962), Chester (1874–) and Murdoch by others. Among firms outside London, Gwynn Williams in Llangollen (1937–) has developed a speciality of Welsh folk music.

Publishers in other countries have emphasized their national music, among them Alsbach in Rotterdam (1866–98) and Amsterdam (1898–). Wilhelm Hansen in Copenhagen (1853–, heir to Sønnichsen, Lose and Horneman) has been Scandinavia's major music publisher; alongside it in Denmark the Samfundet til Udgivelse af Dansk Musik (1871–) is more important for national historical editions, the Kgl. Hof-Musikhandel (1880–1929) for theatre music, the scholarly antiquarian Dan Fog (1953–) for significant bibliographical works. In Norway, H.T. Winther (1823–78) and the Hals brothers (1847–1908), like many north European shops, worked as both publisher and rental library; their successor Carl Warmuth (1851–1908) was in turn succeeded by the Norsk Musikforlag (1909–). Sweden's major firm has been Gehrmans in Stockholm (1893–), while Finland's is Fazer in Helsinki (1897–).



As well as older-established firms such as Choudens, Costallat, Escudier, Heugel, Leduc and Lemoine, the array of major Paris publishers includes more recently founded firms such as Durand (1869–), the original publisher of most of Saint-Saëns, Debussy and Ravel; Hamelle (1877–1993), specializing in 19th-century French music, including most of early Fauré, Salabert (1894), publisher for several of Les Six; Fromont (*c*1885–1922), the early publisher of Debussy; Célestin Joubert (1891–1970), known for operettas and other light works; Max Eschig (1907–), at first largely a French agency for foreign firms; and Jobert (1922–), successor to Fromont. Other publishers recognized as promoters of contemporary composers include Rouart-Lerolle (1905–41), Senart (1908–41) and Editions de la Sirène (1918–36). Foetisch in Lausanne (1865–) has been the major promoter of contemporary Swiss composers. The recent major Italian publishers of art music include Carisch in Milan (1887–), Curci in Naples (1912–), De Santis in Rome (1852–, latterly specializing in avant-garde music), Suvini Zerboni in Milan (1907–, specializing in contemporary music from Japan as well as Italy) and Zanibon at Padua (1908–). The major publisher in Portugal has been Valentim de Carvalho in Lisbon (1914–), in Spain Boileau Bernasconi in Barcelona (1906–), complementing the Instituto Español de Musicología in Madrid (1943–) set up by the Spanish government for scholarly works. Israeli Music Publications in Tel-Aviv (1949–) was set up to serve the needs of Israel's serious composers.

Russian composers, like those elsewhere, worked at first with nearby publishers, for example, Tchaikovsky in Moscow with Jürgenson (1861–1918), The Five in St Petersburg particularly with Bessel (1869–1907); Gutheil in Moscow (1859–1914) became as prominent as those two publishers, especially later on as the publisher of Rachmaninoff. As Russian music became increasingly popular abroad, M.P. Belyayev (1885–, originally from St Petersburg) set up a successful enterprise in Leipzig for distributing Russian music in the West and was able to secure copyright protection outside Russia. The last major firm to be established before the Revolution was Edition Russe de Musique, founded by Sergey Koussevitzky (Moscow, 1909) to promote new Russian works, successor to Gutheil, and active later in Berlin and Paris as the major publisher of Stravinsky and other Russian émigré composers. After the confiscation of Jürgenson in 1918, music in the USSR was published exclusively by Muzïka.

Numerous firms established before the war in eastern Europe are today part of national enterprises. Polskie Wydawnictwo Muzyczne (1928–) is uncommon on three counts: it was established before World War II; it is a consortium of musicians and scholars; and it is located in Kraków rather than Warsaw. Among the earlier Polish firms was Michał Arct (1900–49). The Czech firms of Urbánek and Starý were nationalized around 1949; today they are under the imprint of Supraphon, successor to Hudební Matice. In Hungary, Editio Musica Budapest was created in 1950 through a merger of several firms, including Rózsavölgyi és Társa (1850–), Magyar Kórus

(1931–, specialists in art music) and Rozsnyai (1889–, specialists in pedagogic materials). In Romania, the general firms of Doina in Bucharest (1914–47) and the Morawetz brothers in Timişoara (1930–33) and the pop firm of Stefan Kiritescu in Bucharest (1941–8) have been succeeded by the state-managed Musikstaatsverlag.

The period between the Civil War and World War II in the United States saw an even greater expansion in publishing activity and an increase in specialization. A torrent of music for domestic use was published; indeed the label 'the age of parlor music' appropriately evokes the image of a piano stool in the home filled with sheet music. Oliver Ditson acquired many of the older small firms during the depressions of the late 19th century to become the country's major publisher. He was in a good position to become the prime mover behind the Board of Music Trade, founded in 1855 to address the common concerns of music publishers, though it was moribund by the end of the century. Ditson also set up subsidiaries, notably John Church, Jr (later John Church & Co.) in Cincinnati (1859–1930). Other firms were established, mostly by German immigrants, the largest and best known of these being G. Schirmer in New York (formally established in 1861 but active earlier); it was later known for its special series of the classics, and it extended its catalogue to contemporary music (fig.24) under the wise guidance of Theodore Baker, Oscar Sonneck and, later, Carl Engel. Other firms established by German immigrants included Carl Fischer in New York (1872–), specializing at first in band music, then in choral and orchestral works; Arthur P. Schmidt in Boston (1876–1960), noted for its sponsorship of American composers;

24. Cover of an edition of two piano works by Edward MacDowell, published in the series Schirmer's Library of Musical Classics; the distinctive cover design was adopted in 1939

and the smaller firm of J. Fischer in Dayton, Ohio (1864–1970), specializing in Roman Catholic choral music. Theodore Presser, founded in Lynchburg, Virginia (1883), soon moved to Philadelphia and enhanced its catalogue by publishing what became the major music journal of the time, *The Etude*.

While the conspicuous thrust of America's major music publishers was towards the polite, German repertory – as earnest, classical, cosmopolitan and transcendental as the market would bear – in truth the vast bulk of the output, from these and countless minor firms, was of entertaining, commonplace, provincial and pedestrian repertory, which the market indeed would bear. The measure of music publishing after 1850 must involve not only the easily recognizable large firms but also the smaller regional and specialist firms, less easily describable as a reflection of the totality. Perhaps most conspicuous among the specialist firms were those that cultivated sacred music; they produced tune books, hymnals and school collections, usually set in type in quarto format, at first oblong, later upright. The major early publisher of these was Mason Bros. (1853–69), established by the family of Lowell Mason (i). From its model derive two music publishing traditions. One was devoted to evangelical song and included Biglow & Main in New York (1867–1922), James D. Vaughan (Lawrenceburg, Tennessee, 1890–), Homer Rodeheaver, mostly in Winona Lake, Indiana (1910–), Charles Henry Pace in Chicago (1910–, focussing on black gospel music) and J.R. Baxter in Dallas (1926–72). The other tradition was devoted to public-school and other educational music and included, among the firms originating in the 19th century, Silver Burdett in Boston (1885–) and the Boston Music Co. (1885–1977, originally a subsidiary of G. Schirmer). The manifest trend, however, was towards an emphasis on popular song, such as would be reflected in the sentimental ballads that made up the monthly issues of *The Folio* of the White-Smith Co. (Boston, 1868–1976) as well as the catalogues of Benjamin Hitchcock of New York (1869–1941). It should also be noted that, much as music publishers served also as retailers, a number of firms best known as retailers were also occasional publishers, among them Lyon & Healy in Chicago (1864–, noted as a harp manufacturer as well).

American music publishing was by no means centralized in New York. Chicago enjoyed a bustling activity, its practitioners including the composer Will Rossiter (1891–1954) and Sol Bloom (1896–1910), who was later prominent in the US House of Representatives. Detroit publishers, beginning with Adam Couse (1844–59) and Stein & Buchheister (1854–65), came later to be known for musical comedy firms including Clark J. Whitney (1857–95), Joseph Henry Whittemore (1858–93), Roe Stephens (1868–93) and Jerome H. Remick (1898–1930, also in New York); Sam Fox (1906–) originally worked in Cleveland before moving to Tin Pan Alley. Sedalia, Missouri, could claim John Stillwell Stark (1882–1922), who issued the early rags of Scott Joplin, while Memphis housed W.C. Handy's commercialized blues publishing, under the imprint of Pace & Handy (1908–20, later in New York). As Hollywood became the home of the film industry, Los Angeles developed a music publishing community of its own. In later years, however, it degenerated into the centre of 'song shark' practices, whereby dealers with questionable reputations extracted exorbitant fees from the gullible novices in return for

printing and copyrighting songs and ostensibly 'plugging' them, with the help of famous performers and other influential parties, into lucrative hits.

American popular music publishing emerged as a specialism after the Civil War as publishers began to look for hit tunes. Its centre was an area of mid-town Manhattan, moving upwards from East 14th to West 28th and eventually West 50th Street, known as Tin Pan Alley. Among the major firms were Belwin, Inc. (1918–), founded by Max Winkler, which in 1969 merged with Mills Music (1919–); Famous Music Corp. (1928–66), with strong ties to several Hollywood studios; Leo Feist (1895–, which merged with Miller and Robbins to form the Big 3 Music Corporation: see below); Charles Foley; T.B. Harms (1875–1969), which enjoyed its greatest success when it enlisted Jerome Kern and, later, Richard Rodgers among its composers; Miller Music (*c*1930–1973), an offshoot of Harms; J.J. Robbins (1927–39), active in the 'big band' movement; Shapiro, Bernstein & Co. (1895–); Joseph W. Stern (1894–1920), whose partner, Edward B. Marks, later acquired it; and M. Witmark & Sons (1885–1941), active among the founders of ASCAP. Composers also established their own firms, among them Harry Von Tilzer (1902–), George M. Cohan and Irving Berlin. The proximity of these firms, and later ones like Frank Music Corp. (1949–), to the Broadway musical stage, with its favourite performers and composers attuned to the rising mass audience, greatly enhanced their access to current tastes, while the commercial environment ensured that they were among the first participating publishers in the performing rights movement. Corporate flexibility was as important as musical insight in this world, as directors moved from firm to firm and mergers and acquisitions flourished. Many firms were absorbed into larger units, such as Warner Bros. Music of Los Angeles (1929–, through its Music Publishers Holding Corporation), the Big 3 Music Corporation (1939–, a subsidiary of MGM, later of United Artists), and MCA Music in New York (1965–); and they were unified through trade organizations such as the Music Publishers' Association of the United States (MPA, founded 1895, at first made up of publishers mostly of serious music), or the National Music Publishers' Association (NMPA, founded 1917 as the Music Publishers' Protective Association, made up of popular music publishers), or the Church Music Publishers' Association (CMPA). Recently many publishers have chosen to centralize their marketing, distribution or other activities through specialist firms such as Charles Hansen (1945–) and Hal Leonard (1949–). The spiritual home of America's pop music is probably neither New York nor Hollywood but rather Nashville, although in fact publishers, like record companies, are today scattered across the country.

Educational specialists also emerged to issue books for school use, band parts, music for large choirs, collections of favourite songs for amateurs, charts and other supplies for pedagogic purposes, and juvenile instructional music. In the United States the Lowell Mason tradition culminated in the 'basic series' (i.e. sets of graded materials for use at the elementary school level), which have sustained publishers such as the American Book Company, Allyn & Bacon, Follett, Ginn, Summy-Birchard (1888–) and Neil A. Kjos. Band music continued to be issued nationally by Carl Fischer and another general music firm, John Church, as well as by specialist publishers like E.F. Ellis in Washington, J.W. Pepper in Philadelphia, Vandersloot in Williamsport, Pennsylvania, and C.L. Barnhouse in Oskaloosa, Iowa. Choral music was a speciality of E.C. Schirmer (1921–) in Boston and H.W. Gray (1906–71) in New York, as well as Shawnee Press (1939–), which was devoted at first to Fred Waring choral arrangements. Major denominational firms of special prominence include James D. Vaughan (1890–), originally serving southern rural hymnody and now affiliated with the Church of God; Augsburg (1841–) in Minneapolis, serving various Lutheran churches, along with Concordia (1880–) in St Louis, active in promoting early music for service use; Lillenas (1925–) in Kansas City, with the Nazarene Church, and Broadman (1934–) in Nashville, with Southern Baptists. The gospel song was largely a speciality of Homer Rodeheaver of Winona Lake, Indiana, whose catalogue was acquired in 1969 by Word, Inc. (1951–) of Waco, Texas. Other major religious music publishers include the Hope Publishing Co. (1892–), originally in Chicago; E.S. Lorenz (1890–) of Dayton, Ohio; and the Zondervan Music Group of Nashville, specialists in evangelical song. Songbooks are also issued by or for innumerable political, ethnic, social, fraternal and occupational groups. Fred J. Rullman, associated with the Metropolitan Opera, long dominated the market for opera librettos, while Oak Publications in New York (1950s–) has focussed on folk music, and Hargail, also in New York (1941–), on recorder music. The possibilities of camera-copy music printing have also nourished the 'cottage industry' publishers, whose catalogues contain only a few titles, directed to highly specialized audiences, announced on a highly strategic basis and available only from the publishers directly. The range of specialist activity embraces a vast array of smaller American publishers: the *Musician's Guide* of 1980, for instance, listed 25,000 different firms.

American art music, meanwhile, found its early champions in Arthur P. Schmidt in Boston (who was apprenticed in Germany and, through P.L. Jung, acquired rights to the music of MacDowell), and in the Wa-Wan Press in Newton Centre, Massachusetts (1901–12), set up by the composer Arthur Farwell to encourage a distinctive national style based on Amerindian music. The Society for the Publication of American Music (1919–69) prepared and promoted important new works, as did Henry Cowell's New Music series (1927–58), substantially underwritten by Charles Ives and prepared for publication by Herman Langinger. Serious music was also issued by academic presses, the activity around 1950 in the Smith College area of Northampton, Massachusetts, being noteworthy. The Cos Cob Press (1929–38, leased to Arrow Music Press, to 1956), Peer-Southern (1928–), Galaxy (1931–89), Broude Bros. (1930s–), Alexander Broude (1954–82) and Boelke-Bomart (1948–) have also issued the music of American composers. Among the large general music firms, Schirmer over the decades 1920–50 specialized in American art songs, while since the 1960s C.F. Peters has been strong in avant-garde works. Belmont in Los Angeles (1960s–) concentrates on the music of Arnold Schoenberg. Distribution of music for a limited audience has been addressed by organizations such as the American Composers Alliance (1937–) and the American Music Center (1939–), as well as by music rental services.

The problems in distributing European editions in the USA often led to special American offices, beginning with agencies in New York of Novello in the 1850s and later of Ricordi and, through P.L. Jung (1891–8), of Breitkopf & Härtel. Later cooperative agencies included Associated Music Publishers (1927–64), Peer (1940–, for several Latin American firms), Elkan-Vogel (1929–70, working mainly with French publishers), Am-Rus Music Corp. (directed by Eugene Weintraub, 1940–) and Leeds (*c*1940–1964) – the latter two handling music from the USSR – and European American Music Distributors (1977–). The situation after World War II in particular, when German music was generally unavailable in England and America and when the technology of offset lithography was well developed, gave rise to extensive reprinting, mostly of standard editions. From the 1960s, small editions of important out-of-print texts have been prepared for libraries and scholars; these have often been of monumental historical editions in reduced format. Among the major specialists in this activity are Edwin F. Kalmus (1926–), International Music Co. (1941–) and, more recently, Dover (1941–), all in New York.

Music was printed in Canada as early as 1800, with many different models reflecting various purposes. Prior to the Confederation in 1867, the major firm was A. & S. Nordheimer (1844–*c*1927) in Toronto, whose output reflects American sheet-music practices. Overseas ties are reflected in the Anglo-Canadian Music Publishers' Association (Toronto, 1885–1920), set up to protect English copyrights, as well as in the catalogue of Frederick Harris (1910–), originally an English agency but now specializing in conservatory editions. Among other specialist firms have been Whaley, Royce & Co. (1888–1930s) in Toronto, issuing salon music; Gordon Thompson (1909–) in Toronto, educational music; the Waterloo Music Co. (1922–), wind instruction and band music; and Berandol (Toronto, 1969–), whose serious music catalogue has grown out of earlier BMI commitments. Protestant hymnals, Sunday school books and similar texts also appeared in other parts of the British Empire in the 18th century and the 19th (e.g. *The Oriental Masonic Muse*, Calcutta, 1791, and a song, *Jesus de Ware Zoondaars Vriend* by F. Logier, in a Cape Town newspaper of 1840, provisionally recognized as the first music publications of India and South Africa, respectively), but there was no continuing tradition of production in these areas. Australian music publishing began in Melbourne in 1850 with Joseph Wilkie, predecessor of the more important firm of Allan, and in Sydney a few years later with William Henry (Willem Hendrik) Paling and around 1890 with Jacques Albert. While Allan and Paling came to be noted for their support of Australian composers, Albert worked extensively with English and American firms, as did the branch of Chappell (1904).

Music publishing was also introduced in Latin America by European immigrants, who worked mainly as music teachers and retailers, and often as impresarios. In addition to selling imported editions (sometimes presumably with subsidy from the European publishers) the imaginative shopkeepers identified and promoted music of a distinctively local character, issued separately or as supplements to literary journals devoted to music, cultural topics, general or current affairs. As early as 1824 sheet music was being issued in Rio de Janeiro, later imprints naming J.B. Klier (1834–47), Pierre Laforge (1836–51), Filippone (1846–1911) or Bevilacqua e Napoleão (*c*1869–1968). Music was even published in the Amazon River settlements around 1900 during the rubber boom, also in São Paulo, where Vicente Vitale was particularly active after 1923. Europeans who kept music shops in Spanish communities included Engelmann (from Strasbourg) in Havana, Niemeyer (from Hamburg) in Valparaiso, Chile, and Wagner in Mexico City and Breyer in Buenos Aires (both also from Germany), as well as Giusti (from Corsica) in San Juan, Puerto Rico. Local opera house repertories are also reflected in their catalogues, notably in Buenos Aires, where Ricordi was active as early as 1885 and a powerful force in local music publishing after 1924. Among the major recent composers to benefit from a close working relationship with one particular publisher was Alberto Ginastera, with the Buenos Aires firm of Barry.

5. Music publishing today. The changing circumstances of today's music publishers, in historical perspective, reflect several larger trends. The first is based on measurement of production: more music is available than ever before, although the quantity seems actually to be decreasing slightly from the highpoint reached early in the 20th century. The evidence is very incomplete, although the overall historical trend is obvious. Up to 1700, the annual world-wide production of musical editions probably never exceeded 100 titles. On the basis of data suggested above, it seems fair to fix the total at no more than five titles a year before about 1525 (i.e. from the beginnings to the age of Petrucci); 30 titles a year from 1525 to 1550 (during Attaingnant's major activity); 80 titles a year from 1550 to 1600 (when the four major centres were particularly active); and 60 titles a year during the 17th century. The vast increase during the 18th century reflects the rise of engraved music and the proliferation of songsheets. While any estimates are frustrated by the practice of not dating music, the first half-century, with London as the main centre, probably produced about 150 titles a year; the next three decades probably saw around 300 new titles each year, as Parisian publishers entered the picture; while the last two decades saw a further proliferation, with the growth of Viennese and German publishers, so that the total swelled to about a thousand a year by 1800. The trend continued, stimulated by commercial pressures during the 19th century, with annual outputs reaching perhaps 2000 by 1835, 10,000 by 1850, 20,000 by 1870, and 50,000 by 1910, probably the apogee, just before the extensive distribution of commercial sound recordings. The totals are guesswork, which at best may give rise to questions of what exactly to count, although the slow decline over the intervening decades, when viewed in gross quantitative terms, is hard to regard as a cause for alarm. Underlying factors that contribute to the changes, however, deserve closer attention.

A quantitative decline is possible, in today's intensely active musical society, partly because music itself is more widely available than ever before. Concomitantly, local music retailing has declined disturbingly, as outlets have closed or been forced to provide a more limited range of services to their customers. The attrition, generally an international phenomenon, is partly compensated for by the rise of national and cooperative retailing activities and of public and academic music libraries, along with better bibliographies and repertory lists and (to music publishers

themselves a dubious blessing) modern photocopying technology. Along with the benefit of a greater availability of musical documents probably also comes the loss of respect for those documents. The very abundance no doubt can contribute to a 'musical information overload' of sorts. At the same time, better access has clearly helped scholars to discover, and performers to promote, the little-known and forgotten repertories that enjoy wide favour today.

The resulting diffusion of musical taste may be less specific, but is readily appreciated by inspecting music shop inventories, catalogues, advertisements and collections. There is no longer such an institution as a general music publisher: specialities are called for. With a few notable exceptions, general music journals have also perished, to be replaced by the plethora of specialist periodicals that now overflow the library's current periodical shelves. Generally higher in quality than their departed brethren by being better focussed, they nevertheless further contribute to the fragmentation of our musical communities. Similarly, over the course of the past century, music publishers have discovered the necessity (not to mention the pleasures) of becoming part of specific musical communities through the character of their catalogues, as favouring band or orchestra music, or choral music or songs; in offering conservative or adventurous repertories; in promoting particular composers, schools and trends; and whether catering for amateur or professional audiences.

The trends, once in motion, proliferate, as for each audience a different music publisher or group of publishers seems necessary. It is no longer a matter of the classical performer having trouble talking to the pop performer, so that 90 years ago this maxim could have been proposed: serious music publishers needed support, which popular music publishers earned. Wealth is no doubt still to be amassed in music publishing, particularly where commercial pop music is concerned and when a publisher can develop a successful relationship with recognized composers and styles. The recent experiences of many music publishers with the giant financial conglomerates suggest that the giants usually discover the successful innovators well after their vital and lucrative periods of activity. Yet in the 1960s many of the stable giants of music publishing found themselves, for better or worse, absorbed into the great financial conglomerates. While the music publisher's financial circumstances are probably no less mysterious today than they ever were, a high proportion of today's firms, both classical and popular, would appear to be in the business more as an outgrowth of a commitment to a particular musical community and repertory than in search of lucrative profits.

The music publishing industry has also been profoundly affected by the rise of the modern commercial sound recording, along with the all-pervading sound of music in modern society. The musical mass media, whatever the quality of their offerings, inevitably inspire cases in point of Gresham's law: listeners drive out performers, as bad music drives out good. The possibilities of coordinating a music publishing programme with the related activities of a recording company, a sound-equipment manufacturer, a film producer or the entertainment industry, has further attracted the more imaginative among music publishers, from smaller firms (particularly in areas without a rich music publishing tradition) to the giant conglomerates (notably those lured by potential marketing advantages), albeit so far with mixed results.

Declining concern for the physical objects of music publishing goes hand in hand with the increasing emphasis on music as intellectual and artistic property, which publishers share with or manage for the creator. Many major publishers still flourish by selling copies on paper, although one publisher enjoys recalling how in the 1920s, as sound recording and radio became more pervasive, his firm sold its entire stock – 70 tons of paper – for pulp, for $210. Still other music publishers, for the most part those commercially in the ascendant, find themselves drawn increasingly into the world of copyright law – involving both 'performance rights' over public presentation, broadcast and diffusion and 'mechanical rights' controlling sound recordings – and further away from the world of printing, promotion and distribution.

The distribution of performing parts in the form of manuscript copies during the 18th century no doubt provided a kind of protection, thanks to the restricted access to the musical texts themselves, but the proliferation of printed copies in the 19th century, while it provided for wider distribution, also limited the income of the creator. Thus in Great Britain the 'Bulwer-Lytton Act' of 1833, providing protection for performance of dramatic works, was in 1842 extended to cover music as well. Enforcement was not widespread until the 1870s, however, through the infamous Harry Wall and the Authors', Composers', and Artists' Copyright and Performing Right Protective Society. Revision of the British copyright act in 1911 led to the founding in 1914 of the Performing Right Society Ltd, which covers performance rights; the Mechanical-Copyright Protection Society Ltd (MCPS) was formed in 1924 through the amalgamation of several bodies which had been set up as early as 1910 for the purposes of covering mechanical rights. Previously the Société des Auteurs, Compositeurs et Éditeurs de Musique (SACEM) had been founded in 1851 in France, as well as the Anstalt für Musikalische Aufführungsrechte (AFMA), established by the Genossenschaft Deutscher Tonsetzer (Association of German Composers) in Germany in 1903, today succeeded by the Gesellschaft für Musikalische Aufführungs- und Mechanische Vervielfältigungsrechte (GEMA). The earliest such organization in the United States was the American Society of Composers, Authors and Publishers (ASCAP), founded in 1914, which in 1940 engaged in the pitched battle with the major radio networks that led to the incorporation of its major competitor, Broadcast Music, Inc. (BMI). SESAC (formerly the Society of European Stage Authors and Composers) is another group important in the United States and through bureaux in several other countries, many of which, however, also have their own national organizations. International coordination of these groups involves the Confédération Internationale de Sociétés d'Auteurs et Compositeurs (CISAC) for performance rights, and the Bureau International de l'Edition Mécanique (BIEM) for mechanical rights over sound carriers such as regular and compact disc recordings and tapes.

The rise of rapid photocopying machinery has no doubt further diminished the sale of copies for music publishers, calling for price increases, threatening publishers' historically close working relationship with performers and forcing them to look all the more to performance rights for their income. Such circumstances, influenced variously

by the different kinds of repertory, documentation and audience, have no doubt served to diminish even further the features shared by music publishers. The general belief today is that, after a quarter-century of continued happy expansion, from about 1945 to 1970, the music publishing industry has been experiencing an unsettling period of economic uncertainty and volatility. At the same time, the overriding generalization to be drawn from the history summarized here suggests that published music can always be expected to fluctuate in its accessibility as well as in its significance, as a reflection of publishers' sensitivity to the changing musical, social, technological and commercial contexts of their activity, and of their ability to identify, prepare, distribute and promote the repertories that reflect those contexts.

STANLEY BOORMAN (I, 1–5), ELEANOR SELFRIDGE-FIELD (I, 6), DONALD W. KRUMMEL (II)

Printz, Wolfgang Caspar (*b* Waldthurn, Upper Palatinate, 10 Oct 1641; *d* Sorau, Lower Lusatia [now Żary, Poland], 13 Oct 1717). German music theorist, historian and composer. He was an important figure in late 17th-century German music, and his several books contain prolific documentation of the theory and practice of music during his lifetime.

1. LIFE. Printz left two autobiographical sketches, one in his *Historische Beschreibung* (1690), the other a more extensive essay completed by his son after his death and published in Mattheson. After early schooling at Waldthurn, he moved with his parents to nearby Vohenstrauss, where he entered the Lateinschule. His music teacher, Kilian Hammer, taught him the use of a seventh solmization syllable, *si*, which was at that time a progressive step in music education. He also learnt to play the violin and keyboard instruments. In 1654 he was sent to Weiden to continue his education with the Kantor Wolfgang Altus and the organist Johann Conrad Merz, and he also learnt instruments from Hans Christoph Schaber. In 1659 he went to the University of Altdorf as a theology student. There a Stadtpfeifer (whom he called simply Christoph) gave him free board for a half-year in return for instructing his two children in music. Printz also belonged to the university collegium musicum, in which he played the violin and learnt the bass violin. After returning home at the beginning of 1661 when his father was unable to continue paying for his education, he set out on a career as a Lutheran minister but soon found that political conditions resulting from the conversion of the local aristocracy to Catholicism made it impossible for him to continue. Having earlier preached against Catholicism, he was placed under house arrest for eight days, an experience which, he said, led him to become a professional musician.

Later in 1661 Printz became a tenor in the court chapel at Heidelberg, but he soon left and made a lengthy journey through Italy as a companion to a Dutch nobleman. His experiences in most of the major Italian cities provided much material for his later writings, for example the narrative sections of *Phrynis Mitilenaeus*. In Rome he met Kircher, who was a major influence on his theoretical writing and whose famous museum of musical curiosities he visited. He began to collect music books and to study music theory seriously. On his way back to Germany he fell ill at Innsbruck, where he was left by his employer. After returning home to Vohenstrauss for a brief stay he went to Dresden, where he introduced himself to Francesco Santi, a musician in the electoral chapel, whose brother he had met in Rome. Santi gave him documents of recommendation to Count Leopold of Promnitz, who resided at Sorau and who immediately employed him as court composer and music director. This position was dissolved after the count's death in January 1664, whereupon Printz became Kantor at Triebel. In 1665 he returned to Sorau as Kantor, and in 1682 he also became director of music to Count Balthasar Erdmann of Promnitz. His entire library was lost in the fire that destroyed Sorau in May 1684, and he reported that in 1688 an attempt was made to poison him. These and many other colourful events are described in rich detail in his autobiographical essay in Mattheson.

2. WORKS. Printz said that he composed 150 'largely full-voiced concertos' and 48 seven-part canzonettas, but none of them exists, perhaps not even the canzonettas mentioned by Eitner. He is important solely for his writings, which according to his autobiography included 22 treatises. Only six are extant and they are unquestionably of great value as documents of music theory and history. Heckmann has shown that Printz was responsible for original and influential concepts of rhythm and metre. In his early *Compendium musicae* (1668) – not to be confused with the work of 1689 that shares this initial title – he developed the concept of intrinsic values of stress within metres, i.e. *quantitas intrinseca*. According to this familiar doctrine, which replaces the old concept of *tactus*, beats within a bar have intrinsic strong or weak stresses that not only determine the correct placing of texts according to their poetic metre but also provide the principle by which dissonances are prepared and resolved. Printz is best known generally for his *Historische Beschreibung*, the first major German history of music. It clearly reveals his extensive knowledge of the literature of previous centuries, not only in music but also in philosophy, classical studies and other related subjects. Though some of his information is inaccurate and he had certainly borrowed a great deal without acknowledgment from other sources, the book is still an impressive achievement, which authors throughout the 18th century continually used as a source of information.

Printz's most important work, *Phrynis Mitilenaeus, oder Satyrischer Componist*, is generally underrated, even though it is one of the most extensive summaries of music theory written in Germany in the 17th century. It is in three volumes (a fourth volume, though referred to, was apparently never published) and is cast in the unusual form of partly satirical narratives and dialogues, which tell much of importance about music and musicians of the period, especially about the musical culture of the peasant class. Large portions explore in depth such subjects as a theory of intervals, rhythm and metre, modes and their affections, transposition, counterpoint, text-setting, proportions, tuning and temperament, the thoroughbass and the concept of melodic figuration and variation; there is a particularly important discussion of musical invention. Printz may justifiably be considered the first German theorist to attempt a codification and encyclopedic presentation of musical knowledge, and as such he is a true predecessor of 18th-century German writers such as Mattheson and Walther, whom he influenced considerably.

WRITINGS

THEORETICAL WORKS

Compendium musicae in quo . . . explicantur . . . omnia ea quae ad Oden artificiose componendam requiruntur (Guben, 1668)

Anweisung zur Singe-Kunst, oder Kurzer Bericht wie man einen Knaben . . . könne singen lehren (Guben, 1671) [1666 edn mentioned in *EitnerQ*]

Phrynis Mitilenaeus, oder Satyrischer Componist (Dresden and Leipzig, 1696); vols. i–ii also pubd separately (Quedlinburg, 1676–7) [incl. *Declaration oder Weitere Erklärung*]

Musica modulatoria vocalis, oder Manierliche und zierliche Sing-Kunst (Schweidnitz, 1678)

Declaration oder Weitere Erklärung der Refutation des Satyrischen Componistens (n.p., 1679) [response to essay against *Phrynis*, pubd anon. 1678]

Compendium musicae signatoriae et modulatoriae vocalis, das ist Kurtzer Begriff aller derjenigen Sachen, so einem, der die Vocal-Music lernen will, zu wissen von nöthen seyn (Dresden, 1689/*R*, 2/1714)

Exercitationes musicae theoretico-practicae curiosae de concordantiis singulis, das ist Musicalische Wissenschaft und Kunst-Übungen, i–iii (Dresden, 1687); iv–vi (Dresden, 1688); vii–viii (Dresden, 1689)

Historische Beschreibung der edelen Sing- und Kling-Kunst (Dresden, 1690/*R*1964 with introduction and index by O. Wessely)

NOVELS

authorship uncertain, formerly attributed to Johann Kuhnau

Musicus vexatus, oder Der wohlgeplagte doch nichtverzagte, sondern jederzeit lustige Musicus instrumentalis (Freiberg, 1690)

Musicus magnanimus, oder Pancalus, der grossmüthige Musicant (Freiberg, 1691)

Musicus curiosus, oder Battalus, der vorwitzige Musicant (Freiberg, 1691)

WORKS

Canzonette d'avanti . . . in una opera cantata . . . con ritornelli, sonatine e sinfonie . . . e con 5 viole ornate, 1679, formerly in Sorau, Kirchenbibliothek [incl. Musica Caesarea sive Melothesia ab augustissimo imperatore Ferdinando III composita]

150 concs., 48 canzonettas a 7, lost

Prior, Maddy [Madeleine] **(Edith)** (*b* Blackpool, 14 Aug 1947). English folk singer. The daughter of the scriptwriter and novelist Allan Prior and raised in St Albans, she concentrated on performing English traditional songs on the advice of the folk duo Sandy and Jeannie, for whom she acted as a driver in the mid-1960s. In 1967 she began working with the guitarist and singer Tim Hart, with whom she released the two albums of *Folk Songs of ye Olde England* (Teepee, 1968). She and Hart were members of the initial line-up of the leading folk-rock group STEELEYE SPAN and, after several changes of personnel, Prior fronted a more rock-oriented band which had a Christmas hit single in 1973 with *Gaudete*. In 1997 she left the group to concentrate on a solo career. She has recorded as a soloist (e.g. *Woman in the Wings*, Chrysalis, 1978), in duet with June Tabor (*Silly Sisters*, Chrysalis, 1976) and with her husband Rick Kemp (*Happy Families*, Park, 1990). Her 1998 album *Carols at Christmas*, was recorded live with the Carnival Band, who use medieval instruments, and with whom she has performed and recorded since the 1980s. Prior has established an international reputation for her pure, clear vocal style and convivial stage personality.

ROBIN DENSELOW

Prior imitation. *See* VORIMITATION.

Prioris, Johannes (*fl c*1485–1512). Franco-Flemish composer. Vander Straeten's hypothesis of Flemish origin seems likely. The original version of the composer's surname may have been 'De Veurste' or 'De Vorste'; the name 'Prioirs' found in a registry of the town of Vorst (near Brussels) for the year 1536 may represent an adaptation of the Latin form of the name by a relative of the composer. The only certainty concerning his biography is that Prioris was choirmaster of the French royal chapel for a time. On 8 June 1503 the Ferrarese ambassador to the court of Louis XII wrote to Duke Ercole I that he was sending, as promised, a mass by 'Prioris, suo [i.e., the king's] maystro de capella'. Prioris presumably held that position for at least four more years; the chronicler Jean d'Auton placed him, again identified as *maistre de chapelle*, with Louis XII at the siege of Genoa in April 1507. Prioris's representation in a number of French music manuscripts compiled during the last two decades of the 15th century, sources that tend to restrict their repertories to composers employed at the court, may indicate that he was already there some years before 1503. In Guillaume Crétin's famous lament on the death of Jean Braconnier, dit 'Lourdault' – who died in January, 1512 – the poet called upon 'nostre bon pere et maistre Prioris' to add his voice to the lament by composing a *Ne recorderis*. Although this citation has generally been taken as evidence that Prioris was still the king's *maistre de*

chapelle at the time, Vatican documents refer to HYLAIRE Bernoneau as 'magister capelle Christianissimi francorum regis' as early as 1510. Whatever position Prioris may still have held at the court in 1512, he had probably died by January 1515, since his name appears nowhere in the accounts of Louis' elaborate funeral.

Prioris was included among the finest musicians of his day by writers such as Crétin, Eloy d'Amerval, Jean Daniel and François Rabelais, and he appears among the second group of composers to whom tribute is paid in Pierre Moulu's motet *Mater floreat*. Nor was he entirely forgotten by a younger generation of French court musicians. Sometime around 1545, a singer of the French royal chapel, Pernot Vermont (*d* 1558), requested that his obsequies should include a performance of Prioris's *Missa de mortuis*. His extant output of Masses, motets, Magnificat settings and secular songs is characteristic in kind for a composer working in the late 15th and early 16th centuries.

All but one of the nine French-texted songs that carry Prioris's name are rondeaux (although one survives with only a text incipit). *Mon cueur et moy*, however, is probably not by him. Already in circulation by around 1465, two decades before another piece ascribed to him turns up in any extant source, the chanson received its single attribution only some forty years later. Although the source providing it, *I-Fc* Basevi 2439 is an important one for Prioris, transmitting seven pieces under his name, the number of unique attributions in the manuscript as a whole (among them all seven works given to Prioris) makes its authority difficult to assess. Four rondeaux appear in (mostly French) sources dating from the 1480s and 1490s, and the remaining three may well have been composed before the turn of the century, although their earliest source (*I-Fc* Basevi 2439) was compiled in the early 16th century. For three voices, in duple meter, based on a structural duet of discantus and tenor with an added contratenor, and occasionally imitative, they display the usual characteristics of the genre. Other aspects – repeated notes, homorhythmic textures, rhythmically diminished motivic reworking, and consistent anticipation by the contratenor and discantus of the tenor's melody (in one piece, *Vostre oeul*) – bespeak a more modern style. The single extant setting of a monophonic melody in popular style and most likely his latest secular work, *Entré je suis* (*Par vous je suis*), derives its melodic material and canonic structure from Josquin's three- and four-voice settings. Prioris also wrote two motet-chansons, both for four voices, in which (as usual for the genre) the cantus firmus is dispersed so as to accommodate the rondeau structure of the whole.

Prioris composed at least five settings of the Mass ordinary as well as a *Missa de mortuis*. The earliest of them, the *Missa 'Allez regrets'* (in circulation by the late 1480s), may have been the first to be based on Hayne van Ghizeghem's rondeau. Compact and frequently homorhythmic in the prevailing four-voice passages, its skilful combination of cantus-firmus structure with principles of parody technique recurs in the *Missa 'Tant bel mi sont pensade'*. The more varied texture of the *Missa de angelis* derives from a greater reliance on the technique of imitative voice-pairing. The Requiem, most likely his latest mass, is one of the earliest known polyphonic settings of the Mass for the Dead. The texture is prevailingly full throughout, and often homorhythmic. The simplicity of the melodic lines, with their (mostly chant-derived) repeated notes and free repetitions, may be an intentional reflection of the fact that at the time the Mass for the Dead was normally celebrated in plainchant.

Although three of his settings of the Mass ordinary and the Requiem were probably written while Prioris was at the French court, his main compositional energy after 1500 seems to have been focussed on the motet. This is not surprising, since the serious motet was relatively new at the time and the main genre cultivated in France. Mostly for four voices, sometimes utilizing imitation between pairs of voices, many paraphrase the chant on which they are based. Prioris's single extant five-voice motet, *Benedicta es caelorum regina*, treats a northern French sequence in strict canon. Such canonic procedures culminate in the two late multiply-canonic motets that circulated posthumously, *Ave Maria* (8vv) and *Da pacem Domine* (6vv). The greater length of *Factum est cum baptizaretur* and *In principio* results from the imitative setting of lengthy Gospel texts, a practice that first shows up in the early 16th century in the motets of northern – especially French – composers.

Even given the fact that the two pieces of extant evidence explicitly identifying Prioris as *maistre de chapelle* at the French royal court during the first decade of the 16th century also document the circulation of his music and his presence in Italy, it is striking that half of his motets, as well as two Magnificat settings and at least one mass, all survive in manuscripts compiled for the papal chapel and nowhere else – indeed, in all the music copied for that chapel between 1497 and 1512, Prioris is second only to Josquin in the number of works copied. Moreover, although the references to 'D[omino] Priori' as playing the organ of S Pietro, Rome, in 1491, once thought to refer to Johannes Prioris, are now known to refer to the 'reverend prior' Johannes Brunet, it seems likely that Prioris did have Italian connections before 1500. Such an earlier association would account for his two most popular compositions: the setting of Serafino de' Ciminelli dall'Aquila's strambotto *Consommo la vita mya*, an anomaly for a strictly northern composer and composed no later than the very beginning of the 16th century, and the lauda *Dulcis amica Dei*.

Prioris's compositional output was not large nor (with the exception of the two works just mentioned) widely circulated. Current scholarship mostly consigns him to the second rank of composers. His music displays variety and skill, however, and in his own day he was successful. Contemporary references included him in musically élite company, and he attained and held for at least five years one of the most prestigious positions for a musician in Europe.

WORKS

MASSES

Edition: *Johannes Prioris: Opera omnia*, ed. H. Keahey and C. Douglas, CMM, xc (1982–5) [K i–iii]

Missa 'Allez regrets', 4vv, K i (on Hayne van Ghizeghem's chanson)
Missa de angelis, 4vv, K i
Missa de venerabili sacramento, 6vv, K i
Missa 'Je ne demande', ?4vv, *I-Md* 4 [2266], destroyed (identified by Staehelin with Missa 'Je ne demando' = 'Elle est bien malade' = sine nomine, *Md* 3 [2267], etc., K i)
Missa 'Tant bel mi sont pensade', 6vv, K i (on anon. chanson ed. in G. Haberkamp, *Die weltliche Vokalmusik in Spanien um 1500*, Tutzing, 1968
Requiem, 4vv, K ii

OTHER SACRED

Alleluia: O filii, O filiae, 4vv, K iii
Ave Maria, 3vv, K iii
Ave Maria, 8vv, K iii (quadruple canon; 4vv notated)
Benedicta es caelorum regina, 5vv, K iii
Da pacem, 6vv, K iii (triple canon; 3vv notated)
Dei genitrix, 4vv, K iii
Domine non secundum, 4vv, K iii
Dulcis amica Dei, 3/4vv, K iii
Factum est, 4vv, K iii
In principio, 4vv, K iii
Magnificat primi toni, 3, 4vv, K ii
Magnificat tercii toni, 2, 4vv, K ii
Magnificat quarti toni, 4, 5vv, K ii (2 versions)
Magnificat quinti toni, 3–5vv, K ii
Magnificat octavi toni, 4, 6vv, K ii
Quam pulchra es, 4vv, K iii
Regina caeli, 4vv, K iii

SECULAR
all in K iii

Deuil et ennuy/Quoniam tribulatio, 4vv
Royne du ciel/Regina caeli, 4vv
C'est pour aymer, 3vv
Elle l'a pris, 3vv
Entré je suis = Par vous je suis
Mon plus que riens, 3vv
Par vous je suis [=Entré je suis], 5vv (incorporates the popular Flemish melody 'In minen sin')
Par voz sermens, 3vv
Plus qu'autre, 3vv
Riens ne me plaist, 3vv
Vostre oeul s'est bien, 3vv
Consommo la vita mya, 3/4vv

DOUBTFUL AND MISATTRIBUTED WORKS

Ait latro ad Jesum, 4vv, K i (anon. insertion into Missa de angelis in *I-CMac* M (D); probably not by Prioris)
Royne du ciel/Regina caeli, 3vv, K iii (attrib. Prioris in *Bc* Q17; by Compère)
Gentils galans, 4vv, K iii (attrib. Prioris in *D-Rp* C120, C. van Stappen in 1504[3]; probably by Stappen)
Mon cueur et moy, 3vv, K iii (attrib. Prioris in *I-Fc* Basevi 2439, anon. in *D-W* Guelf.287 extrav., *US-Wc* M2.1 L25 Case, both *c*1465, etc.; probably not by Prioris)

LOUISE LITTERICK

Prioschi, Antonio. *See* BRIOSCHI, ANTONIO.

Pritchard, Sir John (Michael) (*b* London, 5 Feb 1921; *d* Daly City, San Francisco, 5 Dec 1989). English conductor. The son of a professional violinist, he was taught privately by his father, later studying the piano, the viola and conducting in Italy. After his war service had ended in ill-health, he conducted the semi-professional Derby String Orchestra (1943–5). In 1947 he joined the re-formed Glyndebourne Festival Opera as répétiteur for its appearance at the first Edinburgh Festival. The next year he became chorus master and assistant to Fritz Busch, whose sudden indisposition during *Don Giovanni* at the 1951 festival led to Pritchard's conducting début there in mid-performance. He remained associated with Glyndebourne as conductor, music counsellor (from 1963) and musical director (1969–78).

His career, divided between opera and concerts, steadily developed in the 1950s after a three-month engagement with the Vienna Staatsoper in the 1951–2 season, followed by his Covent Garden début in the autumn of 1952 (conducting Verdi's *Un ballo in maschera*). The next year he first conducted in the USA (Pittsburgh SO), and successive international tours included his South American début in 1966 at the Teatro Colón, Buenos Aires, and his first opera performance in the USA with the Chicago Lyric Opera in 1969. He generally preferred to pursue a freelance career, but he spent influential periods as musical director of the Royal Liverpool PO, 1957–63, and of the LPO, 1962–6. He was appointed musical director of the Huddersfield Choral Society in 1973 and later held four major appointments simultaneously: at the Cologne Opera from 1978, the Théâtre de la Monnaie, Brussels, from 1981, the BBC SO, 1982–9, and the San Francisco Opera from 1986, where, at the time of his death, he was planning to conduct his first *Ring* cycle.

Pritchard's Liverpool engagement was distinguished by his introduction there (and later in London) of contemporary music concerts on the 'Musica Viva' model pioneered at Munich, in which performances were preceded by verbal introduction and music examples. A consistent champion of a wide range of new music, he conducted the premières of Britten's *Gloriana* and Tippett's *The Midsummer Marriage* and *King Priam*, all by the Covent Garden company, and the British première of Henze's *Elegy for Young Lovers* at Glyndebourne. His innate musicianship was always admired in performances characterized by reliability rather than special distinction, and he was sometimes criticized for less than purposeful direction. His recordings include two sets of *Idomeneo*, *L'incoronazione di Poppea*, *Falstaff*, *Macbeth*, *Lucia di Lammermoor* and *La traviata* (the last two with Sutherland), and orchestral works by Delius, Elgar, Rawsthorne and Walton. He was made a CBE in 1962 and knighted in 1983.

NOËL GOODWIN

Priuli [Prioli], **Giovanni** (*b* Venice, *c*1575; *d* Neunkirchen, Austria, 1626). Italian composer and organist. He frequently played alongside or substituted for Giovanni Gabrieli, whose pupil he may have been. He was engaged to play at S Marco in 1600, 1602 and 1605, and in May 1607 he was appointed supplementary organist. He played the organ at the Scuola di S Rocco in 1609, and in 1612, four days after Gabrieli's death, he organized the music-making for the feast of the confraternity's patron

saint, a task that Gabrieli had frequently performed. In 1614 or 1615 Priuli became Hofkapellmeister to Archduke Ferdinand at Graz and continued to serve him in the same capacity in Vienna when he was elected Holy Roman Emperor in 1619. In 1626 Priuli was succeeded by Giovanni Valentini.

Priuli's output is divided equally between sacred and secular music: he published five volumes of each. His madrigals show the move from the customary five-part texture to a concertato style characteristic of the period; *Presso un fiume tranquillo*, in *Delicie musicali* (1625), is an opulent work comparable to Monteverdi's setting of the same text in his sixth book of madrigals (1614). Priuli's secular works range from short, strophic pieces with canzonetta-like textures to large-scale concertato madrigals, and his sacred music covers the gamut of 17th-century compositional practice. Many of his sacred works are indebted to the polychoral style cultivated by Gabrieli and his circle, including the motets from the *Sacrorum concentuum* and two of the masses from the *Missae … octo novemque vocibus*. While some of his masses are in the modern concertato style, the *stile antico* is in evidence in the *Missae … quatuor, sex et octo vocibus*, dedicated to Pope Urban VIII, but stark textural, registral and tonal contrasts lend traces of modernity to the collection. The most forward-looking works in Priuli's output are his few-voice motets and sacred monodies. The solo motet *Inter natos mulierum* (1625²) displays his ability to craft expressive, long-breathed melodies and coherent formal designs. Many of the few-voice motets alternate passages of monody with fuller concertato textures.

Priuli had a considerable talent for writing instrumental works for church use after the manner of his teacher Gabrieli: there are 16 such works in the two volumes of 1618–19. They are not as elaborate contrapuntally as similar works by Gabrieli; there is careful thematic integration between various sections. The 12-part *Canzone in echo* (1619) has extended passages for the three topmost instruments echoing one another (the echoes are indicated by dynamic markings).

WORKS

all except anthologies published in Venice

SACRED

Sacrorum concentuum … pars prima, a 5–8 (1618); ed. in Concentus musicus, ii (Cologne, 1973)
Sacrorum concentuum … pars altera, a 10, 12 (1619)
Psalmi Davidis regis, 8vv (1621), lost
Missae 4, 6, 8vv, bc (org) ad lib (1624)
Missae 8–9vv, vn, vle, cornett, bc (1624)
12 motets in 1615³, 1624¹, 1625², 1629¹, 1646⁴; 4 motets in 1615¹³, ed. in MAM, xxiii (1970); 4 sacred contrafacta of madrigals in 1646³; 4 motets ed. in RRMBE, lxxv, 1995; motet incorrectly attrib. in 1641³, 1672²
Sacred works in *A-KR*, *Wn*; *D-Bsb*, *Rp*, *TRb*; *RUS-KA*

SECULAR

Il primo libro de madrigali, 5vv (1604)
Il secondo libro de madrigali, 5vv (1607)
Il terzo libro de madrigali, 5vv, di due maniere, l'una per voci sole, l'altra per vv, insts (1612)
Musiche concertate, 3, 5–9vv, insts, libro IV (1622)
Delicie musicali, 2–10vv, some with insts (1625); 2 pieces ed. in DTÖ, ixxvii, Jg.xli (1934); some ed. in MAM, xlv (1977)
2 madrigals in 1606⁵, 1610¹⁴
Secular works in *A-Wm*; *D-Kl*; *GB-Lbl*; *I-Rn*

JEROME ROCHE/STEVEN SAUNDERS

Priuli [Prioli], **Marieta Morosina** (*fl* 1665). Italian composer, from the noble Venetian Morosina family. She dedicated a volume of *Balletti e correnti* (Venice, 1665) for three string instruments and harpsichord continuo to the Habsburg Empress Mother Eleonora. The volume contains five sets of pieces paired by key, though not by theme, and eight independent *correnti*. They are conservative in style.

ELEANOR SELFRIDGE-FIELD

Prix de Rome. Name given to a competition that awarded artists and composers with a funded period of study in Rome. Although awards with a similar name have been offered by Belgian, American and other academies, in music the term usually refers to the prize offered by the French Académie des Beaux-Arts.

The contest was held annually from 1803 to 1968, suspended only during the two world wars. It was organized and judged by the music section of the Académie des Beaux-Arts, although during the Second Empire (1864–71) it was administered by the Paris Conservatoire. While prizes in painting, sculpture and architecture had been offered throughout the 18th century, a music prize was authorized only when the Institut National and its constituent academies were reorganized by Napoleon in 1803. The prizes were funded by the French government with the aim of fostering French culture. The Prix de Rome in music endured the revolutions, monarchies, empires and republics of the 19th and 20th centuries, but not the student uprisings of the 1960s, after which it was abolished.

The contest was designed to test the competitor's knowledge of music as an art and a science. In a preliminary round, the Concours d'Essai, contenders were assigned exercises in counterpoint, fugue and harmony: the science of music. Contestants who passed this were admitted to the Concours Définitif to test their understanding of music as an art. They were sequestered for four or five weeks to compose an operatic scene (usually called 'cantate' or 'scène lyrique') for one or more voices and orchestra on a text chosen by the music section, whose members, usually composers and theorists from the Conservatoire, then made a preliminary judgment. The judgment for the Grand Prix was made at a meeting of the entire Académie des Beaux-Arts where all members had a vote. In some years no Grand Prix was awarded,

while in others there were joint winners. Autograph scores of the winning works, originally located in the Paris Conservatoire, are now held in the Paris Bibliothèque Nationale.

Artists who attained the prize were awarded a moderate income over several years, support for the exhibition, performance or publication of their work, opportunities to travel, military deferments and free admission to cultural venues in Paris. They were required to spend the first two years at the Villa Medici in Rome studying classical and Italian art and producing works based on these models. Subsequent years were spent in Germany or France.

While the official regulations changed in minor details over the years, the procedures for judgment remained stable. However, specific rules could be changed or suspended by members of the Académie, and tradition, bureaucracy and professorial nepotism often played a large role in the awarding of the prize. Since the academicians elected each other and held their chairs for life, an older generation was always deciding the fate of a younger one. Complaints voiced by generations of composers, journalists, politicians and the academicians themselves were consistent throughout the life of the competition, and loudest at times of artistic change, notably from Berlioz, who competed four times before winning, and Ravel, who competed five times but never won. There was perhaps some justification for sending painters, sculptors and architects off to Italy, but composers had little reason to want to leave Paris. The ability to construct a correct fugue and to obey mechanically the rules of counterpoint and harmony are not sure signs of a creative musical talent. The final round was a test of reasonable length on which to judge a contestant's ability to write opera, but the assigned text and the form it imposed tended to inhibit creativity.

The competition was a rite of passage for generations of French composers, providing some with official standing, public recognition and, most importantly, monetary support early in their careers. The list of laureates below may prompt a variety of conclusions. The paucity of familiar names may demonstrate the failure of the competition to foster French music, but which names might have appeared if the competition had been more successful in meeting these aims is a question that cannot be answered.

WINNERS OF THE PRIX DE ROME
winners of Grand Prix unless otherwise stated

literary subject shown in italics; genre, where specified, and author of text shown in brackets

1803 A.-A. Androt; *Alcyone* (scène dramatique, Arnault)
1804 [no Grand Prix] Seconds Prix: V.-C.-P. Dourlen and F. Gasse; *Cupidon pleurant Psyché* (cant., Arnault)
1805 V.-C.-P. Dourlen and F. Gasse; *Cupidon pleurant Psyché* (cant., Arnault)
1806 G. Bouteiller; *Héro* (cant., J.-M.-B.-B. de Saint-Victor)
1807 [no Grand Prix] Seconds Prix: J. Daussoigne and F.-J. Fétis; *Ariane* (cant., J.-M.-B.-B. de Saint-Victor)
1808 P.-A.-L. Blondeau; *Marie Stuart* (monologue lyrique, E. de Jouy)
1809 J. Daussoigne; *Agar dans le désert* (scène lyrique, E. de Jouy)
1810 D. Beaulieu; *Héro* (cant., J.-M.-B.-B. de Saint-Victor)
1811 H.-A.-B. Chelard; *Ariane* (cant., J.-M.-B.-B. de Saint-Victor)
1812 F. Cazot and F. Herold; *La duchesse de la Vallière* (cant., d'Avrigny)
1813 A. Panseron; *Herminie* (scène lyrique, P.-A. Vieillard)
1814 P.-G. Roll; *Atala* (cant., P.-A. Vieillard)
1815 F. Benoist; *Oenone* (cant., P.-A. Vieillard)
1816 [no Grand Prix] Seconds Prix: D.-A. Batton and F. Halévy; *Les derniers moments du Tasse* (cant., E. de Jouy)
1817 D.-A. Batton; *La mort d'Adonis* (cant., J.-A. Vinaty)
1818 [no Grand Prix] Seconds Prix: A. Leborne; *Jeanne d'Arc* (cant., J.-A. Vinaty)
1819 F. Halévy and P.-J.-P.-C. Massin-Turina; *Herminie* (cant., J.-A. Vinaty)
1820 A. Leborne; *Sophonisbe* (cant., P.-A. Vieillard)
1821 L.-V.-E. Rifaut; *Diane* (cant., J.-A. Vinaty)
1822 J.-A. Lebourgeois; *Geneviève de Brabant* (scène lyrique, J.-A. Vinaty)
1823 E. Boilly and L.-C. Ermel; *Thisbé* (cant., J.-A. Vinaty)
1824 A.-M.-B. Barbereau; *Agnès Sorel* (scène lyrique, P.-A. Vieillard)
1825 A. Guillion; *Ariane à Naxos* (scène lyrique, J.-A. Vinaty)
1826 C.-J. Paris; *Herminie* (cant., J.-A. Vinaty)
1827 J.-B.-L. Guiraud; *Orphée* (cant., Berton)
1828 G. Ross-Despréaux; *Herminie* (cant., P.-A. Vieillard)
1829 [no Grand Prix] Second Prix: E.-P. Prévost; *Cléopâtre* (cant., P.-A. Vieillard)
1830 H. Berlioz and A. Montfort; *Sardanapale* (cant., J.F. Gail)
1831 E.-P. Prévost; *Bianca Capello* (cant., Pastoret)
1832 A. Thomas; *Hermann et Ketty* (scène lyrique, Pastoret)
1833 A. Thys; *Le contrebandier espagnol* (scène lyrique, Pastoret)
1834 A. Elwart; *L'entrée en loge* (J.F. Gail)
1835 E.-H.-A. Boulanger; *Achille* (scène lyrique, Paulin)
1836 X. Boisselot; *Velléda* (scène lyrique, Bignon)
1837 L.-D. Besozzi; *Marie Stuart et Rizzio* (scène lyrique, Halévy)
1838 A.-G.-J. Bousquet; *La vendetta* (cant., Pastoret)
1839 C. Gounod; *Fernand* (scène lyrique, Pastoret)
1840 F.E.V. Bazin; *Loÿse de Montfort* (cant., E. Deschamps and E. Pacini)
1841 L. Maillard; *Lionel Foscari* (cant., Pastoret)
1842 A.-A. Roger; *La Reine Flore* (ballade, Pastoret)
1843 [no Grand Prix] Second Grand Prix: H.-L.-C. Duvernoy; *Le chevalier enchanté* (cant., Pastoret)
1844 V. Massé; *Le rénégat de Tanger* (cant., Pastoret)
1845 [no Grand Prix] Second Grand Prix: E. Ortolan; *Imagine* (cant., P.-A. Vieillard)
1846 L.-G.-C. Gastinel; *Vélasquez* (cant., Doucet)
1847 P.-L. Deffès; *L'ange et Tobie* (cant., L. Halévy)
1848 J.-L.-A. Duprato; *Damoclès* (cant., Lacrois)
1849 [no Grand Prix] Second Grand Prix: E. Cahen; *Antonio* (cant., Doucet)
1850 J.-A. Charlot; *Emma et Eginhard* (cant., Bignan)
1851 J.-C.-A. Delehelle; *Le prisonnier* (cant., E. Monnais)
1852 L. Cohen; *Le retour de Virginie* (cant., Rollet)
1853 P.-C.-C. Galibert; *Le rocher d'Appenzel* (cant., E. Monnais)
1854 G.-N. Barthe; *Francesca de Rimini* (cant., Bonnaure)
1855 J. Conte; *Acis et Galathée* (cant., Locle)
1856 [no Grand Prix] Seconds Grands Prix: G. Bizet and E. Lachemié; *David* (cant., G. d'Albano)
1857 G. Bizet; *Clovis et Clotilde* (cant., A. Burion)
1858 S. David; *Jephté* (cant., E. Cécile)
1859 E. Guiraud; *Bajazet et le joueur de flûte* (cant., E. Monnais)
1860 E. Paladilhe; *Le Czar Ivan IV* (cant., Anne)
1861 T. Dubois; *Atala* (cant., V. Roussy)
1862 L. Bourgault-Ducoudray; *Louise de Mézières* (cant., E. Monnais)
1863 J. Massenet; *David Rizzio* (G. Chouquet)
1864 C.-V. Sieg; *Ivanhoe* (V. Roussy)
1865 C. Lenepveu; *Renaud dans les jardins d'Armide* (Locle)
1866 E. Pessard; *Dalila* (cant., E. Vierne)
1867 [no prize awarded] *Le dernier des Abencérage* (Cécile)
1868 V.-A. Pelletier-Rabuteau and E. Wintzweiller; *Daniel* (Cécile)
1869 A.-B. Taudou; *Françoise de Rimini* (Chazad)
1870 C.-E. Lefebvre and H. Maréchal; *Le jugement de Dieu* (H. Dutheil)
1871 G. Serpette; *Jeanne d'Arc* (J. Barbier)
1872 G. Salvayre; *Calypso* (V. Roussy)
1873 P.-C.-M. Puget; *Mazeppa* (cant., de Lauzières)
1874 L. Erhart; *Acis et Galathée* (cant., E. Adénis)

1875 A.-A.-T. Wormser; *Clytemnestre* (cant., Ballu)
1876 P.J.G. Hillemacher; *Judith* (scène lyrique, P. Alexandre)
1877 [no Grand Prix] Second Grand Prix: C. Blanc; *Rebecca à la fontaine* (cant., G. Barbier)
1878 C.-J. Broutin; *La fille de Jephté* (cant., E. Guinand)
1879 Hüe; *Médée* (cant., Grimault)
1880 L.J.E. Hillemacher, *Fingal* (scène lyrique, Darcourt)
1881 [no Grand Prix] Second Grand Prix: A. Bruneau; *Geneviève* (cant., E. Guinand)
1882 E.-G. Marty; *Edith* (cant., E. Guinand)
1883 P.-A. Vidal; *Le gladiateur* (cant., E. Moreau)
1884 C. Debussy; *L'enfant prodigue* (cant., E. Guinand)
1885 X. Leroux; *Endymion* (cant., A. de Lassus)
1886 M.-E.-A. Savard; *La vision de Saül* (cant., E. Adénis)
1887 G. Charpentier; *Didon* (cant., A. de Lassus)
1888 C. Erlanger; *Velléda* (cant., F. Beissier)
1889 [no Grand Prix] Second Prix: E.-E.-A. Fournier; *Sémélé* (cant., E. Adénis)
1890 G. Carraud; *Cléopâtre* (cant., F. Beissier)
1891 C. Silver; *L'interdit* (cant., Noël)
1892 [no Grand Prix] Second Grand Prix: H. Büsser; *Amadis* (cant., E. Adénis)
1893 A. Bloch; *Antigone* (cant., F. Beissier)
1894 H. Rabaud; *Daphné* (cant., Raffalli)
1895 O. Letorey; *Clarisse Harlowe* (cant., Noël)
1896 J.-E.-G. Mouquet; *Mélusine* (cant., F. Beissier)
1897 M. d'Ollone; *Frédégonde* (cant., Morel)
1898 [no Grand Prix] Second Grand Prix: E.-P.-H. Malherbe; *Radegonde* (cant., Collin)
1899 C.-G. Levadé; *Callirhoé* (cant., E. and E. Adénis)
1900 F. Schmitt; *Sémiramis* (cant., E. and E. Adénis)
1901 A. Caplet; *Myrrha* (cant., F. Beissier)
1902 A.-M.-G.-J. Cunq; *Alcyone* (cant., E. and E. Adénis)
1903 R. Laparra; *Ulysse* (cant., Coiffier)
1904 R.-J. Pech; *Médora* (cant., F. Beissier)
1905 V.-L. Gallois; *Maïa* (scène lyrique, F. Beissier)
1906 L.-C. Dumas; *Ismaïl* (cant., E. Adénis)
1907 M.-G.-E. Le Boucher; *Selma* (cant., Spitzmuller)
1908 A. Gailhard; *La sirène* (cant., E. Adénis)
1909 J.-M. Mazellier; *La Rousalka* (cant., E. Adénis)
1910 N. Gallon; *Acis et Galathée* (cant., Roussel and Coupel)
1911 P. Paray; *Yanitza* (cant., Spitzmuller)
1912 [no Grand Prix] Second Grand Prix: E.-C.-O. Mignau; *Fulvia* (cant., Collin)
1913 L. Boulanger; *Faust et Hélène* (épisode lyrique, E. Adénis)
1914 M. Dupré; *Psyché* (cant., Roussel and Coupel)
1915–18 [Prix de Rome suspended]
1919 M. Delmas; *Le poète et la fée* (cant., Portron)
1920 M. Canal; *Don Juan* (scène dramatique, E. Adénis)
1921 J. de La Presle; *Hermione* (cant., E. Adénis)
1922 [no Grand Prix] Second Grand Prix: F. Bousquet; *Le prétendant* (Gandrey-Réty)
1923 J. Leleu; *Béatrix* (cant., Gandrey-Réty)
1924 R. Dussaut; *Les amants de Vérone* (E. Adénis and Desveaux-Vérité)
1925 L. Fourestier; *La mort d'Adonis* (cant., Belviane)
1926 R. Guillou; *L'autre mère* (Forge)
1927 E. Gaujac; *Coriolan* (cant., Téramond)
1928 R. Loucheur; *Héraklès à Delphes* (Puoux)
1929 E. Barraine; *La vierge guerrière* (cant., Foucher)
1930 T. Aubin; *Actéon* (cant., P. Arosa)
1931 J. Dupont; *L'ensorceleuse* (P. Arosa)
1932 Y. Desportes; *Le pardon* (P. Arosa)
1933 R. Planel; *Idylle funambulesque* (P. Arosa)
1934 E. Bozza; *La légende de Roukmâni* (C. Orly)
1935 R. Challan; *Le château endormi* (Simandre)
1936 M. Stern; *Gisèle* (Maindroni)
1937 V. Serventi; *La Belle et la Bête* (C. Orly)
1938 H. Dutilleux; *L'anneau du roi* (scène lyrique, Vollène)
1939 P. Maillard-Verger; *La farce du mari fondu* (P. Arosa)
1940–41 [Prix de Rome suspended]
1942 A. Désenclos; *Pygmalion délivré* (Brunel)
1943 P. Sancan; *Icare* (Subverville)
1944 R. Gallois-Montbrun; *Louise de la miséricorde* (Clerc)
1945 M. Bitsch and C. Pascal; *La farce du contrebandier* (Téramond)
1946 P. Petit; *Le jeu de l'amour et du hasard* (Clerc)
1947 J.-M. Damase; *Et la belle se réveilla* (P. Arosa)
1948 O. Garty [Gartenlaub]; *Genovefa* (Clerc)
1949 A. Clostre; *La résurrection de Lazare* (Bourgoin)
1950 E. Plicque; *Bettina* (Carol)
1951 C. Chayne; *Et l'homme se vit rouvrir les portes* (Escalada)
1952 A. Weber; *La sotie de la dame qui fut muette* (Escalada)
1953 J. Castérède; *La boîte de Pandore* (Escalada)
1954 R. Boutry; *On ne badine pas avec l'amour* (Escalada)
1955 P.-M. Dubois; *Le rire de Gargantua* (Escalada)
1956 J. Aubain; *Le mariage forcé* (Clerc)
1957 A. Bernaud; *La fée Urgèle* (Varennes)
1958 N. Lancien; *Une mort de Don Quichotte* (Lemoine)
1959 A. Margoni; *Les jardins d'Armide* (Téramond)
1960 G. Boizard; *Cant du printemps* (M. Lubicz)
1961 C. Manen; *La loreley* (G. Apollinaire)

DAVID GILBERT

Pró, Serafín (*b* Havana, 30 July 1906; *d* Havana, 15 Sept 1977). Cuban choral director and composer. He received his training in music at the Havana Municipal Conservatory with Chartrand (piano) and Ardévol (theory). He took part in the Havana Choral Society and the University Chorale, of which he was assistant director. In 1944 he taught choral classes at the Municipal Conservatory, and the next year he founded the conservatory choir. He also worked on a method for teaching solfège and served as editor of the bulletin of the Grupo de Renovación Musical, a musical youth movement of the 1940s made up of followers of Ardévol. A strong proponent of the importance of form, Pró wrote in a more expressive musical language than some of his more academically orientated colleagues in the Grupo. He taught composition and theory at the Amadeo Roldán Conservatory from 1936 to 1962 and at the Alejandro Garcia-Caturla Conservatory from 1962 to 1967. After 1959 he founded and directed the choir of Cuban Radio CMZ, the Coro del Ejército Rebelde and the chorus of the National Theatre, and the Coro Polifónico Nacional (later the Coro National), which he continued to direct until 1975. The bulk of his production was dedicated to choral music, and he wrote a large number of choral arrangements of works by both Cuban and foreign composers.

WORKS
(*selective list*)

Orch: Sonata, Chorale and Fugue, str, timp, 1951
Choral: Las siete doncellas (Lorca), 1940; Estar Así (E. Florit), 1940; Canción de Cuna Junto al Pesebre, S, female vv, 1941; Aspiración

(R.R. Vidal), 1943; Madrigal, 1949; Yo se Egipto y Nigricia, 1953; Fuga doble coral, 1956; En Cuba nació el niño Dios, 1959; Trestextos: Monumental, Lago del alma, La canción del viento (Vidal), 1967

Chamber: Sonata, vn, pf, 1944; Ricercar, 2 tpt, 2 trbn, 1949; Capriccio, fl, ob, cl, bn, 1955

Pf: Sonata, E, 1942; Suite clásica en modo frigio, 1943

JOHN M. SCHECHTER

Pro Arte Quartet. Belgian string quartet. It was founded in 1912 by students at the Brussels Conservatory. The leader, Alphonse Onnou (*b* Dolhain-Limbourg, 29 Dec 1893; *d* Madison, WI, 20 Nov 1940), was a pupil of Alexandre Cornelis. The other members were Laurent Halleux, a pupil of César Thomson; Germain Prévost, a pupil of Léon von Hout; and Fernand Auguste Lemaire, a pupil of Edouard Jacobs. The quartet made its début in Brussels in 1913 and soon became known as an exponent of modern music. In 1918 Fernand Quinet became the cellist, but in 1921 he was replaced by Robert Maas. That year, with the aid of Paul Collaer and Arthur Prévost, the Pro Arte Concerts began, in which performances were given of new works by, among others, Bartók, Casella, Honegger, Martinů, Milhaud and Rieti. The quartet performed with great success at the 1923 ISCM Festival in Salzburg, and the same year played new works commissioned by Elizabeth Sprague Coolidge at a concert in Rome. After touring Europe the quartet visited England for the first time in 1925, and the following year played at the inauguration of the Hall of Music in the Library of Congress, Washington, DC. This was followed by the first of several tours of the USA, and a tour of Canada. Subsequent visits to England included annual series of a week's performances in Cambridge (1932–8). In 1932 the quartet was granted the title Quatuor de la Cour de Belgique, in recognition of its services to Belgian music. Onnou, Halleux and Prévost moved to the USA in 1939. Maas was trapped in Belgium, where he played in the Artis Quartet (with Alfred Dubois, Arthur Grumiaux and Robert Courte). Onnou died in 1940, but the quartet continued until 1947 as quartet-in-residence at Wisconsin University, led first by Antonio Brosa and from 1944 by Rudolf Kolisch. Since then the title Pro Arte Quartet has been taken by the faculty quartet of the University of Wisconsin at Madison. After the war Maas played in the Paganini Quartet until his death in 1948.

At first the Pro Arte Quartet was less consistently successful with the Classical repertory than with modern works, to which it brought exceptional polish and ease; but in time it came to be equally highly regarded in Mozart, Haydn and Schubert. Its style was without either the intensity of the Busch Quartet or the rich warmth of the Léner, but concentrated on finesse, lucidity of texture and rhythmic buoyancy. Among its recordings were many of Haydn's quartets, several of which had not previously been recorded, as well as works by Mozart, Schubert and Brahms and the quartets of Franck, Fauré, Debussy and Ravel. An Austrian quartet of the same name was founded in Salzburg in 1973.

ROBERT PHILIP/TULLY POTTER

Pröbstl. German family of organ builders.

(1) Joseph Pröbstl (*b* Brunnen, nr Waltenhofen, 19 May 1798; *d* Füssen, 3 Sept 1866). He was a pupil of the organ builder Andreas Handmann in Schongau (1821–3). His independent activity began in 1825 with an organ for Waltenhofen (moved to St Koloman, near Schwangau, in 1855). In 1826 he settled in Füssen. He also worked in collaboration with Georg Beer, who later set up independently in Erling, near Andechs. Pröbstl soon worked over a large area, stretching as far afield as the Salzach. He built 37 organs, including those at Habach (1825–6), Pfaffenhofen, near Rosenheim (1833), the Salesian convent, Dietramszell (1840; the first organ he built after the theories of J.G. Töpfer), and the Herzogspitalkirche, Munich (1845).

(2) Balthasar Pröbstl (*b* Füssen, 2 Jan 1830; *d* Füssen, 10 Oct 1895). Son of (1) Joseph Pröbstl. His output numbers 115 instruments, though the first 12 (1849–55) were built with the help of his father. They include organs at the Industrial Exhibition, Augsburg (1852; later installed at Inzell, near Reichenhall), the parish churches of Tölz (1860–61), Kaufbeuren (1861–2) and Schrobenhausen (1865–6), the Studienkirche, Dillingen (1871), the parish church of Thannhausen (1880) and the church of Heilig Kreuz, Donauwörth (1885; 32 stops); his last work is at Donaualtheim (1895). In 1861 he visited J.G. Töpfer in Weimar and Friedrich Ladegast in Weissenfels, and in 1867 Weigle and J. & P. Schiedmayer in Stuttgart. His very fine organs were built first of all using the slider-chest system; he then began to use a cone-chest for the pedal and finally around 1880 used mechanical cone-chests only. His workshop was taken over by Hermann Späth (1867–1917) but ceased on the latter's death.

ALFRED REICHLING

Pro Cantione Antiqua. English vocal ensemble. It was formed in 1968 by Mark Brown, Paul Esswood and James Griffett to sing the repertory of the medieval, Renaissance and Baroque periods. Its début took place that year, in Westminster Cathedral, conducted by Colin Mawby; the ensemble has also been directed by Bruno Turner, who prepared editions of music by several Renaissance composers for the group, as well as Philip Ledger, Henry Washington and others. Usually the group consists of six to nine male singers, including countertenors. Its recordings include an extensive anthology of the Franco-Flemish school, Italian motets, and other music by Morales, Victoria, Lassus, Palestrina, Tallis and Byrd. It has been much praised for the accuracy and the intensity of its singing.

Processional (from Lat. *liber processionalis*, *processionale*, *processionarium*). A small portable liturgical book of the Western Church, containing the chants, rubrics and collects appropriate to liturgical processions. It is of particular musical interest since it contains antiphons, verses, rhymed *Preces* and even polyphonic chants that do not occur in other liturgical books. Like the pontifical, it was a comparatively late addition to the repertory of official liturgical books, originating in the 10th and 11th centuries; the processional antiphons are much older, and formerly occurred in the gradual.

1. Sources of processional chants. 2. Categories of noted processionals. 3. Musical repertory.

1. SOURCES OF PROCESSIONAL CHANTS. Processions occur in most ancient religions. Essentially, they consist of a communal progress on foot for the purpose of petition, penitence or even protocol (as in the processions of the Byzantine court), and the singing of chants. The latter may be very diverse in style – syllabic, melismatic or in litany form (i.e. a series of invocations or petitions, to each of which the congregation makes a brief response).

The oldest known processionals (books containing the processional chants) date from the 12th century, although a book of the chants for the Rogationtide procession at Metz Cathedral (*F-ME*) was copied in the second half of the 11th century; certain other books derived from the Romano-Germanic pontifical of Mainz, and containing important elements of the ritual and processional, may date from the 11th century (*A-Wn* 1888) or even the late 10th (*I-Rvat* Pal.lat.489 from Zell, near Kochem on the River Mosel, and Pal.lat.490 from Lorsch).

Earlier – from the late 8th century – processional antiphons often occurred in the gradual. This is true of antiphons for processions immediately following the blessing of candles (Candlemas), ashes (Ash Wednesday) or palms (Palm Sunday), which were copied before the introit of the day; it is also true of the processional antiphons for the Major Litanies, copied at the end of the graduals (see R.-J. Hesbert, ed.: *Antiphonale missarum sextuplex*, Brussels, 1935, pp.cxxi ff, nos.200–14). (In the tradition of southern French graduals with Aquitanian notation, the relationship between the processional antiphons and introits later extended to all festivals; elsewhere, processional antiphons came to be grouped around the ancient antiphons of the Major Litanies.)

The procession of the Major Litanies ('St Mark's Procession', though unrelated to the festival of St Mark) was introduced at Rome under Pope Gregory the Great in 592. It took place on 25 April between S Lorenzo in Lucina and S Pietro, and represented the christianizing of an old pagan procession held on the same day, the *robigalia*, which had persisted at Rome until the Late Empire. Another distinct procession, that of the Minor Litanies (or Rogations) was instituted in Gaul in 469 by St Mamertus, Bishop of Vienne, on the three days before Ascension. Both processions were in due course adopted into the Roman liturgy: the Gallican Minor Litanies continued to survive even after the introduction into Gaul of the Roman liturgy and its Major Litanies of 25 April; on the other hand, the Gallican Minor Litanies were adopted at Rome in 816, under Leo III, and the same chants were specified for them as for the Litanies of 25 April.

The chants for the Litanies occur in Gregorian graduals written and notated in France, assigned sometimes to 25 April and sometimes to the three days before Ascension, and to them are appended *Preces* that are remnants of the ancient Gallican liturgy abolished at the Carolingian reform (see P. de Clerck: *La 'prière universelle' dans les liturgies latines anciennes: témoignages patristiques et textes liturgiques*, Münster, 1977). In consequence, a study of the chants of the Major and Minor Litanies must begin with an examination of the oldest graduals (listed in *Le graduel romain*, ii: *Les sources*, Solesmes, 1957), in particular those of the 10th and 11th centuries noted with neumes (*see* GALLICAN CHANT, §13).

The inconsistency between those graduals in which the chants were assigned, 'according to the Romans' ('secundum Romanos'), to April 25, and those where the chants were assigned 'following the custom of the Gallican Church' ('juxta morem gallicanae ecclesiae') to the three days before Ascension, was not eliminated: an attempt at codification, in the Ordo XXXI (following the numbering of M. Andrieu: *Les ordines romani du haut moyen-âge*, Leuven, 1931–56) entitled 'Quando letania major debet fieri', did not win acceptance. Nevertheless, the *Ordo romanus antiquus* (following the appellation of Melchior Hittorp, i.e. Andrieu's Ordo L), which was drafted at St Alban in Mainz in about 950, seems to have influenced the processional tradition in several churches of south Germany.

As mentioned above, the graduals of south-west France noted with diastematic Aquitanian neumes generally contain processional chants before the introit of the Mass of the day, and also generally include more processional chants than the other French graduals with chants of Gallican origin made to serve as processional chants. Moreover, they contain the earliest evidence of the melodies, from the early 11th century, owing to the precise diastematic Aquitanian notation they use. No single archetype has been discovered for the Aquitanian processional chants despite a complete study of the processional chants in Aquitanian graduals and in processionals proper, except perhaps in the case of the antiphons of the Litanies. Useful comparisons are possible, even so, between graduals and processionals of the same tradition.

Precursors of the processional – besides the gradual – also include the antiphoner or breviary. Some noted antiphoners, for instance that of Hartker (*CH-SGs* 390–91: PalMus, 2nd ser., i, 1900/*R*; Monumenta palaeographica gregoriana, IV/1–2, Münsterschwarzach, 1988), or the Codex Albensis (*A-Gu* 211; ed. Z. Falvy and L. Mezey, *Codex Albensis: ein Antiphonar aus dem 12. Jahrhundert*, Budapest, 1963), contain the Maundy antiphons. These antiphons, sung weekly in monasteries and annually in other churches on the evening of Maundy Thursday during the Washing of the Feet (see T. Schäfer, *Die Fusswaschung*, Beuron, 1956), appear in many processionals and graduals, although they do not accompany a procession and were omitted from a number of manuscript processionals.

Some breviaries contain processional chants proper, however. A fragmentary breviary with neumes, *CH-Bu* N I 6 (ed. A. Dold, *Lehrreiche Basler Brevier-Fragmente des 10. Jahrhunderts*, Beuron, 1954, pp.19ff), contains the antiphons for the Palm Sunday procession; a 14th-century noted breviary from Lyons (*F-C* 43, ff.249*v*–260) contains the penitential processional chants of the Major Litanies.

Some manuscripts present the various categories of chant (for Mass, Offices, processions and other miscellaneous rites) either in separate volumes (e.g. *F-Pn* lat.12584, of the 11th century, or *GB-WO* F 160, of the 13th century) or in a single volume, with the chants in the order in which they are performed, the processional chants occurring between Terce and the introit at Mass (e.g. *I-Rvat* lat.7018, of the 11th century, or *I-BV* V 19–20, of the 12th century). Other manuscripts contain processional antiphons on flyleaves, and some contain the texts of the processional chants without music notation. Processional chants occur also in tropers and prosers, such as those of St Martial at Limoges (*F-Pn* lat.909, 1136 and 1240). Husmann, in his catalogue of these

manuscripts (RISM, B/V/1, 1964), gave an account of processional chants where they occur.

Some processionals (in the strict sense) that were carried in procession do not contain the processional chants but only the rubrics and the collects recited at each station during the procession, e.g. *F-AI* 17, of the 15th century, from Albi Cathedral; *D-Mbs* Clm.3905, of the 12th century, from St Afra at Augsburg; *GB-SB* 148, of the 15th century; the Sarum processional (ed. Wordsworth, 1901, and Rastall, 1980); and *I-Ac* 32 from Aosta Cathedral (see Amiet, i, 53–5). The incipits of the chants are given in these manuscripts, however, and it is possible, in the absence of a complete processional, to reconstruct the repertory of the church in question.

Chant incipits appear also in the ordinal, a liturgical book with rubrics, collects and lessons, which is another valuable source for the study of processional chants. Manuscript ordinals are listed in *Le graduel romain* (ii: *Les sources*, Solesmes, 1957, pp.189–96); printed ordinals are listed by A. Hänggi (*Der Rheinauer Liber ordinarius*, Fribourg, 1957, pp.xxv–xxxv); and more recently discovered ordinals are listed by A. Jacob ('Mélanges: à propos de l'édition de l'Ordinaire de Tongres', *Revue d'histoire ecclésiastique*, lxv, 1970, pp.789–97). The manuscript ordinals of the Bibliothèque Nationale in Paris have been analysed by J. Dufrasne (*Les ordinaires manuscrits des églises séculières conservés à la Bibliothèque nationale de Paris*, diss., Institut Catholique, Paris, 1959).

2. Categories of noted processionals. Manuscript processionals (listed and described by M. Huglo in RISM B/XIV/1, 1999) fall into a number of categories. The majority are of small portable format and serve for all the processions of the liturgical year. They generally begin with the Sundays and festivals of the Proper of the Time, including those of the Christmas cycle, followed by the festivals of the Proper of the Saints (generally beginning with 24 June – St John the Baptist), and they generally conclude with the chants for various processions to pray for rain, fine weather, etc.

Many, though not all, processionals include after the chants for Palm Sunday the Maundy antiphons, those for the Veneration of the Cross on Good Friday, and sometimes also the chants for the Easter Vigil, such as the Exultet and the hymn *Inventor rutili* (see AH, i, 1907, pp.30–31). These non-processional chants were included in the processional for the sake of convenience.

A very complete type of processional was established in England in 1197 at the revision of the Sarum liturgy; this later spread to all the churches in England (*see* Salisbury, use of; see also Bailey, 1971).

Some manuscript processionals contain only the chants and rubrics for the stations of the processions of the Major and Minor Litanies. Such books would have been used only four times a year; they are of very limited distribution and are found most often in Italy. They seem to have originated in imitation of the Ambrosian processional, which contains only the chants, collects and lessons for the three days before the vigil of Pentecost. The Ambrosian processionals contain the antiphon texts encountered elsewhere but with distinct Ambrosian melodies: *D-F* Mus.Hds. in 4° 1 (olim 5192), copied about 1400, which belonged to Cardinal Francesco Piccolpasso; *I-Muc*, kept until 1970 at the Collegio degli Oblati at Rho (described by G. Tibiletti, 1973, pp.145–62); *F-SO* Rés. 64, of the 15th or 16th century (described by M. Huglo: *Fonti e paleografia del canto ambrosiano*, Milan, 1956, p.75).

The oldest Gregorian processional containing only the chants of the Major and Minor Litanies dates from the 12th century: *I-PCc* 191(28). This processional must be studied in conjunction with *PCd* 9 (26ff.), which contains only the lessons for the stations of the rogation processions. A similar division occurred at times outside Italy, e.g. in nine manuscripts at *D-AAm*, *F-CA* 68(69) and 80(81), *CHRm* 353 (burnt in 1944) and in *VN* 139.

The Corpus Christi procession at times occurred in its own book, e.g. *D-AAm* 57(LV) and 58 (see O. Gatzweiler: *Die liturgischen Handschriften des Aachener Münsterstifts*, Münster, 1926, pp.170–71). Various unofficial popular customs often came to be associated with this procession, for instance at Angers, Effeltrich near Erlangen and at Prague; for a study of these customs – occasionally including the use of musical instruments – it is necessary to consult sources other than manuscript processionals (see Bowles, 1964, and Torsy, 1972). The same applies also to the popular customs associated with pilgrimage processions and other popular processions such as that of St Josse at Montreuil-sur-Mer, of St Guy (Veit) in the Rhineland, and of St Willibrord on the Tuesday after Pentecost at Echternach.

Some processionals conclude with the chants for burial rites, which included a procession to the graveside according to the requirements of the ritual. Because of this, some manuscripts of the funeral rites with notation (e.g. *F-Pn* lat.14825 and various manuscripts at Karlsruhe, described by H. Ehrensberger: *Bibliotheca liturgica manuscripta*, Karlsruhe, 1889), and noted manuscripts of the Office of the Dead (e.g. *A-Ssp* a V 10) have been wrongly termed processionals.

Each of the religious orders imposed a processional of its own, and these were propagated through manuscripts and subsequently in printed editions. The processionals of most of the orders have remained substantially identical with the originals through the history of each order.

The processionals of the various canons regular subscribing to the Rule of St Augustine, particularly the Premonstratensians, follow the pattern of the *Ordinaire prémontré d'après les manuscrits du XIIe et du XIIIe siècles* (ed. P. Lefèvre, Leuven, 1941). They are characterized by the festivals of St Augustine, patron of the orders: principal feast, 28 August; festivals of the translation of his relics to Pavia (*translatio prima*, 28 February; *translatio secunda*, 11 October); and the festival of his conversion (5 May). About ten Premonstratensian processionals survive in manuscript, and there are several printed editions, including those of 1584 and 1666. That of 1727 is neo-Gallican, and has no link with the ancient tradition (*see* Neo-Gallican chant).

No unifying factor links the processionals of the Benedictines. A standard Cluniac processional was, however, approximately followed in the abbeys affiliated to Cluny: *F-Pn* lat.12584, of the 11th century, the antiphoner, processional and gradual of St Maur-des-Fossés (see CAO, ii, 1965, pp.xvff and plate X); *B-Br* II 3823 (Fétis 1172), an early 12th-century Auvergne gradual (*Le graduel romain*, ii, p.38); and *F-SO* Rés.28, of the 15th century, from a Cluniac priory in southern France (see Huglo, 'The Cluniac Processional', 1997).

No Carthusian processional exists; in their simplified liturgy the Carthusians retained only the processions of

Ecclesiastical procession, panel from an altarpiece of the Life of St Michael by Miguel Ximénez, 1500 (Museo del Prado, Madrid)

Candlemas, Ash Wednesday and Palm Sunday, and the chants for these were copied in the standard gradual drawn up after the first Carthusian Chapter General of 1140.

In the liturgy and chant reform undertaken by the Cistercians in the early 12th century, the number of processions was considerably reduced. The primitive processional included only ritual processions for Candelmas (2 February) and Palm Sunday. The first addition, for the feast of the Ascension, dates from *c*1150, after which further processions for specific feast days were gradually introduced: between 1202 and 1225, first the Assumption of the BVM (15 August), then the feast of the Order's founder, St Bernard (21 August); after 1289, the Nativity of the BVM (8 September); after 1318, Corpus Christi; and finally, after 1476, the Visitation (2 July). This progressive enlargement might partly explain the absence from the Cistercian processional of Rogation processions, when crops grown on the vast agricultural estates belonging to the Order would have been blessed (work in the fields was as much a part of the Cistercian vocation as a life of prayer). The noted books had been lost before 1480 from the standard exemplar of the liturgical books of the order (*F-Dm* 114(82) drawn up at Cîteaux between 1185 and 1191); the earliest surviving Cistercian processional is, therefore, a copy, and is from the abbey of Pairis in Alsace (*F-CO* 442, of the 12th century; published as the second part of K. Weinmann's *Hymnarium parisiense*, Regensburg, 1905). Cistercian processionals generally begin with the antiphon *Lumen ad revelationem* for 2 February. The Cistercian processional must have been printed at about the same time as the antiphoner (1545), but no edition except that of 1689 is known.

The Dominican processional drawn up in 1254 constitutes the fourth volume of the standard exemplar of Humbert of Romans (*I-Rss* XIV lit.1, ff.58*v*–66*r*). It begins with the rubric 'De processionibus in genere: Cum imminet aliqua processio'; this was sometimes omitted in manuscript processionals, but was retained in printed Dominican processionals, and still appears in the edition of 1913. Dominican processionals commence with the Palm Sunday antiphon *Pueri hebreorum*. The only variable section is that concerning the Washing of the Altars on Maundy Thursday, since the antiphons, verses and collects were chosen according to the patrons of the altars being washed. Between the Maundy Thursday responsories (*In monte Oliveti* etc.) were inserted an

antiphon with verse, and a collect, in honour of the patron of the altar then being washed. The degree of precision of the manuscripts varies: some present only the standard responsories; some give the general rubric from the standard exemplar, 'Here should be placed antiphons, verses and collects of the saints according to the disposition of the altars in any convent'; some (rather fewer) give the list of antiphons, verses and collects proper to the church in question, either within the manuscript (e.g. *F-CO* 412) or as a supplement at the end. This pattern for the Washing of the Altars is rarely found other than in Augustinian and Dominican manuscripts.

Almost 140 manuscript Dominican processionals survive; the Dominican processional was printed by Spira at Venice as early as 1493, and has since gone through many editions. To study it, it is necessary only to refer either to the standard exemplar from the Dominican house of St Jacques in Paris (*I-Rss* XIV lit.1, mentioned above), or to the portable copy that the Master General of the Order (*GB-Lbl* Add.23935, ff.98*v*–106*v*) used on his visitations to check that the liturgy and chant were being accurately maintained. (The content of this portable copy has been edited by Allworth, 1970, pp.182–5 and table 1.) The study of each Dominican processional thus amounts only to the study of the peculiarities distinguishing the copy from the exemplar, and notably of the particular chants sung during the Washing of the Altars, or of the various supplements such as polyphonic pieces, which were sung despite their prohibition by the Chapter General of Bologna in 1242.

The Franciscan processional is identical with the standard Roman processional. It contains the chants for the processions of the Roman missal, Candlemas, Ash Wednesday and Palm Sunday, according to the rubrics of the missal. It was frequently printed in the 16th century, one of the earliest editions being that of Henri Estienne (Paris, 1507).

3. MUSICAL REPERTORY. In analysing the processional chants, the earlier period, in which the processional chants appeared in the gradual and other books, should be studied separately from the later period when they were collected into a volume of their own.

In the earlier period, the repertory consisted above all of the great processional antiphons, and also (according to region) of *versus*, or hymns with refrains, composed in the 9th century (see AH, i, 1907, pp.237–43, 250–63), and rhymed *Preces* for the Rogations (see M. Huglo: 'Les "preces" des graduels aquitains empruntés à la liturgie hispanique', *Hispania sacra*, viii, 1955, pp.361–83). The great processional antiphons sometimes included verses, and were often in consequence termed *responsoria*. They make up a group of their own within the category of the antiphon (*see* ANTIPHON, §5(vi)). Many of them are remnants of the liturgical and musical repertory of the ancient Gallican liturgy and were changed into processional chants during the Carolingian reform when Gregorian chant was imposed on the Frankish Empire (*see* GALLICAN CHANT).

Some of the earliest specimens of organum are processional antiphons (e.g. in the Winchester Troper; see A. Holschneider: *Die Organa von Winchester*, Hildesheim, 1968) or verses of responsories which occur in the processional. The Sarum processional contains a number of examples of faburden in chants such as the *Salve festa dies*, or those for the Litany of the Saints (*GB-Llp* 438); according to the London chronicle for the year 1531, 'after came Paul's choir ... singing the litany with faburden'.

The later period, in which separate manuscript processionals are found, begins according to region from the 12th century. During this period, the processional antiphons were almost everywhere replaced by greater responsories from the antiphoner, except for litanies and at Rogationtide. This development did not occur uniformly everywhere, however, and the distribution of the Matins responsories over the various festivals of the church year differed from place to place: each church had a list of its own. The practice of this later period – with its use of responsories – is mostly reflected in printed processionals.

Macé, in his *Instruction pour apprendre à chanter à quatre parties selon le plain-chant* (Caen, 1582), included a harmonization, in four voices, of the Candlemas processional antiphon *Lumen ad revelationem*.

MICHEL HUGLO

Processus (Lat.; It. *processo*). *See* AMBITUS.

Procházka, (Jan) Ludevít (*b* Klatovy, 14 Aug 1837; *d* Prague, 19 July 1888). Czech composer, pianist and critic. His early musical training was with his father, an organist, and the composer Měchura. After studying law at Prague University (1854–63) he became a court official, but most of his life was devoted to music. He attended Smetana's piano school (1854–5), later becoming a lifelong friend and powerful advocate of Smetana's music. He was a co-founder of the Prague Hlahol choral society (1861), the publishing house Hudební Matice (1871) and the Jednota pro Komorní Hudbu (Society for Chamber Music, 1877). He was music critic of *Národní listy* (1865–78), editor of *Hudební listy* (1870-72) and *Dalibor* (1873–5), and of several collected editions of Czech songs and choruses, including *Vesna, Záboj* and *Hlahol*. During the 1870s his free musical soirées provided a valuable platform for performances of works by developing Czech composers, including Dvořák and Fibich. He composed many popular and idiomatic Czech songs and choruses.

WORKS

VOCAL

Cz.: numerous choruses and songs, inc. Kovářská [Blacksmith's Song] (F.L. Rieger), 1v, vv, pf (Prague, 1861); 4 songs, 1v, pf, 1861 (Prague, n.d.); Prosba [Request], 2vv (Prague, 1863); Tři sbory na slova L. Čelakovského [3 Choruses on Words of Čelakovský] (Prague, 1863); folksong arrs.
Ger.: songs and duets, incl. 3 Duetten nach slovakischen Volksdichtungen (Berlin, 1885)

INSTRUMENTAL

2 sym. poems: Alfred (after V. Hálek), perf. 1859; Carevič Alexej [Tsar Aleksey], perf. 1860
Adagio, org, 1848; 4 Characteristic Pieces, vc, pf (Prague, 1888); works for pf, *CZ-Pnm*

KARL STAPLETON

Procol Harum. British rock group. Formed in 1966, they rose to fame in 1967 with the hit single *A Whiter Shade of Pale*, which featured a Bach-inspired organ melody set against the rhythm and blues singing of pianist Gary Brooker (*b* Southend-on-Sea, 29 May 1945). The group's early albums, *Procol Harum* (R. Zono, 1967), *Shine on Brightly* (R. Zono, 1968) and *A Salty Dog* (R. Zono, 1969), blend aspects of classical music with the band's rhythm and blues roots, making them a model for much subsequent British progressive rock. The 18-minute suite *In Held 'Twas In I* from their second album is the group's most ambitious track, while *A Salty Dog* from the third employs orchestral accompaniment to beautiful effect. Over the two years that followed *A Salty Dog*, original members Matthew Fisher (*b* London, 7 March 1946; organ) and Robin Trower (*b* East Ham, 9 March 1945; drums) left the group. In 1972 the band released *Procol Harum in Concert*, an album recorded with Canada's Edmonton SO that featured new versions of previously released songs. The single of *Conquistador* from the first album became a hit as did the album. After releasing four more albums, the group disbanded in 1977. In 1991,

Brooker, Fisher and Trower briefly reformed the band and released *The Prodigal Stranger* (Zoo/BMG).

JOHN COVACH

Prodenzani, Simone. *See* PRUDENZANI, SIMONE.

Prod'homme, J(acques) G(abriel) (*b* Paris, 28 Nov 1871; *d* Neuilly-sur-Seine, 18 June 1956). French musicologist and critic. After schooling at the Lycée Condorcet (until 1887) and a year's training in the merchant marine at Guadeloupe he studied music history and philology at the Ecole des Hautes Etudes, Paris (1890–94), and later continued his studies in Germany (1899–1910), Belgium and the Netherlands (1912, 1913). His career as a music journalist began in 1895 with contributions to *Revue socialiste*, *Enclos* and other journals; in Munich, where he lived from 1897 to 1900, he founded and edited the *Deutsche-französische Rundschau* (1899–1902). On his return to Paris he founded (with Dauriac and Ecorcheville) the French section of the International Musical Society (1904), of which he was secretary from 1903 to 1913; he was also a founder (with La Laurencie, 1917), secretary (1917–20), vice-president (1929–36) and later honorary president of the Société Française de Musicologie. In 1931 he succeeded Bouvet as curator of the Paris Opéra library and archivist of its museum, and in 1934 he became librarian of the Paris Conservatoire in succession to Henri Expert; he held both posts until 1940. As a music critic he wrote for many French and foreign journals including *Le ménestrel*, *Revue musicale*, *Revue Pleyel*, *Signal* and *Mesidor*, and in 1921 he joined the committee of La Critique Dramatique et Musicale.

Prod'homme's stature as one of the leading French music historians of his generation was largely due to the diversity of his career and the energy he devoted to it and to his writings, which were informed by his independence of mind and enthusiasm for the subject. Besides his many biographies of composers (including Gluck, Gossec, Paganini, Liszt and Berlioz) he produced translations of Wagner's complete prose works (13 volumes) and operas, Beethoven's conversation books and operas by Haydn and Mozart. He was made a Chevalier of the Légion d'Honneur in 1928 and was a member of the Académie Française, the Académie des Beaux-Arts and the Académie Royale de Belgique.

□

Prodigy, the. English club dance music collective led by Liam Howlett (*b* ?Braintree, 21 August 1971). Howlett was a rave DJ in the early 1990s when they released their second single *Charly* (XL, 1991). Like many one-hit rave singles, it combined samples from children's television with simplistic yet memorable synthesized melodies over hardcore and high-tempo backing. They surprised rave's detractors by sustaining this success across several albums. By the time of their second album, *Music for the Jilted Generation* (XL, 1994), rave had disappeared but they enjoyed mass commercial success by incorporating elements of trip hop and techno. The band's greatest success came with *Firestarter* (1996), a hardcore 'big beat' track which included rock as well as dance elements and caused some controversy, not least through Keith Flint, whose performance and appearance introduced a punk element into the dance mixture. Flint's visual influence was strong (he directed the video for the follow-up single *Breathe* (1996), making their album *Fat of the Land* (XL, 1997) their most successful. By the late 1990s, Howlett had returned to being a DJ, releasing *Dirt Chamber Sessions Volume 1* (XL, 1999), and Maxim had embarked on a solo career. Leeroy left the band in April 2000 to concentrate on his music as Flightcrank.

IAN PEEL

Prodromidès, Jean (*b* Neuilly-sur-Seine, 3 July 1927). French composer. He studied law as well as attending the Paris Conservatoire (1947–55), where his teachers included Messiaen, Duruflé, Fourestier and Leibowitz. He taught at the Opéra-Studio de Paris (1973–8), was chairman of the UNESCO Comité Lyrique de L'Institut International du Théâtre (1981–91) and of the Centre

Français du Théâtre (1988–92), and was elected to the Académie des Beaux-Arts in 1990. With his strong commitment to opera, he was appointed vice-chairman of the Société des Auteurs et Compositeurs Dramatiques in 1988.

After experimenting briefly with serialism (*Deux airs*, 1950), Prodromidès sought a more direct engagement with the physical materials of sound. The orchestral *Parcours* (1973) presents a welter of contrasting materials, including sound masses, melodic lines, glissandi and notes dispersed in register. Also, from *Les Perses* (1961) onwards, he developed his own harmonic system, involving the creation of harmonic 'colours' through particular combinations of intervals. While he rejects the idea of aleatory music, he has devised a kind of 'open' writing which allows both flexibility and control in handling groups of instruments. This can involve different tempi, or the distribution between instrumental parts of melodic formulae which are repeated freely within a given section. His operas explore a man's voyage through his imagination (*H.H. Ulysse*, 1984) or through history (*Les traverses du temps*, 1979), a woman's sorrowful journey from the present to the past (*La noche triste*, 1989) and the struggle of a genius against the forces of obscurantism (*Goya*, 1996). Other dramatic media he has explored include not only ballet and film music, but also 'silent opera' in his work with the mime artist Marcel Marceau.

WORKS
(*selective list*)

all dates are of first performance

Ops: Passion selon nos doutes (Prodromidès and F. Billetdoux), Lyons, Opéra, 9 Nov 1971; Les traverses du temps (S. Ganzl), Nantes, Opéra, 23 Oct 1979; H.H. Ulysse (Ganzl), Strasbourg, Opéra, 2 March 1984; La noche triste (Prodromidès and J. Gruault), Nancy, Opéra, 24 Nov 1989; Goya (Prodromidès, J. Cosmos and F. Fournier), Montpellier, Opéra, 31 May 1996

Ballets: La belle et la bête (choreog. M. Béjart), Paris, RTF, 1962; Salomé (choreog. Béjart), Paris, RTF, 1969; Une saison en enfer (choreog. J. Lazzini), Paris, Odéon, 1969

Incid music: Les Troyennes (Euripides), Spolète, 1963; L'Amérique (J.-L. Barrault, after F. Kafka), Paris, 1965; Marat-Sade (P. Weiss), Paris, 1966

Other works: 2 airs, Mez, orch, 1950; Les Perses (dramatic orat), 1961; Parcours, sym. movt, orch, 1973; Le livre des Katuns (orat), 3 solo female vv, male chorus, orch, 1977; Instantanés, orch, 1978; Crossways, orch, 1985

About 30 film scores incl.: Mourir de plaisir (dir. R. Vadim), 1960; Le voyage en ballon (dir. A. Lamorisse), 1960; Les amitiés particulières (dir. J. Delannoy), 1964; Danton (dir. A. Wajda), 1983

Principal publisher: Choudens

HERVÉ LACOMBE

Proemium (Lat.). *See* PROOIMION.

Profe [Profius], **Ambrosius** (*b* Breslau [now Wrocław], 12 Feb 1589; *d* Breslau, 27 Dec 1661). German music editor, publisher, composer and theorist. After studying theology at Wittenberg, he became a teacher at the Elisabeth Gymnasium at Breslau in 1617 and in the same year was appointed Lutheran Kantor and schoolmaster at Jauer (Jawor), Silesia. In 1629 Lutheranism was suppressed there and Catholic worship re-established, so he was obliged to return to Breslau, where he set up as a merchant. In 1633 he was appointed organist of St Elisabeth there, without, however, giving up his commercial activities. His organist's post came to an end in 1649, when part of the church fell in and destroyed the organ; but he continued his business career and died prosperous.

It is not as a composer but as an assiduous editor and collector that Profe particularly deserves mention. His principal collection is the *Geistliche Concerten und Harmonien* in four volumes (1641–6), completed by the *Corollarium* of 1649. His aim was to introduce Italian vocal works, mainly in motet style, to church musicians in eastern and central Germany: he included works by 31 composers mainly of the Venetian school, whose polychoral writing had long been popular in Silesia, in particular 27 works by Giovanni Rovetta. Profe's texts have not yet been compared with the original Italian editions. (It is interesting that 11 original Venetian editions of Rovetta, published between 1636 and 1650, were kept at Breslau and could thus have come from Profe's own library.) He also included pieces by a few composers from eastern Germany and three unique works by Schütz, among them the seven-part dialogue *Ich beschwöre euch*, which concludes the second book (1641). In 1644 he issued Scheidt's *LXX Symphonien auff Concerten manir*. With the 31 Christmas pieces of *Cunis solennibus* (1646) Profe sought to rescue from oblivion songs from the past that 'were called rotulas, or lullabies for the Christ-child, and were sung in the middle of the *Magnificat*, and can still be used devotionally by us and our successors'; 18 of the pieces have German words, ten are in Latin, and three have mixed texts. Profe also took steps to make known the songs with continuo of Heinrich Albert, from north Germany. These were certainly known and loved in Breslau, but the original folio editions were out of print, and in 1657 Profe brought out a selection of 134 of them in two volumes in a more convenient smaller format.

Of Profe's own works, the most important is the school music textbook *Compendium musicum, das ist, Kurtze Anleitung wie ein junger Mensch . . . möge singen lernen* (Leipzig, 1641). In this little work he attacked the old solmization system based on the hexachord, for which Mattheson warmly commended him in 1717 and 1740. But praise from a modern musician such as Mattheson was not always Profe's lot in his own time: Otto Gibelius complained in his *Kurtzer . . . Bericht von den Vocibus musicalibus* (1659) that, instead of singable syllables such as *do-re-mi*, Profe used letter names ('abcedieren'), which sounded appalling. Apart from this textbook only a few pieces of music by Profe survive.

FRITZ FELDMANN/DOROTHEA SCHRÖDER

Profeta, Laurenţiu (*b* Bucharest, 12 Jan 1925). Romanian composer. He studied with Chirescu (theory and solfège), Constantinescu (harmony) and Mendelsohn (composition) at the Bucharest Conservatory (1945–9), and with E.O. Messner (composition), Ye.K. Golubev (counterpoint) and V.O. Berkov (harmony) at the Moscow Conservatory (1954–6). His appointments have included those of deputy manager of Romanian broadcasting (1948–52) and music director in the ministry of culture (1952–60); in 1968 he became secretary to the Composers' Union in Bucharest. As a composer he has worked in all fields, including music for children and light music. Melody is paramount in his work, which may explain the preponderance of vocal pieces.

WORKS
(*selective list*)

Stage: Soţia căpitanului [The Captain's Wife] (ballet, 3, O. Danovschi), 1946, Bucharest, 1947; Prinţ şi cerşetor [Prince and the Pauper] (ballet, 3, I. Hristea, Danovschi, after M. Twain), 1967, Bucharest, 1968; Marinarul visător [Dreaming Sailor] (ballet, 3, N. Itu), Constanţa, 1972; Povestea micului Peter Pan [The Story of Peter Pan] (children's comic op, 3, E. Rotaru, after J.M. Barry), 1984; Hershale (musical, 3, A. Storin), 1989; Păguboşii [The Loosers] (musical, 3, Rotaru), 1990; D'ale carnavalului [Story of Carnival] (I.L. Caragiale), 1991; Eva-Now (music theatre, ballet, 1, A.M. Munteanu), 1993 Amintiri din copilărie [Childhood Remembrances] (radio musical for children, P. Cârjan, after J. Preangă), 1999; Moştenirea liù Padâr [Kadar's Legacy] (musical, 3, E. Rotaru), 1999
Orch: Imagini din lumea copilăriei [Images from the Realm of Childhood], 1945; Poemul patriei, 1952; Zile de vacanţă [Holidays], sym. suite, 1956; D'ale carnavalului, sym. suite, 1991; Immea lvi Shalom Alehem [Shalom Alehelm's World], Jewish songs, orch, 1997
Choral: Cîntece de tabără [Children's Camp Songs], solo vv, children's vv, orch, 1957; Intîmplarea din grădină [Adventure in the Garden] (orat), nar, Bar, solo vv, children's vv, orch, 1958; Cant. patriei, nar, vv, mixed chorus, wind, perc, kbd, 1959; Brăduţul singuratic [The Lonely Fir Tree], sym. story for children, 1960; 6 piese umoristice, solo vv, children's vv, tape, 1966; Madrigal '75 (cant.), vv, chbr orch, 1975
Songs: Cîntece de ieri şi de azi [Songs of Yesterday and Today], Bar, pf, 1960; Cîntice ţigăneşti [Gypsy Songs], 1v, pf, 1968

Programme music. Music of a narrative or descriptive kind; the term is often extended to all music that attempts to represent extra-musical concepts without resort to sung words.

1. The term and its meaning. 2. History of the concept.

1. THE TERM AND ITS MEANING. The term 'programme music' was introduced by Liszt, who also invented the expression SYMPHONIC POEM to describe what is perhaps the most characteristic instance of it. He defined a programme as a 'preface added to a piece of instrumental music, by means of which the composer intends to guard the listener against a wrong poetical interpretation, and to direct his attention to the poetical idea of the whole or to a particular part of it'. Very few of the programmes of Liszt's own symphonic poems are of a narrative character. He did not regard music as a direct means of describing objects; rather he thought that music could put the listener in the same frame of mind as could the objects themselves. In this way, by suggesting the emotional reality of things, music could indirectly represent them. Such an idea – already familiar in the writings of Rousseau – was also expressed by Beethoven when he described the Pastoral Symphony as 'mehr Ausdruck der Empfindung als Malerey' ('more the expression of feeling than painting').

The close connection in some of Liszt's thinking between 'narrative' and 'emotional' depiction has led to confusion over the use of the term 'programme music'. Some prefer to attach the term purely to instrumental music with a narrative or descriptive 'meaning' (for example, music that purports to depict a scene or a story). Others have so broadened its application as to use the term for all music that contains an extra-musical reference, whether to objective events or to subjective feelings. The responsibility for this broadening of the term lies partly with Friedrich Niecks, whose romantic enthusiasm caused him to overlook, in his influential work on the subject (1907), the vital aesthetic distinction between representation and expression. It is the narrow sense of the term which is the legitimate one. The other sense is not only so wide as to be virtually meaningless; it also fails to correspond to the actual usage of composers and critics since Liszt's invention of the term.

Programme music, which has been contrasted with ABSOLUTE MUSIC, is distinguished by its attempt to depict objects and events. Furthermore, it claims to derive its logic from that attempt. It does not merely echo or imitate things which have an independent reality; the development of programme music is determined by the development of its theme. The music moves in time according to the logic of its subject and not according to autonomous principles of its own. As Liszt wrote: 'In programme music ... the return, change, modification, and modulation of the motifs are conditioned by their relation to a poetic idea .... All exclusively musical considerations, though they should not be neglected, have to be subordinated to the action of the given subject' (*Schriften*, iv, 69).

Liszt thought of himself as putting forward a new ideal for symphonic music, an ideal that had been foreshadowed in Beethoven's Pastoral Symphony and in certain works

of Mendelssohn, Schumann and Berlioz, but which he nevertheless thought to be absent from the body of classical music. He considered the idea of exalting the narrative associations of music into a principle of composition to be incompatible with the continuance of traditional symphonic forms. The term 'programme music' came to be applied not only to music with a story but also to music designed to represent a character (Strauss's *Don Juan* and *Don Quixote*) or to describe a scene or phenomenon (Debussy's *La mer*). What is common to all these is the attempt to 'represent' objects in music; but a certain confusion has entered the use of the term by its application to any form of musical 'depiction', whether instrumental, or vocal, or incidental to an action on the stage. Properly speaking, however, programme music is music with a programme. Further, to follow Liszt's conception, programme music is music that seeks to be understood in terms of its programme; it derives its movement and its logic from the subject it attempts to describe. On that view it would be wrong to call, for example, Couperin's *Le tic-toc-choc* a piece of programme music. The logic of Couperin's piece is purely musical, even if its thematic material is derived from the imitation of a clock. By contrast, the logic of Liszt's symphonic poem *Tasso* is (according to the composer) derived from the events of Tasso's life: it is the sequence of those events, and their intrinsic nature, that dictate the development of the music. (But it should be said that Liszt's own programme music did not always follow his own theoretical precepts.)

However the term is used, it is clear that the idea of music's representing something is essential to the concept of programme music. It is important to understand, therefore, what might be meant by 'representation' in music. The first distinction to make is that between representation and EXPRESSION. It is only recently that attempts have been made to formulate the distinction with any precision, and there is no agreement as to the relation between the terms. But that a distinction exists seems obvious to any lover of the arts. A painting may represent a subject (the Crucifixion, say) and it may also express an emotion towards that subject. To represent a subject is to give a description or characterization of it: it is to say (in words or in images) what the subject is like. Such a description may or may not be accompanied by an expression of feeling. Furthermore, there can be expressions of emotion that are not accompanied by representation. Mozart's *Masonic Funeral Music* is certainly an expression of grief, but it contains no attempt to represent or describe the object of grief. It has been argued that all music expresses emotion. If that is so, then, unless some distinction can be made between representation and expression, all music would have to be regarded as representational. To say that would lead to the conclusion that there is no essential distinction between music and painting in their relation to the world.

It is a matter of dispute whether music is capable of literally representing its subject, in the way that painting and literature represent theirs. What passes for representation might often be more accurately described as 'imitation', for instance when a piece of music mimics the sound of a cuckoo. That there is a difference between representation and imitation is clear. An architectural detail can imitate the curve of a seashell without becoming a representation; or a man can imitate another's manner without representing it. Representation is essentially descriptive: it involves a reference to objects in the world and an attempt to describe them. Imitation is merely copying, and its intention may be no more than decorative. Examples of musical imitation have abounded from the very beginning of music. Indeed, both Plato and Aristotle ascribed an imitative character to the music of their time. It is nonetheless debatable whether music is made representational by imitation alone. Certainly Liszt had more than mere imitation in mind when he introduced the concept of programme music.

It is seldom clear what is meant when it is said that music can represent things. The question arises whether music can actually describe the world or whether it is merely evocative. If representation in music were merely a matter of evocation, it would be misleading to describe it as representation, for that would imply an unwarranted analogy with the descriptive arts of literature and painting. That is why Liszt insisted that true programme music had a narrative or descriptive element which was essential to the understanding of it. In other words, for Liszt the subject has become part of the meaning of the music; to listen to the music with false associations was, in Liszt's view, actually to misunderstand it. Whether or not there is 'programme music' in Liszt's sense, it is clear that it would provide the most plausible example of representation in music. It is further clear that in its strictest sense programme music does not include music that is merely expressive, imitative or evocative. It is doubtful even whether Debussy's *La mer* is a description rather than an evocation of its subject, although the titles of the movements seem to suggest a certain 'narrative' component to its meaning (for example, one of the movements is entitled 'De l'aube à midi sur la mer', which prompted Satie to remark that he particularly liked the moment at 11.15).

Programme music must further be distinguished from the 'representational' music that accompanies words, whether in lieder, in oratorio or on the stage. While all these share devices with programme music and have influenced it continuously throughout the history of music, it is still necessary to distinguish music that purports to carry its narrative meaning within itself from music that is attached to a narrative arising independently, whether through the words of a song or through the action of a dramatic work. The distinction is not absolute, but, unless it is made, the idea of programme music as a separate genre must remain entirely illegitimate.

2. HISTORY OF THE CONCEPT. When Liszt invented the term 'programme music' he was aware that he had not invented the thing that he sought to describe. Berlioz's symphonies are essentially narrative in conception; so too is Weber's *Concertstück* for piano and orchestra, a descriptive work in one continuous movement (made up of several sections in different tempos) which was one of the first Romantic examples of the symphonic poem. One of the difficulties involved in tracing the history of programme music lies in the elusiveness of the distinctions discussed above: whether all representational music should be considered programme music; whether 'imitation' should be counted as a species of representation; and whether a deliberate expressive character is sufficient to rank as a 'programme' in Liszt's sense. Clearly there are many different ways of deriving a history, depending upon the way in which those fundamental critical (and

philosophical) questions are answered. For example, the French harpsichord composers of the 17th and 18th centuries were in the habit of giving titles to their pieces. To some writers on this subject the presence of a title is sufficient to bring a piece under the rubric 'programme music'. But to others that way of thought involves a confusion, for it seems not to distinguish a piece that expresses some emotion suggested by the title from another that either evokes its subject or (in some more concrete sense) actually attempts to describe it. Many critics of Couperin's music, for example, would prefer to speak of the relation between his keyboard pieces and their ostensible 'subjects' as one of expression and not one of representation. The borderline between expression and representation is a hazy one, and it is often impossible to say of a piece by Rameau or Couperin on which side of the borderline it might lie.

If mere imitation is not regarded as a sufficient criterion of programme music, it must be concluded that the history of the genre is considerably shorter than might otherwise appear. It seems to have no medieval examples. Even Janequin's famous chanson *La bataille* or *La guerre* (published in 1529 and thought to refer to the Battle of Marignano of 1515) is hardly to be considered true programme music: while it imitates the sounds of battle, there is no narrative sequence to those sounds and no attempt to subordinate the musical structure to the evolution of an extra-musical theme. Less certain cases are provided by suites in which the titles of each piece form a narrative sequence. Byrd's *The Battle*, a suite for keyboard of 15 pieces – entitled (for example) 'The Marche to the Fight', 'The Retraite' and 'The Burying of the Dead' – does, in a sense, have a programme, but the programme serves to unite the separate musical units and to explain their expressive characters; only in a very limited sense do the pieces attempt also to describe the scenes referred to. (*See* BATTLE MUSIC.)

Other puzzling cases are those in which a composer declares himself to have been inspired by some literary or artistic source. Again there are Renaissance and Baroque examples of composers who have written pieces under the inspiration of pictures. Biber, for example, wrote about 1671 a set of 15 mysteries for violin and keyboard after copperplate engravings of Bible themes; there is an earlier instance by Froberger. Such cross-fertilization between a representational art (such as engraving) and music is a familiar feature of more recent music. Musorgsky's *Pictures at an Exhibition* provides a Romantic example of the same kind of musical device. Here, though, there is the added representational refinement of a 'Promenade' linking some of the pieces, indicating the presence of a 'narrator' in the music, a kind of 'reflector' in Henry James's sense, who remains the true subject matter of the narrative. By that device Musorgsky's work comes near to the central examples of programme music such as the symphonic poems of Liszt. An even more remarkable example of cross-fertilization is the quartet by Janáček composed after reading Tolstoy's novella *The Kreutzer Sonata*, itself inspired by Beethoven's violin sonata. The mere fact that Janáček's quartet was so inspired no more makes it into a programmatic narrative of the events in Tolstoy's story than it makes Tolstoy's story into a 'representation' of Beethoven's sonata. Inspiration, even when consciously referred to, cannot suffice to make music into programme music.

There is no doubt that programme music was established by 1700, when Johann Kuhnau published his six Bible sonatas. Each of them is preceded by a summary of the story that the music is meant to convey, and each is divided into recognizable parts, corresponding to the events of the narrative. The pictorialism is naive compared with the symphonic poems of Liszt and Strauss, but there is no doubt that the music lays claim to a narrative significance nor that the composer intended that significance to be a proper part of the understanding of the music. Later examples of similar narrative music are Vivaldi's concertos the 'Four Seasons', which are prefaced by short 'programmes' in verse, and Couperin's *Apothéoses*, extended representations of Lully and Corelli ascending to find their proper places of rest upon Parnassus, in which each section refers to a separate episode in their apotheosis. Comparable pieces were written by Telemann and other French-influenced composers. The development of such programme music was affected by the French *ballet de cour*, which required just such pictorial accompaniments to its solemn and dramatic performances; but there is no doubt that by the mid-18th century programme music had emancipated itself from any connection with the dance. A notable example is the long orchestral work by Ignazio Raimondi called *Les aventures de Télémaque dans l'isle de Calypso*, based on Fénélon's epic poem. This, published in 1777, includes one of the first attempts to diversify the 'narrative' by representing its several characters in different ways: Calypso, for example, is represented by a flute, and Telemachus by a solo violin.

By the time of Beethoven even the most abstract and classical of musical forms had become capable of bearing a programmatic meaning. The Pastoral Symphony is but one example of a piece that seems to be straining to break free of the constraints imposed by its Classical format in the interests of a pictorial idea. The 'Lebewohl' Sonata op.81*a* is another. Both have precedents, in the 18th-century depictions of Nature and in Bach's capriccio for his departing brother. Like Vivaldi's 'Four Seasons' and Dittersdorf's symphonies based on Ovid's *Metamorphoses*, they attempt to combine a narrative depiction with a rigorous musical form. This led Beethoven's admirers to suppose that the idea of a 'purely musical' structure was after all an illusion, and that the greatness of Beethoven's symphony, in particular its architectural perfection, was of a piece with its profound extra-musical meaning, and that great symphonic writing was but the expression of an independent poetic idea. This impression was enhanced by Beethoven's hint that an understanding of his sonata op.31 no.2 could be induced by a reading of Shakespeare's *The Tempest*. Schering (1936) attempted to explain Beethoven's entire output as programmatic reflections on themes from Shakespeare and Goethe.

Whatever one thinks of those speculations, which have been further extended to the symphonies of Haydn and Mozart (the French theorist Momigny even set a verbal text to a Mozart quartet movement as an interpretation of it), there is no doubt that the greatest step towards true programme music in the Romantic sense was made not by Beethoven but by Berlioz, who introduced into musical representation for the first time a distinction vital to any true narrative portrayal of things in the world, the distinction between subject and object. By his use of the solo viola in his symphony *Harold en Italie* and by his

exploitation of its deeply subjective tones he was able to create a sharp division between the individual protagonist – the feeling, suffering and rejoicing being at the centre of the narrative – and the external circumstances of his experience. Berlioz also introduced the device of the IDÉE FIXE, a melody representative of a character or feeling, which reappears in a variety of forms and develops with the changing circumstances. This was a substantial step towards the Wagnerian LEITMOTIF, through which device the narrative pretensions of music were to receive their most striking confirmation. The leitmotif, a theme that is associated with a character, a circumstance or an idea, and which develops sometimes out of all recognition in order to convey the evolution of its narrative idea, permitted representation in music without a hint of imitation. By means of this device later composers, in particular Liszt and Richard Strauss, were able to associate specific themes with a fixed representational meaning. The traditional devices survived, and with Strauss imitation was carried to extremes never previously envisaged. But it was through the leitmotif above all that music was able to emulate the descriptive range of language and that Liszt was able to approach the ideal he had set himself, the ideal of a music that could not be understood even as music unless the correct poetic conception was invoked in the hearer's mind.

It is possible to doubt that Liszt ever realized that ideal, or indeed that it is capable of realization, because the conception of musical understanding underlying the theory of programme music may not be a coherent one (for further discussion, *see* ABSOLUTE MUSIC). Nonetheless, once the theoretical foundations of the genre had been laid, programme music became highly important. Indeed the 'programme' survived as a basic determining idea in symphonic music until well into the 20th century, receiving no serious intellectual setback until the reaction led by Schoenberg in Vienna, by Bartók in Hungary, and by the cosmopolitan Stravinsky. It influenced many of the great works of Czech and Russian nationalism, the symphonies of Mahler and the French school of orchestral writing.

There is no doubt too that the concept of programme music influenced the IMPRESSIONISM of Ravel and Debussy. But it is doubtful that their music should be regarded as truly programmatic in the Romantics' sense; Impressionism may rather have constituted a partial reaction against the narrative pretensions of the symphonic poem – it was another attempt to put evocation in the place of narrative. In that sense it would be better to compare Debussy's *Préludes* with the *ordres* of Couperin and to consider that the titles (which Debussy was at pains to put not at the beginning but at the end of the pieces) serve to indicate an expressive atmosphere rather than a definite descriptive significance. Indeed, it seems that Debussy did not intend a knowledge of the subject to be essential to an understanding of his music. It is from Debussy's pure style and clean textures that much of the most abstract of modern music has taken its inspiration.

By the end of the 19th century the increasing afflatus of Romanticism had served once again to destroy the distinction between representational and expressive intentions in music. So long as music aims to capture a particular episode, a particular sequence of events or a particular human character, then its representational claims are not in doubt. When, however, it attaches itself to a programme phrased entirely in emotional or quasi-religious abstractions, it is doubtful that it can be considered to be a depiction rather than an expression of its subject matter. For example Tatyana Schloezer wrote a programme for the Symphony no.3 'Le divin poème' by Skryabin (whose mistress she was) beginning:

> *The Divine Poem* represents the evolution of the human spirit, which, torn from an entire past of beliefs and mysteries which it surmounts and overturns, passes through Pantheism and attains to a joyous and intoxicated affirmation of its liberty and its unity with the universe (the divine 'Ego').

That is an example of the 'programme' at its most self-important. It is also an example of the degeneration of the concept from something relatively precise to something entirely vaporous. For Skryabin, Mahler and their contemporaries the 'programme' was on the verge of becoming irrelevant to an understanding of the music. The entire burden of the musical movement lay now in expression; depiction had been cast aside. In so far as the programme continued to exist it was a source of exasperating literary preciosities rather than of genuine musical ideas. It is hardly surprising that composers soon began to turn their backs on programme music and find their way to expression through more abstract musical means; but in the later 20th century some revival of programmatic or semi-programmatic devices could be noted, for example in the works of Maxwell Davies, Leeuw, Norby and Schafer.

ROGER SCRUTON

Programme note. A written commentary in a concert or opera programme intended to inform the listener about the music to be performed. Similar commentaries included in most commercial recordings are usually referred to as disc (or sleeve) notes.

1. Opera and concert programmes. 2. Disc notes.

1. OPERA AND CONCERT PROGRAMMES. The earliest kind of introductory note commonly employed was the 'argomento' (usually a brief synopsis of the plot) printed in early opera librettos (*see* LIBRETTO). Some librettos, for example Lorenzo Da Ponte's first libretto for *Le nozze di Figaro* (Vienna, 1786), included preliminary remarks of considerable interest, but these are exceptional. Opera librettos of the early 19th century seldom offered more than a plot summary, but a few included a short commentary on the music. The libretto for the 1837 production of Rossini's *Moïse* at the King's Theatre, Haymarket, offered brief 'prefatory remarks' on the score and on the work's compositional and performance history. 19th-century opera audiences in Italy and elsewhere were usually supplied with either a single-sheet cast-list or a printed libretto, to be followed during the performance. It was not until well into the 20th century that these regularly contained historical and critical comments on the music.

The concert note was barely known before the early 19th century; it came into being largely as a consequence of the growth in public concerts at the start of the century, and later developed into the explicitly analytical note, often furnished with music examples. In the decade following the first performance, in Paris, of Berlioz's *Symphonie fantastique* (5 December 1830) at least seven versions of the composer's printed synopsis were issued. Although this was a purely programmatic description, rather than an analytical note, Berlioz stated in the first edition of the full score (Paris, 1845) that it was essential for an understanding of the dramatic scheme of the work. The earliest serious attempt at analytical programme notes came with the series of concertos promoted by the Musical Union in London, which began in 1845 under the leadership of the violinist John Ella (1802–88). It was his declared intention to counter the spread of superficial musical knowledge by performing challenging works and providing detailed commentaries on the music. The repertory was unusually serious for the time, including chamber music by Beethoven, Haydn, Mendelssohn, Mozart, J.S. Bach and others, with only one item of more popular fare in each concert. The programme notes were headed by a quotation from Baillot: 'Il ne suffit pas que l'artiste soit préparé pour le public, il faut aussi que le public le soit à ce qu'on va lui faire entendre'. This praiseworthy aim was aided by the programme booklets, each of which contained a 'synopsis analytique' by Ella, including music examples. Ella's commentaries are a stimulating mixture of missionary enthusiasm for works such as Beethoven's string quartets (little known in England during the 1840s) and perceptive comments on the form and character of the works.

Detailed notes of this kind were largely a British phenomenon until almost the end of the 19th century. Two particularly prolific writers were George Grove, for August Manns's concerts at the Crystal Palace, and Charles Ainslie Barry, for Manns's concerts and for Hans Richter's London concerts. Barry was particularly interested in 'progressive' music and wrote substantial polemics in many of his notes. His note for the first performance in England of Bruckner's Seventh Symphony (London, 23 May 1887) is far from uncritical, suggesting that Bruckner's extensive use of inversion by contrary motion 'savours rather of mannerism and scholasticism than of inspiration'.

In at least one instance a programme note from the later 19th century has provided important source information on the work in question: the unsigned note (written by Macfarren) for the first performance in England of Brahms's Symphony no.1 (conducted by Joachim at Cambridge on 8 March 1877) includes a music example from the slow movement which quotes material that Brahms excised before the work's publication. Grove's note for the second English performance of the symphony at the Crystal Palace (conducted by Manns on 31 March 1877) includes rather fuller examples from these cut passages.

Towards the end of the century analytical notes began to appear in programmes for the Vienna and Berlin Philharmonic concerts and in most other important European and American centres, revealing much about national tastes at the time. The late development of regular concert life in Italy led the writer of the programme note for the first Turin performance of Beethoven's Second

Symphony (in 1877) to defend the work against the charge of being 'music of the future'. This was given in the 25th of the Turin *Concerti popolari* (1872–86), the first of their kind in Italy. The increasingly detailed notes in German and Austrian concert programmes led around 1900 to the development of greatly extended and separately published guides (usually described as 'Thematische Analysen') to specific works, such as those for several Mahler symphonies by Richard Specht and the substantial monograph by Alban Berg for the first performance of Schoenberg's *Gurrelieder*.

Leading English-language writers of programme notes in the early 20th century included Donald Tovey (for the London concerts by the Meiningen Orchestra in 1902 and for the Reid Concerts in Edinburgh), Henry Krehbiel (for the Philharmonic Society of New York during Mahler's time and later), Alfred Kalisch, Percy Pitt and Rosa Newmarch (for Henry Wood's concerts at the Queen's Hall), Ernest Newman, Edwin Evans, and Edward Dent. At this time it was not unusual for annotators to write critically about modern works, including those of Debussy and Schoenberg on the occasions of the composers' first appearances in England: Pitt and Kalisch described the *Prélude à l'après-midi d'un faune* as 'purposely vague in form . . . more than anything a study in "atmosphere". Five themes can be distinguished, all languorous and indeterminate in character, and all are in the course of the work amplified by embroideries, rather than developed in any strict sense of the term'.

Analytical notes by composers themselves became a regular feature of programme booklets from the early years of the 20th century. Those with some thematic analysis include the note provided by Janáček for a performance of his overture *Žárlivost* at Brno on 13 October 1917 and the witty commentary by Vaughan Williams for the first performance of his Sixth Symphony (1948). Other composers who supplied notes for their own music include Bartók, Britten, Copland and Stravinsky. Messiaen provided detailed analytical notes for virtually all his major works. In the mid-1930s he also printed small slips of paper outlining his 'musical and theological tendencies'; this short manifesto was distributed at performances of *La nativité du Seigneur* along with a detailed programme. Messiaen's notes also appeared as introductory material in published scores, and include detailed explanations of his musical procedures and of Christian symbolism. Pierre Boulez has often supplied programme notes for his own compositions.

In the 1940s and 50s the BBC regularly commissioned composers to write analytical notes about the music of others, sometimes by teachers and friends. Examples include Constant Lambert's trenchant commentary on Walton's Symphony no.1, Philip Heseltine on Delius's *A Mass of Life*, Lennox Berkeley on Poulenc's Piano Concerto, Matyás Seiber on Bartók's Concerto for Orchestra and Egon Wellesz on Mahler's *Das Lied von der Erde*. Some particularly eloquent and thought-provoking notes were written for BBC concerts by Herbert Howells, on works such as Vaughan Williams's *Job*, Holst's *The Planets*, Elgar's Introduction and Allegro and Walton's *Belshazzar's Feast*. In France during World War II the concerts of La Pléiade (which included important new works banned by the occupying forces) were accompanied by a brilliant series of short essays on modern French music by André Schaeffner, who had earlier written many programme notes for Monteux's Orchestre Symphonique de Paris.

Since then the practice of providing programme notes for concerts and operas has become universal. Opera programmes for Covent Garden, the ENO and WNO, the Staatsoper and Volksoper in Vienna, the Paris Opéra and others often contain several essays by different writers exploring aspects of the work; those for the Opéra usually include a complete libretto. It was from programmes of this kind that two important series grew: in France *L'avant-scène opéra* began publication in 1976 and by 1996 had reached no.175, most numbers being multi-author studies of single works, including a libretto and translation; in England the *ENO Opera Guides* are similar in scope and include some excellent original scholarship.

2. Disc notes. Notes similar in style to the concert programme notes of the time were issued by recording firms such as HMV during the 1930s to accompany sets of orchestral and chamber works. These were either pasted to the inside of the folder containing the records, or issued as separate pamphlets. Often the notes were quite extensive, such as the booklet issued with the Pro Arte Quartet's recording of the Schubert Quintet in C, which includes two pages of background and biographical comment followed by a further two pages of commentary on the work, with music examples. More lavish booklets were supplied for sets such as Schnabel's complete recording of the Beethoven Piano Sonatas, also for HMV.

The arrival of the long-playing record in the early 1950s saw the inevitable compression of notes to a single side of sleeve annotation, and music examples became a rarity. Though recordings of complete operas were an important feature of the early years of the LP, librettos were initially available from several companies only as an additional purchase. By the end of the 1950s, however, operas were usually issued with a complete libretto and notes on the work.

Recordings of composers performing their own works, for example those made by the American Columbia company (now Sony Classical) in the 1950s and 60s, saw the release of discs with important notes by Stravinsky, Copland, Messiaen and Berio. Conductors such as Boult, Jochum and Mackerras occasionally wrote notes to accompany their recordings. In the 1970s disc notes for important releases, especially those of unusual repertory, were increasingly written by leading scholars in a particular field; examples include the detailed documentation by John Tyrrell for the series of Janáček operas recorded for Decca by Mackerras, and the notes by Alfred Dürr and others for the Telefunken recordings of the complete Bach cantatas. Unusually, this series also included copies of the scores with the LP release (though not with the CD reissues). This enlightened practice was occasionally followed by the other companies (RCA originally issued Tippett's *The Vision of St Augustine* in a box containing also a study score).

The arrival of compact discs in the early 1980s saw a further change in the format and presentation of booklet notes. Typically, CD booklet notes for releases by large international companies include notes in three or four languages, often by different authors. Reissues of historic recordings have been particularly well served by booklet annotations: for example, sets of early recordings by Milhaud (Phonotèque nationale) and Bartók (Hungaroton)

were accompanied by extensive notes and illustrations. A more recent innovation, made possible by the development of CD-ROM ('read-only memory') has been the inclusion of documentary material (scores, pictures and commentaries) as part of the disc itself.

Progression. A succession of chords or chord-like constructions having coherence as an expression of harmony ('chord progression', 'harmonic progression'), especially one based on a familiar pattern such as the BLUES PROGRESSION. Some writers use 'progression' as a translation of the Schenkerian concept of *Zug* (*see* ZUG (i)). □

Progressive country [redneck rock]. A term used to describe a style of COUNTRY MUSIC combining country and rock techniques, developed during the 1970s. It is particularly associated with Austin, Texas, where an eclectic musical community experimented with such styles as folk, rock, jazz, western swing, Tex-Mex and mainstream country; the resulting amalgam was aimed at a young audience and widely publicized as an alternative to the NASHVILLE SOUND, which was regarded as too homogenized. Progressive country music's instrumentation is similar to that of mainstream country music. Its name came to imply an open cultural attitude, defined as much by the dress and lifestyle of the musicians as by their music: those who sported 'hippy' hairstyles and clothes as well as traditional cowboy costumes were seen to have forged an alliance between two highly diverging communities – the student population of Austin and the local 'redneck' culture. Exponents of the style included Marcia Ball, Doug Sahm, Michael Murphey and Willie Nelson. The Austin radio station KOKE extended the use of the term by applying it to the contents of its broadcasts, which reflected a flexible programming policy that avoided the usual emphasis on the Top 40; its format was copied by other stations. By the mid-1980s progressive country music had been absorbed into the mainstream of country music as exemplified by the careers of such performers as Nelson and Waylon Jennings.

BILL C. MALONE

Progressive jazz. A term applied to attempts, chiefly in the 1940s and 1950s, to renew the big band tradition of the 1930s; it is generally associated with the work of Stan Kenton. The movement sought more complex goals for the large jazz ensemble and especially a more advanced vocabulary; in the work of Kenton and his arrangers, like Pete Rugolo and Bob Graettinger, this was expressed almost solely in terms of extreme loudness and dissonant, often illogical harmonies. More successful in the 1940s was the work of Earle Spencer and Boyd Raeburn who produced several orchestral pieces (particularly those by George Handy, a pupil of Aaron Copland) that were fairly modern in temper and quite adventurous in their resources, though with an increasing tendency to densely overcrowded scores. Improvisation usually had little place in progressive jazz; its exponents produced much overtly commercial material and the contradiction between it and the more ambitious music was never resolved.

MAX HARRISON

Progressive rock. A development of UK pop music that began in 1967 with the sonic exploration of the Beatles' *Strawberry Fields Forever* and the classical allusions of Procol Harum's *A Whiter Shade of Pale*, and continued as an active underground scene in many parts of Europe into the late 1990s. It was predicated on an achieved maturity of UK rock, divorced from American precursors, an ideology of free expression and a complementary striving for legitimation often founded on the appropriation of classical referents.

Features include the escape from the format of the three-minute pop single, e.g. Led Zeppelin's *Stairway to Heaven* and Jethro Tull's *Thick as a Brick*, references and allusions to, and borrowings from, art music as in Emerson, Lake and Palmer's *Pictures at an Exhibition* or Queen's *Bohemian Rhapsody*, and the integration of free jazz techniques shown in King Crimson's *21st-Century Schizoid Man* and Van der Graaf Generator's *Man-Erg*. Lyrics often display a pretentious quasi-mystical quality, as in Yes's *Awaken*, and frequently eschew narrative, e.g. in *Knots* by Gentle Giant.

These experimental approaches were enabled by growing studio sophistication, a general shift from a working-class, dancing market to a student, listening market, and an economic boom, which gave the major labels the space to invest in artists and relax their hold over product and marketing. The struggle for legitimation frequently led to critical charges of pretentiousness. Punk was perceived in Britain as the necessary antidote.

ALLAN F. MOORE

Prohaska, Felix (*b* Vienna, 16 May 1912; *d* Vienna, 29 March 1987). Austrian conductor, son of KARL PROHASKA. He studied the piano with Friedrich Wührer and Eduard Steuermann, the violin with Gottfried Faist and Oskar Fitz, and theory with Egon Kornauth, Hans Gál, Joseph Polnauer, Felix Salzer and Oswald Jonas. He taught at the Landeskonservatorium, Graz (1936–9) and was also active as the répétiteur at the opera there. From 1939 to 1941 he conducted at the opera in Duisburg, and from 1941 to 1943 at the German Opera in Strasbourg, at the same time directing the opera class at the Strasbourg Conservatory; from 1943 to 1945 he conducted the German Opera in Prague. He taught at the Vienna Music Academy (1945–6) and was a conductor of the Staatsoper

for performances in the Volksoper (1946–55); he was also a professor in the conducting class of the Vienna Conservatory from 1947 to 1950. Prohaska was Generalmusikdirektor of Frankfurt from 1955 to 1961, and from 1961 to 1969 directed the Hochschule für Musik in Hanover. He appeared as a guest conductor at Salzburg (1945–6), Perugia (1951), Copenhagen (1952 and 1956) and South America, and made many recordings.

OTHMAR WESSELY

Prohaska, Jaro(slav) (*b* Vienna, 24 Jan 1891; *d* Munich, 28 Sept 1965). Austrian bass-baritone. After an early career as a church organist, he studied singing at the Vienna Music Academy (1919–23) and made his début in 1922 at Lübeck. After an engagement at Nuremberg (1925–31) he joined the Berlin Staatsoper, of which he remained a member until 1952, taking part in the première of Graener's *Der Prinz von Homburg* (1935). He sang regularly at Bayreuth (1933–44) as Hans Sachs, Wotan, Gunther, Telramund, Amfortas and the Dutchman. He appeared at the Teatro Colón, Buenos Aires (1935 and 1937), and at the Paris Opéra (1936 and 1940). In addition to Wagner roles his repertory included Ochs, which he sang at the 1949 Salzburg Festival. He was appointed head of the Hochschule für Musik in Berlin in 1947 and director of its opera school in 1952; among his pupils was Hermann Prey. His recordings include his Hans Sachs (1943, Bayreuth) and Ochs (1949, Salzburg).

HAROLD ROSENTHAL/ALAN BLYTH

Prohaska, Karl (*b* Mödling, nr Vienna, 25 April 1869; *d* Vienna, 28 March 1927). Austrian composer. He studied the piano with Anna Assmayer and Eugen d'Albert and theory with Franz Krenn, Eusebius Mandyczewski and Heinrich von Herzogenburg; Brahms also showed an interest in his musical development. In 1894–5 he taught at the Strasbourg Conservatory and was also a stage assistant at the Bayreuth Festival. From 1901 to 1905 he conducted the Warsaw PO. He taught the piano from 1908, and later also theory at the conservatory of the Gesellschaft der Musikfreunde in Vienna; he remained on its staff when it was established as the Akademie für Musik und Darstellende Kunst. The new status of the school as the Hochschule für Musik in Vienna (1924) was largely due to Prohaska's efforts, but a disease of the eyes soon made it impossible for him to teach.

Prohaska was in great demand as a teacher. As a composer he took the Romantic styles of Schumann and Brahms as a point of departure, but also drew on the harmonic techniques of his own time. Full-bodied melodies and a strong attraction to polyphony are further characteristics of his works.

WORKS

Madeleine Guimard (op, L. Braun), Breslau, 28 May 1930, lib (Vienna, 1930)

Vocal: Fruhlingsfeier (F.G. Klopstock), solo vv, chorus, orch, org, op.13; Christmas songs, 4 female vv, pf, op.10; Aus dem Buche Hiob, motet, 8vv, org, op.11; unacc. partsongs, opp.2, 8, 9, 12; solo songs, opp.3, 7, 14, 17, 18 (all pf acc.), 21 (str qt acc.), 24 (orch acc.)

Instrumental: Sonata, vn, pf, op.1; Str Qt, op.4; Pf Trio, op.15; Str Qnt, op.16; Variations and Fugue, pf, op.19; Serenade, small orch, op.20; Passacaglia, orch, op.22; Prelude and Fugue, org, op.23

OTHMAR WESSELY

Prohemium (Lat.). *See* PROOIMION.

Prokeimenon. A chant sung in the Byzantine Divine Liturgy (*see* DIVINE LITURGY (BYZANTINE)) and at the Offices of HESPERINOS and ORTHROS. *Prokeimena* consist of a response, usually known as the *prokeimenon*, the text of which is taken from the psalms, and between two and four psalm verses, called *stichoi*. They are normally chanted before scriptural readings: in the Divine Liturgy, before the Epistle (corresponding to the position of the Roman gradual); at Hesperinos, before the Old Testament reading; and at Orthros, before the 'Morning Gospel'. Two *prokeimena*, one for Marian feasts (*Luke* i.46–9) and one for the Holy Fathers of Nicea (*Daniel* iii.26–7), are based on canticles rather than psalms.

The earliest evidence for the singing of selected psalm verses as refrains in the liturgy dates from the 4th century. For example, Psalm cxvii.24, *Hautē hē hēmera* ('This is the day'), was sung at Easter and Psalm cxvii.26, *Eulogēmenos ho erchomenos* ('Blessed is he that comes'), on Palm Sunday; both refrains were later used as *prokeimena* in the Byzantine rite (for the Easter refrain *see* BYZANTINE CHANT, ex.6). It is fairly likely that a responsorial chant was established by the early 5th century as an individual item in the service of readings. Some time after this, however, the responsorial singing of whole psalms was suppressed, and the chant was eventually reduced to a response and one or two verses. This abridgement may have been caused by the development of a more elaborate style of liturgical music in the great cathedrals and the taking over of the people's response by a professional choir. The evolution of the Church year and the simultaneous increase in the number of psalm verses specifically chosen to match the themes of the various feasts may also have influenced this process.

The term *prokeimenon* is first documented in the 9th century. Before that time, the chant was probably referred to as 'psalmos' (i.e. 'psalm'), judging by the rubrics contained in the archaizing 10th-century Codex Sinaiticus (*RUS-SPsc* gr.44) and the chanted announcement *Psalmos tō Daduid* ('A psalm of David') that introduced both the *prokeimenon* and the *allēlouïa* of the Divine Liturgy.

The music of the *prokeimena* is transmitted in three different chant books – the psaltikon, asmatikon and the akolouthiai manuscripts – each of which preserves a different section of the repertory. The psaltikon (for soloists) and asmatikon (for the choir) together contain three series of 48 *prokeimena* in melismatic style for the Divine Liturgy and Hesperinos. Although the earliest surviving manuscripts of these chant books date from the 12th and the 13th centuries respectively, their melismatic *prokeimena* probably derive from an older cathedral rite at Constantinople; this repertory, together with that of the *allēlouïaria*, may have influenced the creation of melismatic melodies for the *kontakia* in the 10th century. A comparison of the florid *prokeimena* with the Gregorian and Old Roman graduals and the Ambrosian *psalmelli* suggests that these melismatic responsorial chants possess some common features and may, therefore, derive from an early Christian 'cathedral' practice.

The psaltikon tradition is divided into two branches, one of which gives the melodies in a slightly more

ornamented form than the other. Many recurrent melodic elements are found in the repertory, and in some modes one basic melody is used for several *prokeimena* and *stichoi*. A remarkable feature of the psaltikon settings is the omission of up to half of the psalm verse; for example, *Ho poiōn tous angelous* (Psalm ciii) uses the first half-verse of verse 4 as the response (*prokeimenon*), the first third of verse 1 as the first *stichos* and the last third of verse 1 as the second and last *stichoi*. It has been suggested that the missing words should be supplied in simple psalmodic style, but it is also possible that the missing phrases were no longer sung at the time when the music of the psaltikon was notated.

Choral responses for the *prokeimena* of Hesperinos and the 'great *prokeimena*' of Lent, Easter Week and Easter are contained in the asmatika under the heading *dochē*. However, in many akolouthiai manuscripts and in one source of the psaltikon (*I-Rvat* gr.1606) the *prokeimenon*, *stichoi* and *dochē* are given in immediate succession. The akolouthiai manuscripts often present two responses: a shorter or 'little' *dochē* (the 'Thessalonian' *dochē*), and a longer *dochē* corresponding to the asmatikon tradition. The *dochē* repeats the text and melodic outline of the *prokeimenon*, but the text continues beyond the first half-verse and the style is more elaborated than that of the psaltikon. The *dochai* also contain recurrent melodic elements, and their final cadences conform to one of two basic types: one for the 3rd plagal mode (*ēchos barys*) and one for all other modes (though adapted to take account of the different modal finals).

The AKOLOUTHIAI manuscripts, which date from the 14th century onwards, contain both simple and melismatic melodies for *prokeimena*. Simple, syllabic settings, such as those for the morning *prokeimena*, usually embrace two complete psalm verses, that is, one *prokeimenon* (refrain) and one *stichos*, and are performed with the repetition of the *prokeimenon*. A large number of the *prokeimena* prescribed by the Byzantine typika (*ordines*) are preserved without music in the extant chant books; they were probably sung to simple melodies, like those in the akolouthiai manuscripts, that could easily be generated from conventional psalmodic patterns. Such chants include the Lenten and Easter series of about 150 two-verse *prokeimena*, the verses being selected from each of the psalms in turn.

The repertory of embellished *prokeimena* in the akolouthiai manuscripts includes settings in the kalophonic style. One of the earliest is a composition by JOANNES KOUKOUZELES (*c*1300–50) based on the text *Ho kyrios ebasileusen* ('The Lord reigns'; Psalm xcii.1) for Saturday Hesperinos; it contains many partial repetitions as well as changes to the original word order.

The *prokeimenon* for Easter, *Tis Theos megas* ('Who is a great God'; Psalm lxxvi.14–16), also enjoyed a certain popularity outside the liturgy. According to the emperor Constantine Porphyrogennetus's *Book of Ceremonies*, written in the 10th century, the chant was sung responsorially at the imperial triumphal ceremony in Constantinople, and the chronicler John Skylitzes reported that the soldiers of the imperial army intoned the response of this *prokeimenon* spontaneously and 'with one voice' as a hymn of victory during a campaign in Armenia in 1049.

CHRISTIAN TROELSGÅRD

Prokina, Yelena (*b* Odessa, 16 Jan 1965). Russian soprano. Her early tuition at the School of Arts in Odessa and the Leningrad Institute for the Theatre, Music and Cinematography was followed by vocal studies at the Leningrad Conservatory, moulding Prokina as an outstanding singer-actress. She made her début as Marguerite in Gounod's *Faust* with the Kirov Opera in 1988, remaining with the company for several years to sing such parts as Desdemona, Tatyana, Emma in *Khovanshchina* and a passionately fresh Natasha in *War and Peace* (the last two preserved on disc). She appeared with the Kirov Opera at the Edinburgh Festival and in Birmingham in 1991, but it was not until 1994 that she consolidated her international reputation with widely praised portrayals of Kát'a Kabanová at Covent Garden and Tatyana at Glyndebourne. She also sang in the first Portuguese performances of *Yevgeny Onegin* (1993, Lisbon).

Although Prokina has sung as far afield as Los Angeles (Donna Anna and Lina in *Stiffelio*), Buenos Aires (Lisa in *The Queen of Spades*) and Sydney (Tatyana), her most significant performances have been in western Europe: she has established close links with the opera house in Zürich, where in 1995 she sang her first Amelia in *Simon Boccanegra* (a role she repeated at Glyndebourne in 1998), and she was Fevroniya in Harry Kupfer's Bregenz production of *The Legend of the Invisible City of Kitezh* in 1995. The latter performance, recorded on CD and video, summed up Prokina's art, with her vivid stage presence, both innocent and womanly, complementing a radiant soprano. Her other recordings include a notable disc of songs by Glière.

JOHN ALLISON

Prokofiev, Sergey (Sergeyevich) (*b* Sontsovka, Bakhmutsk region, Yekaterinoslav district, Ukraine, 11/23 April 1891; *d* Moscow, 5 March 1953). Russian composer and pianist. He began his career as a composer while still a student, and so had a deep investment in Russian Romantic traditions – even if he was pushing those traditions to a point of exacerbation and caricature – before he began to encounter, and contribute to, various kinds of modernism in the second decade of the new century. Like many artists, he left his country directly after the October Revolution; he was the only composer to return, nearly 20 years later. His inner traditionalism, coupled with the neo-classicism he had helped invent, now made it possible for him to play a leading role in Soviet culture, to whose demands for political engagement, utility and simplicity he responded with prodigious creative energy. In his last years, however, official

encouragement turned into persecution, and his musical voice understandably faltered.

1. Russia, 1891–1918.

(i) Childhood and early works. Prokofiev grew up in comfortable circumstances. His father Sergey Alekseyevich Prokofiev was an agronomist and managed the estate of Sontsovka, where he had gone to live in 1878 with his wife Mariya Zitkova, a well-educated woman with a feeling for the arts. Prokofiev was the last of their three children, but his two older sisters had died in infancy, so that to all intents and purposes he grew up as a much indulged and pampered only child. His father supervised his general education in the natural sciences; a French governess and also, at various periods, two German governesses were engaged to teach him foreign languages; and his mother provided his early education in the arts. His playmates were the employees' children, who addressed him by the formal 'you', while he used the familiar pronoun to them. This contributed to giving him a sense, from an early age, of being privileged, indeed invulnerable and immune to criticism.

When he was four years old his mother began his first piano lessons, and his earliest attempts at composition also date from this period: he described them in detail in his autobiography, with musical illustrations. These childhood works include 'Indian Galop', various waltzes and marches, one for four hands, and other small piano pieces written between 1896 and 1901. Visits to the opera (in Moscow in the winter of 1899–1900 and St Petersburg two years later) acquainted him with the standard stage repertory of Russia at the time – Gounod's *Faust*, *Prince Igor*, *The Sleeping Beauty*, *A Life for the Tsar*, Dargomïzhsky's *Rusalka*, Rubinstein's *Demon*, *La Traviata*, *Carmen* – and inspired the ten-year-old boy to try his own hand at opera. He wrote *Velikan* ('The Giant') in February–June 1900, and this childhood opera, in three acts and six scenes, was performed for his family with his playmates taking the parts. In 1901 he was busy with his second operatic project, on a subject of the Robinson Crusoe type: *Na pustïnnïkh ostrovakh* ('On Desert Islands') of which only a few pages survive. In his autobiography he dwelt at some length on his juvenilia, urging his readers to see how the future opera composer was already emerging in the consistent ostinato structures, the changes of dominant to tonic (although these are still simple), and the arrangement of motifs, also still simple. These childhood works were collected in special albums, and the French governess copied out several pieces. At the same time Prokofiev began planning a catalogue in which to enter the titles and openings of his works. All his juvenilia are now in the Moscow RGALI (Rossiyskiy gossudarstvennïy arkhiv literaturï i isskustva, fond 29).

In January 1902 the family stopped in Moscow on their way back from St Petersburg. The son of a family they knew, Yury Nikolayevich Pomerantsev, a graduate of the Moscow Conservatory who later became a ballet conductor at the Bolshoy, put them in touch with Sergey Taneyev. Taneyev recommended that the young Prokofiev study theory with Pomerantsev, and a few lessons did take place; in addition he suggested that one of his own students could act as private tutor to the boy during the summer months in Sontsovka. The man Taneyev first thought of was the pianist Aleksandr Goldenweiser, who had also studied composition; when he declined, Taneyev recommended the young composer and pianist Reinhold Glière. Glière spent the summers of 1902 and 1903 at Sontsovka, teaching Prokofiev theory, composition, instrumentation and piano; during the winter months the boy's instruction continued by correspondence. A phase of intensive and extremely productive activity as a composer dates from this point, and it is clear that even as a boy Prokofiev was developing the habit of working on several pieces at once. Glière urged him to begin by schooling himself to write short pieces built into the structure of a cycle. Prokofiev therefore wrote a number of small piano pieces (*Pesenki*, 'Little Songs', 1902–6), five series each of 12 pieces. Also in 1902 he began work on a symphony in G major, dedicated to Glière; the first movement was completed in full, the other movements only in piano score. The next year he wrote a violin sonata in C minor to which he referred in the *Ballade* for cello and piano op.15 (1912). At the same time, and encouraged by Glière, he set to music Pushkin's 'little tragedy' *Pir vo vremya chumï* ('A Feast in Time of Plague'). When Glière sent him the score of Cui's opera on the same subject, his reaction, as he admits in his autobiography, was of jealousy. His account makes it clear that he regarded the rival opera with hostility from the first, but at the same time he systematically tried to learn from this more mature model. In 1904 he began work on his fourth youthful opera, *Undina*, to a libretto by the Russian poet Mariya Kilstett taken from Friedrich de la Motte-Fouqué's story. He later cut the planned five acts to four, and the work was completed in vocal score in 1907.

(ii) Conservatory studies and first public appearances. In the spring of 1903 the 12-year-old Prokofiev was introduced to Glazunov, then a professor at the St Petersburg Conservatory. Glazunov urged Prokofiev's parents to let him study music, and won their consent by arguing that the conservatory also provided a general education, so that the boy would not need to attend an ordinary school as well. Prokofiev took some private lessons from Mikhail Mikhailovich Chernov, a student about to take his examinations at the conservatory, and passed the entrance examination in the autumn of 1904. He studied theory with Lyadov, whom he described as 'dry and sparing of words', adding that he 'took no interest in his pupil's creative development'. He also ventured to criticize Rimsky-Korsakov's teaching of orchestration; however, he expressed the utmost admiration for Rimsky-Korsakov's later operas, particularly *The Legend of the Invisible City of Kitezh*. In 1908 he began studying the theory of musical form with Vitols. While a student he met Myaskovskiy, ten years his senior. A lifelong friendship between them developed, and was maintained even during Prokofiev's years abroad. It was a relationship allowing room for frank and critical discussion of both men's works.

The revolutionary unrest of the year 1905 was felt in the conservatory. One result was the dismissal of Rimsky-Korsakov, who had supported the striking students, and Glazunov and Lyadov resigned in solidarity, though all three returned in 1906. The young Prokofiev obviously paid little serious attention to these events, and did not

perceive their significance. In the spring of 1909 he completed his studies in composition, and graduated with the usual Russian diploma as free artist. The pieces he offered as his examination works were his sixth sonata (numbered among his juvenilia; only pencil sketches have been preserved) and a scene from an opera *A Feast in Time of Plague* (not the same as his earlier opera). These works, Prokofiev tells us, were not well received, so that his final grade was only 'good'. It seems his years at the conservatory left no lasting mark on him, but merely reinforced a process of development that had begun early and was progressing steadily all the time, hardly affected by his studies. After his examination in composition, he took courses to train as a concert pianist, changing from Alexander Winkler to the highly regarded Anna Yesipova, the teacher of many outstanding Russian pianists. At the same time he began to study conducting with Nikolay Tcherepnin, the only lecturer at the conservatory whom he took really seriously; he also respected him as an analyst. Tcherepnin even taught him, he said, to appreciate the orchestral sound of Haydn and Mozart. He took his examinations in both these practical disciplines in the spring of 1914. For the piano examination he played his own First Piano Concerto, and won the first prize on which he had set his heart.

During his time at the conservatory he wrote a Symphony in E minor, many small-scale piano works and six early sonatas, some of which he utilized later. He left the Sonata in B♭ major of 1904 alone; the Sonata in F minor of 1907 was revised to become his First Sonata op.1 (1909); the Sonata in A minor (also 1907) became the Third Sonata op.28 (1917); the fourth youthful sonata (1908) is lost; the Sonata in C minor of 1908 became the Fourth Sonata op.29 (1917); and, as mentioned above, only sketches remain of the sixth or 'Conservatory Sonata'. Other compositions of this early period also found their way into the catalogue of Prokofiev's mature works. Four piano pieces of 1907–8 became op.3 (1911), and four further pieces of 1908 op.4 (1910–12); the Sinfonietta in A major (1909) was revised to become op.5 (1914) and in its final form became the *Sinfonietta for Small Orchestra* op.48 (1929). Early works also live on in the *Ten Piano Pieces* op.12 (1913) and the Second Sonata op.14 (1912), which incorporates the second of two discarded sonatinas. All his life Prokofiev retained the habit of reworking his musical ideas, either because they pleased him or for financial reasons.

Other student works include two choruses with orchestral accompaniment to poems by Bal′mont (op.7, 1909–10), originally intended for the student choir, and two songs to texts by Bal′mont and Aleksey Apukhtin (op.9, 1910–11), both diptychs reacting to the literary symbolism of the period. The symphonic poems *Snï* ('Dreams', op.6, 1910) and *Osenneye* ('Autumnal Sketch', op.8, 1910, second version 1915, third version 1934) were influenced by Skryabin's orchestral *Rêverie* and Rachmaninoff's *Isle of the Dead* and Second Symphony, which shows that Prokofiev was pitting himself, quite deliberately, against the two leading (and creatively contrasting) composers of the previous generation. He also wrote his first two piano concertos, the second revised in 1923, as well as the five piano pieces *Sarkazmï* ('Sarcasms'), the Toccata for piano, and *Gadkiy utyonok* ('The Ugly Duckling') for voice and piano. In 1912 he made the decision to write for transposing instruments in C and for english horn and trumpets in the alto clef, dispensing with the tenor clef. He kept to this manner of writing throughout his life.

The operatic fragment *Maddalena* op.13 (1911, revised in 1913), after the play of the same name by one Baroness von Lieven, was to have been performed in the conservatory, but proved too difficult for the forces available. Prokofiev had completed the piano score of this one-act opera, but orchestrated only the first of its four scenes. The material remained with the Edition Russe de Musique after the composer's emigration to Paris; Edward Downes discovered it in 1953 and completed the orchestration. The action takes place in 15th-century Venice. Maddalena is leading a double life, as a married woman and also, incognito, as the mistress of a friend of her husband; incited by Maddalena, the two men kill one another in a fight. This dark drama reflects the inner turmoil of its eponymous heroine, besides displaying one aspect of the struggle for emancipation in the early 20th century, in that passion is set above bourgeois morality. The work already contains basic features characteristic of the operatic composer Prokofiev was to become: clear contrasts, differentiated motifs relating to the characters and situations, musical-dramatic movement with its own inner tempo, and a highly strung female character such as Prokofiev developed further in Paulina in *Igrok* ('The Gambler'), Renata in *Ognennïy angel* ('The Fiery Angel'), and to some extent Natasha in *Voyna i mir* ('War and Peace').

Through his former teacher Chernov, Prokofiev met some of the organizers of the Evenings of Contemporary Music in 1908, including the critics Vyacheslav Karatïgin and Walter Nuvel′, who was a friend of Diaghilev. Between 1900 and 1912 these recitals took place about six times a season in St Petersburg, and it was here that Prokofiev made his début as a composer on 18/31 December 1908, with seven of his piano pieces written in 1907–8: *Skazka* ('Tale'), *Snezhok* ('Snow'), *Vospominaniya* ('Reminiscences'), *Porïv* ('Elan'), *Molbï* ('Imploring Requests'), *Otchayanie* ('Despair'), and *Navazhdeniye* ('Suggestion diabolique'). Works by Myaskovsky also had their first public performances at the same recital. From then on Prokofiev regularly appeared at these evenings, performing both his own compositions and those of others. He first introduced himself to Moscow audiences on 21 February/6 March 1910, with a performance of his Etudes op.2 and Sonata op.1, at one of a series of concerts given by the soprano Mariya Deisha-Zionichkaya. Other important performances took place in the summer recital programmes of the Evenings of Contemporary Music. In Moscow, where a concert series of the same name had begun, Konstantin Saradzhev conducted Prokofiev's orchestral pieces *Dreams* and *Autumnal Sketch* in 1911; the contact was provided by Myaskovsky, whose works Saradzhev had performed earlier. 1912 saw Prokofiev's first appearance as soloist with an orchestra when he played his First Piano Concerto with great success, as he tells us, first in Moscow and then under Aleksandr Aslanov in Pavlovsk, near St Petersburg. The Second Piano Concerto, which he played at its première a year later on 23 August/5 September 1913, also in Pavlovsk and under Aslanov, created a sensation which the composer describes with evident pride in his autobiography. The work was roundly condemned in the conservative press, while progressive critics such as

Karatïgin reviewed it favourably. Though still a student, Prokofiev had established himself, in the recitals of the Evenings of Contemporary Music, as a controversial innovator. He was also looking for a publisher. Koussevitzky, who had founded his own orchestra and the Edition Russe de Musique in 1909, and with whom Prokofiev later had a fruitful relationship, rejected his works at this point on the recommendation of his advisers Skryabin, Rachmaninoff and Medtner. Initally the St Petersburg publisher Boris Jürgenson, son of Tchaikovsky's publisher Pyotr Jürgenson, also rejected Prokofiev, but then, thanks to the intervention of Aleksandr Ossovsky, he published the First Sonata and the Four Pieces op.3. Prokofiev remained with Jürgenson until 1916 and then changed to the publishing firm of Gutheil, which Koussevitzky took over that year, though he kept the firm's old name.

(iii) The path to emigration. Prokofiev had visited France, England and Switzerland in the summer of 1913, and a year later his mother gave him a trip to London as a graduation present. Here he heard Ravel's *Daphnis et Chloé* and Stravinsky's *Firebird*, *Petrushka* and *Rite of Spring*, the last of which he regarded with unconcealed scepticism. Nouvel introduced him to Diaghilev, who was in London with his ballet, and Prokofiev played him his Second Piano Concerto. This is said to have given Diaghilev the idea of commissioning *Ala i Lolli*, for which he suggested the symbolist poet Sergey Gorodetsky as author of the scenario. He turned down Prokofiev's proposition for *The Gambler*, since he thought opera had no future. When Prokofiev travelled to Rome in the spring of 1919, with considerable difficulty because of the war, and showed Diaghilev his sketches for the ballet, the impresario let the project drop. On this visit he had another meeting with Stravinsky, whom he had known in St Petersburg; the reservations the two composers had about each other remained unchanged. Also in Rome he encountered Marinetti and the ideas of Italian futurism, but they left him indifferent. He also played his Second Piano Concerto in Rome on 7 March 1915, his début abroad.

Using music from the aborted ballet, he wrote the *Skifskaya syuita* ('Scythian Suite') op.20 (1914–15), directly inspired by the *Rite of Spring*. It was first performed at the beginning of 1916, with the composer conducting, and created as much of a sensation as the Second Piano Concerto. From Prokofiev's account of this event in his autobiography, written in the provocative style of the Russian literary futurists, it is clear that he was seeking to create just such a scandal as Stravinsky had, to shock his audience and thus attract attention. With its harsh tone colours, frequent accumulations of dissonances, obsessive pedal-note and ostinato techniques, and extremely large orchestra, playing *forte* or *fortissimo* for long passages, the *Scythian Suite* is indeed a challenge, but it remains remarkably traditional in its formal layout and thematic structure. The four movements – an allegro with two contrasting themes (but not written as a sonata movement), a scherzo and trio, a slow movement and a rondo-like finale – correspond to the movements of the traditional symphony. Rhythm and metre remain simple; all four movements are in 4/4, and as is usually the case with Prokofiev, there are no changes of time signature or complex superimpositions of different rhythms and metres such as are found in Stravinsky from

1. Sergey Prokofiev

the first, and even in earlier Russian composers. The melodies are simple, indeed plain; large intervals (9ths and even larger) are preferred in expressive passages. In addition, there are direct changes to another key as the melodic movement progresses. Harmonies move in independent layers subordinate to tone colours and registers, and displace one another so that a polytonal effect or a kind of heterophony is created (Karatïgin spoke correctly, in a review, of 'a new heterophony'). This peculiar ambivalence – with an aggressive tonal structure and an accumulation of dissonances on the one side, and on the other an uncomplicated formal construction, clear melodies, simple rhythms and harmonies varied by direct changes of key – is a characteristic feature in the young Prokofiev, and in modified form he displayed it all his life. The archaic and pagan subject survives in the titles of the movements of the suite: 'The Worship of Veles and Ala', 'The Idols and Dance of the Evil Spirits', 'Night' and 'Lolli's Journey and Sunrise'. They reflect the rejection of a civilization felt to be over-refined, a longing for the primitive and for closeness to the earth and old rituals, ideas that run through the symbolist literature of the time and that also surface in Stravinsky's *Rite of Spring*.

Prokofiev returned to a subject of this nature in the cantata *Semero ikh* ('They are Seven') op.30, written in 1917–18 and revised in 1933, after Bal'mont's poem 'Cries from Primeval Times', with the subtitle of 'Chaldean Invocation'. The text concerns seven giants who destroy the world with terrible violence. Prokofiev relates his choice of subject to 'the events of the revolution shaking Russia'; it may also perhaps be a reaction to the horrors of World War I. He introduced several new effects, such as the whispering of the chorus at the beginning, choral glissandi, expansive *col legno* parts, and a large body of

percussion principally used as solo instruments. This work had its première in Paris in 1924, under Koussevitzky. The description of it as a cantata is an addition of the Soviet publisher, and one Prokofiev vigorously rejected, on the grounds that it allowed associations of an outworn character, though he did also use the term himself. This was his first publication in the Soviet Union.

During Prokofiev's 1919 visit to Rome, Diaghilev's idea for the ballet *The Tale of the Buffoon* took shape, and he commissioned Prokofiev to write this work, *Skazka pro shuta*, also known by the French transliteration *Chout*. The story comes from Aleskandr Afanas′yev's collection of Russian folk tales, which had already served as Rimsky-Korsakov's source for a number of works. Diaghilev asked for something typically 'Russian'; he was well aware of the attractions of the exotic, as Russian music was perceived to be in western Europe, and Prokofiev did include some national folk elements in his music. The score was completed in 1916, but the première did not take place until 17 May 1921, in Paris, conducted by Prokofiev himself.

In the period leading up to his emigration, besides revising juvenile works for his Third and Fourth Sonatas, he wrote the *Sarcasms*, op.17, 1912–14, five piano pieces which he performed to acclaim at the recitals of the Musical Contemporaries, which had superseded the Evenings of Contemporary Music, and the *Mimoletnosti* ('Visions fugitives', op.22, 1915–17), a cycle of 20 piano pieces with a title suggested by a poem of Bal′mont's. At the same time he began working on his First Violin Concerto, op.19 (1916–17), which did not receive its première until 1923 in Paris, and on the opera *Igrok* ('The Gambler'), op.24 (1915–17), from Dostoevsky's novel of the same name, a project in which he was encouraged by Albert Coates, who had become chief conductor of the Mariinsky Theatre in St Petersburg in 1911. The work went into rehearsal, and Prokofiev had this first version of the opera printed in vocal score for the purpose, but because of resistance by the singers and the revolutionary unrest in February 1917 the opera remained unperformed.

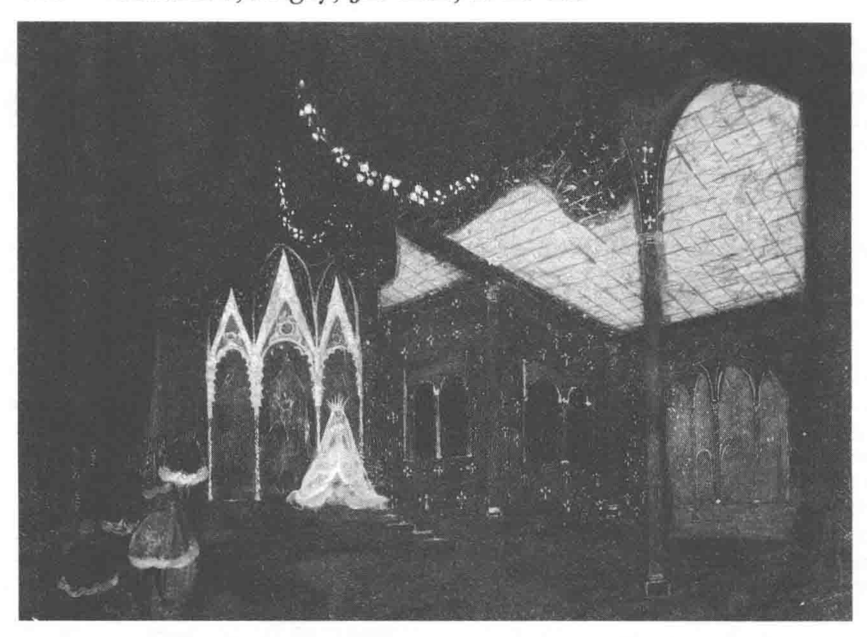
Prokofiev showed quite another side of himself in the Classical Symphony op.25 (1916–17). His much-quoted remark – 'I thought that if Haydn were alive today he would compose just as he did before, but at the same time would include something new in his manner of composition. I wanted to compose such a symphony: a symphony in the classical style' – reads like an early confession of neo-classicism. Stravinsky's *Pulcinella*, the key neo-classical work, was not begun until two years later. Prokofiev was certainly referring back to classical models here, for instance in the proportions of the symphony, the well balanced sonata movements in the opening allegro and the finale, the triad-based melodies and the occasional Alberti bass figures. However, the stylization also includes Baroque elements, particularly in the third movement, a gavotte, and in the regular accompanying chords of its predecessor. These were also the direct harmonic idioms typical of Prokofiev which mark the symphony a 20th-century work.

2. USA, 1918–22. Prokofiev remarked in his autobiography that: 'the February Revolution took me by surprise in Petrograd. Like those circles in which I moved, I welcomed it joyfully'. The 19th *Vision fugitive*, he said, reflects the revolutionary events. He was genuinely enthusiastic about the idea of revolution, as a radical break with tradition, and he sought to give it artistic shape. He found inspiration less in music than in literature, for instance in Mayakovsky's forceful, anti-bourgeois lyrics, and in the collection published by the Russian futurists under the provocative title *A Slap in the Face of Public Taste*. In his autobiography (published in extracts in *SovM*, 1941–6) he went on to explain that he had no very clear idea of the October Revolution, and 'I had not yet become aware that I, like every other citizen, could be useful to the revolution'. This was written at the end of the 1930s and beginning of the 1940s, when it would have been dangerous to write anything that might be seen to contravene Soviet ideology. We may believe Prokofiev when he claims to have felt enthusiasm for a revolution in art; his expressions of enthusiasm for the political revolution, however, and for the idea of being useful to it, are precautionary measures, of which there are many in the book. For instance, he emphasized his allegedly revolutionary and proletarian origin by pointing out that his father maintained contact with revolutionary groups in the 1870s, and that his mother's forebears had been serfs. In fact he must have recognized quite early that the revolution and the incipient civil war would leave him no room for artistic development, and he took the decision to go to the USA in the spring of 1918. He travelled to Petrograd and gave several concerts there, including the premières of the *Mimoletnosti* ('Visions Fugitives'), the Third and Fourth Sonatas, and the Classical Symphony. He met Mayaskovsky, called on Anatoly Lunacharsky, then cultural commissar, and applied to him for permission to go abroad. Lunacharsky granted it, as he did to many other great Russian artists. On 7 May 1918 Prokofiev travelled from Petrograd through Siberia to Vladivostok and on to Tokyo, where he gave some concerts. He arrived in New York at the beginning of September 1918.

He described his years abroad as a gradual process of failure, blaming the difficult conditions of American and European musical life. Even if his generally negative account of cultural conditions in the west was written with an eye towards Soviet censorship, the facts show that his years in exile were not as successful as he had planned and hoped. He had arrived in the USA without any firm agreements, and at first tried to make his way as the interpreter of his own works. The first piano recital he gave in New York, on 29 November 1918, was, he said, 'seen on the surface as a success'. Following his manager's advice, he had also included some works by Skryabin and Rachmaninoff in the programme, as older and more accessible music than his own. In saying that he had misjudged the rather conservative musical taste of the American public, 'while Rachmaninoff, who had come to New York at about the same time and played a classical programme with only two or three of his own preludes, was much more successful', his admission that he himself achieved only a *succès d'estime* barely conceals a weightier problem he had not previously recognized: Rachmaninoff was the leading Russian pianist in the USA. Rachmaninoff had introduced himself to the American public as early as the 1909–10 season, and had composed his Third Piano Concerto for that tour. Like Prokofiev, he had emigrated after the Revolution. American agents had engaged him for a tour comprising 36 concerts in the 1918–19 season, and over the next few years he gave 60 to 70 concerts every season. If Prokofiev were to compete, he would

have to emphasize his image as a pianist. His summing up of his first season in America sounds resigned: 'The public here is not used to listening to the works of a single composer for a whole evening. People want a varied programme as a showcase for popular pieces. Rachmaninoff has accepted this compromise. I could not even dream of the overwhelming success he has with his concerts'.

Yet the first years in the USA were not as dismal as Prokofiev described them in his autobiography. He appeared in New York in two concerts with the 'Russian Orchestra', an ensemble of emigrants, under Modest Altschuler. He played his First Piano Concerto and several solo works, and the Classical Symphony was performed too. In Chicago, Friedrich Stock conducted two concerts including the *Scythian Suite* and, again, the First Piano Concerto. From then on Prokofiev regularly appeared in American concert halls. He also performed in Canada in 1919, and took account of the wish for older music by, for instance, arranging a Buxtehude organ fugue for piano, and at Stravinsky's suggestion adapting some of Schubert's waltzes and ländler into a suite. Interest shown in Prokofiev's works by American publishing firms caused him to write two collections of piano pieces: *Skazki staroy babushki* ('Old Grandmother's Tales', op.31, 1918), and four dances (op.32, 1918). However, they were not published in America, because Prokofiev would not accept the conditions he was offered; he gave both works their premières at his piano recitals in New York early in 1919. he was commissioned by the Jewish ensemble Simro, whose members had emigrated from the Soviet Union, to write the Overture on Hebrew Themes for clarinet, string quartet and piano (op.34, 1919, orchestrated 1934), which had its première in New York in 1920 with Prokofiev himself at the piano. Only a few recordings of Prokofiev himself have survived. Reports of his playing, which apparently changed little over the years, focus on the following characteristics: an emphasis on metre and rhythmic pulse, an almost complete eschewal of rubato, a striving after transparency of texture and, especially in the interpretation of his own works, an exaggeration of performance indications; only with dynamic markings did Prokofiev, in his own works as well as those of others, allow himself generous latitude.



On his début in Chicago, in 1919, he met Cleofonte Campanini, conductor of the Chicago Opera. This meeting led to the commission for *Lyubov' k tryom apel'sinam* ('The Love for Three Oranges', op.33, 1919), a subject he suggested, since the score of *The Gambler*, in which Campanini was also interested, had been left behind in Petrograd. However, the première of the opera, Prokofiev's best known and most successful work in the genre, was postponed when Campanini died in December 1919. It was postponed again next season because Prokofiev was demanding compensation for the delay from the management of the opera company, who were unwilling to pay it. The work did not go into rehearsal until a year later, when Mary Garden had taken over as director; the première, conducted by Prokofiev, took place on 30 December 1921. The libretto is based on Gozzi's *commedia dell'arte* play *L'amore delle tre melerance* and on the comedy of the same name by Konstantin Vogak, Vsevolod Meyerhold and Vladimir Solov'yev. Meyerhold had published a magazine from 1914 to 1916 entitled *The Oranges, or Dr Dapertutto's Magazine*. The play Prokofiev used as basis for the libretto was published here for the first time, and provided the idea of an anti-bourgeois, anti-illusionist drama which brings the artificial, artistic element to the fore and dispenses with psychological study of the characters. The three planes of the action – represented by the fairytale characters (the Prince, Truffaldino), the underworld figures (Fata Morgana, the magician Celio), and the watching eccentrics, empty-heads and adherents of tragedy and comedy – are constantly disintegrated and rearranged like a mosaic, as Asaf'yev put it. This is particularly clear in the debates about the theatrical genre, or when the eccentrics intervene in the action in a parody of the *deus ex machina*, save Princess Ninetta and put Fata Morgana to flight. Prokofiev claimed to have 'chosen a simpler musical language than in *The Gambler*, taking American taste into consideration'. Certainly he showed an honest readiness to adapt – a frequent feature of his work. It is also true that he was sparing with chromatics and dissonances in this opera. However, the musical language is by no means 'simpler', based as it is on a fine web of contrasting themes and motifs. This enables Prokofiev to dispense with traditional arias, recitatives and other self-contained numbers (the only one is the famous March), and ensures the smooth inner tempo of the musical-dramatic action. Another feature is the parody of traditional operatic emotions.

After his second rather unsatisfactory season in America, Prokofiev turned his thoughts to Europe again. He spent the next three years giving concerts and composing in Europe during the summer months and returning to the USA for the winter season. In April 1920 he was in Paris and London, where he had discussions with Diaghilev about the performance of *The Tale of the Buffoon*, postponed since 1915, and began revising and orchestrating the score. Meanwhile, Koussevitzky too had left the Soviet Union, and wished to introduce himself to the Parisian public with the *Scythian Suite*. So two of Prokofiev's works had their premières in Paris very close together: the *Scythian Suite* under Koussevitzky on 29 April 1921, and *The Tale of the Buffoon* under Prokofiev himself on 17 May. They instantly made him famous and placed him on a par with Stravinsky.

He spent the summer of 1921 in Brittany, and completed the Third Piano Concerto op.26, the first sketches for which go back to 1917. At the same time he had the idea of composing a two-movement 'white' quartet, i.e. a work without any accidentals, but abandoned it. The themes intended for the second movement are incorporated into the finale of the concerto. At this period Bal'mont too was staying in Brittany; he wrote a poem in the symbolist spirit on the new piano concerto and on Prokofiev. It ends with the lines:

> 'But the tide foams wildly on, over all:
> Prokofiev! Music and youth blossom,
> In you the orchestra yearned for musical flight,
> And the invincible Scythian beats the tambourine of the sun.'

His reunion with Bal'mont inspired Prokofiev to compose the Five Poems op.21 (1921), his last settings of the poet. Using Bal'mont's texts, he had previously written two poems for female chorus and orchestra (op.7, 1909–10), the two songs. *It is of Other Planets* (op.9, no.1, 1910–11) and *In My Garden* (op.23, no.4, 1915), and the cantata *They are Seven*. The Third Piano Concerto, predominantly still diatonic (once again, perhaps with American taste in

mind), is extremely effective and contains reminiscences of Russian folklore. Prokofiev gave it its première on 16 December 1921 in Chicago under Friedrich Stock, and played it the next month in New York under Coates; it became his best-known concerto. In 1932 it became the first of his works he recorded, with the London SO. Despite the success of *The Love for Three Oranges* and this concerto, however, he summed up 1921–2 with the remark that 'the final result of the season spent performing in America . . . was as good as nil'; he decided to move to Europe.

3. Europe, 1922–36.

(i) Musical activities and works. In March 1922 Prokofiev went to live in southern Germany, near the monastery of Ettal, where, he said, he found the right atmosphere in which to continue work on *Ognenniy angel* ('The Fiery Angel', op.37), which he had begun, uncommissioned, directly after finishing *The Love for Three Oranges*. However, it was years before the opera was finally completed, since he had difficulty interesting an opera house in it. Mary Garden, who had wanted to bring it to Chicago, had left her post there. In 1926, when Bruno Walter, head of the Berlin Opera, was considering a production, Prokofiev began revision and orchestration. The score was not finished until 1927, and Koussevitsky gave a concert performance of parts of the opera in Paris. The première of the whole work did not take place until after Prokofiev's death: in a concert performance in Paris on 25 November 1954, and in a stage production at La Fenice a year later. The libretto is based on the symbolist novel by Valery Bryusov; the action takes place during the humanist period in and around Cologne (Agrippa von Nettesheim, a historical figure, appears as the representative of humanism). The protagonist Renata, who seeks in vain for Madiel, her 'fiery angel', with the help of the knight Ruprecht, vacillates throughout from hysteria to madness to dark brooding and is burnt as a witch at the end. Bryusov in his novel and Prokofiev in his libretto were less concerned with historical accuracy than with the field of tension between superstition and irrationality, reason and a questionable belief in progress. In Renata, a continuation of the character type represented by Maddalena and Paulina (in *The Gambler*), Prokofiev created a complex female figure torn apart by inner conflict. A dense and extremely impressive musical language, symphonic over long passages, corresponds to the character of the protagonist, with complexes of themes for the individual characters.

When it appeared that the extremely difficult part of Renata might be another reason militating against a stage production, Prokofiev used the material for his Third Symphony op.44 (1928), which was first performed at the beginning of 1929 with him conducting in Brussels and Pierre Monteux in Paris, and which has entered history as the '*Fiery Angel* symphony'. Prokofiev protested against this name on the grounds that the opera derives from previous material which was not at first specific to the operatic genre (specifically the rejected 'white quartet', also incorporated into the Third Piano Concerto), and which is neutralized, so to speak, in its symphonic form. After *The Fiery Angel* Prokofiev felt that he had failed as a composer of opera and avoided the genre which was really closest to his heart until 1939, when, long after his return to the Soviet Union, he began writing *Semyon Kotko*.

He lived for over a year in Ettal, using it as his base while he gave concerts in almost all the countries of Europe. On the occasion of a revival of *The Tale of the Buffoon* in the summer of 1923, Diaghilev expressed an interest in *The Love for Three Oranges*, perhaps because this work can be understood as a parody of 19th-century opera tradition. When Prokofiev played him the opera there was a violent argument between the composer and Stravinsky, who was also present, over their respective aesthetic positions, and the tension between them, artistic and personal, was never entirely overcome. While living in Ettal Prokofiev also wrote a new version of the Second Piano Concerto (1923) and his Fifth Sonata op.38 (1923). On 1 October 1923 he married the Spanish singer Lina Llubera, who sometimes gave performances of his songs.

Later that month the Prokofievs moved to Paris. The delayed première of the First Violin Concerto took place on 18 October 1923 under Koussevitzky, with Marcel Darieux as the soloist. The reactions of the press were mixed: in the circle of Les Six the work was criticized as old-fashioned. The Second Piano Concerto and the *Scythian Suite*, performed the following year, were much more successful. Consequently, and with his characteristic willingness to adapt, Prokofiev decided to write a symphony 'of iron and steel'. This Second Symphony op.40 (1924–5) is a brittle work shot through with abrupt contrasts, in two movements: a very complex sonata movement and a set of variations. At its première, conducted by Koussevitzky on 6 June 1925, it met with a lukewarm response. Prokofiev summed up his feelings: 'this was perhaps the only time I felt afraid I might be becoming a composer of the second rank'. He rightly saw this symphony, with the *Sarcasms*, the *Scythian Suite* and *They are Seven*, as the richest in dissonance of all his works; the symphony, he said, was in part inspired by the atmosphere of Paris, since the public there was not afraid of difficult sounds. Such reflections are wide of the mark: the wealth of dissonance – which is not the same thing as complexity – can be traced back to a plain, often diatonic kernel; in other words, the process of composition takes a clear course beginning with a theme, a melody and a relatively simple accompaniment which is then made denser in several stages.

While engaged on the Second Symphony Prokofiev was writing a chamber piece in six movements for a touring ballet company, a piece danced as *Trapetsiya* ('Trapeze'), but known in the concert repertory as the G minor Quintet op.39 for oboe, clarinet, violin, viola and double bass. The European première of *The Love for Three Oranges* took place in Cologne in 1925, and a year later the opera had its first performance in Berlin. Meanwhile, in the summer of 1925 Diaghilev had suggested a ballet on a Soviet subject. The title – *Stal'noy skok* or *Le pas d'acier* ('The Steel Step') – was his idea, and he drew up the scenario together with the painter and stage designer Georgy Yakulov. The glorification of machines and their movement in the ballet is in the tradition of futurism and early Soviet constructivism: there is no real plot, but instead scenes of a poster-like nature, though no political propaganda was intended. 'In our ballet hammers large and small, transmission shafts turning and flywheels, as well as flashing coloured light signals, were shown on stage. All came to a climax in a general creative upsurge in which the groups of dancers had to work at the machine and at the same time illustrate the working of the machines in dance', wrote Prokofiev of this ballet, and he emphasized that he had turned to a simpler language, by which he meant abandoning chromatic density and dissonances in favour of diatonicism and a style reminiscent of the music hall. He worked out the orchestration when he was in the USA to give 14 concerts during the 1925–6 season, and developed a method of including detailed instructions in the piano score, so that writing out the full score would be a mechanical process. Later, during his time in the Soviet Union, he perfected this technique to such an extent that he could leave other people to write out his scores. The première of *Le pas d'acier* in Paris on 7 June 1927, and the first London performance of 4 July 1927 attracted much attention – the work was erroneously taken to be Bolshevist propaganda – but did not establish the ballet in the repertory.

3. Sergey Prokofiev with his wife, Lina

After writing several smaller works – the Overture op.42 for 17 instrumentalists (1926, revised for full orchestra 1928), written for the opening of an American Pianola Society concert hall but given its première in Moscow, the Divertimento op.43 for orchestra (1925–9), first performed under Prokofiev in Paris in December 1930, and the two piano pieces *Veshchi v sebe* ('Things in Themselves', op.45, 1928), given their première by the composer in New York early in 1930 – as well as the Third Symphony, Prokofiev received in the autumn of 1928 what was his fourth ballet commission from Diaghilev and the latter's last such request, resulting in *Bludnïy sïn* ('The Prodigal Son', op.46, 1928). With a scenario by Boris Kochno, this is a plain, retrospective work in the spirit of neo-classicism; the première took place in Paris under Prokofiev on 21 May 1929. He then worked material from the ballet into his Fourth Symphony op.47 (1930), commissioned for the 50th anniversary of the Boston SO and given its première on 14 November 1930 without any very great success.

The Gambler had its première in Brussels on 29 April 1929, and maintained its place in the repertory for two years. With a view to a planned performance in Leningrad which never materialized, Prokofiev had thoroughly revised the opera in 1927. With its directly literary emphasis and eschewal of closed musical forms, and its contemplative ensembles or large choruses, it belongs to the tradition of 'opéra dialogué' which had been begun at the end of the 1860s by Dargomïzhsky with *The Stone Guest* and Musorgsky with *The Marriage*, and was continued by Rimsky-Korsakov with *Mozart and Salieri* and Rachmaninoff with *The Miserly Knight*. Prokofiev followed this tradition by incorporating passages of direct speech from Dostoyevsky's novel into the libretto, basing

4. Autograph sketches for the opening of Prokofiev's Violin Concerto no.2, composed 1935 (RUS-Mcm)

his formal construction on a differentiated system of characteristic motifs, and using no choruses except in the scene in the gambling hall (Act 4, scene v). The work shows Prokofiev's liking for exaggerated, grotesque, even humiliating situations, in which the protagonists are under great psychological pressure, so that a very tense and chromatically dense language is appropriate. His liking for comic situations is also clear, for instance in the unexpected appearance of the grandmother when the other characters think she is on her deathbed and are already dividing up her inheritance. The rapid changes of mood and expression, and a certain brevity in the various sections of the music, produce an effect close to the techniques of film cutting.

In the early 1930s Prokofiev wrote a series of commissioned works. His First String Quartet op.50 (1930) was written for the Library of Congress in Washington, which was commissioning works by famous composers for its collection of manuscripts. The quartet is in three movements, and strikes a neo-classical note which the composer achieved, according to his own account of it, by turning back to an intensive study of Beethoven's quartets. In the summer of 1930 Serge Lifar, ballet master of the Paris Opéra, commissioned a work to be dedicated to the memory of Diaghilev. Under the title of *Na Dnepre* ('On the Dnieper' or 'Sur le Borysthène' after the old name of the river), Prokofiev wrote an atmospheric piece again without any real plot. Stylistically it is similar to *The Prodigal Son*, and at its première on 16 December 1932 it was such a dismal failure, despite the expensive production (with sets by Larionov and costumes by Goncharova), that Lifar removed it from the repertory at once and did not pay Prokofiev the full agreed sum of 100,000 francs. There was a lawsuit, which Prokofiev won. He wrote his Fourth Piano Concerto op.53 (1931) for the Austrian pianist Paul Wittgenstein, who had lost his right hand in World War I. Wittgenstein rejected the concerto, and Prokofiev never carried out his plan to revise it for both hands and the work was not performed until 1956. The last two great works to be first heard by western European audiences were the Fifth Piano Concerto op.55 (1932, première on 31 October 1932 in Berlin under Furtwängler), which was not very well received, and the Second Violin Concerto op.63 (1935), commissioned by admirers of Robert Soetans, who gave the première in Madrid on 1 December 1935. The work's clear tonality and reminiscences of Russian folklore are indications of the 'new simplicity' for which Prokofiev was striving in the early 1930s.

(ii) Contacts with the Soviet Union. Directly after settling in Europe, Prokofiev resumed contacts with the Soviet Union, and despite his increasing success in the 1920s and early 30s, in the USA as well as western Europe, he purposely intensified them. A new journal which appeared in 1923 and ceased publication after three numbers) – *K novïm beregam* ('Towards New Shores'), named after a

famous remark of Musorgsky's – devoted four articles to Prokofiev in its first issue, giving an extensive and very laudatory account of his work and activities abroad. From then on almost all his works were played regularly in the Soviet Union (as well as the west), some even having their premières there: the Bal'mont Poems in 1923, the G minor Quintet and the Overture op.42 in 1927, the suite from *Le pas d'acier* in 1928, the Sinfonietta in 1929, the piano pieces from the *Prodigal Son* and the Sonata for two violins in 1932, the Symphonic Song in 1934 and the Three Piano Pieces op.59 in 1935.

In addition, and beginning with the cantata *They are Seven*, many works appeared in print not under Koussevitzky's Gutheil imprint but in the Soviet Union (published by the All Russian Music Publishing House – later Muzgiz, the State Music Publishing House); the Soviet publications included the piano scores of *Le pas d'acier* and *On the Dnieper*, which at the time had been performed complete only in western Europe. Prokofiev must have intended to make sure that, though absent, he was prominent in Soviet musical life. It is very likely, too, that he kept open the possibility of his return, at least after 1922. He was never an emigrant in the legal sense: when France granted the Soviet Union diplomatic recognition in 1924, he registered as a Soviet citizen, and never concealed the fact that in principle he welcomed the developments in his native land.

In January 1927 he accepted an invitation to make a two-month concert tour in the Soviet Union. He gave eight concerts in Moscow, with four different programmes, including the Third Piano Concerto, which he played with Persimfans, a conductorless orchestra. In Leningrad he gave the same four programmes, attended a performance of *The Love for Three Oranges*, which had become part of the repertory there, and encountered several works by young Soviet composers, including Shostakovich's First Sonata and a septet (also known as a chamber symphony) by Gavriil Popov, which he particularly liked. Then there were concerts in Kharkiv, Kiev and Odessa. A tour of the Soviet Union planned for 1928 fell through; in November 1929 Prokofiev travelled to Moscow again, but did not appear as a pianist because he had injured his hands in a car accident. He attended rehearsals for a new production of *The Love for Three Oranges*, which had now established itself firmly in the Moscow repertory as well. A plan for staging *Le pas d'acier* – the symphonic suite from it had been performed several times – was thwarted by the resistance of the Russian Association of Proletarian Musicians, which supported an aesthetic of primitive affirmation and saw the ballet as a caricature of Soviet ideals. Prokofiev visited the Soviet Union for the third time in November 1932 and took a flat in Moscow, but he still made Paris his main home. He travelled to Paris from Moscow for the première of the ballet *On the Dnieper*, and from there went on to the USA for a three-month tour.

He recorded his impressions of his first visit to the Soviet Union in a diary; its existence was long known to Soviet musicologists, but they ventured to publish it only in the context of perestroika and to celebrate the centenary of the composer's birth. Two aspects of this diary made any earlier publication in the Soviet Union seem inopportune. Firstly, Prokofiev regarded the political system sceptically and sometimes even critically (in contrast to his public pronouncements and despite his agreement with it in principle). Secondly, he was interested principally in musical life under the new circumstances, and the opportunities it could offer him. The political system interested him only in so far as it might be useful or injurious to his career, and in connection with the compromises he might have to make. He obviously regarded the diary as a document for his eyes only, intended to help him decide between the Soviet Union and the west. It was also meant as an antidote to the blurred judgements or rose-tinted visions of memory. Prokofiev's keen analytical gift of observation is revealed. He soberly noted the changes that had occurred during the ten years of his absence. He was clear in his own mind that art in the Soviet Union was subject to political and social ideals, and that these ideals – not criteria immanent in art – would decide between success and failure in any doubtful case. By 1932 at the latest he had consciously assessed the field of tension between adaptation and self-assertion. Moreover, since the end of the 1920s he had been seeking to find a simpler musical language, and he believed his aesthetic of a new simplicity could be combined with the official Soviet concept of art. So much does he make of this accord in his comments in the press (*Vechernaya Moskva*, 6 December 1932; *Sovetskaya muzïka* 1933, no.3; *Isvestiya*, 16 November 1934; *Vechernaya Moskva*, 23 January 1936) that it is difficult to know which was more important to him: proclaiming his own ideal of art or paying homage to an aesthetic dictated from outside. He signalled his readiness to adapt with a collection of folk and choral songs (op.66, 1935), one of which, 'Anyutka', was awarded a prize by *Pravda*. The Soviet side came halfway to meet him too: in 1932 he was commissioned to write film music for *Poruchnik Kizhe* ('Lieutenant Kijé') and a little later to write incidental music for *Yegipetskiye nochi* ('Egyptian Nights'), a Muscovite collage made from Shaw's *Caesar and Cleopatra*, Shakespeare's *Antony and Cleopatra* and Pushkin. Both scores provided material for symphonic suites (opp.60 and 61, 1934). At the end of 1934 the Leningrad opera house (now renamed after Sergey Kirov, an associate of Stalin's who had been murdered on 1 April that year) negotiated with Prokofiev for the ballet *Romeo and Juliet*; when this project fell through, the Bol'shoy in Moscow commissioned the score.

4. The USSR, 1936–53.

(i) Return and first Soviet works. In the summer of 1936 Prokofiev finally moved to the Soviet Union, to live there with his wife and two sons. Stalin's power politics were approaching their ghastly climax in the purges at this time. It must remain an open question how far Prokofiev was able to assess the existing political structures, which were very dangerous for his non-Russian wife. In his public utterances, he explained his return in terms of patriotic feeling and homesickness. 'I must see the real winter again', and 'hear the Russian language in my ears', he told French friends. Such sentiments seem out of tune with his down-to-earth, clear-thinking character. He must have had other and more convincing reasons for taking such a step, and we can only conjecture what they were. Between 1926 and 1936 Shostakovich was the leading, most highly regarded and most internationally renowned composer of the Soviet Union. His second opera, *Lady Macbeth of the Mtsensk District* (given its première on 22 January 1934) had been performed 83 times in Leningrad and 94 times in Moscow within two years, until it found

itself a political target. On 28 January 1936 the article 'Chaos instead of Music' appeared in *Pravda*. Ostensibly it was a venomous condemnation of the opera and its composer, but first and foremost it was a politico-cultural manifesto seeking to base all Soviet art on the principles of 'socialist realism'. It terrified all Soviet artists and shook their creative confidence; Shostakovich's career as a composer was at a temporary end, only to be re-established with the première of his Fifth Symphony in 1937. One reason for Prokofiev's departure from America had been Rachmaninoff's greater success, and in Europe he came second to Stravinsky; he returned to the Soviet Union just when Shostakovich was out of the running as a rival.

We must assume that a decision to return to the Soviet Union was also made palatable to him by promises of privileges. He retained his passport, with which he could travel abroad without the humiliating petitions usually necessary in the Soviet Union, and he continued to give guest performances in Europe and even undertook an American tour in 1938. Then the trap snapped shut: he was asked to hand in his passport for the transaction of a formality, but did not get it back, so that there could be no question of further tours abroad, as he later told the violinist Mikhail Goldstein.

As a composer, Prokofiev was cautious and ready to adapt in the first years after his return. In 1936 and 1937, like all composers in the Soviet Union, he was busy with works to mark the centenary of Pushkin's death, celebrated as a great event. However, his music for a film version of *Pikovaya dama* ('The Queen of Spades') and two sets of incidental music for stage performances of *Boris Godunov* and *Yevgeny Onegin* were not performed; some of their themes were later incorporated into other works (*Semyon Kotko*, *War and Peace*, Eighth Sonata). At the same time he was writing music for children, no doubt partly with his growing sons in mind. In addition, music for children was highly valued in the Soviet Union, and even composers of the first rank took it very seriously. Prokofiev wrote Music for Children, twelve easy piano pieces (op.65, 1935, seven of them arranged for orchestra in 1941), three songs for children (op.68, 1936–9), and the rightly famous symphonic fairytale *Petya i volk* ('Peter and the Wolf', op.67, 1936), for which he wrote the text himself, providing opportunities to use instruments and tone colours with sensitive educational skill. He was also turning to genres favoured by official Soviet cultural policy, as in his Four Marches op.69 for wind band (1935–7), Russian Overture op.72 inspired by folklore (1936), op.79 song cycle on patriotic texts (1939) and four patriotic cantatas. However, *Pesni nashikh dney* ('Songs of Our Times' op.76), a suite in nine movements for solo voices, chorus and orchestra (1937) was criticized by Soviet writers as excessively simple, and the cantata for the 20th anniversary of the October Revolution (op.74, 1936–7) – a monumental work in ten movements for two professional choruses, an amateur chorus, symphony orchestra, wind band, percussion ensemble and accordion band, to texts by Marx, Lenin and Stalin – was not granted permission for performance by the Committee for Artistic Affairs, on the grounds that it did not meet the criteria of 'socialist realism'. Not until April 1966 was the work performed. In 1939, for Stalin's 60th birthday, Prokofiev wrote the cantata *Zdravitsa* ('Hail to Stalin', op.85), an occasional work on folk tunes of the most varied nationalities of the Soviet Union and one of countless works of homage to Stalin from this period. With a revised text, it maintained its place in the Soviet repertory even after the dictator's death. The cantata *Aleksandr Nevskiy* (op.78, 1938–9), drawn from the score for Eisenstein's film, was the only work of this time to be praised outside as well as within the Soviet Union. Prokofiev's second work for Eisenstein, the film music for *Ivan Grozniÿ* ('Ivan the Terrible', op.16, 1942–5) also exists in an oratorio arrangement by the conductor Abram Stasevich (1961).

Only two works of Prokofiev's first years back in the Soviet Union are not marked by political considerations. He had begun his Cello Concerto op.58 in 1933, but did not finish it until 1938. It failed miserably at its première (with Berezovsky on 26 November 1939), and Prokofiev revised it, following the critical advice of Myaskovsky. In this version Pyatigorsky performed it in the USA in 1940; then a further revision was made in 1950 at the urging of Rostropovich. The other non-political work, *Romeo and Juliet*, had been finished in 1936; while writing it Prokofiev considered giving the story a happy ending, but rejected the idea as sacrilege to Shakespeare. Since the Bol′shoy rejected the work as too complicated, and the Leningrad School of Choreography also backed out of a contract made in 1937, the première did not take place until December 1938, and then in Brno. Prokofiev had previously arranged two symphonic suites (opp.64a and b) and a collection of ten piano pieces (op.75) from the ballet, and these were performed very successfully in 1936 and 1937. In 1946 he arranged a third orchestral suite (op.101). The first performance of the ballet in Leningrad was on 11 January 1940, in a magnificent production with the prima ballerina Galina Ulanova as Juliet. At the request of the choreographer, Leonid Lavrovsky, Prokofiev made many alterations and composed two extra numbers (no.14, Juliet's Variations, and no.20, Romeo's Variations). *Romeo and Juliet* soon became a showpiece of Soviet ballet and entered the international repertory.

Prokofiev returned to opera after a break of over ten years with *Semyon Kotko* op.81 (1939), attempting to treat a modern Soviet subject in the manner of the 'song opera' then officially favoured, for which Ivan Dzerzhinsky's now long-forgotten *Quiet Flows the Don* was regarded as the model. Prokofiev's opera was based on the story *I am the Son of the Working People* by Valentin Katayev, published in 1937, and Katayev worked with the composer on the libretto. The action takes place in the Ukraine during the Civil War, with young revolutionaries as the protagonists. In his setting of the text Prokofiev complied with the demand for song-like music, the folk idiom, revolutionary emotion and propagandist art. Though the music is distinguished from other Soviet works of this period (for instance, Khrennikov's *In the Storm*) by a fine network of characteristic motifs, short sections in the manner of film scenes and a wealth of ideas, and though Prokofiev found an intelligent way of presenting the idea of socialist realism, this very connection with the ideals of the time is an obstacle to the wider dissemination of the opera. The work also failed in the Soviet Union. Preparations dragged on a long time, because Meyerhold, who was to direct the work, was arrested in June 1939. As a result, the première did not take place until 23 June 1940. The opera set off a violent dispute, which was won by the narrow-minded cultural

ideologues, so that the piece was taken out of the repertory in 1941 and not performed again until after Prokofiev's death.

In spite of this failure he immediately began another operatic project, *Obrucheniye v monastïre* ('Betrothal in a Monastery', op.86, 1940), based on Sheridan's comedy of mistaken identity, *The Duenna*, made into a libretto by Mira Mendel′son, Prokofiev's new companion. The opera is neo-classical, with clear references to Mozart and Rossini. It is often described as a Soviet counterpart to *The Love for Three Oranges*, though it is far inferior in musical versatility, comedy of situation and irony with respect to the operatic genre. It did not have its première until after the end of the war, on 5 May 1946 in Prague (the first performance in Leningrad followed on 3 November), and it too was unable to maintain its place in the repertory.

(ii) World War II and after. On 21 June 1941 Germany attacked the Soviet Union, and the so-called 'Great War of the Fatherland' began. Prokofiev was evacuated in August, like all important artists. His travels took him to Nalchik in the northern Caucasus, then in November to Tbilisi, in June 1942 to Alma-Ata, in June 1943 to Perm′ in the Urals, and back to Moscow in October 1943. During this period he was, like Myaskovsky and several other composers, awarded the highly regarded title Honoured Artist of the RSFSR. His creative work during the war years was along two lines: he reacted to the events of the war with propaganda music, and he devoted himself increasingly to chamber works. He completed the three piano sonatas he had begun simultaneously in 1939 (opp.82–4), and they were given their first performances during the war by Sviatoslav Richter and Emil Gilels. The Ninth Sonata op.103 was added in 1947, and he was planning two more sonatas in 1953, the year of his death. The Second String Quartet op.92 (1941) is based on Kabardinian themes from Nalchik, which give this work a modal character and brittle charm characteristic of the folk music of one of the areas to which Prokofiev had been evacuated. The Flute Sonata op.94 (1943), of which the composer also arranged a version for violin as his Second Violin Sonata, became a popular repertory piece thanks to its playful elegance. With its dark colours, the First Violin Sonata op.80, begun in 1938 and completed in 1946, seems like an intimate reflection of the events of the war. In 1947 came a Sonata op.115 for unaccompanied violin. All these works are without non-musical function; like the Fifth Symphony op.100 (1944), they display the freely tonal harmonies, melodic and thematic wealth of ideas and lyrical expressivity characteristic of the mature Prokofiev – qualities that have established these works firmly in the international repertory.

Of those compositions relating to the war, the only ones to find much favour in the Soviet Union were the March op.99 for military band (1943–4) and the arrangements of folksongs for voice and piano (op.104, 1944), intended as an expression of patriotic feeling. The first two songs in the collection, 'In the Summer of the Snowball Bush' and 'The Green Grove', were even awarded a prize. The other war-related works – the Symphonic March op.88 (1941), the Seven Choral Songs op.89 (1941–2), the symphonic suite *The Year 1941* op.90 and the *Ballad of an Unknown Boy* op.93 (1942–3) – were honestly intended as expressions of resounding patriotism, yet they too were negatively judged by critics whose opinion carried weight (Shostakovich and Myaskovsky), and were soon forgotten. The sensation caused in the Allied countries by Shostakovich's Seventh Symphony (1941) also renewed western interest in Prokofiev's music during the war, especially in England and the USA – interest not in the explicitly patriotic Soviet works, but in the cantata *Aleksandr Nevskiy*, the Fifth Symphony, the Sixth and Seventh Sonatas, the two suites from *Romeo and Juliet*, and earlier compositions such as the Classical Symphony, the *Scythian Suite*, *Peter and the Wolf*, and the suite from the film music to *Lieutenant Kijé*.

The main works of the war years are the opera *Voyna i mir* ('War and Peace', op.91), after Tolstoy, which was written in its first version in 1941–2 and had its première in a concert performance during the war, on 16 October 1944, and the ballet *Zolushka* ('Cinderella', op.87, 1940–44). The latter did not receive its première until 21 November 1945, in Moscow, and joined the international repertory, if in a place second to *Romeo and Juliet*. Then the end of the war was celebrated by Soviet composers with festive works. Prokofiev contributed his *Ode on the End of the War* op.105 (1945), a monumental work in one movement for eight harps, four pianos, wind ensemble, percussion and double basses, which was intended as a mighty dithyramb, with the archaic Russian sound of bells, but baffled the audience at its première on 12 November 1945 and was condemned by the critics.

(iii) 'Zhdanovshchina'. During the war art had been less strictly supervised by the state. Certain works (in particular literary works by Zoshchenko and Akhmatova, and the films of Eisenstein, but also music by Shostakovich and Prokofiev) had aroused great interest in the west, and had deviated from the ideal of 'socialist realism'. But in the years 1946–8 four major resolutions affecting cultural policy were passed. The man responsible was Andrey Zhdanov, the leading cultural ideologue of the Stalinist period, and they paralysed cultural life until Stalin's death in 1953. Hence the informal term 'Zhdanovschchina' for this terrible period, though Zhdanov himself had died suddenly in August 1948. The first resolution, of 14 August 1946, related to the Leningrad literary journals *Zvezda* and *Leningrad*; the second, of 26 August 1946, affected the theatrical repertory; the third, of 4 September 1946, was aimed at the Soviet film industry, in particular Eisenstein and the second part of *Ivan the Terrible*, for which Prokofiev had written the score. The resolution on music was not passed until two years later. These state measures were intended to bring art back to a unified party line, emphasizing the folk tradition and an affirmative outlook. At first Prokofiev did not let them affect him; he was busy with three symphonic suites from *Cinderella*, and another suite, of waltzes from various of his works (opp.107–10, all 1946). At the same time he was completing the Sixth Symphony, a thoughtful work in three movements which he initially wished to dedicate to the memory of Beethoven, and he made a new version of the Fourth Symphony (op.112, 1947), though this was not performed until 1957. He also paid tribute to the 30th anniversary of the October Revolution with two works: the symphonic poem *Tridtsat′ let* ('Thirty Years', op.113) and the cantata *Rastsvetay moguchiy kray* ('Flourish, Mighty Homeland', op.114), to a text by Yevgeny Dolmatovsky.

On 10 February 1948 the resolution 'On the Opera "The Great Friendship" by Vanno Muradeli' was passed.

Perhaps the saddest document in Soviet musical history, this decree was directed not so much against the composer Muradeli – forgotten today, along with the work which aroused Stalin's ire at the time and which was the ostensible occasion for official criticism – as against the great composers of the Soviet Union. To Prokofiev, it was a blow from which he did not recover. After 1948 he was a sick and deeply insecure man; the few further works he wrote before his death bear traces of this insecurity. What happened at the time can be reconstructed from a special number of *Sovetskaya muzïka* published in 1991 on the centenary of Prokofiev's birth. Four days after the passing of the resolution, a ban on the performance of certain works by Prokofiev was issued by the highest authority; on 16 February Prokofiev acknowledged his alleged artistic errors in a letter of self-abasement; this letter was read out to a meeting of the Union of Composers on 17 February; on 20 February his first wife Lina was arrested; on 3 December his *Povest'o nastoyashchem cheloveke* ('The Story of a Real Man') was given a private performance before members of the Union of Composers at the Kirov and so savagely criticized that there could be no question of a public première; on 28 December he again accused himself of his alleged artistic errors in an open letter to the Union of Composers.

In the resolution Zhdanov had attacked Shostakovich, Prokofiev, Khachaturian, Myaskovsky and several other composers by name, denouncing their works for 'formalistic distortions and anti-democratic tendencies', as a 'rejection of the principles of classical music' and for the 'dissemination of atonality'. Comprehensive polemics of this nature were nothing new to Soviet artists. Zhdanov referred expressly to the article attacking Shostakovich's *Lady Macbeth* which had appeared in *Pravda* in 1936, and it was not forgotten that the composer had been regarded thereafter as *persona non grata*, had lost the positions he held and even faced arrest. The artists rebuked for nonconformity in 1946 had also lost their opportunities to work and be published. It was clear to the composers, therefore, what this resolution meant for them. Only Prokofiev, who had hitherto remained unaffected, does not seem to have understood the threat represented by the Zhdanov tribunal at once. Rostropovich commented that Prokofiev had 'always been a great child, of astonishing naivety. . . . When Zhdanov made his caustic speech attacking the composers in the Central Committee, Prokofiev was in the hall. There was a deathly silence, but he went on talking to his neighbour, the next conductor of *War and Peace*'.

In his long letter of 16 February 1948 to the Union of Composers, Prokofiev wrote that his state of health did not allow him to attend their meeting; he welcomed the resolution because it had created 'the conditions for the recovery of the entire organism of Soviet music'. It was particularly important, he continued, because it had shown 'that the formalistic movement which leads to the impoverishment and decline of music is foreign to the Soviet people and because it has shown us, with the utmost clarity, the aims toward which we must strive in order to serve the Soviet people as best we can'. Passages of self-accusation and justification follow. Under the influence of western currents, Prokofiev said, he was guilty of formalism and atonality, but in such works as *Romeo and Juliet*, *Aleksandr Nevskiy*, the cantata *Hail to Stalin* and the Fifth Symphony, he hoped he had overcome these tendencies successfully. Finally he expressed his gratitude to the party 'for the clear guidelines laid down by the resolution'.

Here we see a great artist forced by an unspoken but only too comprehensible threat to ape the language of narrow-minded cultural bureaucrats, deny his own talent and abase himself. Such confessions and self-accusations were usual in Soviet cultural politics. After *Lady Macbeth*, Shostakovich had found a specific musical vocabulary with which he could reflect official criticism, the threat of power, and the tragic events in the Soviet Union. He reacted to the resolution with the choral works *Song of the Forests* and *The Sun Shines Over Our Homeland*, wrote a primitive song of praise to Stalin which has only recently become known again in the Soviet Union, and apart from that composed works to be put quietly away (the First Violin Concerto, the cycle *From Jewish Folk Poetry*), works in which he took the mechanisms of suppression as his theme. Prokofiev did not have such a vocabulary at his disposal, nor did he need it, for in his view tragic themes and a critical relation to contemporary history did not have a place in music; he had thought that art and politics could be kept separate. Accordingly, he was helpless and baffled in the face of the resolution. He obviously hoped to come to some agreement with his tormentors, for in his letter to the Union of Composers he promised to take the recommendations of the Central Committee to heart in his new opera, *The Story of a Real Man*, to strive for a simple harmonic language and to make use of Russian folksongs – and he meant his promise seriously.

When Prokofiev wrote his letter of contrition he did not know that some of his works were already banned. The extract concerning him from 'Order no.17 of the Committee for Artistic Affairs of the Ministerial Council of the USSR, Main Department for Control of Theatrical and Musical Programmes', dated Moscow, 14 February 1949, runs:

> The following works of Soviet composers at present on the programmes of concert organizations are to be removed from the repertory and may not be played: Prokofiev: symphonic suite '1941', *Ode on the End of the War*, Festive Poem [*Vstrecha Volgi s Donom*], Cantata on the 30th Anniversary of the October Revolution, *Ballad of an Unknown Boy*, Piano Sonata no.6.

The list of banned works is surprising and revealing, for it affects not works which might be suspected of 'formalism', but compositions with unambiguously Soviet subjects. It is relatively improbable that Stalin's cultural ideologues did not see the principles of 'socialist realism' realized in these particular works (although the *Ode on the End of the War* and the *Ballad of an Unknown Boy* were not published in Prokofiev's lifetime). The list of banned works, rather, is arbitrarily drawn up with deliberate intent: only in this way could music directors and programme planners be so thoroughly alarmed that they would not venture to include any works by Prokofiev in the repertory at all. A good year later the ban was lifted, in a decree dated 16 March 1949 and signed by Stalin himself. There was a very practical reason for the rescinding. Skostakovich was to travel to the World Peace Congress in the USA in the spring of 1949, at Stalin's express wish. He declined to go on the grounds that he would not know what to say when he was asked why his and his colleagues' compositions were not played at home.

The heaviest and most threatening blow to Prokofiev followed after Zhdanov's tribunal and his letter of contrition when his first wife was arrested, accused of spying and treachery, and condemned to 20 years in a labour camp. Prokofiev heard the news from his sons, and he must have tormented himself with self-reproaches, for it was possible that he had contributed to the situation. As early as 1941, he had left his family and gone to live with the writer Mira Mendel'son, who wrote the librettos for his operas *Betrothal in a Monastery*, *War and Peace* and *The Story of a Real Man* and the scenario for the ballet *Skaz o kammenom tsvetke* ('The Stone Flower'). 'When my father decided to legalize his new marriage', Svyatoslav Prokofiev recalled:

> the court told him, much to his relief, that a divorce was unnecessary: the marriage he had contracted on 1 October 1923 in Ettal in Germany was declared null and void because it had not been registered in a Soviet consulate. Mother, who had gone to the USSR as his wife, ceased to be his wife at all at some mysterious moment. Father, convinced that his marriage to mother was legal, turned to the next highest court, but there he was told the same thing – so he could marry his second wife without going through a divorce first.

In view of the arbitary and unpredictable Soviet system, it is hard to decide whether there is any connection linking Prokofiev's public humiliation, his marriage to Mira Mendel'son and the arrest of Lina Prokofieva. Nor should Prokofiev be blamed for acting irresponsibly and risking his first wife's arrest in marrying again. He was under enormous psychological pressure, and lived in constant anxiety after 1948: if Lina had been arrested and deported on the flimsiest of grounds, then the same thing could happen to his two sons, himself, or even Mira Mendel'son. Lina spent eight years in labour camps, and was released in 1956 on the grounds of 'suspension of the proceedings'. She died on 3 January 1989 in London.

Prokofiev hoped to rehabilitate himself with his seventh opera, *The Story of a Real Man* op.117 (1947–8), based on the story of the same name by the war reporter Boris Polevoy, who was awarded the Stalin Prize, second class, in 1946. The plot concerns an airman who loses both legs when his plane is shot down, but who fights heroically on. Prokofiev's failure was the result of his attempt to fulfil the demands of the resolution too scrupulously. The patriotic and sentimental tone is overdone, the musical language so simple, unspecific and banal over long passages that the opera became an unintentional caricature of the principles of 'social realism'. Prokofiev tried to defend himself against its rejection in his second long letter to the Union of Composers, which shows how earnestly he had wanted to adapt and how unjustly he now felt he had been treated:

> It was clear from the resolution . . . that the party and the government allot special significance to operas on Soviet subjects, and that the composition of such an opera is particularly important for the Soviet people. Consequently I felt bound to devote my powers to a work in this area, and I laboured unceasingly for almost a year on a Soviet opera . . . In my opera I endeavoured to be as melodic as possible and write melodies that would be very easily understood. In the depiction of my hero I was particularly concerned to indicate the internal world of a Soviet man, love of the homeland and Soviet patriotism. It gave me pain to hear the comrades' critical opinions. However, I would rather write operas on Soviet subjects, and even hear criticism if they do not succeed, than not to write and to hear no criticism.

This letter, like *The Story of a Real Man* itself, betrays a dire sense of helplessness and artistic insecurity. After these events Prokofiev composed very little more: there could be no compromise between the narrow-minded official aesthetic and his own concept of art, and he found no critical answer to the humiliations he had to endure. In addition he was a sick man; he suffered from nervous headaches and had several heart attacks, and his doctors strictly forbade work. His works now were seldom performed or printed, so that he had economic problems too. On 20 March 1952 the Committee for Artistic Affairs made a very modest petition to the Central Committee of the Communist Party, asking the composer to be allowed a pension of 3000 roubles a month and a single payment of 25,000 roubles. The request was partially granted with a decree of 22 April 1952 giving him 2000 roubles a month. This document too is signed by Stalin himself.

In the last years of his life Prokofiev was working further on *War and Peace* and trying to change and extend his style in conformity with the 1948 resolution. The opera had been given a second concert performance directly after the end of the war, on 7 June 1945. Following the advice of the conductor Samuil Samosud, Prokofiev had added two scenes to the original version (the new additions were scene ii, the ball at Catherine's court, and scene x, the council of war in Fili). Of this second version, now in 13-scenes and a choral prologue, and intended to be played over two evenings, the first part (eight scenes) was performed on 12 June 1946 in Leningrad in a production by Boris Pokrovsky, conducted by Samosud, and met with a favourable response. No one dared perform the second part in the poisoned atmosphere of the three first resolutions affecting art, and after 1948 performance became absolutely unthinkable. In the hope that the opera might yet be staged, Prokofiev worked until 1953 on a third version, cut to 11 scenes again. It was not given even in a concert performance until the summer of 1953, after the composer's death; the stage production followed in Leningrad on 1 April 1955. The 13 scene version, much cut, was performed on 8 November 1955 at the Nemirovich-Danchenko Theatre in Moscow; the première of the full opera took place on 15 December 1959 at the Bolshoy.

Besides working on *War and Peace*, Prokofiev was writing works in the spirit of 'social realism': a 'Soldiers' Marching Song' (1950), the eight-movement suite *Zimniy kostyor* ('Winter Bonfire', op.122, 1949), the oratorio *Na strashe mira* ('On Guard for Peace', op.124, 1950) and the symphonic festive poem *Vstrecha Volgi s Donom* ('The Meeting of the Volga and the Don', op.130, 1951) for the opening of the Volga-Don Canal. The fairytale ballet *The Stone Flower* op.118 (1948–50) did not have its première until 12 February 1954, and has not kept a place in the repertory, nor have the four orchestral suites Prokofiev drew from it (opp.126–9, all 1951). The late instrumental works are curiously colourless, and conspicuous for an almost excessive tendency to simplicity; there is nothing here of the lively nonconformity of the young Prokofiev. This is true also of the Symphonic Concerto op.125 for cello and orchestra (1950–52) and the unfinished Cello Concertino op.133 (1952), both written for Rostropovich, and also the Seventh Symphony op.131 (1951–2).

From the first Prokofiev sought to conduct a dialogue with his public by adapting to prevailing tendencies. As a young composer he startled his audiences with his provocative tone colours and tone combinations, his many dissonances and his sheer volume of sound. He found inspiration in the Russian futurists of Mayaskovsky's

5. Sergey Prokofiev, 1951

circle, but also in Stravinsky's ballets, then seen as challenging. In other words, he took his bearings from those who represented the avant garde of the time. In the USA he strove, as he said, to find a simpler musical language without sacrificing his artistic integrity, and *The Love for Three Oranges* was the impressive result. In Europe he reacted to a more sophisticated public with differentiated formal structures and more complex harmony. Finally, in the Soviet Union, he adapted to the never clearly defined maxims of 'socialist realism'. However, in his comments intended for public consumption he always emphasized that a simpler musical language was not to be confused with excessive simplicity and composing to a stereotyped pattern, and in the USSR too, for all his caution, he succeeded in retaining his unmistakable style. It must remain an open question whether the many works concretely motivated by Soviet events, in which function takes precedence to the extent that artistic quality is irrelevant, were written out of genuine conviction or should be seen as efforts to conform. Prokofiev held no position in cultural politics, for instance in the Union of Composers, nor did he ever take a teaching post. Unlike Shostakovich and many of his colleagues, he never became a member of the Communist Party, so that he retained a certain freedom of space in which to manoeuvre. It was not until 1948 that Soviet cultural policy really caught up with him and destroyed him both artistically and physically.

A large number of the works that are free from political professions have a firm place in the international repertory, and he is rightly counted one of the major composers of the 20th century. He was not a great influence on younger generations of composers, unlike Schoenberg, Berg and Webern, Stravinsky, Bartók and Messiaen – except in the Soviet Union, where Soviet-trained musicians of a whole generation took their guidelines from either Shostakovich or Prokofiev, raising the achievement of one or the other to the status of a philosophy of life, and passed on their stylistic features to those who followed.

Prokofiev's death on 5 March 1953 passed almost unnoticed, for Stalin died on that same day.

WORKS

Editions: *Sergey Prokof'yev: sobraniye soch i neniy* [complete works], ed. N.P. Anosov and others [20 vols.] (1955–67/*R* as *The Collected Works in 80 Volumes*, New York, 1979/*R* as *The Complete Works in 93 Volumes* [with addns], New York, 1980)

OPERAS

op.	
–	Velikan [The Giant] (3, Prokofiev and others), vs, 1900, unpubd; Kalnga guberniya, private home, sum.1901
–	Na pustïnnïkh ostrovakh [On Desert Islands], (ov. and 3 scenes of Act 1, Prokofiev), 1900–02, unpubd
–	Pir vo vremya chumï [A Feast in Time of Plague] (1, Prokofiev, after A.S. Pushkin), vs, 1903, 1 scene rev. 1908–9, unpubd
–	Undina (4, M. Kilstett, after F. de la Motte Fouqué), 1904–7, unpubd
13	Maddalena (1, Prokofiev, after M. Lieven), 1911–13, inc., concert perf., BBC, London, 25 March 1979 orchd E. Downes]
24	Igrok [The Gambler] (4, Prokofiev, after F. Dostoyevsky), 1915–17, rev. 1927–8; Brussels, Monnaie, cond. M. Corneil de Thoran, 29 April 1929; see orch works, op.49
33	Lyubov' k tryom apel'sinam [The Love for Three Oranges] (prol, 4, Prokofiev, after C. Gozzi), 1919; Chicago, Auditorium, cond. Prokofiev, 30 Dec 1921 as *L'amour des trois oranges*; see orch works, opp.33bis, 109, pf works, op.33ter
37	Ognennïy angel [The Fiery Angel] (5, Prokofiev, after V. Bryusov), 1919–23, rev. 1926–7; Act 2 in concert perf., Paris, cond. S. Koussevitzky, 14 June 1928; complete, Paris, Champs Elysées, cond. C. Bruck, 25 Nov 1954 as *L'ange de fen*; see orch works, op.44, vocal orch works, op.37bis
81	Semyon Kotko (5, V. Katayev, Prokofiev, after Katayev), 1939; Moscow, Stanislavsky, cond. M.N. Zhukov, 23 June 1940; see orch works, op.81bis
86	Obrucheniye v monastïre [Betrothal in a Monastery] (4, Prokofiev, M. Mendel'son, after R.B. Sheridan: *The Duenna*), 1940–41; Prague, National 5 May 1946; Russ. première, Leningrad, Kirov, cond. B. Khaikin, 3 Nov 1946; see orch works, op.123
-	Khan Buzay, 1942–, inc., unpubd
91	Voyna i mir [War and Peace] (5, epigraph, Prokofiev, after L. Tolstoy), 1941–3, rev. 1946–52; II scenes, concert perf., Moscow, Actors' Club, 16 Oct 1944; Pf I, 8 scenes, Leningrad, Malïy, cond. S.A. Samosud, 12 June 1946; complete (13 scenes), with cuts, Moscow, Stanislavsky-Nemirovich-Danchenko, cond. A. Shaverdov, 8 Nov 1955; Moscow, Bol'shoy, cond. A. Melik-Pashayev, 15 Dec 1959, first relatively complete perf., incl. epigraph; see orch works, op.110, pf works, op.96
117	Povest' o nastoyashchem cheloveke [The Story of a Real Man] (4, Prokofiev, Mendel'son, after B. Polevoy), 1947–8; private concert perf., Leningrad, Kirov, cond. Khaikin, 3 Dec 1948; staged, Moscow, Bol'shoy, cond. M.F. Ermler, 8 Oct 1960
–	Dalyokiye morya [Distant Seas] (Prokofiev, after V.A. Dïkhovichnï), 1948–, inc., unpubd; planned as op.118

BALLETS

20	Ala i Lolli (S. Gorodetsky, Prokofiev), 1914–15, withdrawn, unpubd; see orch works, op.20

21	Skazka pro shuta [The Tale of the Buffoon] (Chout) (6 scenes, Prokofiev, after A. Afanas'yev), 1915, rev. 1920; Paris, Gaîté Lyrique, cond. Prokofiev, 17 May 1921; see orch works, op.21bis
39	Trapetsiya [Trapeze] (1), 1924; Berlin, Romanov Company, late 1925; music also as Quintet, op.39
41	Stal'noy skok [The Steel Step] (Le pas d'acier) (2 scenes, Prokofiev, G. Yakulov), 1925–6; Paris, Sarah Bernhardt, cond. Désormière, 7 June 1927; see orch works, op.41bis
46	Bludnïy sïn [The Prodigal Son] (L'enfant prodigue) (3, B. Kochno), 1928–9; Paris, Sarah Bernhardt, cond. Prokofiev, 21 May 1929; see orch works, opp.46bis, 47
51	Na Dnepre [On the Dnieper] (Sur le Borysthène) (2 scenes, S. Lifar, Prokofiev), 1930–31; Paris, Opéra, cond. P. Gaubert, 16 Dec 1932; see orch works, op.51bis
64	Romeo i Dzhuletta [Romeo and Juliet] (4, Prokofiev, others, after W. Shakespeare), 1935–6; Brno, cond. Q. Arnoldi, 30 Dec 1938; see orch works, opp.64bis, 64ter, 101, pf works, op.75
87	Zolushka [Cinderella] (3, N. Volkov), 1940–44; Moscow, Bol'shoy, cond. Y. Fayer, 21 Nov 1945; see orch works, opp. 107–10, chamber works, op.97bis, pf works, opp.95, 97, 102
118	Skaz o kammenom tsvetke [The Tale of the Stone Flower] (4, L. Lavrovsky, Mendel'son, after P. Bazhov), 1948–53; Moscow, Bol'shoy, cond. Fayer, 12 Feb 1954; see orch works, opp. 126–9

OTHER DRAMATIC WORKS

incidental music

–	Yevipetskiye nochi [Egyptian Nights] (Pushkin, Shakespeare, G. Shaw), 1934; Moscow, Kamernïy, April 1935; see orch works, op.61
70bis	Boris Godunov (Pushkin, produced Meyergold), 1936; Moscow, Central Children's Theatre, April 1957; selected nos. from opp.70, 70bis and 71 arr. as Pushkiniana by Rozhdestvensky (1962)
71	Yevgeny Onegin (Pushkin), 1936, unpubd; BBC, London, 1 April 1980
77	Hamlet (Shakespeare), 1937–8; Leningrad, 15 May 1939; see pf works, op.77bis

film scores

–	Poruchnik Kizhe [Lieutenant Kijé], 1933, unpubd; film unrealized; see orch works, op.60, other vocal works, op.60bis
70	Pikovaya dama [The Queen of Spades] (after Pushkin), 1936; film unrealized
–	Aleksandr Nevskiy (dir. S. Eisenstein), Mez, chorus, orch, 1938, unpubd; see vocal orch works, op.78, other vocal works, op.78bis
–	Lermontov, 1941, unpubd; see orch works, op.110, pf works, op.96
–	Kotovskiy, 1942, unpubd
–	Partizanï v stepyakh ukrainï [The Partisans in the Ukrainian Steppes], 1942, unpubd
–	Tonya, 1942, unpubd; film unrealized
116	Ivan Groznïy [Ivan the Terrible] (dir. Eisenstein), part 1, 1942–4, part 2, 1945, unpubd; arr. as orat by A. Stasevich, 1961

ORCHESTRAL

–	Symphony, G, 1902, unpubd
–	Symphony no.2, e, 1908, unpubd, reworked in Piano Sonata no.4
5	Sinfonietta, A, 1909, rev. 1914–15, unpubd; rev. as op.48
6	Snï [Dreams], sym. tableau, 1910, unpubd
8	Osenneye [Autumnal Sketch], small orch, 1910, rev. 1915, 1934
10	Piano Concerto no.1, D♭, 1911–12
16	Piano Concerto no.2, g, 1912–13, unpubd; rev. 1923
19	Violin Concerto no.1, D, 1916–17
20	Suite from Ala i Lolli (Skifskaya syuita [Scythian Suite]), 1914–5
21bis	Suite from The Tale of the Buffoon, 1920
25	Symphony no.1 'Classical', D, 1916–17
26	Piano Concerto no.3, C, 1917–21
29bis	Andante from Piano Sonata no.4, 1934
33bis	Suite from The Love for Three Oranges, 1919, rev. 1924
34bis	Overture on Hebrew Themes [after chbr work], 1934
40	Symphony no.2, d, 1924–5; see also op.136
41bis	Suite from The Steel Step, 1926
42	Overture, B♭, chbr orch, 1926, unpubd
42bis	Overture, B♭, full orch, 1928

DOROTHEA REDEPENNING

Prokopiev, Trajko (*b* Kumanovo, 6 Nov 1909; *d* Belgrade, 20 Jan 1979). Macedonian composer and conductor. He completed his studies in composition with Milojević and Slavenski at the Belgrade Academy of Music in 1934, and in conducting at the Prague Conservatory with Dědeček in 1947. Before World War II he was a music teacher and choirmaster in several former Yugoslav towns; he then worked in Skopje's as conductor of the Skopje SO, head of Radio Skopje's music programmes (1947–50) and as conductor of the opera (1950–73). His music is lyrical and markedly national in its dependence on Macedonian folk music.

WORKS
(*selective list*)

Stage: Labin i Dojrana, ballet, 1958; Rastanak [Separation], opera, 1972

Other works: choral cycles, incl. Kumanovke, Lenka; solo songs, chamber and pf pieces

Principal publisher: Društvo na Kompozitorite na Makedonija

STANA DURIC-KLAJN

Proksch [Prokš], **Joseph** [Josef] (*b* Reichenberg [now Liberec], 4 Aug 1794; *d* Prague, 20 Dec 1864). Bohemian teacher. Blind from the age of 13, he studied at the Prague Institute for the Blind (1809–16) with Wenzel Franz Kozeluch (piano) and Václav Farník (clarinet) and, after touring the Austrian Empire, returned to teach in Reichenberg; he also studied briefly in Berlin (1825) with J.B. Logier, a fashionable exponent of a method of teaching by simultaneous group-performances on a number of pianos. From this Proksch evolved his own teaching method and in 1831 opened his Musikbildungsanstalt in Prague, a progressive institution which offered a comprehensive musical education and which, with its public examinations and concerts, contributed much to Prague's musical life, attracting the attention of visiting celebrities such as Liszt and Berlioz. Its pupils included Jindřich Kàan, Josef Krejčí, Wilhelmine Clauss-Szavardy as well as Smetana, whose years at the institute (1843–7), and as a private harmony and composition pupil of Proksch, had a far-reaching influence on his career as a virtuoso pianist

and composer. Proksch published several books explaining his methods together with volumes of teaching material. He composed several masses and other church music, a Singspiel, incidental music, a ballet, a string quartet, orchestral music, much piano music and many piano arrangements. After his death the work of the institute was carried on by his son Theodor (1843–76), his daughter Marie (1836–1900) and his great-nephew Robert Franz Proksch (*d* 1933).

JOHN TYRRELL

Prolatio (Lat.: 'prolation'). In the system of mensural notation of the late Middle Ages, the relationship between semibreve and minim. *See* NOTATION, §III, 3.

Prologue. A separate introductory scene to a play or opera serving to clarify and enhance the perceptual and conceptual frame of the drama, often by securing some manner of collusion with the audience. The prologue can variously outline the aesthetic intent of the work, introduce the subsequent action, and/or pay homage to a patron. The changing place of the prologue in operatic history holds an intriguing mirror to the fate of opera itself, reflecting the various political, social, cultural and philosophical pressures brought to bear on so problematic a genre.

The first opera librettists and composers exploited the prologue to proclaim the raison d'être of the new genre. In part the precedent was classical, but they also followed the example of the most obvious antecedent to opera, the pastoral play. In such pastorals as Guarini's *Il pastor fido*, the prologue permitted justification of a genre deprived of classical authority. Similar motives inspired the prologues in early opera. The librettist of the first *drammi per musica*, Ottavio Rinuccini, opted for straightforwardly classical figures: Ovid in *Dafne* (1598), Tragedy in *Euridice* (1600), Apollo in *Arianna* (1608). Similarly, in Monteverdi's *Orfeo* (1607) Music offers an important account of the new style. The choice reflects the insecurity of early opera over its dubious aesthetic foundations, and also the fear that contemporary audiences might find the notion of sung drama unacceptable. Poets responded by producing sententious verse in rigorous quatrains. This is matched by formalist musical settings, generally employing strophic techniques evoking earlier improvisatory formulae linked to epic verse. The generic associations, plus of course the speakers and their sentiments, claim credibility for an essentially incredible genre.

With the subsequent acceptance of opera (at least in some quarters), the justificatory prologue gradually lost ground. One can detect its residue in the deities that animate the prologues of Venetian 'public' opera, where disputes between the gods provide a motivation for the opera as exemplar of some moral or emotional issue (as in Monteverdi's *L'incoronazione di Poppea*, 1643). But here the rationale seems more one of allowing the stage designer leeway to display splendid scenic effects. Similarly, in France the prologue became a more straightforward encomium of the princely patron: Lully's *Alceste* (1674) refers specifically to Louis XIV's recent military campaigns in the Netherlands, equating his return with the Louis/Apollo who provides the *deus ex machina* for the happy ending.

The prologue remained a standard element in French opera until Rameau's *Zoroastre* (1749). Elsewhere, meanwhile, prologues had increasingly lost their place in public opera. The evident antipathy of Zeno, Metastasio and the Arcadians to superfluous prologues clearly had some influence here, as did the broad familiarity with and acceptance of operatic conventions and themes among an opera-going public. The prologue's function as introduction and explication was instead fulfilled by the printed programme/libretto issued for the performance, and later (following Gluck) by the instrumental overture.

19th-century aesthetics similarly militated against extraneous prologues. They are generally used only to provide background information (often set some time before the main action) necessary for the understanding of a historical plot: examples include Verdi's *Attila* (1846) and *Simon Boccanegra* (1857), Gounod's *Roméo et Juliette* (1867), Musorgsky's *Boris Godunov* (1874 version) and Borodin's *Prince Igor* (1890). An extreme case is Wagner's *Das Rheingold* (1869), essentially a musical and literary prologue to *Der Ring des Nibelungen*.

The second prologue (1875) to Boito's *Mefistofele* (1868) replaced the first 'Prologo in cielo' with one 'in teatro', involving a debate between the composer, a critic and a member of the audience. It seems no coincidence that prologues justifying the composer's decision to assay drama through music became more common as opera itself underwent a period of revaluation: Leoncavallo's *Pagliacci* (1892) has the protagonist Tonio first appear as the 'Prologo' to emphasize the claims of *verismo*, and Busoni's *Doktor Faust* (1925) a spoken prologue explaining the composer's choice of subject. Other prologues made play of the fictive nature of opera by a direct statement to the audience – as the astrologer in Rimsky-Korsakov's *The Golden Cockerel* (1909), the Animal Tamer in Berg's *Lulu* (1937), the theatre director in Poulenc's *Les mamelles de Tirésias* (1947) and the Choregos in Birtwistle's *Punch and Judy* (1968) – or by more roundabout means, as the theatrical debate in Prokofiev's *The Love for Three Oranges* (1919) and, on a more extended scale, the 'opera within an opera' of Richard Strauss's *Ariadne auf Naxos* (1916).

Similar motives lie behind prologues that establish an explicit narrative framework for the drama, usually through some 'story-telling' scenario. An early example is

Offenbach's *Les contes d'Hoffmann* (1881) and it becomes a standard topos through Kodály's *Háry János* (1926), Vaughan Williams's *The Pilgrim's Progress* (1951) and Britten's *The Turn of the Screw* (1954). In other operas by Britten, prologues set a scene (*Peter Grimes*, 1945), establish 'flashback' techniques (*Billy Budd*, 1951), and secure a direct rapport with the audience (the 'Chorus' in *The Rape of Lucretia*, 1946). All these and other prologue techniques developed in the 20th century encompass both a reversion to early operatic types (in some cases, even to classical antiquity) and experiments influenced by contemporary drama and cinema.

TIM CARTER

Prolongation. In Schenkerian analysis (*see* ANALYSIS, §II, 4–6), the generation of the harmonic and contrapuntal substance of a piece by a linear elaboration of its fundamental structure (URSATZ). Methods of prolongation may be applied to the upper voice or the bass, or to one of the inner voices arising from early stages of elaboration; they may also link an inner voice to an outer one, or the two outer voices to each other.

An analysis of part of the main Allegro theme of the first movement of Haydn's Symphony no.104 in D, taken from Schenker's *Der freie Satz* (1935), will help to illustrate some of these methods. The Ursatz (ex.1*a*) is prolonged by an INTERRUPTION after the arrival of $\hat{2}$ over the dominant, which necessitates a return of the opening $\hat{3}$ over the tonic and the eventual completion of the motion $\hat{3}$–$\hat{2}$–$\hat{1}$ in the second half of the theme (see ex.1*b*). To reach the next stage (ex.1*c*; after Schenker 1935, fig.95*a*/5), the first bass note, *d*, is brought into a higher octave (*d′*) by an ascending REGISTER TRANSFER. This d′ initiates a linear progression (*See* ZUG (i)) through the interval of an octave which returns to the original *d* before proceeding to the dominant. The upper part imitates the octave with a linear progression of its own, beginning on d″ and proceeding in 10ths with the bass until it, too, regains its starting note, *f*♯′. This sixth-progression is preceded by an unfolding of the tonic chord, *f*♯′–*a*′–*d*″, called anarpeggiation (*see* ARPEGGIATION (ii)). The arrival on the dominant in bar 8 is delayed by a $^{6-5}_{4-3}$ suspension, itself a type of prolongation.

Other methods of prolongation include COUPLING, INITIAL ASCENT, MOTION FROM AN INNER VOICE, REACHING OVER and UNFOLDING.

WILLIAM DRABKIN

Promenade concerts. Informal concerts at which inexpensive tickets are sold for standing room or floor space (although not actually for 'promenading' in the manner of the 18th- and 19th-century London pleasure-garden concerts; *see* LONDON, §V, 4). The most famous, the London Henry Wood Promenade Concerts, started in 1895 and have been given in the Royal Albert Hall since World War II. They were anticipated by other informal concerts given from 1838, themselves modelled on those given in Paris by Philippe Musard from 1833. 'Proms' have been given elsewhere in Britain, notably in Manchester by the Hallé Orchestra. From 1972 opera and ballet proms were given at Covent Garden, and in 1976 they were introduced at the Scottish Opera in Glasgow. Similar informal concerts are given in the USA, sometimes with refreshments served to the audience; they include the 'Boston Pops' and, in New York, proms and the 'rug concerts' initiated by Boulez.

□

Promethean chord. *See* MYSTIC CHORD.

Pro-Musica. American society founded by the French pianist E. Robert Schmitz in New York in April 1920, to promote new and unfamiliar music. It was known as the Franco-American Musical Society early in its 12 years of existence, when its aim was to internationalize music by an exchange between France and the USA. A broader base was sought, the name was changed to Pro-Musica Inc., and over 40 chapters were established in the West and Midwest of the USA, Canada, Europe and East Asia. With support from socially and financially prominent patrons, Schmitz sought 'to stimulate and promote a better understanding, relationship and cooperation between nations, races, societies and classes by making available the best of the past, present and future artistic compositions in the field of music and allied arts'.

Schmitz had contacts with many musicians in Europe and was able to arrange appearances and tours for many of the most important composers of the century. Pro-Musica chapters became part of the established musical life in their respective cities, with concerts by local performers interspersed with appearances by guest composers. In 1928 Ravel's first tour of the USA was sponsored by Pro-Musica, including lecture-recitals for 30 chapters. During the same year Bartók and Respighi were introduced and made extensive tours of the USA and Canada, American works were heard by the Paris chapter, and the American tenor Roland Hayes sang in Moscow and Leningrad. Among the many artists to appear for Pro-Musica were Hindemith, Schoenberg, Honegger, Milhaud, Roussel, Tansman, Prokofiev, Casella, Bliss, Tailleferre, Schmitt, Kodály, Stravinsky, Webern, Tcherepnin and Toch.

From 1923 Pro-Musica sponsored International Referendum Concerts with programmes suggested by their international advisory board. Several important premières were given, such as two of Ives's *Three Quarter-Tone*

Pieces in February 1925. *Pro-Musica Quarterly*, published four times a year by the society, featured articles on music and news of the activities of the organization. The Pro-Musica Collection is housed at the Yale University Music Library.

VIVIAN PERLIS

Pro Musica Antiqua, New York. American ensemble founded in 1952 by NOAH GREENBERG.

Pronomus [Pronomos] (*fl* c440 BCE). Greek poet and musician, the most famous of the Theban school of auletes. An epigram (*Greek Anthology*, xvi, no.28), perhaps early in date, celebrates the skill of these performers and the special pre-eminence of Pronomus. His renown was such that he gave lessons to Alcibiades (Athenaeus, iv, 184d); Aristophanes (*Ecclesiazusae*, 102) mentions him in passing, not unfavourably. Both Pausanias (ix.12.5–6) and Athenaeus (xiv, 631e) state that he was the first to play a number of modes (*harmoniai*) on one double AULOS. The former specified these as the familiar basic group consisting of Dorian, Phrygian and Lydian; Athenaeus referred simply to 'the modes'. Schlesinger suggested that Pronomus might have achieved his feat by extending the reed mouthpiece, thus obtaining Phrygian and Lydian as species (*eidē*) of Dorian; this has been disputed. With the help of rotating bands, however, he could have produced true modes. Such fittings are known to have been in use from the middle of the 5th century BCE; they served to cover or expose auxiliary finger-holes. Alternatively, his auloi may have had the finger-holes arranged in staggered rows, although Pollux (iv.80) states that Diodorus of Thebes introduced this modification. However perfected, the aulos of Pronomus's period was undoubtedly the instrument banned from Plato's ideal state because of its 'panharmonic' capacities (*Republic*, iii, 399d3–4).

When the Peloponnesian city of Messene was founded in 369 BCE, the builders worked to the rival aulos melodies of Pronomus and the composer SACADAS OF ARGOS (Pausanias, iv.27.7). A well-known vase of the late 5th century BCE probably shows Pronomus (rather than his son, also named Pronomus), rehearsing in a room before the performance of a satyr-play. He would have been responsible for the music; by this time, any such setting would have been composed by the aulete, not by the dramatic poet.

Prooimion [proimion] (Gk.: 'proem', 'introduction'; Lat. *prooemium*, *proemium*, *premium*, *prohemium* etc.). A term used, like *anabolē*, in various musical contexts since antiquity, signifying some sense of the word 'prelude'. TERPANDER (*fl* c675 BCE) is said to have made lyric *prooimia* as prefaces to the public recitation of Homeric epics; the HOMERIC HYMNS were likewise termed *prooimia* in antiquity, although the longer hymns may well have constituted independent pieces (Allen, Halliday and Sikes, esp. pp.lxv, xciii ff). Three settings of *prooimia* survive from late antiquity (*see* MESOMEDES). For further references to the *prooimion* in antiquity, *see* ALCMAN; SACADAS OF ARGOS; and STESICHORUS.

In Byzantine chant the *prooimion* (also termed *koukoulion*, with alternative English spellings *cuculion*, *kukulion* etc.) is the introductory strophe of a KONTAKION, which differs metrically from the succeeding stanzas. The 'Prooimiac Psalm' (*ho prooimiakos psalmos*) is the introductory psalm at Hesperinos (Byzantine Vespers), Psalm ciii in the Septuagint. The simple refrains customary in the Prooimiac Psalm were greatly extended and elaborated from the 14th century (*see* HESPERINOS; KOUKOUZELES, JOANNES; KLADAS, JOANNES).

16th-century Latin humanists revived the terms *anabolē* and *prooemium*: HANS KOTTER used the latter term to mean 'prelude' in his keyboard tablatures.

Proper chants (from Lat. *Proprium* [*missae et officii*]). Chants whose texts vary from day to day, as distinct from those whose texts remain constant (ORDINARY CHANTS). Strictly the term applies to chants from both Mass and Office, but it is customary to use the term chiefly to refer to Mass chants, owing to the need for terms that distinguish between those parts of the Mass most often set polyphonically from the second half of the 14th century onwards (the Ordinary), and those usually sung as plainchant. Nevertheless, there are settings of cycles of Proper chants by, for example, composers of the Notre Dame School (*see* MAGNUS LIBER), Isaac and Byrd.

The Proper chants of the Mass are the introit, gradual, alleluia, tract, offertory and communion. The sequence, sung throughout the Middle Ages on important feast days, may also be included in this category, as may also tropes, adjuncts to the above group of chants, which were always Proper to a particular feast. The principle of varying chants for reasons of liturgical propriety also affects the unvarying texts of the Ordinary (Kyrie, Gloria etc.) in that they may be sung to a small corpus of different melodies, each one for use on a different occasion (double feasts, single feasts, feasts of the BVM etc.).

See also MASS, §I, 2(iii).

□

Proper of the Saints (from Lat. *Proprium sanctorum*, *Sanctorale*). The collective name for the annual cycle of liturgical observances of the Western Church in honour of saints who have special Offices. The readings and chants make specific reference to the saint being honoured. *See* LITURGY AND LITURGICAL BOOKS, §II, 1.

□

Proper of the Time (from Lat. *Proprium de tempore*, *Temporale*). The collective name for the annual cycle of liturgical observances of the Western Church that are determined by the date of Easter. The Proper of the Time also includes Christmas, feasts of the Lord, and (exceptionally) sanctoral observances in the week following Christmas. *See* LITURGY AND LITURGICAL BOOKS, §II, 1.

□

Prophecies. Lessons from the Books of the Prophets, replacing the Epistle at Mass at various times during the year such as Epiphany and the Monday, Tuesday and Wednesday of Holy Week, and used above all on Holy Saturday, whose liturgy includes a set of nine (formerly 12) readings (not all from the Books of the Prophets, however). A further group of ancient writings, the Sibylline Oracles, was widely regarded in the Middle Ages and Renaissance as prophetic of Christ, even though it was non-canonical and not admitted to the liturgy. Music concerned with the Sibyls includes Lassus's *Prophetiae Sibyllarum*, a motet cycle for four voices representing the sayings of 12 Sibyls. *See* SIBYL, SONG OF THE.

RICHARD SHERR

Prophet. A SYNTHESIZER, several models of which (many of them programmable and polyphonic) were developed by Dave Smith and others and manufactured by Sequential Circuits in San Jose, California, between 1978 and 1987, when the company went bankrupt. *See* ELECTRONIC INSTRUMENTS, §IV, 5(iii) and fig.8.

□

Prophetia (Lat.: 'prophecy'). The *Benedictus* chant in the Mass of the Gallican rite; *see* GALLICAN CHANT, §7(iv).

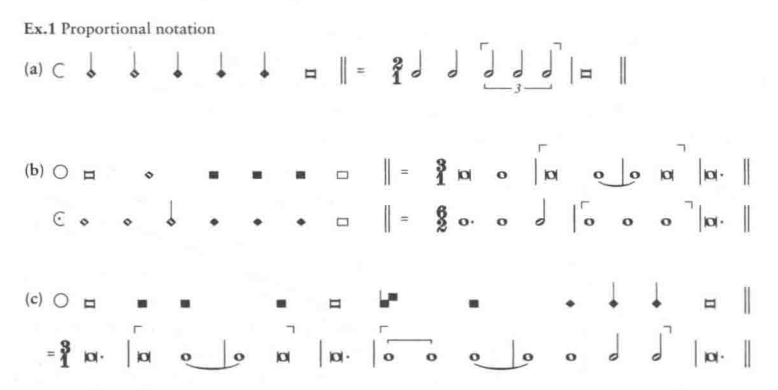
Propiac, (Catherine Joseph Ferdinand) Girard de (*b* Dijon, 1759; *d* Paris, 31 Oct 1823). French man of letters and composer. He began composing at an early age and made his début in 1787 at the Comédie-Italienne with *Isabelle et Rosalvo* and *Les deux morts*, both *opéras comiques*. Between 1787 and 1790 he composed three more, which had some success. He emigrated in 1791, served in Condé's anti-Revolutionary army and stayed for a time in Hamburg. He returned to Paris after Napoleon came to power in November 1799 and under the Consulate (1799–1802) obtained a post as archivist to the Prefecture of the Seine. Thereafter he devoted himself almost exclusively to literature, though he composed two minor *opéras comiques*, *La double apothéose* (1800) and *La pension des jeunes garçons* (1801), which were probably occasional works, performed in small theatres. His literary works include several translations.

WORKS

unless otherwise stated, all are stage works first performed at the Comédie-Italienne (Salle Favart), Paris

Isabelle et Rosalvo (comédie mêlée d'ariettes, 1, M.-V. Patrat), 18 June 1787 (Brussels and Paris, 1788), excerpts pubd separately
Les deux morts (oc), 20 June 1787 (Brussels, 1788)
Les trois déesses rivales, ou Le double jugement de Paris (comédie lyrique, 1, J. de Piis), 28 July 1788 (Paris, 1788), excerpts pubd separately
La fausse paysanne, ou L'heureuse inconséquence (comédie, 3, de Piis), 26 March 1789 (Paris, ?1789), excerpts pubd separately
Les savoyards, ou La continence de Bayard (comédie, 1), 30 May 1789
La double apothéose (oc, 2), Paris, Troubadours, 1800
La pension des jeunes garçons (oc, 1), Paris, Jeunes Artistes, 1801
Romances on poems by Patrat; many romances in contemporary anthologies

PAULETTE LETAILLEUR



Proportional notation. A system (or systems) of graphic devices in musical notation, by the application of which the durations ostensibly prescribed for notes conveyed by pre-orthochronic notations were modified and made greater or less in accordance with a specified proportion.

1. General. 2. Coloration. 3. Proportion signs. 4. Practical usage.

1. GENERAL. Such graphic devices fall into two principal classes. First is coloration (or blackening): somewhat simplified, this may be described as the blackening of notation otherwise void, or – prior to the adoption of void notation – the execution in red full (also, rarely, red void or black void, even blue full) of notation otherwise black full. Second is the graphic modification of any of the four standard mensuration signs, either through its inscription in mirror-image or through the addition of a stroke and/or a number (or pair of numbers). The apparent note values could be either reduced in value or augmented; diminution was by far the more common. Resort to these devices is found in notation from the early 14th century to the early 18th, but enjoyed three particular periods of favour among composers: *c*1380–1420, *c*1465–1525 and *c*1580–1650. The reasons for their adoption were diverse and legion, and differed somewhat from period to period, albeit within fixed boundaries. Overall, to the extent that musicians who composed were familiar with the mathematics of the Boethian proportions by which intervals were identified and explained, it was probably natural that when seeking to invent notational neologisms to convey rhythmic patterns unnotatable by conventional means, or to render difficult notation in a more digestible form, they should resort to devices based similarly on proportional concepts.

2. COLORATION. The device that was both the simplest and the most stable and durable was that known as *coloratio*. In principle, any note or group of notes subjected to coloration or blackening was reduced to two-thirds of the value that it would have enjoyed in its pristine state. In respect of any note in mensural notation that was equal in duration to two of that next smaller in value, the coloration of three in succession caused each to undergo reduction to two-thirds of its erstwhile value, so creating a triplet (ex.1*a*). In the case of any note that was equal in duration to three of that next smaller, the coloration of three together likewise effected a proportional reduction in the value of each to two-thirds, so reducing perfect value to imperfect and commonly creating the effect called hemiola (ex.1*b*). As an aid to comprehension by the reader, coloration was usually applied to notes in groups that added up to conventional and readily recognizable ensembles of three units to be reduced overall to the value of two; this device might commonly entail the coloration of smaller notes whose values individually were not thereby affected (ex.1*c*). On occasions coloured notes could appear singly to denote imperfect value, especially to inhibit unwanted perfection and alteration.

3. PROPORTION SIGNS. In comparison with coloration, proportional usage generated by graphic modification of the standard mensuration signs was far less stable in its signification. It was practised for over 300 years; usage evolved and changed over the centuries, and at any given moment a single manifestation might convey in one cultural region a meaning somewhat different from that prevailing in another. Secure interpretation by modern

editors of such notational phenomena therefore relies on the perception and identification of fine distinctions both geographical and chronological. Because much of this work yet remains to be undertaken, few aspects of the subject are uncontroversial, and no real justice can be done to it in a brief article.

To original performer and modern editor alike, resort by the composer to a proportional signature introduced the need to resolve two principal issues: firstly, the mensural relationships prevailing among the principal components of the hierarchy of note values (primarily long, breve, semibreve, minim); and secondly, the temporal equivalence between note values of proportioned notation and those of the adjacent unproportioned notation (*integer valor*). The former issue can usually be determined by inspection; essentially, original performer and modern editor alike use their eyes and inner ears to determine which values are arriving in twos and which (if any) in threes. In the latter case, all the usual rules of perfection, imperfection and alteration apply (*see* NOTATION, §III, 3). For the second issue, the appropriate resolution can usually be calculated readily when the proportion occurs in one part contemporaneously with *integer valor* in another. However, when all the constituent voices of a polyphonic composition progress simultaneously from *integer valor* to proportion (or vice versa), the temporal relationship cannot be resolved by inspection and resort must be made to contemporary theory. At this stage, distinction must always be made between those writers who were faithfully and objectively describing current usages, and those who took up the pen to advocate novel systems and approaches consciously divergent from the contemporary practice, revised and reformed in ways commendable to the author but not necessarily to anyone else. Both are illuminating in academic terms, only the former in practical terms.

Three basic practices informed the system. (1) The inscription of a stroke through any signature conveyed *diminutio dupla*, namely execution of the notes concerned in values half those of *integer valor*. Execution of the signature in mirror image could likewise convey *diminutio dupla*, or occasionally some more irregular proportion. (2) The appending to a signature of two numbers written as a fraction (or, rarely, in succession) indicated the inauguration of performance of the upper number of notes in the time previously taken to perform the lower; whether the note value concerned was breve, semibreve or minim is usually evident on inspection, and largely may be determined by chronology. *Diminutio sesquialtera* (3 in the time of 2) was inaugurated by such a sequence as C→C3/2 (the numbers written as in the modern time signature), *diminutio dupla* (2 in the time of 1) by C→C2/1, and *diminutio tripla* (3 in the time of 1) by C→C3/1. Many other fractional diminutions were possible in theory, but were engaged in practice only rarely. (3) The appending of a single number to a signature originally conveyed diminution by a proportion indicated by the number, plus the transfer of the mensural relationships of *integer valor* to the degree next higher (*modus cum tempore*). However, following the extinction of *modus cum tempore* by the later 15th century, C→C2 could be used as an abbreviation for C→C2/1 (*dupla*), and C→C3 commonly for C→C3/2 (*sesquialtera*) or, more rarely, for C→C3/1 (*tripla*). (When not necessary for comprehension, repetition of the base-line signature could in practice be omitted.) Only one form of augmentation was ever common. Ɛ occurring simultaneously with O conveyed duple augmentation; it could be engaged, for example, to preserve the original major-prolation mensuration of the *L'homme armé* melody when used as the tenor of a mass otherwise notated in O.

4. PRACTICAL USAGE. Each resort to proportional notation was no isolated intellectual game, but was part of the standard notation practice of its particular time and location. Only chronologically, therefore, not analytically, can proportional usages be genuinely understood; some good beginnings have been made on such work, but much remains to be done. Many of the earliest manifestations of proportional usage arise in music in the style dubbed ARS SUBTILIOR (*c*1380–1420). A notational principle fundamental at this period was that of the constancy of the value of the minim from one mensuration to another succeeding it; proportional usages were developed as a means of subverting this principle. Particularly challenging in their intricacy and not intimidating in aggregate number, the interpretation of these early instances is now largely resolved.

Beyond about 1420 occurrences of proportional usage fall into two areas. The simplest – coloration/blackening and *sesquialtera* – are encountered continuously well into the 17th century, and were part of any composer's stock-in-trade, for use in any kind of composition. More complex instances occurred predominantly in sacred music, in which they could make a contribution to the composer's offering of profundity and learning. Prior to about 1450 such examples occurred commonly in motets that engaged isorhythmic diminution of the tenor, enabling that voice to be notated in a manner at once erudite and concise. By the middle of the century, however, some fluidity was entering the system, as rules yielded (albeit temporarily) to conventions. In particular, while the

juxtaposition of Ф with O simultaneously (and ¢ with C) continued to specify *diminutio dupla*, the occurrence of Ф in succession to O (and ¢ in succession to C) appears to have been intended to prescribe a tempo that was faster than O and C respectively, but less than twice as fast. There are grounds for interpreting the sequence O→¢, frequently encountered in music of the mid-century, to convey a proportion of four semibreves of ¢ to three of O.

Towards the end of the 15th century the emerging practice of choral performance for church polyphony instigated formalization of the concept of the TACTUS, entailing in its turn some radical rethinking of the practice of proportional notation. In particular, equivalence of the semibreve (rather than of the minim) was confirmed as the principle now primarily subvertible by resort to proportional notation. Some examples of cumulative proportion became common, especially C→¢3/2 serving as a means of denoting *diminutio tripla* (*sesquialtera* [3:2] and *dupla* [2:1] applied simultaneously produce 3:1). For so long as the principle of an all-pervasive uniform *tactus* subsisted, commonly measured by its similarity to the human pulse, it provided a mental anchor upon whose stability theorists such as Tinctoris and Gaffurius could hang elaborately all-inclusive systems of proportional usage (almost as impractical as they were erudite and encyclopedic), composers could create elaborate mensuration- and other canons and incorporate similar offerings of elegant learning in their church composition, and controversialists among the theorists could engage in learned disputations on finer points.

Interest in proportions other than the simplest rather waned after about 1525. By this time ¢ was established as an initiating mensuration signature in its own right. It was used in conjunction with note values that were longer than those employed under C, performed in a faster tempo so that the *tactus* fell on the breve (that is, *alla breve*). Theorists of the preciser kind proved unable to rationalize this essentially irrational usage (as a diminution ostensibly *dupla* but in practice imprecisely related to C); those more pragmatic simply accepted it, and presently recognized ¢ as a standard usage for church music, C for madrigals and other secular genres.

Towards the end of the 16th century, and especially with the inception of the Baroque style, proportional usages were revived and extended, and were applied increasingly to secular as well as to sacred genres. By about 1615 even a *diminutio sextupla* (six semibreves in the time of one) had been invented; initiated by the signature sequence C→Ф3/1, it was created to permit the notation of a triple time sufficiently quick for it to be conveyable only *in tactu aequali*. Certain composers now extended their resort to the hooked minim as an unambiguous alternative to the blackened minim; elsewhere, however, the potential for confusion between the blackened minim and the crotchet was already beginning to undermine the whole practice of coloration. In terms of the sheer quantity of music affected, this is the most significant period of proportional usage. However, the performers and scholars who first disinterred this repertory in the early 20th century found that the application of interpretations ostensibly correct for these proportions delivered results inconsistent with their aesthetic preconceptions for it. Consequently, the notation was conveniently dismissed as being in a state of 'chaotic confusion', and the evidence of the sources, both theoretical and musical, was disregarded.

It is true that some publications of the period manifest a potentially somewhat confusing proliferation and diversity of symbols to convey proportional usage, to which their composers, untutored in the correct application of a system that had been believed obsolete at the period when they were under training, were now making totally unnecessary (and sometimes incorrect or irrational) resort. Moreover, certain German practices differed from Italian; particular idiosyncrasies could be found (e.g. Giovanni Gabrieli's consistent application of the number 3 alone to denote *diminutio tripla*); and local peculiarities occurred (e.g. the use in some early 17th-century Dutch and north German sources of a practice endorsed by certain local theorists whereby three blackened minims may denote crotchet-crotchet-minim). Nevertheless, to theorists of the time, including Morley, Zacconi, Banchieri and Michael Praetorius, the primary system inherited from the past was still in good working order. Coloration, *sesquialtera*, *tripla* (and now *sextupla*) meant what they had always meant, and Praetorius in particular advocated a severe pruning of the symbols used in his day so as to clarify the basic simplicity underlying the system. Modern performance of late Renaissance and early Baroque music may well start to sound different when these principles have become further assimilated into editorial practice.

The very beginnings of the dissolution of the proportional system, and of its orderly evolution onward, can be traced to about the 1620s, with the inception of a progressive evaporation of the concept of the *tactus* on which it had come to depend. Prior to the early years of the 17th century it was a principle too pervasively fundamental to require statement that, once established at the beginning of the performance of any piece of music, the chosen *tactus* did not change; on this certitude hung all calculation of proportional usage. In avant-garde circles the principle was being questioned by as early as 1609, when the singer Aquilino Coppini observed that the emotionalism of certain of Monteverdi's most recent madrigals was best served by a degree of local flexibility in the *tactus*. From a conservative theorist such as Agostino Pisa (1611) such thoughts provoked a clear statement of the traditional immutability of the *tactus*; presently, however, that principle proved equally ungrateful to such a composer as Girolamo Frescobaldi, who risked a conscious break with received wisdom and practice by prefacing his *Primo libro di capricci* (1624) with verbal instructions for relative tempo, modifying and refining the message conveyed by his array of proportion signs (resourceful and elegant though that already was). Only slowly did the proportional system dissolve and mutate, however, and odd items in the output of Purcell, Handel and J.S. Bach show that it was still being taught to young composers far into the 17th century. Nevertheless, by then its evolution into the modern system of time signatures was well under way, though the detail of this transition still awaits its elucidation through research.

ROGER BOWERS

Proportz (Ger.: 'proportion'). A term used in 16th- and 17th-century Germany for an after-dance derived from a duple-metre dance (e.g. allemande or pavan) by the application of *proportio sesquialtera* to the melody of the first dance, that is, three notes of the after-dance in the time of two notes in the model. Sometimes such after-dances were incorrectly labelled 'Proportz tripla', meaning that three notes of the after-dance took the time of one in the model (*see* NACHTANZ).

□

Proposta (It.: 'proposal'). In FUGUE, the SUBJECT, as opposed to the answer. The term gained currency in the writings on fugue of Italian theorists in the Baroque period; the term for the answer is *risposta*.

□

Proprietas (Lat.: 'propriety'). A term used in theoretical writings on mensural music from the mid-13th century onwards. It refers to a quality of ligatures that depended on the value of the first note of the ligature. The first note was normally assumed to be a breve unless its normal shape was modified. If the first note was of normal shape (for an ascending ligature this meant without stem, for a descending ligature this meant with a stem descending to the left) then the ligature had propriety and the first note was a breve. If the ascending ligature began with a note with a stem descending to the right, or if the descending ligature began with a note without a stem, then the ligature had no propriety and the first note was a long. Ligatures *cum opposita proprietate* were a special case, written with a stem ascending to the left, where the first two notes of the ligature were always understood to be semibreves. A quality of ligatures that depended on the value of the final note of the ligature, *perfectio* ('perfection'), was governed by similar rules. For the usual shapes for two-note ligatures *see* PERFECTIO, Table 1. Ligatures of three, four and more notes were governed by the same rules, with all but the first and last notes understood to be breves (except in the case of opposite propriety, when the second note was always a semibreve, or where a note is graphically distinguished as a long or a maxima).

PETER WRIGHT

Prosa [prose]. A text for a sequence (*see* SEQUENCE (i)). The term was sometimes used loosely in medieval sources to apply to texts of other kinds of chants, for example Kyries, or to text underlay for melismas (a phenomenon better referred to as PROSULA).

A *prosa* in the restricted sense is a Latin text constructed largely in 'couplets': two lines of text set syllabically to the same phrase of music, hence having the same (or almost the same) syllable count. Successive couplets are of varying lengths, however, so that the line structure of the whole is not regular, like verse, but rather irregular. In the early repertory (written *c*850–1000) *prosae* neither scanned nor rhymed, but later they did both, becoming almost indistinguishable from verse.

Frequently a number of *prosae* were written to one sequence melody, but (in the early repertory, at least) any given *prosa* could be sung to only one melody. *Prosae* were sung at Mass after the alleluia. Usually they were proper to a holy day or saint's day. The entire repertory consists of several thousand items, as published in Analecta Hymnica Medii Aevi (vol.liii contains most of the early repertory).

The term *prosa* is a late Latin contraction of the expression *prorsus oratio* ('straightforward discourse') being the classical circumlocution for language not cast in verse. During the early medieval period, however, the term was used particularly for 'art prose', that is, prose that was elevated in style by careful attention to rhythm (for example, use of the so-called cursus) including the construction of clauses (*cola*) and periods; and to diction, especially assonance and eventually rhyme. 'Rhymed prose' was a striking development of the 9th and 10th centuries. The couplets used in this prose (or sequence) can be viewed as a systematic application of *bicola* or pairs of clauses, as described by late Latin rhetoricians.

The term *prosa* is first applied regularly to the texts of sequences in 10th-century manuscripts. One of the earliest such appearances is in *F-Pn* lat.1240 (923–4), as *congregatio prosarum* ('collection of *prosae*' – which, however, also includes some prosulas). NOTKER of St Gallen (*c*840–912) published his *prosae* under the title *Liber hymnorum* (884). *Prosae* were regularly sung (rather than recited or read silently), and the melodies – the sequences – were in the first instance to be sung with their *prosae*; it is

presumed, however, that sequences were also sung as melismas. The terms 'prosa' and 'sequence' therefore came to be virtually interchangeable terms, each referring to melody plus text.

Prosae were composed in a wide variety of styles. Early West Frankish examples sometimes betray their descent from the tradition of highly rhythmic, sonorous, colourful but non-classical Latin cultivated particularly by Irish monks. Notker's *prosae*, on the other hand, are distinguished by their careful observance of classical canons of taste; beyond that, Notker's texts have a superior poetic quality, but they are not as musical as the West Frankish ones. During the 10th and 11th centuries, *prosae* often became *poesia per musica*, less interesting in their own right than the melodies they served; but sometimes they were vehicles for elaborate rhetorical conceits and inventions. In the hands of ADAM OF ST VICTOR in the 12th century they became exquisite meditations on sacred subjects, now cast entirely in rhyme and scansion, using the highly developed poetic-religious diction of the later Middle Ages.

RICHARD L. CROCKER

Prosdocimus de Beldemandis [Prosdocimo de' Beldomandi] (*d* Padua, 1428). Italian music theorist, mathematician and physician. His treatises on music are particularly important in the areas of mensuration, counterpoint (including *musica ficta*) and tuning.

Prosdocimus studied at the universities of Padua and Bologna, took the doctorate in arts at Padua on 15 May 1409, and received the licence in medicine on 15 April 1411; he taught at Padua on a variety of subjects, including astrology, astronomy, mathematics and experimental philosophy, the arts and medicine, from 1422 (possibly 1420) until 1428, the year of his death. He wrote treatises on all four quadrivial arts; the manuscript *I-Fl* Ashburnham 206, in Prosdocimus's hand and dating from his student days, contains treatises (many of them standard works of the day) on the computus, arithmetic, music, astronomy, astrology, the quadrant and the astrolabe, and medicine, alongside the statutes of the Paduan college of arts and medicine and dozens of prescriptions against ills of various types.

Prosdocimus's range of interests seems typical for a Paduan doctor of his day. Italian universities were organized into two colleges, one for law and one for arts and medicine, a circumstance that encouraged a strong link between the arts and medicine; indeed the majority of members of the Paduan College of Doctors of Arts and Medicine in the late 14th century appear to have held degrees in both disciplines. As late as the 15th century, professors who were not *ordinarii* were expected to lecture on any of the arts.

Prosdocimus's eight treatises on music, admirable for their succinctness, rigour and aesthetic sensitivity, constitute a systematic survey of the main aspects of the art. The *Tractatus pratice cantus mensurabilis ad modum Ytalicorum* is the last major treatise on Italian trecento notation. The *Expositiones tractatus pratice cantus mensurabilis Johannis de Muris* not only explicate the most widely disseminated medieval treatise on mensuration (the *Libellus cantus mensurabilis*), but include a text of the treatise itself that antedates all but a few extant manuscripts of the treatise alone; Prosdocimus's discussion of the practice of *cantus planus binatim* – plainchant sung in note-against-note polyphony, nowadays usually called 'primitive polyphony' – provides the only contemporary account of the practice by a theorist. The *Parvus tractatulus de modo monacordum dividendi* presented the first monochord division that included the derivation of five flats by successive perfect 5ths downwards from F and of five sharps by successive perfect 5ths upward from B in addition to the seven natural notes. The *Contrapunctus* is important as a witness to the florid practice of *musica ficta* in Italy around the turn of the 15th century. The *Tractatus musice speculative*, despite its noncommital title, is a virulent attack on the proposal to divide the whole tone into five equal parts that Marchetto da Padova had advanced a century earlier in his *Lucidarium*; critical of what he saw as Marchetto's poor arithmetic and faulty logic, Prosdocimus revised several of his own treatises (notably those on counterpoint and the monochord) to introduce or strengthen criticisms of the earlier theorist's doctrine of tuning. (Marchetto's theories of mensuration and mode, on the other hand, he esteemed.)

15th- and 16th-century mathematicians and scientists evidently held Prosdocimus in high regard. Luca Paccioli (*Summa de arithmetica*, 1494) placed him in the distinguished company of Euclid, Boethius, Leonardus Pisanus, Jordanus de Nemore, Biagio Pelacani and Johannes de Sacrobosco; Prosdocimus's *Algorismus de integris*, a treatise on computations by whole numbers, was printed in 1483 and again in 1540, his *Scriptum super tractatu de spera Johannis de Sacrobosco*, a commentary on one of the most significant astronomical treatises of the Middle Ages, in 1531.

Prosdocimus also made his mark on music theory. Ugolino of Orvieto (*Declaratio musice discipline*, 1430s) modelled his discussions of counterpoint (including *musica ficta*) and the monochord on Prosdocimus; Giovanni del Lago owned a copy of the original version of Prosdocimus's *Contrapunctus*, and quoted from the revised version (and from other of Prosdocimus's treatises) in correspondence from the 1520s and 30s. Prosdocimus's monochord, with its sets of five flats and five sharps, the flats one Pythagorean comma lower than the sharps to which they would be enharmonically equivalent in equal temperament, may have been the prototype for a great number of monochord divisions containing five flats described in treatises of the 15th and 16th centuries. The substitution of these flats for sharpened notes produces triads that are virtually pure, which suggests that such divisions 'whetted that Renaissance appetite for sonorous triads which only meantone temperaments could fully satisfy on keyboard instruments' (see Lindley).

JAN HERLINGER

Prose. *See* PROSA.

Prošev, Toma (*b* Skopje, 10 Nov 1931; *d* Zagreb, 12 Sept 1996). Macedonian composer and conductor. After completing studies at the Zagreb Academy of Music in 1957, he studied composition at the Ljubljana Academy of Music under Škerjanc (until 1960) and later in Paris with Boulanger (1963–4). He was music editor with Radio-televizije Zagreb (1957–60) and a lecturer at the Lisinski Music School in Zagreb (1960–67), while also conducting the Musica Viva ensemble. Returning to Skopje in 1967 as a lecturer at the Visoki Music School, he continued his conducting activities with the Sveta Sofija Ensemble, as well as in opera and ballet. In 1981 he took the doctorate in musicology in Skopje, and thereafter divided his time between Skopje and Zagreb.

Prošev's early works, written between 1950 and 1957, employ a moderately advanced European mainstream style influenced by Hindemith and making some use of folksong. From 1957 to 1963, influenced by his further studies and contacts, he made considerable use of 12-note procedures. After 1963 he composed works using free atonal methods with some debt to serial techniques, great formal freedom, frequent though clearly circumscribed aleatory coordination and occasional employment of electronic sounds.

WORKS
(*selective list*)

DRAMATIC AND VOCAL

Ops: Paučina [The Spider's Web], 1958; Mali princ [The Little Prince], 1966; Aretej, 1972, rev. 1989; Zoe, 1995
Ballets: Okviri i odjeci [Frames and Echoes], 1961; Pesma nad pesmama, 1967; Relacije [Relaxations], 1969
Orats: Jama [The Pit] (I.G. Kovačić), 1961; Skopje (A. Popovski), 1965; Sunce prastare zemlje [The Sun of the Ancient Earth] (Popovski), 1966; Poruka [The Message] (G. Todoroski), 1968; Mir svetju, 1982; Terra Macedonica, 1993
Cants: U zbegu, 1959; Epitaf, 1v, orch, 1961; Car Samuil [Tsar Samuel], 1965; Dnevnik jednog malenog [Diary of a Little Man], 1967; Canticum canticorum, chbr cant, 1967; Jedan Čovek [One Man] (C. Janevski), 1968; Sermo declamatorius, 1969; Spokoj, 1971; Titov naprijed, 1972; Perunika, 1975; Gloria tua, 2 female vv, orch, 1980; Prijatelju, 1v, orch, 1980
Other works: Mali ptići [Little Bird], suite, chorus, orch, 1964; Sveta Sofija ohridska, 1v, str, 1966; Boje [Colours] (E. Čolaković), S, A, T, B, 2 spkrs, chorus, ens, tape, 1967; Čovek [Man], 3 choruses, 1968; Nebo [The Sky], 1v, chbr orch, 1968; Luzna [The Scar] (Ožilijak), 1v, pf, 1968; Tempera IX, spkr, 1v, chorus, ens, 1974; Leto Gospodovo [The Lord's Summer], 2 Mez, T, double mixed chorus, ens, 1977

NIALL O'LOUGHLIN

Proske, Carl [Karl] (*b* Gröbnig, Upper Silesia, 11 Feb 1794; *d* Regensburg, 20 Dec 1861). German musicologist and editor. He was a medical doctor before settling in 1823 in

Regensburg, where he turned to the study of theology and was ordained on 11 April 1826. In 1827 he was appointed vicar-choral at the collegiate monastery of the Alte Kapelle in Regensburg; he was made a canon there in 1830. From that time he devoted himself entirely to church music reform. Proske's aim was to combat the tendency towards independence in church music and link it as closely as possible to the liturgy again. He regarded Gregorian chant and the old style of vocal polyphony as the two basic types of 'pure, exclusively sanctioned sacred song'. Proske's ideas made him an important instigator of the Cecilian movement, which had one of its major centres in Regensburg. His publishing activities began with the Denkschrift *Die Verbesserung der Domkirchenmusik* (1829–30). Between 1834 and 1838 he made three extended visits to Italy to collect liturgical vocal works; his library (left after his death to the Regensburg bishopric; now *D-Rp*) eventually contained over 5000 examples of church music from the 15th century to the 18th. The music manuscripts in the collection are contained in three volumes of the Kataloge Bayerischer Musiksammlungen series. He began publication of the collection Musica Divina in 1853, completing three volumes in 1859 (a fourth appeared in 1863), and a second selected edition, Selectus Novus Missarum, appeared between 1856 and 1861. After Proske's death a second annual volume of Musica Divina was edited by Joseph Schrems and Haberl between 1865 and 1877. Proske also edited works by Palestrina (*Missa Papae Marcelli: triplici concentu distincta, videlicet*, Mainz, 1850) and Alessandro Scarlatti (*Missa quatuor vocum, quam juxta exemplar autographum in Bibliotheca Vaticana, scil: Cod. Nr. 2925. Bibl. Alt. Othob.*, Regensburg, 1841). He composed two *a cappella* works in the *stile antico* himself: a four-part *Et incarnatus est* (MS in *D-Rp*) and a four-part setting of psalm cxxix, *De profundis* (MS in *D-Rp*; pub. in *KJb*, ii (1877), 27–30). As Proske destroyed his diaries and a large part of his correspondence before his death, his estate (*D-Rp*) contains few personal documents.

AUGUST SCHARNAGL/RAYMOND DITTRICH

Prosodion. A song accompanying the movement of the celebrants in a religious procession. Proclus states in *Useful Knowledge*: 'It is said to be a prosodion when they process to the altars or temples, and in processing, it was sung to the accompaniment of the aulos. But the hymn, properly speaking, was sung to the accompaniment of the kithara while they stood'. The inscription preceding the second Delphic paean (*see* HYMN, §I, 3) confirms this association between the *prosodion* and the hymn or paean, which it may normally have followed. In the paean itself, the *prosodion* occupies lines 33–40 structured in eight-syllable cola, each of which could easily be subdivided into four groups of two. The emphasis on long syllables gives the *prosodion* a stately character. The text is devoted to a prayer to Apollo, Artemis and Leto; this accords with Pollux's *Onomasticon* (i.38), which characterizes a *prosodion* as a composition particularly devoted to Apollo and Artemis.

Prosodia were among the earliest musical types employed by the Greeks. In three separate locations in his *Description of Greece* (iv.4.1, iv.33.2 and v.19.10), Pausanias remarks on a *prosodion* composed by Eumelos sung by a male chorus at the temple of Apollo in Delos during the reign of Phintas (*c*740–720 BCE). Pseudo-Plutarch (*On Music*, 1132c, 1136f) credited Clonas – the follower of TERPANDER – as the first to establish auloedic *prosodia*, adding that *prosodia* were also composed by ALCMAN, PINDAR, Simonides and BACCHYLIDES. These *prosodia* were supposed to have been written in the Dorian *tonos* because of its grandeur and dignity; this may be true, although the surviving *prosodion* in the second Delphic paean is set in the Lydian *tonos*. Numerous illustrations of processions are preserved in Greek vase painting that confirm the general descriptions in literature. A red-figure *kratēr* in Ferrara (Museo nazionale, Inv. T 128) illustrates a *prosodion* accompanied by an aulete and shows both a statue of one of the gods, which has perhaps been carried in the procession, and the altar itself. The solemnity suggested in this painting suits the *prosodion*'s association with the hymn or the paean.

The *prosodion* as a type may have encompassed relatively short sections following hymns or paeans – and accompanying limited movement from the place where the hymn was sung to the altar itself – as well as longer independent compositions accompanying more extended processions. The *prosodion* apparently included some narrative about the god to whom it was addressed, but supplication was the central purpose of its text.

THOMAS J. MATHIESEN

Prosperi, Carlo (*b* Florence, 13 March 1921; *d* Florence, 15 June 1990). Italian composer. He studied in Florence with R. Cicionesi, Dallapiccola, Frazzi and P. Rossi, taking his diploma in horn in 1940 and composition in 1949. He worked as a programming assistant for orchestral and chamber music and opera at RAI in Rome (1950–58); from 1958 he lectured on harmony and counterpoint and later (1969–89) lectured on composition at the Florence Conservatory. In 1969 he was appointed a member of the Accademia Nazionale Luigi Cherubini.

Prosperi belonged to the avant-garde Italian musical current of the 1950s, when he developed his own freely atonal language using the 12 pitches but remaining at a distance from both 12-note and serial dogmatism and subsequent developments into more radical experimentation. His mature work is characterized by particular attention to timbre and the expressive qualities of the sound (*Incanti*, *In nocte secunda*, *Tre canti di Betocchi*), his constant aim being to create music which is lyrical and communicative. His last works saw the appearance of a neo-classical strain, apparent in a limited use of sounds, forms and compositional styles from the past (*Concerto dell'arcobaleno*, *Elogio della follia*).

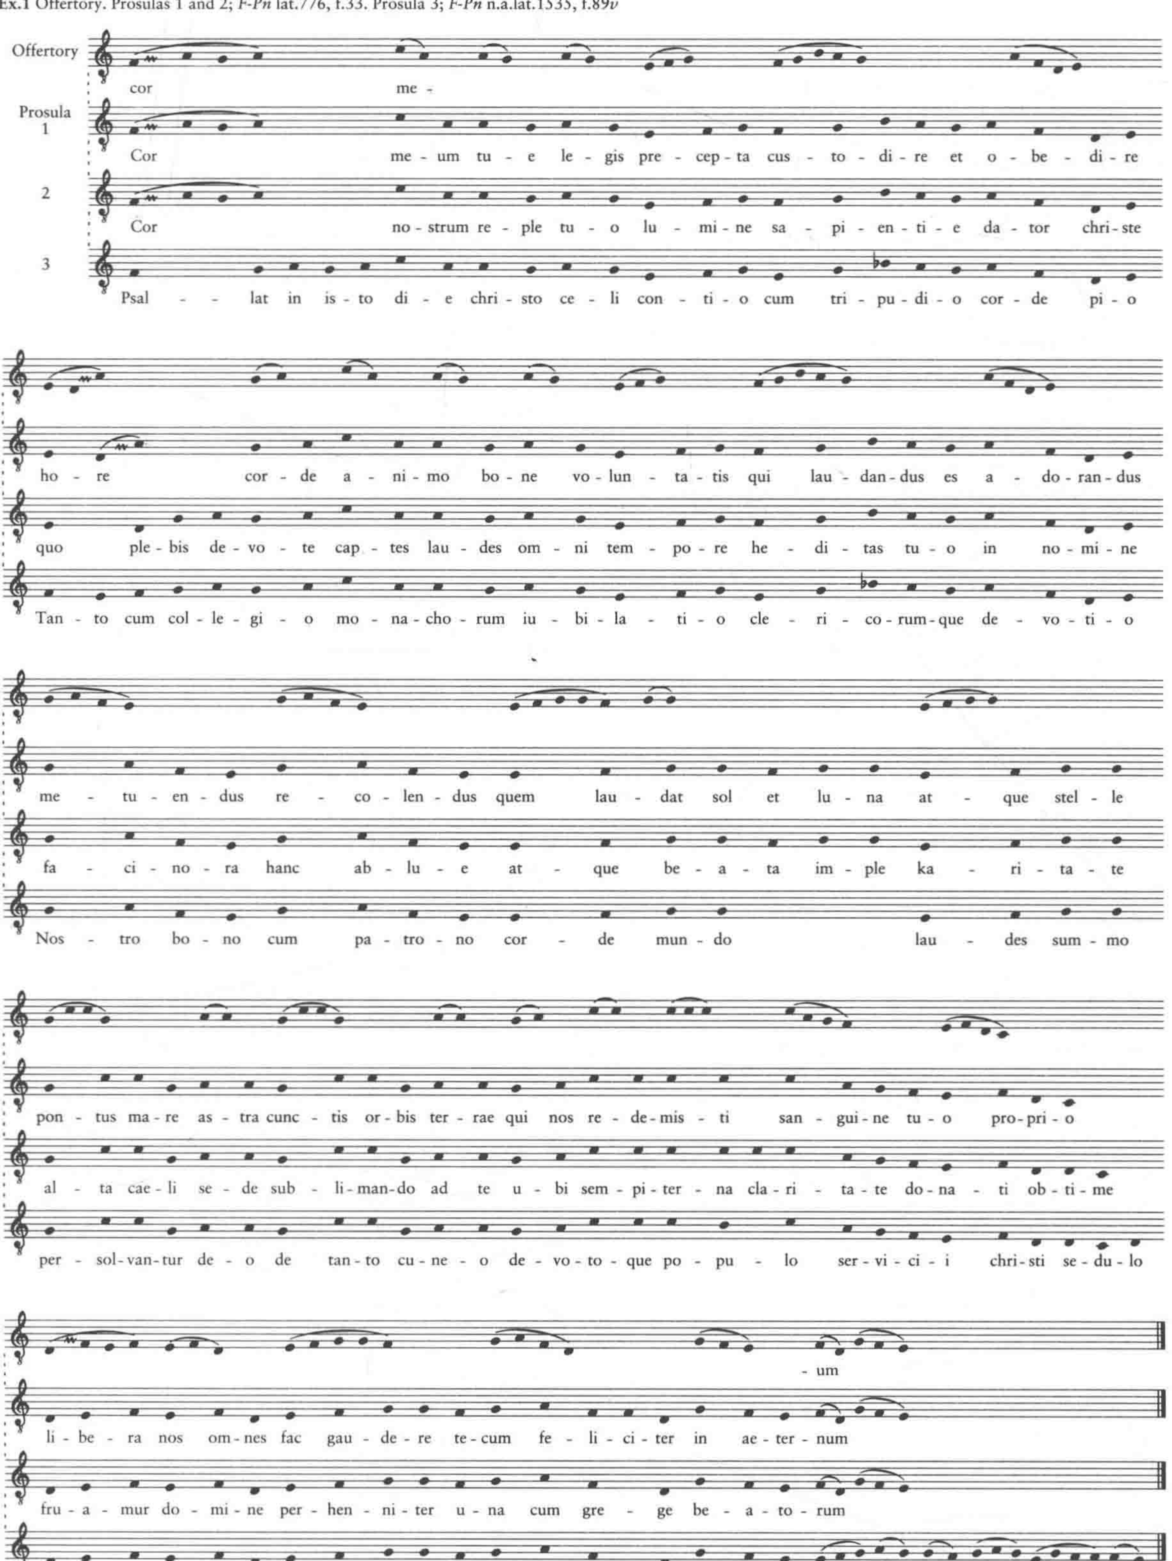
ROBERTA COSTA

Prostopeniye (Ukr.: 'plainchant'). The monophonic chant tradition preserved in the use of the Old Believers. *See* RUSSIAN AND SLAVONIC CHURCH MUSIC, §4.



Prosula. A prosula is a text created to fit a melisma in Gregorian chant. Alternative terms similarly employed in the medieval manuscripts include 'prosa', 'tropus' and 'verba' (*see* PROSA and TROPE (i)).

There are prosulas for chants of both the Mass and the Office, and, within the Mass, for both the Ordinary and the Proper. Best known are those for the Kyrie eleison; but more numerous than these in 10th- and 11th-century sources are those for offertory verses and alleluias. The prosula is nearly always in strictly syllabic style, with one syllable for each note of the melisma. As a rule, the contours, phrasing and articulation of the melody were carefully observed by the prosula writer, so that the phrases of text match those of the melody and accented syllables fall on appropriate notes. The beginnings and endings of words in the text often coincide with the beginnings and endings of neumes in the melisma.

Since prosulas appear in virtually all the earliest manuscripts containing tropes and sequences, it could be argued that they are earlier than the manuscripts themselves, very likely dating from the 9th century. A particularly early example may be *Psalle modulamina*, a prosula to the alleluia *Christus resurgens*, which appears with neumes in *D-Mbs* Clm.9543, a collection of writings by St Ambrose. If the prosula were copied by Engyldeo, the manuscript's main scribe, not only would its date be earlier than the mid-9th century, but the manuscript itself would possibly be the earliest to include neumes. (For a persuasive presentation of this case, see Möller; although the argument is not entirely convincing, it is nevertheless significant that *Psalle modulamina* has neumes, whereas some other prosulas have none or only a few.)

The prosula seems to have served two purposes: to enrich the liturgy with new devotional texts and to make it easier for singers to memorize the melodies. The offertories of Gregorian chant, when their verses are considered, have relatively long texts, and the prosulas written for them can be properly appreciated only in this full context. Most of them restate in new words, sometimes in striking phraseology, the subject matter of the offertory; a few add new images and ideas. In one respect, however, the existence of prosulas signals a decline. The apparently subtle rhythmic distinctions represented in the notation of melismas in manuscripts such as those of St Gallen must have been lost when words were applied to these melodies.

Among the offertories for which prosulas were provided is that for Quinquagesima, *Benedictus es*. (It is noteworthy that offertory prosulas were sung frequently on days when, because of the liturgical season in which they occur, there are no tropes, and perhaps no Gloria or *prosa*.) The long melisma on the syllable 'me-' of 'cor meum' at the end of the third verse of this offertory is given a prosula in various sources; it is shown with two prosulas from the 11th-century Aquitanian gradual *F-Pn* lat.776 in ex.1. Occasionally the prosulas use more or fewer notes than the melisma, making it evident that the melismatic and texted versions could not have been sung simultaneously.

Ex.1 Offertory. Prosulas 1 and 2; *F-Pn* lat.776, f.33. Prosula 3; *F-Pn* n.a.lat.1535, f.89*v*

The third text in the example appears with this melody when it is borrowed for use in the Responsory *Petre amas me* in the 13th-century Sens antiphoner *F-Pn* n.a.lat.1535; in it the structure depends rather less than usual on that of the melisma, and more on the principle of having several phrases in succession, wherever possible containing the same number of syllables, having the same pattern of accents and ending in the same sound.

Alleluia prosulas were written to fit the music for the word 'Alleluia' and the jubilus that followed, and often also for one or more melismas in the alleluia verse. Occasionally the prosula was made to cover the entire verse, incorporating all or most of the existing text, as in this alleluia from *F-Pn* lat.776:

Alleluia. V. Letabitur iustus in domino et sperabit in eo et laudabuntur.omnes recti corde.

[Prosula] *Alle*viata christe *lu*mine clara illustra corpora nostra munda hac animas gaudi*a* sanctorum coniungas splendore in aeterna requie. V. *Leta*ndo sublima*bitur iustus* fulgidus nec non et fide actus *in* dominico.populo fervens *domino et sperat* ut sua capiat regni premia christus cum.regnaverit ad iuditium micans gaudebit et rutila*bit in eo et laude* dignissima tunc gloria*buntur* florigero solio sedentes *omnes recti* probi et casti corpora simul *corda* cum quibus redemptor te gaudent te alm*e* pneumate feliciter congaudenter una protecti tuo iuvamina.

Texts for the Kyrie eleison of the Mass, on the other hand, often omit the word 'Kyrie'; they are not regarded as prosulas by some writers, who believe that in these works the music was written after the text, to fit the expanded version.

The manuscripts in which prosulas appear vary in character (*see* SOURCES, MS). Some are graduals, in which the prosulas follow immediately the melismas to which they are set (*F-Pn* lat.776., 903, n.a.lat.1235; *I-BV* VI-34). Others are tropers. In some of these the prosulas appear together, in the order in which they fall in the liturgical year (*F-Pn* lat.1084, 1118, 1338, n.a.lat.1871; *D-Mbs* Clm.14322). In others, each of them stands with the tropes and *prosae* for its day, in the order in which they appear in the service (*F-Pn* lat.9449; *I-Rc* 1741; *Rn* 1343; the troper of *Ra* 123). An exceptional case is the manuscript *D-W* Gud.lat.79 which, though not strictly a liturgical book, gives an enormous collection of alleluia prosulas ordered according to the liturgical year. Its early date (10th century) raises the possibility that the repertory of prosulas in southern France was once much larger than the surviving manuscripts would suggest. It must be added that when the melodies are not notated, or are written imprecisely (as is the case with *W* Gud.lat.79), sorting the prosulas out and identifying the melodies that underlie them can be difficult.

When prosulas for the Office are found, they are for the responsories of Matins or Vespers; such texts are usually given in antiphoners and breviaries, although a few appear in tropers. Prosulas may occur at two points in a responsory: in a melisma towards the end of that part of the responsory that serves as a refrain after the verse (itself sometimes a later addition to the work), or in the verse, where the prosula is fitted in around the existing text. *Descendit de celis*, an old responsory for Christmas, is one of the most frequently given prosulas; it has a full complement of them in, for example, the 11th-century Nevers Troper *F-Pn* lat.9449. Another instance where prosulas are written for a melody that is a later addition to a chant occurs in troped versions of the Gloria in excelsis Deo, where various texts, known as 'Regnum prosulae', are set to a melody interposed between the phrases 'Jesu Christe' and 'Cum Sancto Spiritu'.

RUTH STEINER/KEITH FALCONER

Prot, Félix-Jean (*b* Senlis, Oise, 1747; *d* Paris, early 1823). French composer, violinist and violist. He studied the violin with Desmarets and composition with Gianotti, joining the orchestra of the Comédie-Française as a violist in 1775 and remaining there for 47 years. As a composer he wrote four operas and a considerable amount of chamber music for strings, some being destined for performance by young students and other amateurs. This suggests that Prot was also active as a teacher, and highlights the growing fashion in the 18th century for informal music-making.

Prot's first stage work, *Les rêveries renouvelées des grecs* (1779), was a reworking of a popular libretto by Favart, *La petite Iphigénie*, first heard in 1757 (this in turn was a parody of Guimond de la Touche's tragedy *Iphigénie en Tauride*). *Le bal bourgeois*, which received a private performance at Brunoy the following year, was indebted to similar sources: Favart's original had been given at the Foire St Germain in 1738 and reworked (though not by Prot, as has previously been suggested) for the Foire St Laurent in 1761. Further works enjoyed a modest success at the Comédie-Italienne: *Le printemps* included several 'tableaux agréables' (according to the

Mercure de France) although the use of patois in the vaudevilles was apparently considered distasteful by some, and the libretto *L'amour à l'épreuve* received praise for an adroitly managed comic intrigue. Prot aimed, essentially, to please with charming but light music which, unlike the style developed by contemporaries such as Grétry, was not destined to extend the musico-dramatic boundaries of the nascent *opéra-comique*.

His early chamber works were didactic and many of the duos were provided with an optional bass line. Though initially perferring a two-movement format, Prot later adopted a three-movement pattern which, alongside the more pervasive use of strong, concise and repetitive motifs and increased technical demands on the performers, reflected Italian influences. His *Simphonie concertante* for two solo violas and orchestra is one of the earliest known works with this instrumentation and has a good deal of melodic charm: it also makes use of the chronometre figures developed by Renaudin as a means of designating tempos with greater accuracy.

WORKS

printed works published in Paris

STAGE

Les rêveries renouvelées des grecs (parodie en vers mêlee de vaudevilles, 3, Favart, C.H.F. de Voisenon and J.N. Guérin de Frémicourt), Paris, Italien, 26 June 1779 (1779)
Le bal bourgeois (oc, 1, C.-S. Favart), Brunoy, 22 Nov 1780
Le printemps (divertissement pastoral, 1, A.P.A. de Piis and P.Y. Barré), Marly, 19 May 1781 (1781)

ARISTIDE WIRSTA/ELISABETH COOK

Prota. Italian family of musicians. They were active in Naples in the 18th and early 19th centuries.

(1) Ignazio Prota (*b* Naples, 15 Sept 1690; *d* Naples, Jan 1748). Teacher and composer. As a child he received musical instruction from his uncle, the priest Filippo Prota (*d* Naples, 1 Jan 1740), *maestro di cappella* of S Giorgio Maggiore, Naples, of whose works only a *Lectio III primi nocturni sabati sancti* for contralto survives (*I-Nf*). In 1706 Ignazio entered the Neapolitan conservatory S Maria di Loreto, where he completed his musical training under the *primo maestro* Gaetano Veneziano and the *secondo maestro* Giuliano Perugino. On 9 March 1713 he married the 14-year-old Caterina d'Ambrosio. Of their descendants, two sons, (2) Tommaso and (3) Giuseppe, two grandsons, Ignazio and (4) Gabriele, and a great-grandson, (5) Giovanni, became musicians. The relationship of a Gaetano Prota, an oboist in the Teatro S Carlo orchestra in Naples with (3) Giuseppe during the 1786 season, is not known.

Ignazio contributed a prologue, several arias and three *buffo* scenes to a performance of C.F. Pollarolo's *Tito Manlio* at the Teatro S Bartolomeo in Naples in 1720. The following year he composed his first *opera buffa*, in Neapolitan dialect, *La finta fattucchiera*, for the Teatro dei Fiorentini. After his appointment as a *maestro* of the Neapolitan conservatory S Onofrio a Capuana in June 1722, he curtailed his promising career as an operatic composer in favour of teaching. He served S Onofrio for 26 years until his death, first with *maestro* Francesco Feo (1723), then Leonardo Leo (1739), and finally Francesco Durante (1745). He never attained the first position, but was highly respected by his students, among them Gennaro Manna, Jommelli, Latilla and Domenico Fischietti. His successor at S Onofrio was Girolamo Abos, who had assisted him since 1742. In 19th-century literature (Fétis, Florimo, Eitner) various members of the Prota family are confused, and Ignazio's biography is discussed under the name of his son (3) Giuseppe.

WORKS

STAGE

performed in Naples; music lost unless otherwise indicated

La finta fattucchiera (ob, A. Birini), Fiorentini, spr. 1721
La vedova ingegnosa [Strabone e Drusilla] (int, T. Mariani), S Bartolomeo, 12 July 1735 [perf. with L. Leo: Emira]
La Camilla (ob, A. Palomba), Nuovo, wint. 1737
Contribs. to C.F. Pollarolo: Titi Manlio, 1720, 1 aria *I-Nc*

(2) Tommaso Prota (*b* Naples, ?1727; *d* after 1768). Composer, son of (1) Ignazio Prota. In a legal document of 1750, Tommaso Prota, Tommaso Traetta, Gennaro Piano, Antonio Cherubino and others are referred to as having been students at the conservatory S Maria di Loreto; it has therefore been assumed that Prota and Traetta (*b* 1727) were approximate contemporaries. In 1748 Tommaso presented himself to the Neapolitan public with an *opera buffa*, *La moglie padrona*, at the Teatro Nuovo. From existing manuscripts, performance records, and publications of his works it seems that Tommaso left Naples for Malta, worked in various Italian cities and perhaps also in Paris and London.

WORKS

Sinfonia, vn, bc, Pisa, 1756; sonata, 2 fl, bc: *GB-Er*
Concerto, fl, vns, bc: *I-Nc*

(3) Giuseppe Prota (*b* Naples, 3 Dec 1737; *d* Naples, 21 July 1807). Oboist and teacher, son of (1) Ignazio Prota. In 1748, after his father's death, he entered the conservatory S Maria di Loreto, where he studied woodwind instruments under Cherubino Corona. He was soon recognized as an outstanding player, and in 1762,

when only 24, succeeded Corona as teacher of the oboe, bassoon and flute at the Loreto Conservatory. When the Mozarts visited Naples in 1770, Leopold listed 'Sgr Broda suonatore del'oboe' in his travel notes among the prominent Neapolitan musicians. On 8 June 1778 Giuseppe became oboist of the royal chapel, and in the following year teacher of wind instruments at the conservatory S Maria della Pietà dei Turchini; he held these positions until his death. His son Ignazio was also an instrumentalist, and in 1813 was first oboe at the Teatro S Cecilia in Palermo.

(4) Gabriele Prota (*b* Naples, 19 May 1755; *d* Naples, 22 June 1843). Composer, grandson of (1) Ignazio Prota. In 1780 he was *maestro* of the SS Annunziata in Naples, and later of the monastery church S Chiara. In 1785, according to Prota-Giurleo, he married a young Parisian, Rosalie Laurent, who had been educated in Naples. During the 1790s he composed several successful *opere buffe*, among them *I studenti*, for Neapolitan theatres. Gabriele and his wife became politically associated with the Jacobin cause and the 1799 republican uprising, and were incarcerated after the Bourbons had crushed the revolution. In 1806, when the French began to rule Naples, King Joseph Bonaparte appointed Mme Prota director of the newly formed music school for women, the Collegio delle Donzelle, and Gabriele became *maestro di cappella* and singing teacher there. Because of the success of the institution, both were allowed to retain their positions after the Bourbons returned to power in Naples in 1815.

Kyrie, 4 S, vns, b; Litanie, 4vv, vns, b; Miserere (per la Settimana Santa), 4vv, vns, b: all *I-Nc*
Stabat mater, Naples, April 1819, lost

(5) Giovanni Prota (*b* Naples, *c*1786; *d* Naples, ? 13 June 1843). Composer and teacher, son of (4) Gabriele Prota and Rosalie Laurent. His approximate date of birth is based on Prota-Giurleo's claim that the parents were married in 1785. A *Missa di requiem a due cori con più stromenti* dated 20 December 1798, attributed to Giovanni (held in Naples) would therefore represent the efforts of a 12-year-old. His first opera, *Il servo furbo (astuto)*, was staged at the Teatro dei Fiorentini in Naples in 1803. After the performance of his *opera buffa*, *Amor dal naufragio*, at the Teatro Nuovo in 1810, the *Corriere di Napoli* praised 'Sig Prota, giovine maestro di cappella' for his accomplishments in the genre. About 1820, Giovanni became a singing teacher and *maestro e compositore* at the Educandato dei Miracoli, in Naples. Much of his church music (the manuscripts are dated) was written when he was at this institution.

HANNS-BERTOLD DIETZ

Prota-Giurleo, Ulisse (*b* Naples, 13 March 1886; *d* Perugia, 9 Feb 1966). Italian musicologist. He spent most of his life in Naples and dedicated himself to the history of Neapolitan music and theatre. He began work in this field in 1912 on the encouragement of his teacher Salvatore Di Giacomo, whom he assisted in compiling a music catalogue of the Oratorio di S Filippo (1918) and two volumes on the four conservatories in Naples (1924–8). From 1920 to 1930 he gathered information on the history of music in Naples and on Neapolitan theatrical and artistic life (with special reference to the 17th and 18th centuries), making important contributions to knowledge of the Scarlatti family, Logroscino and the early history of *opera buffa*, Sacchini, Cimarosa, Porpora, Piccinni, Provenzale and others, and to the history of Neapolitan organists of the 17th and 18th centuries. His aim to publish a lengthy history of music in Naples was thwarted by the lack of an interested publisher; instead, part of his research appeared as 'Breve storia del teatro di corte e della musica a Napoli nei secoli XVII e XVIII' (1952). It bears comparison with the work of Croce, Di Giacomo and Pannain as one of the most important 20th-century essays on the history of Neapolitan music.

CAROLYN GIANTURCO

Protheroe, Daniel (William) (*b* Cwmgiedd, nr Ystradgynlais, 24 Nov 1866; *d* Chicago, 25 Feb 1934). Welsh conductor and composer. Before his voice broke, he won at the National Eisteddfod in 1880 and 1881. He was briefly conductor of the Ystradgynlais Choir before he emigrated at 19 to Scranton, Pennsylvania. His first music teachers in Wales had included J.T. Rees, and he continued his studies, gaining the BMus (Toronto) in 1890 and DMus in New York. At Scranton he was conductor of the Cymmrodorion Choral Society for eight years, and on moving to Milwaukee in 1894 and subsequently to Chicago he conducted a number of flourishing choirs. In Chicago he was also on the staff of Sherwood Music School and director of music at the Central Church. The foremost musician in the Welsh community in the USA, Protheroe frequently visited Wales, where he was also admired as a conductor (e.g. at the Harlech Festival, 1931), eisteddfod adjudicator and composer. Of his compositions, those for male-voice choir have enjoyed lasting popularity (e.g. *Invictus*, *Nidaros*, *Jesu, lover of my soul*), as have a number of his hymn tunes ('Milwaukee', 'Wilkesbarre', 'Hiraeth', 'Cwmgiedd'). Another well-known piece is the arrangement for male voices and piano, published under the title *Laudamus* in 1932, of the hymn tune 'Bryn Calfaria' by William Owen. Protheroe also wrote a string quartet and the symphonic poem *In the Cambrian Hills*. He edited *Can a Mawl* (Chicago, 1918), the hymnbook of the Welsh Calvinistic Methodists in the USA, and published *Arwain corau* (1914) and *Nodau damweiniol a d'rawyd* (1924).

OWAIN EDWARDS

Protopopov, Sergey Vladimirovich (*b* Moscow, 21 March/2 April 1893; *d* 14 Dec 1954). Russian composer and theorist. He studied medicine at Moscow University before attending the Kiev Conservatory, where he studied with Boleslav Yavorsky, graduating in 1921. He then moved back to Moscow and became associated with the Association for Contemporary Music (ASM). In 1927, his Second Sonata was published by Universal Edition and performed by the Austrian pianist Friedrich Wührer; he also became involved in a close relationship with his former teacher Yavorsky who in 1928 gave the first performance of the substantial single-movement Third Sonata. Protopopov's career as a composer of avant-garde tendencies understandably tailed off after the later 1920s. He then held positions as a choral conductor and as a teacher at the Moscow Conservatory (1938–43). Little more is known of his life. Almost all his works are based on or to some extent influenced by Yavorsky's theories; like that of Aleksandr Krein and Aleksey Melkikh who also studied with Yavorsky, Protopopov's harmony is unmistakably stamped with the personality of Skryabin and, as such, is based on permutations of octatonic and dominant-type modes. Protopopov, however, eschewed the lyrical approach of his two colleagues in favour of a language which is at times violently aggressive and at others entrancingly obscure. His second and third piano sonatas both employ canonic strategies to create vast sonic edifices employing the entire range of the keyboard. He also produced extended 'scenas' for two voices and piano based on Russian folk sources, while his romances reveal a more intimate facet of his creative personality. The striking works he wrote in the 1920s were initially neglected by Russian performers and musicologists but began to be revived in the West in the 1980s. He elucidated Yavorsky's theories of modal rhythm and expanded them to include microtonal structures of 24, 48 and 72 degrees per octave; almost every piece or movement by Protopopov is preceded by a staff defining its modality in Yavorsky's nomenclature.

WORKS

Pf: 3 sonatas: no.1, op.1, 1920–22; no.2, op.5, 1924; no.3 'alla memoria di Leonardo da Vinci', 1924–8; étude, ?1940
Vocal: Yunost' [Youth] (S. Lipsky), op.3, Mez, pf trio, 1917; 2 skazki [2 Tales] (A. Afanas'yev, B. Shergin, after folk tales of the Arkhangel'sk region), op.4, 2 vv, pf, 1922; Skazka o divnom gudochke [Tale About the Magic Horn] (Shergin), op.7, 1v, pf, ?1925; Yunost' [Youth] (S. Lipsky), 3 songs, op.8, S, pf, 1917–26 [incl. arr. of op.3]; 2 stikhotvoreniya [2 Verses] (A.S. Pushkin), op.10, 1v, pf, 1928; Poema lyubvi [Poem of Love] (Pushkin), 1v, pf, ?1928
Choral works, collab. B. Yavorsky; folksong arrs.

JONATHAN POWELL

Protopopov, Vladimir Vasil'yevich (*b* Moscow, 30 June/13 July 1908). Russian musicologist. He graduated from the Moscow District Music Technical College (1930), where he had studied composition with Iosif Dubovsky, and from Lev Mazel''s theory and musicology class at the Moscow Conservatory (1938). He took the *Kandidat* degree in 1942 with a dissertation on Taneyev's chamber music, and in 1960 was awarded the doctorate for his work on Glinka's operas. In 1938 he joined the teaching staff of the Moscow Conservatory, in 1943 was appointed senior lecturer and in 1962 professor. He collaborated with Asaf'yev at the Conservatory on the commission 'Glinka i yego sovremenniki' ('Glinka and his contemporaries', 1944–8). From 1948 to 1960 he was also a senior research fellow at the Institute for the History of the Arts in Moscow.

Protopopov is the author of many important studies devoted to matters of the history and theory of Russian and Western European music. He developed a history of polyphony that considers music of various national schools from the Renaissance to the early 20th century. Important, too, are his writings on the theory of musical form as it affects the use of a multi-layered structure, the basic principles of composition and their interaction, the formation and evolution of sonata and sonata-cyclic forms, and the principles of form to be found in the music of Bach and Beethoven. He has also contributed significantly to studies of Glinka, Tchaikovsky and Rimsky-Korsakov (and has been involved in the edition of their complete works) as well as Russian and Ukrainian musicians of the 17th and 18th centuries (Titov, Dilets'ky).

TAT'YANA DUBRAVSKAYA

Prōtopsaltēs. The lead chanter on the right-hand choir of a Byzantine church.

Prototype melody. A term used in literature on Gregorian chant to describe melodies adapted to new texts; *see* CENTONIZATION.

Protschka, Josef (Franz Hermann) (*b* Prague, 5 Feb 1944). German tenor of Czech birth. He studied in Cologne and made his début in 1977 at Giessen; after singing in Saarbrücken, in 1980 he was engaged at Cologne. He has also appeared in other major German houses, and sang Peisander (*Il ritorno d'Ulisse*) in Salzburg (1985), Idomeneus at Drottningholm (1986), and the title role of *Fierrabras* in Vienna (1988). His other roles have included Tamino, Don Ottavio, Max, Lionel, Faust, Werther, Jeník, Loge, Tom Rakewell and Titus, which he sang in Salzburg and Houston (1991). Protschka's warm-toned and lyrical voice has become stronger and more dramatic, enabling him to tackle heavier roles such as Florestan (the role of his Covent Garden début in 1990), Erik and Lohengrin. He is also a sensitive recitalist, and has made fine recordings of lieder by Mozart, Schubert and Mendelssohn. Notable among his operatic recordings are Florestan, Fierrabras, Erik and Elis in Schreker's *Der Schatzgräber*.

ELIZABETH FORBES

Prout, Ebenezer (*b* Oundle, 1 March 1835; *d* Hackney, 5 Dec 1909). English musical theorist, editor and teacher. The son of a Congregationalist minister, Prout showed exceptional musical promise as a child, but his father opposed a career in music, and, apart from a course of piano lessons from Charles Salaman, he was entirely self-taught as a musician. He worked as a schoolmaster from 1852, taking the degree of BA (London) in 1854, but in 1859 he turned to music as a profession, initially teaching a singing class at a ladies' school in Hackney and taking private pupils, the first of whom was the organist John Locke Gray. He was organist of several nonconformist chapels, including the Union Chapel, Islington (1861–73), and from 1861 to 1885 was professor of the piano at the Crystal Palace School of Art. In 1862 he won a Society of British Musicians prize with his String Quartet in E op.1, and in 1865 another with his Piano Quartet in E♭ op.2. These works, and the Piano Quintet in G op.3, were published and occasionally played at concerts, but suffer from a rigidity of phrasing and lack originality. Prout taught at the National Training School for Music from 1876 to 1882, at the RAM from 1879, where his pupils included Henry Wood, Edward German and Tobias Matthay, and at the GSM from 1884. From 1876 to 1890 he was conductor of the Hackney Choral Association, for which he composed the cantatas *Hereward* (1878) and *Alfred* (1882).

In 1876 he published *Instrumentation*, the first of a series of treatises which established his reputation as an authority on music theory and were extremely influential on music students well into the 20th century. The first British theorist to write extensively on musical form, melodic construction, contrapuntal techniques and orchestration, his books provided a multitude of actual examples, drawn from his encyclopedic and detailed knowledge of music from Bach to Sullivan. His writing was informed by his reading of German theorists, particularly Riemann, and *Fugue* and *Musical Form* were translated into Russian, *Instrumentation* into Italian and *The Orchestra* into German. Prout was not afraid to modify or even reject his earlier ideas: originally his theory of harmony was in agreement with that of Alfred Day, but in the 16th edition of *Harmony* (1901), he abandoned it in favour of an aesthetic rather than scientific basis for the construction of chords. His success as a theoretician led to his appointment in 1894 as professor of music at Trinity College, Dublin, and the following year he received the honorary degrees of MusD from Dublin and MusDoc from Edinburgh.

From 1871 to 1875 he was the first editor of the *Monthly Musical Record*, to which he contributed, among much else, analyses of the later works of Wagner; he was also music critic of *The Academy* (1874–9) and *The Athenaeum* (1879–89), and contributed 53 articles to the first edition of *Grove's Dictionary*.

Prout's name also became prominent through his edition of Handel's *Messiah* (1902), which he based on a thorough examination of the autograph and the transcripts of the amanuensis J.C. Smith. He eliminated textual errors current since Handel's day, but failed to understand the complex history of the variant movements, and retained Mozart's additional accompaniments, which he edited and added to, justifying their necessity in performance by large choral societies, as was then the rule. His manifesto of editorial policy, forming the preface to the full score, was reprinted in *MT* (xliii, 1902). He also edited *Samson* (1880) and two series of arias from Bach and Handel.

In addition to the works mentioned above, Prout's compositions include four symphonies, several choral

works with orchestra, an Organ Sonata, an Organ Concerto in E minor op.5, which was performed by Stainer at the Crystal Palace in 1872, another in E♭ op.35 (1885), and a Concertante Duet in A op.6 for piano and harmonium. These works were well received but have not been revived. His library was acquired by Trinity College, Dublin.

For Prout's place in the history of analysis *see* ANALYSIS, §II, 3.

ROSEMARY WILLIAMSON

Provedi, Francesco (*b* Siena, *c*1710; *d* ?Siena, after 1755). Italian music theorist. He was a knife maker by profession who had an interest in music history and theory; according to Schmidl he was also a chapel singer at S Maria in Provenzano. He published two treatises. His *Lettera* (dated 4 October 1743) argues in favour of Guido of Arezzo's more complicated method of sight-singing as opposed to the French one of Anselmo then recently introduced by F. Frittelli, *maestro di cappella* of Siena Cathedral. Provedi's *Paragone* (1752) purports to establish continuity between the music of the Greeks and Gregorian chant. Correspondence between Padre Martini and Provedi on the latter's writings continued up to 1755.

CAROLYN GIANTURCO

Provenzale, Francesco (*b* Naples, before 15 Sept 1624; *d* Naples, 6 Sept 1704). Italian composer and teacher. He was the first prominent Neapolitan musician to compose opera, but his work was mainly devoted to teaching and he taught many important Neapolitan musicians active in the first part of the 18th century.

1. Life and musical activities. 2. Works.

1. LIFE AND MUSICAL ACTIVITIES. As a young boy Provenzale may have studied with Giovanni Salvatore and Erasmo Bartoli at the Conservatorio della Pietà dei Turchini, close to his family home in Naples. There is, however, no record of his activities prior to 1658, when his opera *Theseo* was performed in Naples: the libretto states that Provenzale was the composer of at least three other operas performed in Naples; *Il Ciro*, *Xerse* and *Artemisia*. He may have composed music for the *Febiarmonici* (a musical group that had been active in Naples

Ex.1 *Lo schiavo di sua moglie*, Act 3, Menalippa's aria

from at least 1650), succeeding Francesco Cirillo. A member of the *Febiarmonici* witnessed the marriage of Provenzale to Chiara Basile on 12 January 1660.

An opera with the title 'Il Ciro' and with music by an unstated Neapolitan composer was presented at the Teatro di SS Giovanni e Paolo, Venice, in 1654, with additional music by Cavalli. There seems no doubt that this Neapolitan opera was Provenzale's and it may have been the first such work to be performed on a Venetian stage. Provenzale may afterwards have returned the compliment that Cavalli paid him by adapting his *Il Ciro*. Cavalli wrote two original operas called *Xerse* and *Artemisia* for Venice, in 1654 and 1656 respectively. Since the operatic company then in Naples was in the habit of borrowing extensively from the Venetian repertory, it is possible that Provenzale's *Xerse* and *Artemisia* were arrangements of Cavalli's operas rather than compositions totally his own. On 7 May 1663 Provenzale was appointed *maestro* of the Conservatorio di S Maria di Loreto (even if already working there since at least 1661). He was replaced by his *vicemaestro*, Giuseppe Cavallo, in 1675, by which time Provenzale had already been *maestro* for two years at the more prestigious Conservatorio della Pietà dei Turchini. While at S Maria di Loreto, he produced a number of sacred *melodrammi*, including *Il martirio di S Gennaro* (1663), *La colomba ferita* (1670), *La fenice d'Avila* (1672) and possibly *La Vittoria fuggitiva*. These works received numerous performances in Naples and its surroundings by students of the conservatory. Provenzale gradually gained status in the city, taking on posts as *maestro di cappella* at numerous churches and congregations, including S Domenico maggiore (1667), S Angelo a Nilo (1669), Monte degli Agonizzanti in S Maria Ancillarum (1679) and the Monastero di S Chiara (1679). He was also appointed *maestro della Fidelissima Città di Napoli* at the Tesoro di S Gennaro in 1665 (an appointment which did not come into effect until 1686), and *maestro onorario* to the royal chapel (1680). He resigned from the royal chapel in 1684 (taking six of its best singers with him) after twice being overlooked for the position of chief *maestro*. In 1689 his only printed work appeared in Naples, the *Mottetti a due voci*.

Provenzale led a comfortable life, financially. As was common at that time, he received a percentage of the earnings of his pupils for organizing performances for them and for making arrangements to leave them prestigious posts at his retirement or death. In 1699 he was removed from his post as *maestro* of S Gennaro because of 'incapacity and old age', his pupil Gaetano Greco replacing him, and in 1702 the Conservatorio dei Turchini came to the same decision. However, he continued to serve the royal chapel as deputy to Alessandro Scarlatti (who was appointed *maestro* in 1684 over Provenzale's head), a post which he had resumed in 1688. From 1691 he was *maestro di camera* there and continued to serve until a few days before his death, by which time he was finally chief *maestro*, a post which was passed on to his favourite pupil, Gaetano Veneziano. Provenzale had three children, not one as was previously thought: his son, Giuseppe (*b* 5 March 1665), had a brilliant ecclesiastical career; a daughter, Grazia, was married in 1674, taking with her the considerable dowry of 3000 ducats; and a second daughter, Anna Maria, entered the Monastero di S Teresa di Massalubrense in 1684.

2. WORKS. Provenzale's surviving music consists of two operas, *Lo schiavo di sua moglie* and *La Stellidaura vendicante*, the sacred *melodramma La colomba ferita*, some instrumental sections from theatrical compositions, and 24 sacred works, including the 13 printed motets. This must be only a small part of his total output: at S Maria di Loreto alone he was expected to compose a mass with instruments every four months, a mass for double choir with instruments at the end of each year, a motet every month and 'recitative compositions' for special occasions. In *La Stellidaura vendicante* the narrative structure plays on the themes of love and misunderstandings (the text is to some extent a Neapolitan parody of *Romeo and Juliet*), but with little or no dramatic impact. *Lo schiavo di sua moglie* is the first *commedia per musica* using disguised characters (which were very fashionable in the 18th century), with interjections in a foreign tongue (Selim the Turk) and a comic character (the gardener Sciarra), who sings in Neapolitan. Both operas employ characteristics which fall between traditional Venetian models and Neapolitan innovation: arias abound with descending tetrachords, representing a lament, or passacaglias where the versets are interrupted by pauses which give the effect of a sigh (ex.1).

Ex.2 *Pange lingua* in D minor

La colomba ferita is the best of Provenzale's surviving works. The structure is close to that of the operas but it has more abundant and diverse material, with instrumental ritornellos, dialogue, ariosos and polyvocal structures in the style of a motet. It is also more successful in dramatic terms, with many disguised characters. Dramatic characteristics are also evident in the short Christmas cantata *Su i palchi delle stelle* and the *Passione*. Several secular cantatas attributed to him may also, at least in part, be derived from dramatic scores which do not

survive, but they take on quite original characteristics and their style suggests a connection with Luigi Rossi. The two cantatas now in Milan are in a different style, with alternating arias and recitatives, and certainly date from a late period.

Provenzale's impressive *Missa defunctorum* was probably composed for an important state funeral, such as that of Filippo IV in 1665. The style is solemn and archaic, with homophonic, chordal progressions interrupted only occasionally by a delayed resolution (*Libera me*) and wonderful dissonances (*Lacrimosa*). The *Vespro breve* suggest a connection between Provenzale and the congregation of the Oratorio di Girolamini, the only evidence of this until now being his renting a house of theirs in the 1670s. The motets display the more modern side of the composer, particularly those for two voices from the collection printed in 1689: the vocal writing is in the bel canto style and often full of technical difficulties over an extremely complex harmonic bass. From the number of copies in existence his most successful sacred composition appears to have been the *Pange lingua* in C minor, very similar in style to the *Missa defunctorum*; it was still being performed during the Forty Hours Devotion at the end of the 18th century. A second *Pange lingua* in D minor is attributed to Provenzale in an 18th-century manuscript at Naples. It would be extraordinary if it were by Provenzale as it anticipates the compositional style of Pergolesi at the beginning of his famous *Stabat mater* (ex.2).

WORKS

DRAMATIC

Il Ciro (drama per musica), G.C. Sorrentino, Naples, S Bartolomeo, ?1653; with musical addns by F. Cavalli, Venice, SS Giovanni e Paolo, 4 Feb 1654; further musical addns by A. Mattioli, Venice, 1665, *I-Vnm*

Xerse (drama per musica, N. Minato), Naples, S Bartolomeo, 1657 [? adaptation of Cavalli's Xerse]

MICHAEL F. ROBINSON/DINKO FABRIS

Provesi, Ferdinando (Angelo Maria) (*b* Parma, 20 April 1770; *d* Busseto, 26 July 1833). Italian organist and composer. After completing his musical studies he was appointed organist at Scandolara, then at Soresina, Sissa and Cremona. He was imprisoned for approximately two years (1801–2) for stealing from the church's collection basket in Sissa. From 1816 he served as organist at S Bartolomeo, Busseto, and from 1820 was *maestro di cappella* there. He also directed the Società Filarmonica of Busseto at the home of Antonio Barezzi, served as director of the Scuola Comunale di Musica, and founded a poetry society. He was one of Verdi's early music teachers.

Provesi was an able contrapuntist and poet, writing the librettos for several of his operas. His theatrical music is not noteworthy, although a few of his instrumental and sacred works exhibit a certain melodic and rhythmic vigour. None of his works was published during his lifetime.

WORKS

MSS in I-Fc, PAc, Biblioteca della Cassada Risparmio di Parma e Piacenza

STAGE

all performed in Busseto

La clemenza di Cesare (dramma serio)

Una difficile persuasione (farsa, 2)

Eurisio e Camilla, ossia La costanza alla prova (melodramma semiserio, 2)

Pigmalione (melodramma)

Le nozze campestri (farsa)

L'ebreo di Livonia (farsa)

OTHER WORKS

Sacred: Requiem, Ave Maris stella, masses, lits, hymns, pss, motets and other works

Inst: Sinfonias, incl. Sinfonia 'La Clemenza di Tito' and Sinfonia in C Major (Milan, 1941); org sonatas, chbr music

ROBERTA MONTEMORRA MARVIN

Prowett, Stephen (*b* *c*1495; *d* Norwich, 1560). English composer. Two voices of his five-voice settings of the Jesus antiphon *O bone Jesu* and a Marian antiphon *Plaude potentissima parens plasmatoris* survive in a pair of partbooks dating from about 1530: *GB-Cu* Dd.xiii.27 and *Cjc* K31 (James 234). The latter composition is chiefly remarkable for the unrelievedly alliterative nature of its text.

A plausible candidate for identification with the composer (given the title 'dom' in the sources) is the Stephen Prowett, priest of Norwich, to whom a reference occurs in the accounts of the churchwardens of St Mary's, Bungay, Suffolk, in 1526. Probably he was then associated with either the parish church of St Peter Mancroft, Norwich, or the nearby collegiate church of St Mary de Campis – both institutions maintained choirs, and probably expert ones. In 1534 he received payment for composing a new ballet for use during the annual Corpus Christi pageant of the Norwich Company of Grocers. In 1547 he was one of the stipendiary priests at St Peter Mancroft; subsequently he became the parish chaplain, and in 1556 became rector of the church. His will was proved in March 1560, and among his effects was 'a payer of Clavycords'.

ROGER BOWERS

Prowo, Pierre (*b* Altona, nr Hamburg, 8 April 1697; *d* Altona, 8 Nov 1757). German organist and composer. He came from a family of good standing and sympathetic towards music. He is known to have been organist of the Reformed church at Altona from 1738. A large number of his instrumental works survive, and show competence as a secondary master in the development between suite and sonata.

Pruck, Arnold de. *See* BRUCK, ARNOLD VON.

Pruden, Larry (*b* New Plymouth, 28 July 1925; *d* Wellington, 1 Oct 1982). New Zealand composer. He began composing at the age of 12 and was self-taught until he won a government bursary to study composition, conducting and percussion at the Guildhall School of Music, London (1951–4), becoming, with his compatriots Edwin Carr and David Farquhar, a member of Frankel's composition class. In 1955 he joined the staff of the NZBC, and in 1975 he was appointed Mozart Fellow at the University of Otago. Most of his colourful and approachable works have related to places; examples include the *Harbour Nocturne* (1956), *Dances of Brittany* (1956), *A Back-Country Overture* (1961), *Haast Highway* (1975), winner of the 1975 New Zealand Brass Bands Association competition and *Taranaki, a Provincial Overture* (1976). His other works include a lyrical *Soliloquy for Strings* (1952) and a String Trio (1954), a committed work with a lively opening, lyrical second movement and spirited scherzo.

J.M. THOMSON

Prudencio (Bilbao), Cergio (*b* La Paz, 3 Nov 1955). Bolivian composer, conductor and pedagogue. After studying composition with Villalpando and conducting with Carlos Rosso at the Catholic University, he attended the Latin American Contemporary Music Courses in Brazil and Venezuela. As a member of a pioneering research team at La Paz's state university, he was a key figure in the foundation of the first orchestra of native Bolivian instruments (OEIN), remaining its director since 1980. Following a period in public office where he was arts officer of the municipal government of La Paz, he began freelance work for video producers, also composing film scores, notably for Jorge Sanjinés's *Para recibir el canto de los pájaros* and Mela Márquez's *Sayariy*.

Prudencio's primary contribution lies in his longstanding leadership of OEIN. Driven by his avowed desire 'to transcend . . . ethnological and archaeological rhetoric . . . , incorporating [instead] structural concepts of indigenous music', he has almost single-handedly kept the ensemble going. The task has involved researching and classifying the instruments, studying their original repertory and their application to a contemporary idiom, and, fundamentally, passing on this knowledge to the younger generation. Consistent with his forceful theoretical writings, his compositions strive towards a new musical language, recognisably Bolivian and yet 'neither folk-derived nor nationalistic'. *La ciudad*, written for OEIN's inaugural concert (1980), is an arresting journey into, until then, uncharted sonorities, loosely following the atmospheric descriptions of Blanca Wiethüchter's eponymous poem.

WORKS
(*selective list*)

OEIN: La ciudad, 1980; Cantos de piedra, 1989; Cantos de tierra, 1990; Los peregrinos, 1995; Cantos meridianos, with A, tpt, didgeridoo, 1996

Other works: Gestación, str qt, 1976; Tríptica, 4 amp charangos, 1984; Awasqa, el-ac, 1986; Juegos imaginados, 2 perc, 1985–7; Umbrales, pf, 1994; Paisaje con habitantes, vn, vc, db, 1994; Y cantó una historia, va, 1995–6; A la sombra de la highera, 4 perc, 1997

AGUSTÍN FERNÁNDEZ

Prudent (i) [first name unknown] (*d* ?Paris, 1780/81). French composer. Very little is known of his life except that he taught the violin and composition, worked in Paris and was known as *maître de musique et d'instruments*. He published some cantatilles in 1745 and wrote a successful motet for the Concert Spirituel in 1766. He may also be the Prudent mentioned by *Les spectacles de Paris* of 1758 as a violinist in the orchestra of the Concert Spirituel. Prudent's principal opera, *Les jardiniers*, is interesting in that it represents the *opéra comique* of the 1760s and 70s at its least complex. Comic elements play a large part in descriptive arias and in ensembles expressing contradictory feelings; the music for the two lovers, however, ranges from the sentimental to the pathetic, with various instrumental effects and frequent recourse to the key of G minor. The public was clearly avid for this kind of opera, for *Les jardiniers* was revived in 1781.

WORKS
all printed works published in Paris

Les jardiniers (comédie mêlée d'ariettes, 2, Davesne), Paris, Comédie-Italienne (Hôtel de Bourgogne), 15 July 1771 (1772), arias (1771)

L'heureux engagement (oc, R.-T. Pleinchesne), Paris, Ambigu-Comique, 8 Oct 1772

Other vocal: Diligite justitiam, motet, chorus, 1766; Cantatilles, with insts, incl. Les quatre saisons du coeur (1745), La fierté inutile (1745), L'heureux caprice (1745), L'aurore de l'amour (n.d.), L'innocence (n.d.), La sérénade (n.d.), others, lost

Inst: Les bouquets de Chassenay, hurdy-gurdy, bagpipe, tr viol, vn, b (n.d.), ? other works

MICHEL NOIRAY/R

Prudent (ii). *See* THIERIOT, PRUDENT.

Prudent, Emile (Racine Gauthier) (*b* Angoulême, 3 Feb 1817; *d* Paris, 14 May 1863). French pianist, composer and teacher. Entering the Paris Conservatoire at the age of ten, he won the first piano prize in 1833. He continued his studies there until he heard Thalberg perform in 1836, a transformative event which inspired Prudent to retire to Angoulême to perfect his technique to an equivalent degree. By 1840 he had begun to give concerts in the provinces, but his Paris début did not take place until March 1842. The most successful piece at the concert, the Thalbergian fantasy on *Lucia di Lammermoor* (op.8), eventually sold over 10,000 copies. Less than two months later (28 April) Prudent played in a two-piano recital with Thalberg himself at the Théâtre Italien, and was judged his equal by critics delighted at the discovery of a French rival to Thalberg and Liszt. The enthusiasm with which French critics greeted Prudent as a representative of the *juste milieu* between the other two performers was combined with public admiration for his dramatic performance style. His prestige grew steadily through the decade as he gave lessons in Paris and toured extensively in France and Europe. In 1850 his most ambitious work, the Concerto-Symphonie, was well received, but as time went on it became clear that Prudent was not living up to earlier critical expectations, apparently unable to move beyond the harmonic vocabulary, technical tricks and small scale of his earlier works. As the years went by he was also accused of excessive mannerisms onstage, and of working out his spontaneous gestures in advance. His popularity with audiences, however, appears to have remained constant, and many of the character pieces in which he specialized, such as *La danse des fées* and *Rêve d'Ariel*, were anthologized for decades after his death.

WORKS
(*selective list*)
all works published in Paris

PIANO AND ORCHESTRA

Concerto-Symphonie, g, op.34, 1850

La prairie, conc., D, op.48, 1856

Les trois rêves, op.67 (1863)

PIANO SOLO

Fantasias and variations incl.: Lucia di Lammermoor, op.8 (1842); Les Huguenots, op.18 (*c*1844); La Sonnambula, op.23 (1845); La Juive, op.26 (1846); La Dame blanche (?1846); La Favorite (*c*1846); Guillaume Tell, op.37 (1851); Robert le Diable, op.38 (1851); Le Domino noir, op.51 (1858); 'La donna e mobile' from Rigoletto, op.62 (1861); La Traviata, op.66 (1863)

Character pieces and studies incl.: Souvenirs de la Marquise, op.3 (before 1835); Andante, op.9 (1842); Souvenirs de Beethoven, op.10 (1842); Souvenirs de Schubert, op.14 (1844); 6 études de genre, op.16 (1844); Seguidille, op.25 (1846); Air et marche arabe, op.32 (1849); Farandole, op.33 (1849); La réveil [/danse] des fées, op.41 (1853); Le retour des bergers, op.42 (1853); 6 romances sans paroles, op.46 (1856); Oberon, op.50 (1857); Adieu printemps, op.53 (1859); Folie, op.56 (1859); Études-lieder, op.60 (1861); Rêve d'Ariel, op.64 (1861); Solitude, op.65 (1862)

Transcriptions incl.: Grand trio de Guillaume Tell (1844); Trio de Robert le Diable, op.20 (1845); Miserere du Trovatore de Verdi, op.55 (1859); 'J'ai perdu mon Eurydice', from Gluck's Orfeo (1859); Marche solennelle from Gluck's Alceste (1861)

BENJAMIN WALTON

Prudenzani [Prodenzani], **Simone** [Simone di Ugolino de' Prodenzani] (*b* Prodo, nr Orvieto, 2nd half of 14th century; *d c*1438). Italian poet. His main works are a narrative series of sonnets, entitled *Liber Saporecti* (or *Saporetto*, i.e. 'sauce'; *c*1415), divided into four parts, and a series of 18 *novelle* in ballata metre called *Liber Solatii* (or, in the vernacular, *Sollazzo*). The first two parts of the *Saporetto* describe the entertainment provided by a minstrel named Sollazzo (i.e. 'amusement') on Christmas evenings at the fictitious court of Pierbaldo, lord of

Buongoverno. A number of sonnets provide valuable evidence of the musical repertory then in vogue, specifying the pieces performed by the minstrel (naming them by incipit) and the manner in which he performed them, both on instruments and vocally. The bulk of this repertory is Italian music of the late Trecento, but it also takes into account novelties from the international repertory (including pieces by PIERRE DES MOLINS and JAQUEMIN DE SENLECHES) as well as aspects of a more locally characterized style (including several types of dance music and Sicilian genres). Among the composers explicitly cited are BARTOLINO DA PADOVA (credited with having composed 'French rondeaux', now lost), FRANCESCO LANDINI, ANTONIO ZACARA DA TERAMO and JOHANNES CICONIA. Their pieces are mentioned in sequences reflecting those found in sources such as the manuscripts *I-FZc* 117 and *I-La* 184. Taken as a whole, the *Saporetto* is an important witness to the musical life of central Italy in the early Quattrocento. More specifically, it may outline the repertory associated with the anti-schismatic government of Orvieto after 1400.

GIANLUCA D'AGOSTINO

Pruett, James W(orrell) (*b* Mount Airy, NC, 23 Dec 1932). American music librarian and musicologist. He attended the University of North Carolina (BA 1955, MA 1957, PhD 1962) and from 1955 was on the staff of the library there, first as a reference assistant and later (1961–76) as music librarian. In 1963 he joined the faculty of the music department, where he became professor of music in 1974 and chairman of the music department in 1976; posts he held until 1986. In 1987 he became chief of the music division of the Library of Congress. While there he was responsible for the acquisition of the personal papers of Irving Berlin, Leonard Bernstein, Artur Rubinstein and others. He expanded the concert programme to include jazz, and he established the Leonore S. Gershwin/Library of Congress Recording and Publishing Project. Pruett has been active in the AMS and the Music Library Association (president, 1973–5), and was editor of *Notes* from 1974 to 1977.

PAULA MORGAN

Prugg, Jacob de. *See* BROUCK, JACOB DE.

Prumier, Antoine (*b* Paris, 2 July 1794; *d* Paris, 20 July 1868). French harpist and composer. He studied the harp with his mother and showed an early talent for both music and mathematics. In 1810, after taking first prize in mathematics at the Lycée Bonaparte, he entered the Conservatoire, where he studied the harp under Naderman and took *second prix* in Catel's harmony class (1812). He graduated in humanities at the Ecole Polytechnique and in sciences at the Ecole Normale (1814), then re-entered the Conservatoire and studied counterpoint under Eler. He became harpist at the Théâtre Italien, but moved to the Opéra-Comique in 1835 when he became professor at the Conservatoire, succeeding Naderman. He retired in 1867. Not a highly regarded performer, Prumier was nevertheless a good teacher; among his pupils were Josef Hasselmans and Samuele Merlow. He was a member of the Conservatoire education committee and a captain in the National Guard; he received the Légion d'Honneur in 1845, and an Association des Artistes Musiciens award in 1850. He wrote about 100 examination pieces for use at the Conservatoire: fantasies, rondos and variations for harp. His *Méthode pour harpe à double mouvement* op.76 (Paris, 1865) recommended the five-finger technique (after Mme de Genlis), which was later replaced by the four-finger technique.

Prumier's son Ange-Conrad (*b* Paris, 5 Jan 1820; *d* Paris, 3 April 1884) studied with his father at the Conservatoire, where he took the *premier prix* for the harp in 1838 and for counterpoint and fugue in 1845, and succeeded him at the Opéra-Comique in 1840. He also played at the Opéra and the Pasdeloup and Conservatoire concerts. He was tutor of preparatory harp classes at the Conservatoire from 1838 to 1851, and in 1870 succeeded Labarre as professor. His *Etudes spéciales pour la harpe* (Paris, 1866), a continuation of his father's *Méthode*, advocated holding the harp on either shoulder, but the practice was not generally accepted. His compositions include Conservatoire examination pieces, liturgical music, character-pieces, and works for harp and other instruments.

ALICE LAWSON ABER-COUNT

Prunet. *See* PERRINET.

Prunières, Henry (*b* Paris, 24 May 1886; *d* Nanterre, 11 April 1942). French musicologist. He was a pupil of Rolland at the Sorbonne from 1906, taking the doctorat ès lettres there in 1913 with dissertations on Italian opera in France before Lully and the *ballet de cour* in France before Benserade and Lully; later he also took the diploma of advanced librarianship (1935). After compiling a catalogue of the music in the Biblioteca Laurenziana, Florence (1908), he taught at the Ecole des Hautes Etudes Sociales (1909–14). In 1920 he founded and directed (until 1939) the *Revue musicale* and from 1921 its series of concerts, largely of contemporary music, given in the Théâtre du Vieux-Colombier; at these, he ardently promoted the music of Bartók, Malipiero, Pizzetti and Casella. Concurrently he worked as Paris music correspondent of the *New York Times* (1924–35) and general secretary and chairman of the French section of the International Music Society, of which he was a co-founder.

Prunières' writings are largely centred on French music of the 17th century. Above all, he was responsible, almost singlehandedly, for rediscovering Lully and identifying him as the founder of French music and the creator of a style which dominated French music until the Revolution. The background to his Lully studies is admirably covered in the doctoral dissertations, and he returned repeatedly to the period in articles published throughout his life. One of his last enterprises was a collected edition of Lully's music, which was completed after his death. Of these volumes, the most useful is *Alceste* since there is no complete full score of this work dating from Lully's lifetime; Prunières' collation of librettos, partbooks and incomplete versions is masterly. Nothing that Prunières wrote later is as enduringly valuable as the two dissertations. His short books *Lully* (1910) and *Claudio Monteverdi* (1924) are hampered by the limitations of the series to which they belong, and they may appear simplistic or facile because Prunières was constrained to present only the conclusions of his studies and not the research itself. In *Cavalli et l'opéra vénitien* (1931), however, he overcame these restraints. This is probably his most successful book for the general reader, combining something of the breadth of scope of his scholarly writing with the lively anecdotal style in which it came naturally to him to communicate his passion for the 17th century.

PATRICIA HOWARD

Pruslin, Stephen (Lawrence) (*b* Brooklyn, New York, 16 April 1940). American pianist, librettist, writer and broadcaster. He studied music at Brandeis University (1958–61) and Princeton University (1961–3). At the same time, he took piano lessons with Luise Vosgerchian and then with Schoenberg's pianist, Steuermann, from whom he inherited a lifelong fascination with *Pierrot lunaire* (he has published his own translation of *Pierrot*). He taught at Princeton until 1964, when he moved permanently to London. He made his recital début in 1970 at the Purcell Room.

In 1967 Pruslin was one of the founders of the Pierrot Players, subsequently reconstituted as The Fires of London, both of whose names he invented. A leading interpreter of contemporary piano music, Pruslin has worked closely with such composers as Birtwistle, Carter (of whose *Night Fantasies* he was one of the earliest exponents), Henze and Maxwell Davies (who wrote his

Piano Sonata for Pruslin in 1981). He has appeared at most major international festivals and has made many important recordings.

He devised the music for Derek Jarman's film *The Tempest* (1980) and for the Broadway and London productions of Peter Ustinov's play *Beethoven's Tenth* (1983). He has written two opera librettos: the first for Birtwistle's *Punch and Judy* (1966–7), acclaimed by W.H. Auden as 'one of the most outstanding and original opera librettos of the century'; the second for Butler's *Craig's Progress* (1993–4). He is also the author of numerous articles on contemporary music.

JONATHAN CROSS

Psalinis, Ubertus de. *See* HYMBERT DE SALINIS.

Psallendae. Processional antiphons sung during certain Offices in the Ambrosian rite. *See* AMBROSIAN CHANT, §6(ii).

Psallendi. Chants sung at Matins and Vespers in the Mozarabic rite. *See* MOZARABIC CHANT, §3(viii).

Psalm (Lat. *psalmus*; Gk. *psalmos*). An ancient Near Eastern or ancient Egyptian sacred poem exhibiting the following main characteristics: a theocentric subject, short bifurcated units of literary construction, and parallelism of clauses (*parallelismus membrorum*, 'thought rhyme'); or a setting of such a poem to music. The Greek word itself, used in the Septuagint for the book of *Psalms*, and in the New Testament, referred properly to a song with plucked string accompaniment (elsewhere in antiquity it referred also to the movement of the fingers in plucking strings, or to the sound of string instruments). In later usage, the word referred loosely to a metrical or non-metrical sacred poem or song.

This article discusses the music associated with the biblical *Psalms* and other psalmodic texts such as the biblical canticles, in ancient Judaism, early Christianity and the traditions springing from Eastern and Western Christianity. No detailed account is given here of the various independent musical forms of the Christian liturgy that originated ultimately in psalmody, even though these often retained psalmodic texts; for these *see* ANTIPHON; COMMUNION; GRADUAL (i); INTROIT (i); OFFERTORY etc. For metrical psalm settings, *see* PSALMS, METRICAL.

On psalmody in the Jewish Synagogue, *see* JEWISH MUSIC, §III, 2(i).

I. Biblical and early Christian period. II. Latin monophonic psalmody. III. Byzantine psalmody. IV. Polyphonic psalms.

I. Biblical and early Christian period

1. Introduction. 2. The book of *Psalms*: general musical aspects. 3. Ancient Judaism: (i) Temple of Jerusalem: liturgical use (ii) Temple of Jerusalem: extra-liturgical use (iii) Outside the Temple. 4. Early Christianity: (i) Psalms of the Psalter (ii) Other psalmodic material. 5. Performing practice.

1. INTRODUCTION. The most significant collection of psalms as sacred poetry (see initial definition above) is that of the 150 items comprising the *Sefer tehillim* ('Book of Praises'; in normal English usage, 'book of *Psalms*' or 'Psalter') in the Hebrew scriptures (Old Testament) of the Jews. The *Sefer tehillim* belongs to the Ketuvim ('Writings'), the last of three sub-divisions within the Jewish scriptures of which the others are Torah ('Law') and Nevi'im ('Prophets'). The standard printed text of the Hebrew scriptures follows the Masoretic Text – that agreed and codified by the Jewish Masoretes in the early Middle Ages.

The Hebrew Jewish Scriptures were early translated into Greek, the Law perhaps as early as the mid-3rd century BCE. By about 130 BCE the 'law, the prophets and the other books of our [i.e. the Jews'] fathers' were known in Greek (*Sirach*, 'Prologue'); it is generally assumed that the 'other books of our fathers' included the Ketuvim. Probably by the turn of the era the material constituting what in Christendom came to be known as the Apocrypha and the Deuterocanonical Books had been added. The Greek translation is known collectively as the Septuagint; it is the version of the Jewish scriptures with which Hellenized Jews and Greek-speaking early Christians were most familiar. Septuagint *Psalms* is the basis of the book of *Psalms* in the Vulgate, Jerome's Latin version of the Bible.

Psalm-numbering conventions are different in printed editions of the Septuagint compared with printed editions of the Masoretic Text. The 'Masoretic Text' convention is followed in the King James Version (1611) and all post-Reformation Protestant bibles; the 'Septuagint' convention is followed in the Vulgate, the English versions of Wycliffe and Coverdale, and most Roman Catholic translations based on the Vulgate, although some recent Roman Catholic translations follow the 'Masoretic Text' convention. The Septuagint Psalter contains 151 psalms, but Psalm cli is designated extra-canonical. The concordances are given in Table 1.

Superscriptions (or 'headings', sometimes erroneously called 'titles'), containing musical, historical or liturgical notes, precede 113 psalms. They are regarded by some as late additions and are therefore omitted in certain modern translations (e.g. the New English Bible). Superscriptions are not part of the psalm texts, hence English versions ignore them in verse-numbering, unlike the printed editions of the Masoretic Text, Septuagint and Vulgate. (*See* BIBLICAL INSTRUMENTS, §3(xv).)

2. THE BOOK OF 'PSALMS': GENERAL MUSICAL ASPECTS. The psalms were intended for singing with instrumental accompaniment. In two of the earliest complete manuscripts of the Septuagint, the Codex Vaticanus (4th century) and the Codex Alexandrinus (4th–6th centuries), the book of *Psalms* is entitled, respectively, 'Psalmoi', that is, 'songs sung to [the accompaniment of] plucked string instruments' and 'Psaltērion', that is, '[to or for] plucked strings'. *Psalms* is rich throughout in references to song, singing, musical instruments (string, wind and percussion) and the playing of instruments in conjunction with song.

TABLE 1

Masoretic, Protestant	*Septuagint, Vulgate, Roman Catholic*
1–8	1–8
9–10	9
11–113	10–112
114–15	113
116 vv. 1–9	114
116 vv. 10–19	115
117–46	116–45
147 vv. 1–11	146
147 vv. 12–29	147
148–50	148–50

The Hebrew term 'mizmor' (Septuagint: 'psalmos') in the superscriptions of 57 psalms may be a generic term for instrumentally accompanied song. The superscriptions of 19 psalms contain expressions thought to be the names of tunes or modes to which they were sung (*see* BIBLICAL INSTRUMENTS, §3(xv); see also Wulstan; Bayer; Smith, 1990 and 1994).

3. ANCIENT JUDAISM.

(i) Temple of Jerusalem: liturgical use. The three successive Temples in Jerusalem (First Temple: built by Solomon, *d* 922, and destroyed 586 BCE; Second Temple: 516/515–20/19 BCE; Herod's Temple: 20/19 BCE–70 CE) were the centre of ancient Jewish worship. Psalms of the Psalter, many of which had cultic significance for ancient Judaism, were ritually important. In accordance with ancient Davidic tradition, they were performed by Levites (hereditary male Temple functionaries and musicians) who sang as a choir and played instruments (Smith, 1990, p.167). Sources specify that the Levites sang Psalms xxiv, xlviii, lxxxii, xciv, lxxxi, xciii and xcii as daily Proper psalms, one for each day of the week, at the daily sacrifices (Mishnah, *Tamid* vii.4; Babylonian Talmud, *Rosh ha-shanah* 31*a*); Psalms cxiii–cxviii (the *hallel*) at the feast of Passover Pesaḥ, during the sacrifice of the lambs (Mishnah, *Pesaḥim* v.7); and Psalm xxx during the presentation of first-fruits (Mishnah, *Bikurim* iii.4; the superscription to this psalm in the Masoretic Text and Septuagint allocates it, however, to the dedication of the Temple – cf Septuagint 2 *Maccabees* x.7). The allocation of Psalms xxiv, xlviii and xcii–xciv to their respective weekdays is confirmed in the superscriptions to their Septuagint equivalents; the allocation of Psalm xcii to the Sabbath receives additional confirmation in its superscription in the Masoretic Text. In practice the Levites may have sung many more psalms than the 14 listed here; it has been estimated that between 109 and 126 psalms belonged to the levitical repertory (Smith, 1990).

Among psalmodic material from elsewhere in the Old Testament, the Song of the Sea (*Exodus* xv.1–18) and the Song of the Well (*Numbers* xxi.17–18) were sung by the Levites at the afternoon sacrifice on the Sabbath (Babylonian Talmud, *Rosh ha-shanah* 31*a*). In addition, David's lament (2 *Samuel* i.19–27), Ezekiel's lament (*Ezekiel* xix.2–14) and Habakkuk's prayer (*Habakkuk* iii.2–19) exhibit features that argue strongly for levitical liturgical use in the Temple (Smith, 1990, pp.181–3; 1998).

(ii) Temple of Jerusalem: extra-liturgical use. Processions and other extra-liturgical events took place on occasion. These were conducted with the playing of musical instruments, including the playing of timbrels (*tof*, small hand-held frame drums) by females, dancing and singing (*1 Chronicles* xv.29; Psalm cxlix.3; Psalm cl.4; *Jeremiah* xxxi.4–6; see Smith, 1990, p.167). References to such events in Psalms xlii, xlviii, lxviii, cxviii, cxlix and cl suggest that psalms were employed. Psalmodic material from outside the Psalter that may also have been employed includes Miriam's Song (*Exodus* xv.21) and Judith's Song (Apocrypha, *Judith* xvi.2–17; see Smith, 1990, pp.181–4; 1998).

The superscriptions of Psalms cxx–cxxxiv consist of or include the phrase 'a song of ascents' ('shir ha-ma'alot'; Psalm cxxi: 'shir la-ma'alot'). The Septuagint and Vulgate equivalent is 'a song of the steps' (Septuagint: 'ōdē tōn anabathmōn'; Vulgate: 'canticum graduum'). This may be a reference to the flight of 15 steps that connected the Court of Women with the Court of Israelites in the Temple, upon which the Levites would stand and sing and play during the Feast of Tabernacles (Mishnah, *Sukah* v.4, *Middot* ii.5). These 15 psalms probably constituted the levitical singing on the steps (Smith, 1990, pp.174–5).

(iii) Outside the Temple. At public celebrations of their release from captivity Jews sang the 'song of their fathers' (*ōdēn patriōn*: *3 Maccabees* vi.32). Domestically they sang the *hallel* (Psalms cxiii–cxviii) during the Passover meal (Mishnah, *Pesaḥim* ix.3), and in devout households a father might sing psalms to his children (*4 Maccabees* xviii.15). Corporate worship in the Jewish religious community of the Therapeutae included the singing of a 'hymn', either a new composition or one by 'poets of an earlier day', and also the 'lyrics of the procession [*prosōdia*]' (Philo of Alexandria, *d c*54 CE, *De vita contemplativa* x.80 and xi.83–9), which may be references to psalms.

The Synagogue, before the destruction of the Jerusalem Temple in 70 CE and for several decades afterwards, had no formalized liturgy or 'worship service' in the modern sense. Psalms were read for private prayer, or as scripture for exigetical purposes. By the turn of the 2nd century CE festal recitation of the *hallel* may have become customary, but the use of psalms as a discrete liturgical element is not evident until some centuries later. The earliest unequivocal evidence for the use of a psalm in the Synagogue comes from *c*130 CE (Mishnah, *Ta'anit* iii.9; see Smith, 1984, pp.4–5). In antiquity, psalms were probably read with simple recitation formulae; singing in the Synagogue is not evinced before the 4th century CE (McKinnon, 1979–80; Smith, 1984; McKinnon, 1986; Sanders, 198–208; Smith, 1994, pp.2–3).

(iv) Other collections of psalms. Ancient Judaism knew at least three other groups or collections of psalmodic material. Five Apocryphal psalms (Psalms cli–clv) are extant, dating from the 3rd century BCE to the early 1st century CE (Charlesworth, ii, 609–24). The Dead Sea Scroll 1QH preserves approximately 25 Thanksgiving Hymns (*hodayot*) of the Qumran community, dating probably from the 1st century BCE (Vermes, 189–236). The *Psalms of Solomon* are 18 pseudepigraphs from the 1st century BCE (Rahlfs, ii, 471–89; Charlesworth, ii, 639–70; Smith, 1990, p.185). This material had only limited circulation; there is little likelihood that it was used in the Synagogue or the Temple.

See also JEWISH MUSIC, §II.

4. EARLY CHRISTIANITY.

(i) Psalms of the Psalter. Christianity grew initially from within Judaism, sharing the latter's culture and scriptures. The New Testament contains frequent allusions to and quotations from Septuagint *Psalms* as well as references to the book of *Psalms* as a collection (e.g. *Luke* xx.42 and xxiv.44; *Acts* i.20; *Colossians* iii.16; see Smith, 1995).

Until the late 2nd century psalms seem to have been used primarily as sources of apologetic and homiletic proof-texts; it is uncertain whether they were used discretely in worship (McKinnon, 1990; Gélineau, 2/1992). Unqualified occurrences of the term 'psalmos' cannot be relied upon to mean a psalm (Smith, 1994). The earliest unequivocal evidence appears in the apocryphal *Acts of Paul* ix (late 2nd century): 'each one took of the bread and feasted according to custom amid the

singing of psalms of David and of hymns' (Schneemelcher, ii, 258). From the mid-3rd century the desert monks in Egypt recited *Psalms* in course as their principal religious exercise (McKinnon, 1994).

(ii) Other psalmodic material. Much of the religious poetry composed by early Christians depends on Jewish models. Some is psalmodic in style. There are examples in the New Testament (e.g. *Magnificat*, *Benedictus*, *Nunc dimittis*), in gnostic and apocryphal literature (e.g. Hymn of Jesus in the *Acts of John*, xciv–xcvii; see McKinnon, 1987, §38) and preserved in manuscripts of the Septuagint (e.g. *Gloria in excelsis* expanded from *Luke* ii.14; *Odes of Solomon*; see Charlesworth, ii, 725–71). The use of privately composed psalms (*idiōtikoi psalmoi*; *psalmi idiotici*) in church was censured in the late 4th century by the Council of Laodicea (McKinnon, 1987, §261).

5. PERFORMING PRACTICE. The levitical Temple repertory was sung to the probably heterophonic accompaniment of instruments (see 3(i) above). The rubric 'selah' (Septuagint: 'diapsalma'), found in 39 psalms, possibly signified a break in the singing for prostrations (Smith, 1990, pp.173–4).

The forms of the singing were solo, choral and responsorial. Passages in Old Testament *Chronicles*, *Ezra* and *Nehemiah* show that the levitical choir sometimes had a director who also led the singing. The Mishnah contains descriptions of the levitical choir; it also mentions Hugras ben Levi who was in charge of the levitical song and a noted solo singer (Mishnah *Sheqalim* v.1, *Yoma* iii.11). Several psalms have refrains or are prefaced by the word 'halleluyah' that was used as a refrain; these features probably reflect responsorial performance. Similar forms of singing obtained away from the Temple, but without instrumental accompaniment. Released Jewish captives (see 3(iii) above) formed 'choral groups' for their singing (*3 Maccabees* vi.32, 35); a father sang psalms for his children (*4 Maccabees* xviii.15); at the domestic Passover meal the *hallel* was sung responsorially (Mishnah *Pesaḥim* x.4, 7); and there was solo, responsorial and choral song among the Therapeutae (Philo, *De vita contemplativa* x.80 and xi.83–9; see Smith, 1984).

In early Christianity, individual, corporate and responsorial unaccompanied singing is evinced inside and outside the New Testament (e.g. see Smith, 1984, pp.13–15). There is no clear evidence that the New Testament psalmodic material itself (see 4(ii) above) was sung. Three of the *Odes of Solomon* contain direct references to solo and corporate song (Smith, 1994, pp.13–14). The Hymn of Jesus was sung responsorially.

The earliest reference to psalm singing occurs in the late 2nd century in the *Acts of Paul* (see 4(i) above); the earliest references to solo, responsorial and choral psalmody occur at the turn of the 3rd century in the works of Tertullian (e.g. *Apologeticum* xxxix.16–18; *De oratione* XXV ii; *Ad uxorem* II, viii.8–9; see McKinnon, 1987, §§74, 78, 80) and Hippolytus (e.g. *Apostolic Tradition* xxv; see McKinnon, 1987, §89). From this time onwards, and especially after Constantine's 'edict of toleration' of 313 CE, references become more frequent.

II. Latin monophonic psalmody

1. Early Christian psalmody. 2. The nature of early psalmody. 3. Changes in performing practice. 4. Responsorial and antiphonal psalmody. 5. The development of the recitation formulae. 6. The connection between psalm tone and mode. 7. The simple psalm tones of antiphonal psalmody: (i) Intonations (ii) Reciting notes (iii) Median cadences (iv) Terminations. 8. The Short Responsories. 9. Invitatory tones. 10. The tracts. 11. The psalmody of the responsories of the Mass and Office. 12. The alleluia verses. 13. The offertory verses.

1. EARLY CHRISTIAN PSALMODY. It would be difficult to overestimate the importance of the psalms in Christian religious life in the 4th century, after Constantine's 'edicts of toleration'. About earlier practices, however, very little is known, and opinion is divided about the role of the psalms in the liturgy. Some (Gélineau, 2/1992) would go so far as to say that there is no reason to believe the early Christians sang psalms in their worship after they ceased to attend the Synagogue (which itself had no formal liturgy or ritualized use of psalmody at this time, and singing in Synagogue services is not attested before the 4th century – *see* PSALM, §I, 3(iii) and EARLY CHRISTIAN

CHURCH, MUSIC OF THE, §I). That psalms were sung in the liturgy of the 3rd-century Church, especially at Mass and in the evening Office (Vespers), is documented by several authors, and it would be hard to believe that the importance of the Psalter in the later liturgy is a departure from tradition. Christians continued to select psalms for their suitability in the liturgy, for instance, Psalm cxl (Greek and Latin numbering) at Vespers ('Lord, I cry unto thee ... Let my prayer be set forth before thee as incense; and the lifting up of my hands as the evening sacrifice'), but they went much further and developed Offices that can fairly be described as services of psalms. The Christian innovation was to sing all 150, in the order of the Psalter, in a regular cycle, most commonly in the course of a week, although shorter and longer periods were also prescribed. This sequential series seems to have begun as a monastic practice, but the ferial psalms (as they came to be called) were added to the 'cathedral' (episcopal) liturgy in some centres of the Greek and Latin Church before the end of the 4th century and later became universal (*see* PSALTER, LITURGICAL). The monastic and cathedral Offices, which by the 6th century numbered seven or eight (*see* DIVINE OFFICE), came to be considered the principal duty of monks and nuns, occupying more and more of their time – by the 11th century as much as eight hours or more a day. These Offices, even after all the additions made in the Middle Ages, remained predominantly psalmodic.

2. THE NATURE OF EARLY PSALMODY. The Psalter is a collection of lyric poetry (the Greek term 'psalmos' connotes a plucked string accompaniment), and although in Byzantine monastic practice the ferial cycle could be simply recited, in the Latin Church the psalms were always sung, if only to a simple formula. The musical style varied widely, generally according to the manner and occasion of execution. In the early centuries, the psalm verses were normally chanted by a soloist, usually with refrains interpolated by the assembly, although direct psalmody (without congregational response) also had a place in the liturgy.

The formulae employed by the soloist might be simple or complex, but it may be assumed that refrains intended for an untrained congregation were uncomplicated. By the 9th century, the time of the oldest liturgical books containing musical notation, the congregation had ceased to take part in liturgical psalmody, and some of the refrains were very elaborate. Whether these were originally simpler, or whether those found in the chant books have replaced earlier congregational refrains, is a question that remains unanswered. It is similarly impossible to say whether the simple psalm tones associated with choral psalmody in books of the 9th century and later are ancient, but it may be taken for granted that the structural components (introductory figure, recitation and cadence) were those employed, if sometimes more elaborately, by the solo psalm singers of earlier times. These elements are nearly universal features in the public recitation of long texts; the little evidence there is suggests that figures similar to those used in Christian liturgical psalmody were employed in the psalmody of the Jews before the Diaspora.

The earliest refrains documented in Christian worship were the single words 'Alleluia' or 'Amen' – these being frequently specified in the psalms themselves. The Hebrews also employed longer texts (e.g. 'For his mercy endureth forever' in Psalm cxxxv); and Christian authors of the 4th and 5th centuries, among them St Ambrose and St Augustine, recorded similar congregational refrains consisting of several words or even whole verses, always taken from the psalm with which they were sung. It has been suggested that some, at least, of the refrain melodies found in medieval books are elaborations of the ancient formulae used by the soloist in chanting the psalm verses. The chief support for this hypothesis is found in the passages of recitation on one note that frequently occur in antiphons and responsories. But such passages can also be explained otherwise, for example, as accommodating extra syllables when adapting standard melodies.

In the Middle Ages the refrains of antiphonal psalmody were normally sung twice: once before the chanting of the verses, and again at the end after the obligatory DOXOLOGY (the *Gloria patri*). But this was not the only usage. In the early centuries (though perhaps not in the extensive ferial psalmody) refrains were sung after each verse; and later practice included many exceptions, either solemn elaborations or further abbreviations: for example, the antiphon might be sung twice or more at the beginning; or the repetition at the close might be restricted to the second half of the refrain (as was customary in the case of the responsories). Even in modern times, the refrain of the invitatory psalm was sung twice at the start, once (in part, at least) after each verse, and twice after the concluding doxology. (For a fuller history of the refrains and the details of their performing practice, *see* ALLELUIA; ANTIPHON; INVITATORY; OFFERTORY; and RESPONSORY.)

3. CHANGES IN PERFORMING PRACTICE. The passing of the refrain from congregation to choir was not the only change between ancient and medieval psalmody; the manner of chanting the body of the psalm was also altered. As early as the 7th century, and more widely in the wake of the Carolingian conquests, the role of the solo singer was greatly reduced. After the 9th century, the normal execution of extensive psalmody was choral, the verses being chanted antiphonally, that is, alternately by two separate bodies of singers. Even the complex responsory verses came to be executed chorally, after an intermediate stage when a small number of singers, probably the 'choir leaders' (*regimini chori*), sang together. Isidore of Seville makes it clear that in 7th-century Spain the responsory verses were normally chanted by soloists, but he also noted that sometimes as many as four singers were involved. Even two centuries later, execution by a soloist or soloists seems to have been the normal practice in Frankish regions: in the earliest chant books, the indications of subtle performance nuances with which the neumes for the responsory verses are generously marked can hardly have been intended for the larger chorus. Since the refrains, too, have such markings, and taking into account their melodic complexity and wide tonal ambitus, it is possible that in early Gregorian practice (disseminated from the Frankish court) these refrains were also sung by the cantors. From the 12th century, however, soloists were normally restricted to the singing of incipits; the remainder of even the most complex chants was performed by the chorus. It was only in this late period that ecclesiastic monody took on the slow, deliberate, rhythmically undifferentiated character of 'plainchant'.

4. RESPONSORIAL AND ANTIPHONAL PSALMODY. Writers since Isidore have divided liturgical psalmody into two general classes, antiphonal and responsorial, usually saying that the distinction depends on the way the verses were executed: in responsorial psalmody, by one singer; in antiphonal, by a chorus. This definition is obviously not satisfactory for the later Middle Ages (when verses and refrain were both sung by the chorus), nor does it hold for the early period when the verses of 'antiphonal' psalmody were executed by a soloist. Several explanations can be offered for the words that correspond to 'antiphon', 'antiphonal', 'responsory' and 'responsorial' in early texts. The usage varied and changed over the centuries, and (for us) is often confusing, especially since *responsorium* (*responsum* etc.) and *antiphona*, whatever else these words came to signify, are primarily the Latin and Greek terms for 'refrain', and might thus be used interchangeably. The original difference between responsorial and antiphonal psalmody may have been more functional than stylistic: the former applying to the psalms the Church insisted must separate the items in a series of scriptural lessons, the latter to psalms that were considered scriptural readings in their own right. In any case, the elaborate style characteristic of responsorial psalmody in medieval books may be a later development, after the intercalations were shortened, usually to a refrain and a single verse. Similarly, the stark simplicity of the antiphonal recitation tones may date only from the time the solo psalm singer gave way to the chorus.

5. THE DEVELOPMENT OF RECITATION FORMULAE. The simplest psalm formulae, used in the Ambrosian liturgy of Milan for the ferial series, had only two components: (1) a recitation tone (referred to by late-medieval theorists as *recitatio*, *tenor*, or *tuba*) and (2) a cadence (*terminatio*, *differentia*, *distinctio*, *divisio* etc.) whose notes were set to the last syllables of each verse cursively, that is, without regard to the text accent. There was neither initial figure nor median cadence at the caesura. In Gregorian practice, even for the ferial psalms, the formulae included an initial inflection (*initium*, *intonatio*), if only for the first verse, and both median and final cadences – the former usually adjusted for the accent, the latter only sometimes. Evidence suggests that accentual cadences are a later sophistication, perhaps the result of the proto-humanist literary interests of the Carolingian circle. The predominance of accentual cadences at the caesura may be an indication that they are a later development, a sign that older Gregorian practice had been more like the Ambrosian: the verses sung without an internal inflection. The practice of the Greek Church also supports the hypothesis that the choral psalm tones were originally very simple. In the East, the two halves of the verses were sung to the same formula.

This, of course, raises another question. Most psalm verses have a parallel, binary, structure and a clear caesura – features that survived in the Latin translations of the Psalter even when other prosodic devices of Hebrew poetry did not. This parallelism was reflected in the practice of the Synagogue: the alternation of half-verses (by cantor and the congregation) is one of the kinds of psalmody documented in the Talmud. But it should serve as a caution against the assumption that early Christian practices were simply a continuation of the Jewish, that in Western antiphonal psalmody it was always whole verses that were alternated. In the Greek East, the choral alternation of half-verses can be documented, but the divergence from Western usage is perhaps not as significant as it might seem, since some Greek Psalters divide the psalms into twice the usual number of verses.

Recitation formulae were seldom written out in medieval books, and such examples as there are (even those in instructional works) reveal a surprising lack of consistency, especially with respect to the text accent. Initial inflections, for example, are usually treated cursively, but even they were occasionally adjusted to accommodate the accent of the opening syllables. Early monastic *regulae* stress the importance of choral recitation 'as if from one mouth', and no doubt with good reason. It is hard to imagine that the daily practice was very consistent: it would be difficult for a chorus chanting long texts without books to recognize the fifth-to-last or whichever syllable was to be sung to the first note of the cadence, and even more difficult to adjust that cadence *ex tempore* for the accent.

6. THE CONNECTION BETWEEN PSALM TONE AND MODE. In Gregorian practice, the standard tones for the responsory verses and the formulae for the extensive psalmody of the Office are associated with the eight musical modes. For the responsories, there are eight standard tones, and the mode of the refrain determined which would be used. In early antiphoners, no neumes were supplied; the singer was expected to adapt the verse text to the psalm tone *ex tempore* (any freely composed responsory verses were, of course, written out). In the case of the antiphons, the initial inflection, reciting pitch, and median cadence were similarly decided, although the choice of final cadence usually involved additional considerations and reference to a TONARY, where antiphons were grouped according to mode and secondarily according to termination. In practical service books, the correct cadence was usually indicated by a cue consisting of the notes of the final inflection set to *euouae*, the vowels of 'seculorum. Amen', the last words of the doxology that was almost invariably sung at the conclusion of antiphonal psalmody (*see* EVOVAE).

The eight modes were introduced in Frankish regions near the beginning of the 9th century; the recitation formulae are certainly older, and associating them with the modes was obviously to introduce order to an unsystematic practice. In the Ambrosian Church, where the modes were resisted, there are many more psalm tones than in the Gregorian, and the practice found in Ambrosian manuscripts is far from rational: the same recitation tone is frequently employed for chants with different finals and very different melodic characteristics. Even in Gregorian documents, traces remain of the time before modes were involved. The eight modes are the basis of the earliest exposition of antiphonal psalmody, the *Commemoratio brevis de tonis et psalmis modulandis*, but the treatise does not present eight standard formulae, only six ('the sixth tone is like the first and the last like the second'). Moreover, in recognizing the legitimacy of certain additional tones it does not include and in rejecting others as 'spurious', the treatise gives ingenuous testimony to an earlier, less systematic practice such as is found in the Ambrosian books. Circumstances are somewhat similar for the recitation tones used with responsories: a few medieval manuscripts contain more than the usual eight formulae, but it is not clear whether this represents an earlier, less systematic practice or a later one in which

certain, favourite, freely composed verses could be adapted to new texts.

7. THE SIMPLE PSALM TONES OF ANTIPHONAL PSALMODY. The principal recitation formulae of Roman-Gregorian practice, which in the Middle Ages came to be adopted throughout almost the whole of Western Europe, are illustrated in the following examples, beginning with the simple psalm tones of antiphonal psalmody (where the principles are most obvious). Although the division of psalm tones into ornate and simple, corresponding roughly with the earlier dichotomy of solo and choral execution, is not entirely straightforward, some stylistic overlap occurs, if only for certain elements of the formulae: undecorated initial inflections and passages of simple recitation are not infrequently found in psalmody that is otherwise highly elaborated. The examples given below are representative, not complete. The practice was never uniform: there were slight variations in melodic detail, and there was even more widespread disagreement about the number of terminations that might be employed. Commonly, there were several to choose from (a 9th-century tonary from Metz includes as many as 13 for mode 7), but some of the more severe monastic orders reduced their number – the Cistercians, for example, to a single one for each mode.

The simple recitation tones for the eight modes are set out in ex.1 *a–c*, *d–f* and *g*, *h*. Two versions are given, those found in the *Commemoratio brevis* of the end of the 9th century (labelled CB) and, for the sake of representing the kind of differences encountered in medieval manuscripts, those of the Vatican editions (V) a thousand years later. The simplest tones were those for the psalms sung in the Office: these normally had no inflections for the first syllables after the caesura, but it is typical of the variability of medieval practice that the *Commemoratio brevis* does prescribe second intonations for all but the 2nd, 4th and 7th modes. Slightly more complex are the formulae used for the New Testament canticles (the *Benedictus* of Lauds and the *Magnificat* of Vespers) and the tones used for the remnants of psalmody in the Mass. In the Ambrosian Mass, no simple psalmody survived: by the time of the earliest service books, only the antiphons remained. In the Gregorian Mass, something of the introit psalm persisted, and traces of the communion psalm. The former, usually reduced to a single verse, was sung to formulae such as those from the Vatican editions included in ex.1; the communion psalm seems to have been sung to the same tones as were used for the introit.

Some of the cadences from the Vatican editions in ex.1 are accentual, that is, they are adjusted so that the last stressed syllable, or the last two, are reinforced by the musical accent. The empty notes (semibreves) provide for situations (e.g. 'dóminus', 'adsúmsit me', 'confído in te') where more than one syllable follows the last accent or (in cadences of two accents) where two or more unstressed syllables separate the final two stresses. The square notes (breves) indicate the pitch on which were chanted all syllables not included in the initial inflections and cadences.

(i) Intonations. In the ordinary, simple psalmody of the Gregorian Office, initial inflections were sung only for the first of the verses to be chanted; the others began immediately with the reciting note. For the slightly more elaborate psalmody of the *Benedictus*, the *Magnificat* and (on the rare occasions when more than one verse was specified) the introit, the initial inflections were repeated for each verse. Normally, the figures of the first and second intonations were applied mechanically to the first, the first two, or the first three syllables without regard for the accent. Although the initial inflections of simple psalmody present nothing like the complications of the terminations, the practice (as ex.1 shows) was not perfectly uniform.

(ii) Reciting notes. In Ambrosian psalmody, recitation can be found on all notes of the scale. In Gregorian practice, in keeping with the restrictions of the modal system, only certain notes were regularly employed: originally, the 5th above the *finalis* for the authentic (odd-numbered) modes, and the 3rd above for the plagal – except for mode 4, whose reciting note is *a*. The reiteration of the reciting pitch gives it undoubted prominence, and theorists have made much of its tonal significance (it is sometimes referred to as the 'dominant' of the mode). But the 'system' introduced with the modes was less than systematic and, before long, changes were made that further diminished the symmetry. Uneasiness about recitation on the note *b* – perhaps because this degree of the scale was unstable, sometimes sung as *b*♭, sometimes as *b*♮ – led to the raising of the reciting note of the 3rd and 8th modes to *c*. The settled Gregorian practice is summarized in Table 1. In simple psalmody, the reciting note is normally the same for both half-verses, but among the irregular tones that survived to be used occasionally in the Middle Ages are a few that have a different reciting note before and after the caesura (as do, regularly, the verse tones of responsories and invitatories). It is rare to find psalm tones written out, and difficult therefore to know how widespread were 'exceptions' to the rule. The 'regular' tone for 6th-mode introits is given in ex.1. However, in the Vatican editions and in some medieval books, the 6th introit-tone, applied to certain verses, appears to have recitation on *a* in the first part and on *f* in the second. These cases can be explained as examples where the reciting note does not appear in the second half of the tone, all the syllables having been needed for the second intonation and termination (which consists, exceptionally, of eight elements). The widely used, irregular formula known later as the *tonus peregrinus* ('wandering tone'), given in ex.2 from the *Commemoratio brevis*, also appears to have two reciting notes; but what is usually seen as recitation on *g* in the second part can also be understood as extra notes inserted to preserve the text accents of 'dómino' and 'fílios' in the cadence.

(iii) Median cadences. The mediations of ex.1 consist of a varying number of elements, from two (mode 2) to six (the formula for mode 3 in the *Commemoratio brevis*). The examples from the Vatican editions demonstrate how these were adapted to accommodate the varying number of syllables that might follow the last, or the last two text accents. In the case of the doxology of the introit, which was tripartite (like that of the invitatories), the second mediation was the same as the first (however, the second intonation was repeated for the third section). It is interesting that this tripartite structure is found only in the doxology: introit verses, however long, were always divided into two parts. In the simple psalmody of the Vatican editions, first half-verses that are exceptionally long are divided, the division marked by a slight pause and a drop from the reciting note to a note a 2nd or 3rd

below. This subsidiary inflection (known as the 'flex') seems to be a modern addition.

(iv) Terminations. It is usually said that a choice of terminations (*differentiae*) was provided in order to ensure the smooth transition between the last note of the psalm tones and the first note of the following antiphons. This explanation is not adequate: the endings assigned in medieval books make the connection through every interval from unison to 5th; moreover, for Gregorian tones 1, 3, 4, 7 and 8, there was normally a choice of endings that concluded on the same note. Antiphons that belong to the same melodic family are usually assigned the same psalm termination. But it is not clear whether the choice was made because of some structural charac-

teristic of the antiphon's melody, or merely because antiphon and cadence were associated traditionally. It does seem likely that the superfluous assortment of endings (like the irregular psalm tones) survives from the earlier, unsystematic practice before the introduction of the modes. In ex.3 are given the terminations from a 13th-century English antiphoner (*GB-WO* F.160; PalMus, 1st ser., xii, 1922/*R*) that fairly represents the medieval customs. Such endings, in the Vatican editions, are usually adjusted for the accent; the medieval practice is elusive. *Euouae*, the conventional cue representing the termination in the service books, presents only one of several possible combinations of stressed and unstressed syllables, and that one (owing to the appearance of the Hebrew word 'amen', whose accentuation was uncertain) is sometimes ambiguous. Since written-out examples of other texts with different patterns of accentuation are usually lacking, it is impossible to say whether it was normal in the Middle Ages to add extra notes so that the last text accent (or last two) coincided with the musical stress. It seems likely, however, that such adjustments are niceties from later times, when the psalms might be chanted from books.

See also Inflection.

8. The Short Responsories. Although the responsorial psalmody that followed the extensive readings of the Mass and Office was invariably elaborate, the short readings, or chapters (*capitula*), assigned at the Little Hours of Prime, Terce, Sext, None and Compline (and in monasteries, at Lauds and Vespers as well) were followed by the brief, simple psalmody of the Short Responsories (*responsoria brevia*). In a normal performance their

refrain was sung twice before the verse, once (but only the second part) after the verse and once (complete) after the doxology. The medieval practice was not uniform, but in most churches a small number of formulae were used throughout the year, with special tones (elaborations of the simple formulae, newly composed melodies, or adaptations of long responsories) reserved for only the most important occasions. In ex.4, the simple 4th-mode tone used (except for saints' feasts) throughout Advent has been adapted to two psalm verses. The history of the Short Responsories is obscure. The simple melodies – in appearance rather like antiphons, although adapted to various texts much like psalm tones – are sometimes used for the refrains as well as for the verses. This might suggest that the Short Responsories are remnants of an early stage of psalmody (Hiley, 1993), but they may just as well be late additions. The development of the LITTLE HOURS is not well documented: in the early Middle Ages they varied so little from day to day that monks, clerks and nuns could be relied upon to sing what was needed from memory; it is only in later books, at a time when the minor Offices had lost something of their stark simplicity, that their requirements were fully written out.

9. INVITATORY TONES. From the 6th century, Psalm xciv ('O come, let us sing unto the Lord and make a joyful noise unto him with psalms') has been sung at the beginning of the night Office (Matins) in the Roman rite as an invitatory (*invitatorium*), that is, an 'invitation' to prayer. The same psalm is sung traditionally in the morning service in the Synagogue (*see* JEWISH MUSIC, §III, 2(i)). Invitatory psalmody is irregular in a number of ways: (1) the text is that of the 'Roman' Psalter, an early version (with an extra phrase) otherwise superseded in Gregorian regions by the 'Gallican' translation; (2) the psalm has been divided into five verses, not the usual 11; (3) these five verses are divided, not into the usual two hemistichs, but (like the doxologies of the introit and the invitatories) into three – three phrases in which further divisions are often suggested by the structure of the musical formulae. The psalmody of the invitatory also stands apart from ordinary psalmody in another way: the

pattern of refrain repetition is much more complex. It seems that the general practice was to sing the antiphon twice before the verses were chanted and twice after the doxology, to repeat it in full after the odd-numbered verses, but to sing only the last part of the antiphon after the even-numbered ones.

Ex.4

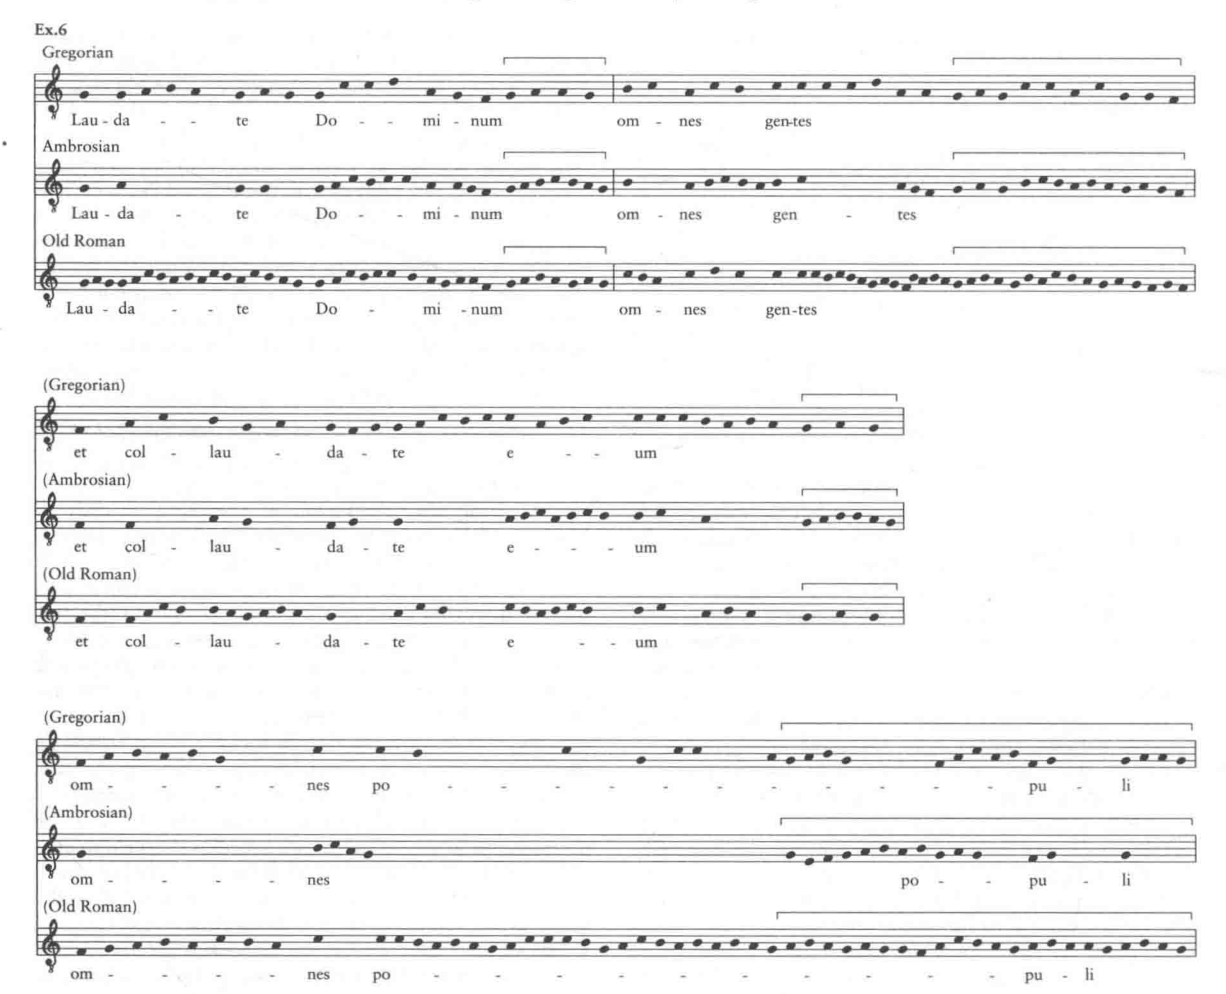
Some of these features suggest antiquity, as does, perhaps, the fact that only six of the modes are represented. Even though there are a great many invitatory antiphons, they were assigned only to modes 2 to 7 (a single, relatively late, exception is known; an invitatory antiphon elsewhere assigned to the 4th mode is assigned to mode 1 in a Sarum manuscript). Normally, however, there were more than six recitation tones for the invitatory: the usual number seems to have been about a dozen, but in some manuscripts as many as 20 are found. Alternatives were especially widespread for the 4th mode. A comprehensive account of the medieval repertory will not be possible until a complete inventory has been compiled.

Some of the invitatory tones are close to simple psalmody, though with the added complications of second and third intonations, a second internal cadence and (often) more than one reciting note. An example of a relatively simple tone with a single reciting note is given in ex.5. Other invitatory tones, generally speaking those for important feasts, are much more ornate. They are

Ex.5

more like free melodies adapted to different texts than formulae, and their structure is often obscure.

10. THE TRACTS. In the Middle Ages, not all liturgical psalms were sung with refrains or in antiphonal alternation; direct psalmody survived in both Mass and Office. The tone used at Mass for this kind of recitation is among the most elaborate in the medieval books. The Gregorian tracts and their Ambrosian counterparts the *cantus* were originally full psalms; but as in the case of the responsories, this psalmody was later abbreviated, usually (in the Mass) to one, two or three verses, although there may be as many as five. In Gregorian books, two melodies, one in mode 2 and one in mode 8, serve for all chants identified as tracts, but those of the 2nd mode are properly responsories. The only authentic tract melody – a formula in fact, though greatly and distinctively elaborated – belongs to the 8th mode. This tone had other uses as well: at Mass (in Gregorian books) for the recitation of (the last part of) one of the lessons on Ember Saturdays; and in the Office for certain recitations in Holy Week. In all these instances, even in the Middle Ages, the tone was used for the chanting of a whole canticle or psalm. That this same formula – the more interesting in that it was unquestionably intended for solo recitation – is the only one employed in Ambrosian books, is but one indication of its antiquity.



There is, of course, no way to be sure that the elaborate formula with impressive melismas found in the medieval books for the *cantus* and the 8th-mode tracts is ancient. But the melismas aside, there is some reason to think so: the tract-*cantus* repertory did not receive the kind of development seen in the rest of the liturgy, where new feasts, with new responsories, new antiphons, new alleluias (etc.) were added in every century. The tracts and *cantus* belong to the static ferial liturgy; they kept their place at Mass only in Lent (when feasts were excluded) and on other penitential occasions (*cantus* were sung in the vigil Mass of certain saints, but such vigils were considered penitential preparation for the feast that followed). At other times, these chants were replaced – in stages, between the 5th and 9th centuries – by the alleluia. 'New' tracts may have been added in the Middle Ages, but all texts were taken from the psalms, and no new melodies were produced.

The formula used for the tracts and *cantus* (like those of the invitatory) articulates more divisions of the psalm verse than those used in simple psalmody: the major division is into hemistichs, but each hemistich is further divided (even when the sense does not suggest it), and for each of the four sections there is an initial inflection, reciting note (if the text is long enough) and termination. In Gregorian books, the operation of the formula is often obscured (the tracts often seem more like free melodies than formulae; it is as though later singers sometimes lost sight of the original structure and used the elements of the formula without regard for their proper syntax). In Ambrosian and Old Roman books the structure can still be seen clearly, but even so it is only when several *cantus* are compared that the elements of the formula can be seen for what they are. The successive verses of tracts were sung to progressively more elaborate melodies. In the *cantus* it can be seen more clearly that specific forms of the formula were used for first, second and third verses, with successively longer melismatic expansions of the cadences. It may be presumed that this complication is a later development of the Mass chants; when the same formula is used for the more extensive psalmody in Holy Week, it is applied to the successive verses without such elaboration.

In ex.6 are compared the Gregorian, Ambrosian and Old Roman settings of 'Laudate dominum omnes gentes' (the first verse of Psalm cxvi in the Roman Psalter). The musical elements (initial inflection, reciting note on *c*, and termination) are typically less obvious in the Gregorian version than in the other two, but the comparison makes clear that the melody and procedure for adapting it are common to all three. The notes under the brackets are the characteristic elaborations of the final note of the cadence in each of the four sections; in some settings these cadential elaborations were very greatly expanded.

11. THE PSALMODY OF THE RESPONSORIES OF THE MASS AND OFFICE. Also among the most ornate of the medieval psalm settings were the long responsories (*responsoria prolixa*) sung after the lessons in the Office (mostly at Matins and Vespers) and at Mass. The chants normally consisted of two parts, a refrain – the 'respond' – and a verse or verses. A doxology was associated, but it was shorter than that used in antiphonal psalmody (the full text was, 'Glory to the Father, the Son and the Holy Spirit', just as for the *responsoria brevia*) and it was not sung with every responsory but normally only for the last of a series. With rare exceptions, mostly in the case of very short examples, the refrain was sung only in full at the beginning (though sometimes more than once); after the verses, only its last part was repeated. This shortening of the refrain is probably to be seen as an abbreviation of the earlier practice, but it was not a medieval development. It is obvious that the texts of many responsories were composed (or chosen) so that the *repetendum* would make grammatical sense in conjunction with the last words of the verse. The chants of Matins are frequently referred to as the Great Responsories, but they are not consistently different in style from those sung in other Offices; indeed, Matins responsories were not infrequently assigned elsewhere. Gregorian manuscripts refer to the responsory of the Mass as the 'respond-gradual' or 'gradual' (*responsorium graduale*, *gradualium*) apparently because such chants were sung from the steps (*gradus*) of the ambo. The analogous Mozarabic and Ambrosian terms, 'psalmo' and 'psalmellus', respectively, strengthen the argument that the responsories of the medieval books are the remnants of the responsorial psalms sung between the lessons in the early Church. The Ambrosian term, which means 'little psalm' can even be seen as a reference to the abbreviation of the earlier, fuller psalmody that had occupied the same position in the liturgy.

The verses of the responsories of the Office are mostly sung to standard tones, although many can only be described as freely composed; in the Mass, all the verses are set to what appear to be individual melodies. In the 'free' verses of the Mass and Office, certain musical phrases are used again and again, migrating between chants of the same mode, and even between chants of different modes. Such verse settings (and the responds with similar characteristics) have been described as *centos* (Lat.: 'patchwork'); their construction is far from being systematic, but it is not impossible that some of them (specifically those found in the oldest books) have been imperfectly transmitted, and that in earlier times their

structure would have been more obvious, perhaps even obviously formulaic.

Most of the responsory verses are psalmodic, but many (these, presumably, later additions) have texts taken from scripture outside the psalms or newly composed. Whatever the source, the verse texts were set to the standard tones in the same way. The eight regular recitation tones for the Gregorian responsories are given in ex.7, from the Vatican editions. Each is adapted to the doxology and to a psalm verse or scriptural citation. The hollow notes (breves) represent pitches required to accommodate the accent and to provide for extra syllables in certain texts. As in the case of the simple tones, the medieval practice for the responsorial tones was not as consistent as that found in the modern books; but the recitation formulae in ex.7 do fairly represent the late Middle Ages in places where the practice, with respect to the text accent, was punctilious. In structure, these tones resemble those of simple psalmody, but the adaptation of the components to the text is much more complicated, and differences between the verse settings are considerably greater. The initial inflections and second intonations are adjusted for the accented syllables, usually at the point of the first stress, although in some cases (there is no clear rationale) this is delayed until the second or even third word. In such cases a prosthetic recitation, sometimes of several syllables, precedes the 'initial' inflection of the tone. The reciting note is not always obvious: sometimes it is substantially decorated (mostly by higher notes that serve to reinforce accented syllables); sometimes, in the case of short texts (whose syllables are taken up by the initial inflection and cadence), it is omitted altogether. The 'rule' governing the relationship between the responsorial reciting notes and the final of the tone is even less defensible than that postulated for simple psalmody: only the 5th responsory tone has the same reciting note in both halves, and there is some uncertainty between *c* and *b* in the second half of the 3rd-mode tone and the first half of the tone for mode 8. The median cadence of all the responsory tones consists of five melodic elements; in ex.5 (though not consistently in medieval manuscripts and probably not originally) this is treated as a cadence of one accent: the median inflection begins on the third syllable before the last stress, and if the last syllables produce a proparoxytone (as in the case of 'filio' in the doxology), an extra note is inserted before the second to last element. It should be noted that although the adjustment to the cadence is made in accordance with the last accent, the stress of this syllable is not reinforced (in the usual sense of the word) by the alteration. Normally, there was a single ending for each responsory tone; there is nothing like the system of *differentiae* found in simple psalmody, although alternate endings can sometimes be found. The terminations, like the median cadences, consist of five

elements, but in the ending they are sung cursively to the last five syllables whatever their accentuation.

12. THE ALLELUIA VERSES. According to the Byzantine historian Sozomenus, who wrote in the mid-5th century, the alleluia was sung in Rome only on Easter Day. We learn from Pope Gregory I (*d* 604) that before his time the Mass alleluia was sung until Pentecost, and that he had been criticized for extending it beyond the Easter season. By about 900, the time of the earliest Gregorian

quo - - ni - am bo - nus

quo - - - - - ni - am in sae - cu - lum

mi - se - ri - cor - di - a e - - - - - - ius

books, the alleluia was sung in all Masses of the year that were not penitential, and for all these occasions verses were provided. There is no reference to verses in the earliest authors; presumably they were added only after the alleluia lost its exclusively paschal connotation, added in order to make the chant appropriate, or at least distinctive, on the particular day. The repertory of Gregorian verses was very greatly expanded in the Middle Ages, with texts taken freely from scriptural and non-scriptural sources; however, a significant portion, if not the majority, of alleluia verses have texts taken from the psalms. Although it may be that the psalm texts of the earliest alleluia verses were sung by the soloist to elaborate tones, perhaps like those used for the tract, this cannot now be determined by analysis – not least because it is often impossible to tell which verses are old and which are later additions that might have been constructed according to different principles. Most of the settings known to us have the appearance of individual melodies, like the free verses of responsories, but in many of the alleluia verses it is possible to see evidence of a formulaic basis.

The verse sung at the Mass of the Easter Vigil is given (from the *Graduale Romanum*) in ex.8. *Confitemini domino quoniam bonus* is probably among the most ancient of alleluia verses; the association of this text with *Alleluia* is found in the Psalter itself, in Psalm cvi and again in cxvii. In ex.8 the verse *Confitemini Domino* is divided by melodic inflections into four sections: each begins with an intonation (whose essential motion is from *g* to *c*) and each concludes with a cadential figure; moreover, the operation of a reciting note (*c*) is unmistakable. The cadential figure ends on *g* in three of the four sections of the verse. The symmetry would be more complete (and the similarity to a psalm tone even more striking) if the second section also ended on *g*, and this would be so if the word 'quoniam' (of 'quoniam in saeculum') were begun five notes later. This may in fact have been the case. The text underlay in ex.8 is indeed that found in the earliest manuscripts, but for the Mass of the Major Litany, the same verse text is set to a version of the same melody, and there the third section does seem to begin at precisely this point (see *CH-SGs* 339, p.86; PalMus, 1st ser, i, 1889/*R*). Other procedures were also employed in setting alleluia verses, perhaps even in the earliest times. The verses of the Ambrosian alleluia, whose development was very restricted (the medieval books contain 52 verse texts, set to only ten melodies), are sung to what seem to be adaptations of the alleluia melisma – that is to say, they seem to be early examples of the practice later employed in prosulae and the early sequence.

13. The offertory verses. Although in medieval books the offertory is often identified as an antiphon, the nature of this chant is disputed: some believe it to have been responsorial from the beginning; others presume that the form known to us is a later abbreviation – and stylistic elaboration – of what was originally (like the introit and communion) a simple psalm and refrain to accompany the bringing of the gifts to the altar. In the course of the 12th and 13th centuries, the Gregorian offertory lost its verses entirely; however, in the earliest books (and in the Ambrosian rite) some offertories do have verses – one to three (rarely four) – the great majority of them taken from the psalms. No trace of an earlier, simpler, style of offertory verse is known to survive, and if the offertory did develop its unique, flamboyant style by a process of elaboration of such psalmody, this is not apparent in the verses known to us. Recitation on or around one note is not hard to find; but the verse settings have a very wide ambitus and a lack of tonal focus that would be hard to relate to the simple formulae used for antiphonal psalmody elsewhere in the liturgy. There are, moreover, frequent melodic connections between offertory verse and refrain, and repetitions of text phrases that have no parallel in any other psalmody of the Mass and Office. By and large, these (and other) features suggest that the offertory verses belong to a late stratum of Western chant.

III. Byzantine psalmody

1. The Byzantine Psalter and its liturgical use. 2. Simple psalmody. 3. Elaborated psalm settings.

1. THE BYZANTINE PSALTER AND ITS LITURGICAL USE. Although the Byzantine rite is renowned mainly for its hymnography, the Psalter provides the basic structure and the texts for substantial parts of the Offices and the Divine Liturgy. Three different forms of psalmody are practised in these services: fixed psalms, continuous psalmody, and selected single psalm verses, as in the responsorial chants, the *prokeimenon* and the *allēlouïarion*. In addition to the 150 psalms, the Septuagint version of the Psalter often included the supernumerary Psalm cli, although this was not part of the division of the Psalter into *kathismata* for continuous psalmody (see below). From the 5th century onwards the Greek Psalter normally also included the canticles; there were originally as many as 14, but in the 10th century a standard order of nine was universally established (*see* HEIRMOLOGION). Liturgical psalters also often included early Christian hymns, such as *Phōs hilaron* ('O gladsome light'), and the Byzantine Gloria, *Doxa en hypsistois Theō* ('Glory to God in the highest').

Two different types of medieval psalter survive, one adapted for the monastic rite and the other for the urban rite celebrated in cathedrals (later referred to as the ASMATIKĒ AKOLOUTHIA or 'chanted rite'). The extant liturgical and musical sources show, however, that in their use of the Psalter these two traditions were not wholly independent of each other.

In the monastic rite the Psalter is divided into 20 *kathismata* ('sessions'), each of equal length and consisting of between one and five psalms. Each *kathisma* is subdivided into three *staseis* ('stations'), also known as *antiphona*; a Doxology concludes each *stasis*. Dots indicate the verse divisions (*stichoi*) in both psalms and canticles (according to the typical organization of the biblical Book of Psalms, each *stichos* corresponds to a half-verse). The division of the Psalter into *kathismata* pertains to the continuous psalmody of HESPERINOS and ORTHROS, the evening and morning Offices, during which the Psalter was recited once a week (twice weekly during Lent), always beginning at the Great Hesperinos of Saturday with the first *kathisma* of the Psalter. In addition to the continuous psalmody, fixed psalms and psalm complexes were sung at every service: at Hesperinos – the *prooimiakos* (Psalm ciii, the opening 'prooimiac' psalm) and the *Kyrie ekekraxa* (Psalms cxl, cxli, cxxix and cxvi); at Orthros – the 'hexapsalmos' (a complex of six psalms beginning with Psalm iii and ending with Psalm cxlii.10*b*), the *pentēkostos* (Psalm l), the *Theos Kyrios* (Psalm cxvii), the *polyeleos* (Psalms cxxxiv–cxxxvi) and *hoi ainoi* ('Lauds'; Psalms cxlviii–cl); and at the Divine Liturgy on Sundays and important feasts – three antiphons (Psalms xci, xcii and xciv; *see* DIVINE LITURGY (BYZANTINE)).

Ex.9 Psalm ix.2 and the first part of the doxology from *GR-An* 2458, f.65

má - si - a sou. Dó - xa pa - trí kai ui - ó kai a - gí - o pneú - ma - - ti....

In the urban rite, leaving aside the fixed psalms of Hesperinos and Orthros, 140 psalms are divided into 68 *antiphona*, each of which consists of an entire psalm or a group of psalms; only the long *amōmos* psalm (Psalm cxviii), sung at Orthros on Sundays, is divided into three *antiphona*. In the odd-numbered *antiphona* each *stichos* ('verse') concludes with an *allēlouïa* refrain; the even-numbered ones are sung with a variety of brief 'litanic' refrains, for example, 'Epakouson me, Kyrie' ('Hear me, O Lord'). These litanic refrains, called *ephymnia*, *epiphthegmata* or *hypopsalmata* etc., are often indicated in the margins of Psalters.

The monastic rite also makes ample use of the *allēlouïa* and other refrains, but more significant are the *troparia* (*see* TROPARION) sung with the psalms. In the fixed psalms these intercalations are termed *stichēra* (*see* STICHĒRARION) and are inserted between the last eight, six or four verses and the doxology, according to the solemnity of the feast. The last part of the doxology, 'kai nun . . .' ('both now . . .'), is normally followed by a *theotokion* – a *troparion* in honour of the Mother of God. After the final doxology of each *kathisma* in continuous psalmody, a *troparion* (likewise known as a *kathisma*) is sung.

In both the monastic and urban rites the performance of psalmody was primarily antiphonal, with one choir taking over from the other at each new verse – a practice indicated in the notated manuscripts by 'allagma' ('change').

2. Simple psalmody. According to the Byzantine orders of service – the *typika* or *synaxaria* – the standard term for psalmody was *stichologein* ('verse-saying') or simply *psalmon legein* ('to say a psalm'). However, except for a possible reference in the *Hagiopolitēs* (chap.45) to the adaptation of the psalmodic cadence to lead on to the following *troparion* or the beginning of the next verse, Byzantine music theory does not deal explicitly with the technicalities of simple psalmodic practice. The latter must therefore be studied through the few verses set in simple style that are notated in manuscripts. In general, simple psalmody remained an oral tradition.

The simplest notated settings are 'model-verses' – typically the first verse of a psalm or psalm complex – written in sequence in each of the eight modes to a syllabic psalm tone, which could then be adapted to the subsequent verses. Although psalm verses in a relatively simple style are found in such 13th-century manuscripts as *I-GR* E.α.II, Γ.γ.II, IV and VII, and *F-Pn* gr.261 (dated 1289), 'model-verses' are first notated in the akolouthiai manuscripts from the 14th century onwards. The simplest settings are of Psalms cxli.8 (from the *Kyrie ekekraxa*), l.3, cxlviii.1, ix.2 and doxologies, notated in each of the eight modes (ex.9), two sets of *prokeimena* (one for Sunday morning and one for weekdays) and the first verses of the canticles and the Beatitudes (*Matthew* v.3). Strunk (1960) has shown that the simple psalmodic cadences are quoted in the openings of the *stichēra* for the *anabathmoi* (the 'gradual psalms', cxix–cxxx), which are located in the oktōēchos section of the stichērarion. The written tradition of the *anabathmoi* goes back at least to the 10th century, when the earliest stichēraria were copied; but the syllabic psalm tones are probably earlier, for the *stichēra* of the *anabathmoi* are traditionally ascribed to Theodore Studites, who flourished in about 800.

In the simple psalm tones, intonation and reciting note are determined by the placing of the main accents in the text, whereas the psalmodic cadence is of the cursive type, invariably applied to the last four syllables regardless of accentuation (ex.10). The psalm tone may begin on the reciting note of a given mode or use a brief opening formula, which in the 2nd authentic and the 1st, 2nd and 4th plagal modes duplicates the modal intonations (see Jung), and which in all modes except mode 1 is determined by the text accent. These opening formulae may be prepared by a number of unaccented syllables, thus creating secondary reciting notes, a principle that in a few cases applies also to the internal accentuation patterns.

The main reciting notes in the authentic modes are identical with the high theoretical *finalis*, a 5th below the low final. The plagal modes, however, are irregular with

regard to the pitch of their reciting notes: modes 1 plagal and 2 plagal both use G; modes 1 authentic and 3 plagal (*barys*) use A; modes 2 authentic and 4 plagal use B; and modes 3 and 4 authentic use C and D respectively.

The tonic accent rises a 2nd or a 3rd from the reciting note and is often introduced by a melodic element covering one or two unaccented syllables, resulting in a variety of accentuation patterns. There is no mediant (or *flexa*) in Byzantine psalmody, but the verse, half-verse or full verse is sung straight through to the psalmodic cadence.

Melodic ornamentation and adaptation to the following melody are both characteristics of the psalmodic cadences (in ex.10 they are given only in their simplest form). The cadence of the doxology in mode 3 authentic shows both ornamentation and adaptation (ex.11). In mode 3 plagal (*barys*) two different cursive cadences are used, one ending on the theoretical final F, which was probably used only at the very end of the doxology, and the other ending on G for all the preceding verses.

Strunk has suggested that these simple and flexible melodic procedures derived from very archaic psalmodic principles. Likewise, the coincidence of recitation patterns in modes 1 authentic and 3 plagal (*barys*), and the irregularity of the recitation patterns in the plagal modes compared with their regularity of intonations and cadences, may indicate a compromise between archaic recitation practices and the system of the *oktōēchos*.

3. Elaborated psalm settings. Most of the verses found in the akolouthiai manuscripts are more elaborated than those shown above in ex.9. These elaborated settings may be divided into two groups. The first, consisting of traditional settings that are only moderately embellished and sporadically influenced by the 'kalophonic' style of composition, are either anonymous or labelled with terms such as *palaion* ('old'), *politikon* ('Constantinopolitan'), *thessalonikaion* ('Thessalonian') or *agiosophitikon* ('from Hagia Sophia'). A moderately embellished style is also typical of the traditional settings of the fixed psalms of Hesperinos and Orthros in the akolouthiai manuscripts. Elaborated psalm settings are found as early as the 13th century, particularly in the *allēlouïa* refrains and the half-verses selected as refrains for the fixed psalms, whereas simple settings of the same psalms are found in later sources and bear the designation *hagioreitikon* ('from Mount Athos') or *ekklēsiastikon* ('for church use').

In the second type of elaborated psalmody, the verses are ascribed to named composers of the late 13th century to the 15th, and the melodies are clearly influenced by the kalophonic style (Akolouthiai), although elements of simple psalmody also appear (ex.12). It is not known why only a selection of the verses are notated in the akolouthiai manuscripts. In some cases the manuscripts provide rubrics (usually next to the simpler settings) concerning the performance of the chants: for example, 'the same melody [is sung] till the end of the psalm', indicating that the melody type should be adapted to all the following verses, although each would have different numbers of syllables and accentuation patterns. Other possible interpretations are that the fixed psalms were stylized and only selected notated verses were sung, or that perhaps the missing verses were performed in simple psalmodic style according to the principles of oral tradition.

Elaborated psalm verses for the Koinōnikon, the Prokeimenon, the Allēlouïarion, and for some special psalm complexes sung at Christmas, Epiphany and Holy Saturday, are included in the asmatikon and psaltikon, the old chant collections of the cathedral rite.

IV. Polyphonic psalms

1. Up to 1600: (i) Use in worship (ii) Settings based on Gregorian tunes (iii) Protestant metrical psalms (iv) Independent psalm motets. 2. After 1600.

1. Up to 1600.

(i) Use in worship. The ancient Hebrew psalms were adopted as the basis of formal worship in the Christian Church, whose earliest services emphasized the psalms. In the Roman Church this feature survived most clearly in the Office, which included the recitation of the entire Psalter each week. In the Mass, however, the expansion of the liturgy throughout the Middle Ages and the increasing elaboration of antiphons and responsorial material led to a shortening of the psalms, so that eventually the introit, gradual and other parts of the Proper seldom contained more than a single psalm verse (indicated by ℣ in liturgical books). Complete psalms thus became characteristic of the Office, and of certain ceremonies and processions. For most of its history the Roman psalter has used the 'poetic prose' of the Vulgate translation of the Bible, each psalm being sung to one of the eight melodic formulae ('tones') which could easily be adapted to succeeding verses of different length.

In the 16th century most Protestant Churches sought to return to a form of worship based largely on psalms in the vernacular, and prose translations were sung in several languages, including German and English. But to encourage congregational singing, many Protestants adopted metrical versions, using strophic melodies analogous to hymn tunes. The need for adaptability in the prose versions, and the effect of doctrinal pressures on Protestant metrical forms, meant that polyphonic treatment of liturgical psalms seldom amounted to more than simple chordal harmonization. Their functional character, and particularly the use of recurrent music for each verse or pair of verses, kept them distinct from the repertory of through-composed psalm settings used as occasional motets or anthems.

(ii) Settings based on Gregorian tunes. In the Roman Catholic Church the Gregorian tones first attracted improvised polyphony during the late 9th century. The early treatises *Musica enchiriadis* and *Scolica enchiriadis* (*c*900) include psalm verses among their examples, and in the latter there is a polyphonic elaboration of the *tonus peregrinus* setting the last verse of Psalm cxiv–cxv (*In exitu Israel*). In some of the sources for Guido of Arezzo's *Micrologus* (?1025–6) one of the examples of organum sets the opening verse of Psalm xciv, although not using the psalm tone itself. In the later Middle Ages this improvised polyphony may have been close to fauxbourdon: there are very few written examples and they are nearly always for the psalms of Sunday Vespers, such as Binchois' *In exitu Israel* and the anonymous cycle of five in *I-MC* 871. Even in the 16th century only Italy and Spain had any strong tradition of written psalm polyphony, mostly using the technique of *falsobordone* in which the chant was the highest of three or four voices. Polyphony might be used only in alternate verses ('salmi a versi senza risposte') or the psalm could be sung by two alternating polyphonic choirs ('salmi a versi con le risposte'). Such settings rely heavily on root-position triads as the basis for recitation, although by the end of the century they were occasionally subjected to florid embellishment, as in collections entitled *Salmi passeggiati* or *Falsobordoni concertati*.

The use of two alternating choirs in psalm settings can be traced to Ferrara in the 1470s, whence comes a large manuscript *Libro de canto da vespero* (*I-MOe* αM.1, 11–12), containing double-choir psalms by Johannes Brebis and Johann Martini. This technique was cultivated in a more elaborate form in the 16th century in the double-choir psalms of Gasparo Alberti, Francesco Santa Croce, Jacquet of Mantua, Willaert and others. Their works were distinguished by the term 'salmi spezzati' (apparently first used by Aaron in 1536) and were in principle through-composed, permitting a more varied and flexible texture and layout rather than in *falsobordone* settings. The original psalm tones, largely preserved by Willaert, were generally abandoned by the native Italians, and the two four-part choirs began increasingly to depart from the verse structure of the psalm and to overlap or even combine into eight real parts, especially in the doxology. These techniques undoubtedly contributed to the rise of the polychoral motet in the second half of the 16th century, although the liturgical function of the Office psalms kept them a distinct category.

Polyphonic adornment of the Gregorian tones achieved only limited popularity in northern Europe. For example, in England before the Reformation faburden techniques were applied to the *Magnificat* and, on occasion, to certain processional psalms, but scarcely ever to the Office psalms. In Germany Georg Rhau published a collection of Vespers psalms (RISM 1540[5]), in which the polyphony is for alternate verses, with the chant in the tenor. An earlier manuscript collection is in Jena (*D-Ju* 34). Several composers, including Johann Walter (i), Vulpius and Calvisius published polyphony of the *falsobordone* type for the German vernacular psalms in Luther's translation. After the English Reformation the Prayer Book psalms evidently continued to be sung to some form of the old Gregorian tones. Those for major feasts were occasionally set, with the chant in the tenor, to a harmonic formula adapted for each succeeding verse by the composer himself: the best-known of these 'festal' psalms are those in five parts by Tallis.

(iii) Protestant metrical psalms. In some parts of northern Europe, metrical psalms in the vernacular became a central feature of religious life and worship from about 1520 onwards. One of the earliest and most important translations of the psalms was that by Clément Marot, which became the basis of the official Calvinist psalter. A repertory of tunes, to some extent international, was assembled or adapted from plainchant, secular and popular sources, with a small number that were probably newly composed. Polyphony was banned in Calvinist churches, so that many of the published polyphonic settings must have been intended for domestic devotions or recreation, and were sometimes advertised as 'biens convenables aux instruments'. Many were in a simple chordal style, including Loys Bourgeois' influential *Vingt-quatre psaumes à 4 voix* (Lyons, 1547), and Goudimel's complete psalter of 1563, which achieved widespread recognition as a standard polyphonic version. Some collections included settings in a more contrapuntal or partially imitative texture, particularly those published in France where the Marot psalter was used by Catholic as well as Protestant communities. The more important were those of Certon (1546), Mornable (1546), Janequin (1548

and 1549) and the later publications of Bourgeois. A few composers, notably Claude Le Jeune (1564), dropped the tunes altogether and composed what amounted to free motet settings. At about the same time, studied contrapuntal treatments of the psalm tunes, probably for didactic use, began to appear in the *tricinia* of Lassus, Crecquillon and others.

Standing halfway between simple chordal harmonizations and motet style-settings are the graceful, chanson-like three-voice *Souterliedekens* of Clemens non Papa, published by Susato in 1556–7. They were the first polyphonic settings of all 150 psalms in Dutch, using metric versions of the texts attributed to Willem van Zuylen van Nivelt. Clemens used the popular tunes assigned to each psalm in the edition of SOUTERLIEDEKENS published in Antwerp in 1540 as cantus firmi in the tenor or superius.

Metrical psalms became widely popular in England after the accession of Elizabeth I in 1558, partly through the agency of Protestants who had been exiled abroad during the reign of the Catholic Mary Tudor (1553–8). The standard metrical psalter was that of Sternhold and Hopkins, completed by 1562 and published in that year with 65 tunes taken from the Geneva psalter and other sources. A year later there appeared *The Whole Psalmes in Foure Parts* (RISM 1563[8]) in which the same tunes were provided with simple harmonizations. Other metrical psalters also appeared, notably that of Archbishop Parker (1567), for which Tallis provided several harmonized tunes. Polyphonic collections later in the century included those of William Daman (1579), and an anthology of works by various composers published by Thomas East in 1592.

See also PSALMS, METRICAL and PSALMODY (ii).

(iv) Independent psalm motets. The personal and symbolic qualities of many of the psalms made them especially attractive to 16th-century composers, who used them extensively as texts for the new repertory of motets evolved by Josquin and his contemporaries in about 1500. Over 20 such psalm motets carry attributions to Josquin, although some are surely imitations by German composers. These pieces show an apparently conscious attempt to match the musical speech as closely as possible to the rhythm and the expressive elements of the text (for example at the start of the *secunda pars* of Pseudo-Josquin's *Dominus regnavit*, Psalm xcii). A psalm tone cantus firmus was rarely used, and then only as an expressive element in itself. Many settings omit the doxology, and some composers treated the main texts with considerable freedom, for example by using extracts, assembling verses from different psalms and incorporating paraphrased or even non-biblical texts. These motet settings, therefore, cannot have been used as liturgical psalms: if sung in church at all, they must have served a votive or ceremonial function outside the formal liturgy.

The Netherlandish composers introduced and firmly established psalm setting in Italy, where it contributed to the wider motet repertories of Rome, Venice and most other major cities. The genre became especially significant in Germany, where it was cultivated by all the leading composers of Latin polyphony, as a result of the renewed interest in the psalms engendered by the Reformation. Thomas Stoltzer was one of the first to set both Latin and German psalm texts in motet form, and some later published collections mixed Latin and German settings, with little or no stylistic distinction between them. In France, Latin psalms were relatively neglected after Attaignant's anthology of 1535. English composers, however, took some interest in the third quarter of the 16th century. Some 70 settings survive, by Byrd, William Mundy, Robert White and others.

2. AFTER 1600. To trace the development of psalm composition during the 17th and 18th centuries is largely to trace the history of the motet and the anthem during the same period. The book of *Psalms* continued to provide the main source for Latin motet texts (as it had done before 1600), though the compositional techniques available to the composer now ranged from those associated with unaccompanied vocal polyphony to those of the latest concertato styles. The psalm settings of Monteverdi's *Vespro della Beata Vergine* (1610), *Selva morale* (1640) and *Salmi a ... voci concertati* (1651) bring together elements of 16th-century choral polyphony, Venetian *cori spezzati* and the monodic style of the continuo madrigal; the Vespers apply both *falsobordone* and cantus firmus techniques to Gregorian psalm tones. It was a time of great activity in psalm composition, particularly in Venice and Rome; other composers include Francesco Cavalli, Tullio Cima, Simone Molinaro, Giovanni Rovetta and Lodovico Viadana. Both Salamone Rossi's Hebrew psalm settings *Hashirim asher lish'lomo* (1622–3) and some fragments, probably Venetian, from about 1630–50 indicate that in certain Italian Jewish circles polyphonic psalms had gained a foothold. The Spanish tradition of polyphonic psalm motets was carried over to the Americas and Hernando Franco in Mexico, Juan Gutiérrez de Padilla in Puebla and Juan de Araujo in Cuzco wrote elaborate polychoral psalm settings. In the late 18th century, José Angel Lamas composed psalm settings for chorus and orchestra for the cathedral in Caracas.

Later in the 17th century Alessandro Scarlatti's motets, most of which date from between 1680 and 1720, exemplify further both the ubiquity of psalm texts and the variety of their treatment. Of some 40 motets on biblical texts, all but three are settings of verses from the psalms, and the forces they require range from an unaccompanied four-part chorus (*Exaltabo te Domine*, Psalm xxx) or a chamber ensemble with solo voices (*Diligam te Domine*, Psalm xviii) to large-scale choral and string orchestral forces with solo voices and continuo (one of two settings of *Nisi Dominus aedificaverit*, Psalm cxxvii). Noteworthy is Scarlatti's frequent, and by this time archaic, use of Gregorian psalm tones as cantus firmi (often in long notes) in both *stile antico* and *stile moderno* settings. In the early 18th century Jan Dismas Zelenka contributed settings of the vespers psalms which form a coherent liturgical unit. The late 18th century saw a decline in the setting to music of complete psalms, although exceptions include Michael Haydn's *Benedicite Dominum* (Psalm ciii) and *Laetatus sum* (Psalm cxii), vespers settings by Fux, and Mozart's two cycles for Vespers, the *Vesperae de Dominica* K321 and the *Vesperae solennes de confessore* K339, in which the psalms and the Magnificat are treated as symphonic works (with a fugue as the fourth and an aria as the fifth psalm in each collection.

A reliance on psalm texts (though seldom to such an extent on psalm tones) is found in Latin motets by other 18th-century composers, both in Italy and elsewhere. The

words of English anthems, too, are mostly from the book of *Psalms*, as a glance at the anthems of such composers as Pelham Humfrey, Blow and Purcell confirms. Three of Handel's Coronation Anthems and all 11 Chandos Anthems are settings of psalm texts, in either translation or paraphrase. The prevalence of binary structures in the ninth Chandos Anthem, *O praise the Lord with one consent* (a setting of verses from Psalms cxvii, cxxxv and cxlviii in the metrical version of Tate and Brady), illustrates the extent to which musical form in these works is determined by the tendency for each verse of a psalm to divide into two complementary statements. Psalm texts are much less important in the Lutheran church cantata, where the choral is a more fruitful source for both words and music. Most of Buxtehude's psalm settings, though called cantatas, are to Latin texts, and while Bach's cantatas contain frequent quotations from the psalms, only a few (e.g. *Der Herr denket an uns* BWV196) have texts drawn entirely from a single psalm. Probably the best known of Bach's psalm settings are the motets, *Singet dem Herrn* (BWV225) and *Lobet den Herrn* (BWV230).

While most psalm settings originated as separate pieces (chiefly motets and anthems) for specific church or ceremonial occasions, the practice of publishing collections of psalm compositions by a single composer also continued after 1600. Among the finest are the four volumes by Sweelinck comprising all 150 psalms (three of them set twice) in the French metrical versions of Clément Marot and Théodore de Bèze, published in Amsterdam between 1603 and 1621. These take the form of unaccompanied motets for between three and eight voices, in most of which Sweelinck treated the appropriate melody from the Geneva psalter as a free cantus firmus. Schütz also set the complete psalter in the German metrical version of Cornelius Becker, but it was his more elaborate settings of some 26 psalms in Luther's version (*Psalmen Davids*, 1619) that established his reputation as the foremost German composer of church music. These are multi-choral works supported by continuo, and sometimes by other instruments also, in the tradition of Andrea Gabrieli's *Psalmi Davidici* (1583) and Viadana's *Salmi ... per cantare e concertare nella gran solennità di tutto l'anno* (1612).

Later in the century G.B. Bassini issued the first of his five volumes of psalms, *Armonici entusiasmi di David overo salmi concertati* (Venice, 1690). In some of Bassini's psalms, especially perhaps the *Salmi per tutto l'anno* (1704) for double chorus and continuo, the *stile antico* continues to exert its influence, but others are stylistically closer to the chamber cantata. In the same tradition were the influential settings by Benedetto Marcello of the first 50 psalms in the Italian paraphrased version of G.A. Giustiniani, published under the title *Estro poetico-armonico* (Venice, 1724–6). Several other editions followed, and an English version by John Garth was published in London in 1757. An interesting feature of Marcello's settings is their use, as cantus firmi, of certain Jewish liturgical melodies dating from the 12th–14th centuries.

Despite the comprehensiveness of such volumes, certain psalms (e.g. c, cx, cxxx and cl) were favoured for elaborate musical setting, and this is even more marked after 1800. With the greater proliferation of public concerts in the 19th century and the decline of the church as a main focal point of compositional activity, the subsequent history of psalm composition is largely traced through isolated works written for concert use and scored for full orchestra and chorus, often with solo voices. Noteworthy examples of the genre are Mendelssohn's settings (in German) of Psalms xlii, xcv and cxiv, Schumann's of Psalm cl, Dvořák's of Psalm cxlix and Liszt's of Psalm xix. Bruckner represents what is perhaps the ultimate stage in this development by his large-scale settings of Psalms cxii and cl, though both he and Liszt, motivated by the spirit of 19th-century liturgical reforms, also wrote more modest devotional settings suitable for church use. Also more intimate in style (though designed for choral societies rather than for church choirs) are such settings as Schubert's, for women's voices and piano, of Psalm xxiii in the German version of Moses Mendelssohn, and Brahms's, for similar forces (with strings ad lib), of Psalm xiii. The second of Brahms's two motets op.29 is a setting of Psalm li. An echo of Bruckner's and Liszt's large-scale settings is found in Reger's monumental setting of Psalm c (1908–9) and in Elgar's *Great is the Lord* op.67 (Psalm xlviii, 1912).

Psalm settings in the 20th century include a substantial number of works intended primarily, though not exclusively, for church performance; in this category are settings by Ives, Distler, Britten, Hovhaness and Pärt. A second category consists of works clearly intended for the concert stage; among the most impressive of these are Kodály's *Psalmus hungaricus* (1923) and Stravinsky's *Symphony of Psalms* (1930). The first is a setting of Psalm lv in the 16th-century paraphrased version of Mihály Kecskeméti Vég. It was written to celebrate the 50th anniversary of the merging of Buda with Pest to form the Hungarian capital, and embodies nationalistic as well as religious feeling. Stravinsky selected the Latin text of his *Symphony of Psalms* from Psalms xxxix, xl and cl to form a logical progression from contrition to jubilation in a three-movement work scored for chorus and orchestra without upper strings. Also important are settings by Ginastera (Psalm cl, 1938), Lili Boulanger (Psalm cxxi, 1921) and Bloch (Psalms xxii and cxiv, both 1919), Gorecki's *Sancti tui Domine* (1993), Penderecki's *Psalmy Dawida* (using Psalms xxvii, xxx, xliii and cxliii, 1958) and *Benedicamus Domino* (Psalm cx, 1993), and Bernstein's *Chichester Psalms* (words from Psalms ii, xxiii, c, cviii and ccxxiii, 1965), set to the Hebrew text. Schoenberg found expression for his Jewish faith in *De profundis* (1949), a setting for six-part chorus of the Hebrew version of Psalm cxxx. His *Moderner Psalm* op.50*c* is an unfinished work in a projected series of religious compositions to words by Schoenberg himself.

Some of the best-known settings of verses from the psalms are contained in oratorios or other large-scale choral works, among them Handel's *Messiah*, Mendelssohn's *Elijah*, Brahms's *German Requiem*, Honegger's *Le roi David* and Walton's *Belshazzar's Feast*. Psalm texts have occasionally been used for solo songs with piano accompaniment, for example Dvořák's ten *Biblické písně* ('Biblical songs'), Edmund Rubbra's settings of Psalms vi, xxiii and cl and Paul Creston's setting of Psalm xxiii, but such works are not common. Also rare are purely instrumental compositions based on, or inspired by, the psalms. Some 17th-century composers, including Sweelinck and Henderick Speuy, wrote keyboard pieces (mainly variations) on psalm melodies, and Julius Reubke's organ sonata *Der 94. Psalm*, Herbert Howell's

Three Psalm Preludes (also for organ), David Diamond's *Psalm for Orchestra* (1936) and Justin Connolly's *Anima* (1975, an orchestral piece prefaced by the sixth verse of Psalm cxxiv, are among more recent examples; Penderecki's *Psalmus* (1961) is an electronic piece for tape.

Psalm book, metrical. *See* PSALMS, METRICAL and PSALMODY (ii).

Psalmelli (Lat.: 'little psalms'). Chants sung between lessons at Mass, and also at Terce during Lent, in the Ambrosian rite. *See* AMBROSIAN CHANT, §7(i).

Psalmi. Responsorial Mass chants in the Mozarabic rite, corresponding to the Roman graduals. *See* MOZARABIC CHANT, §4(v).

Psalm interlude. A passage of organ music played between the stanzas, or even between the lines, of a metrical psalm. After the Restoration, metrical psalms were commonly accompanied on the organ in England (though not in Presbyterian Scotland). John Playford provided plain keyboard harmonizations of four psalm tunes in the first and second editions of *Musick's Hand-maide* (1663 and *c*1668). John Blow merely provided little flourishes between the lines of the tunes (*The Psalms ... Set Full for the Organ or Harpsichord*, 1703, reissued *c*1730). His younger contemporaries were more ambitious; interludes were written by John Reading (iii) (manuscripts at *GB-Ldc*) and Daniel Purcell (in *The Harpsicord Master Improved* (1718) and in a publication devoted to his own music brought out in the same year and reissued *c*1730); an example on the 'Old Hundredth' is printed in *MT*, xlvi, 1905, p.162. Later 18th-century publications included *Eighteen Preludes or Short Fugues for the Organ or Harpsichord Proper for Interludes to Psalm Tunes* (*c*1770) and *Forty Interludes to be Played between the Verses of the Psalms: twenty five ... by Mr. J. Keeble, & fifteen by Mr. J. Kirkman* (*c*1787). Samuel Wesley published a collection of *Parochial Psalm Tunes and Interludes* (n.d.) and *A Book of Interludes for Young Organists* (n.d.). S.S. Wesley in *A Selection of Psalm Tunes* (*c*1860) provided an introductory playing-over of each tune (sometimes in elaborate counterpoint) with a separate harmonization for, and interlude between, each stanza. The interlude by Wesley shown in ex.1, which is for the tune known as 'St Mary', illustrates the degree of harmonic extravagance apparently considered permissible. Later in the 19th century, however, with the increasing importance of the harmonized singing of hymns and psalms by the choir, the old methods of accompaniment,

Ex.1

including the playing of interludes, fell gradually into disuse.

JOHN CALDWELL

Psalmodikon. A bowed box zither, used at one time in Scandinavian countries to regulate choral singing. There is some divergence of opinion as to its origin. Several reference works treat it (albeit with some reserve) as the invention of a Swedish pastor, Johann Dillner (1785–1862), but Ostenfeld (1976) provided convincing evidence that this was not so. Dillner did, however, introduce the instrument to Sweden, and had it approved by the Swedish Royal Academy of Music in 1829. Norwegian scholars have tended to claim that it was introduced somewhat earlier in Norway by a cantor, Lars Roverud, who in turn seems to have got his inspiration in Denmark. Yet it seems to have found little favour in Denmark in spite of its use in some schools. There is at present no evidence of any contact between Dillner and Roverud.

In its earliest form the psalmodikon consisted of a flat, rather shallow soundbox, in plan a tall trapezium (or occasionally a rectangle), with a single (bowed) string of gut supported by a nut at each end and passing over a bridge. Beneath and parallel to this string was a strip or 'rule' of wood transversely ridged to form frets, with the stopping positions marked by letters (see illustration). Thus the player could follow a printed cue-sheet instead of formal music notation. There were also a number of wire drone strings which passed over sections of the bridge that were cut lower so as not to impede free bowing. In some early instruments further clearance was

Psalmodikon with 14 sympathetic strings, Swedish, 19th century (Musikhistorisk Museum, Copenhagen)

provided by cutting the soundboard away in a concave 'bout' on the near side of the bridge. Additionally the more sophisticated examples were provided with several alternative rules differently marked so that the instrument could be played in several keys.

The presence of a bowed string associated with a fretted and lettered fingerboard recalls John Playford's 17th-century PSALTERER (though there is no evidence that either Dillner or Roverud had any knowledge of Playford's work). Both instruments were designed expressly to support choral singing in lieu of an organ or other skilled instrumental accompaniment.

The psalmodikon enjoyed great popularity in Norwegian and particularly Swedish schools until about 1860; it was also used by Scandinavian immigrants, for instance in the USA, where it is reported until about 1900. It appeared in a number of different versions, some with as many as four bowed strings, and with a variable number of drones. Such instruments were professionally made, but certain museum collections have examples of rustic copies of varying sophistication. Probably the most singular of these is one colloquially called *notstok*, in which the body was boat-shaped (sometimes not even hollowed out) while the fingerboard resembled a long handle passing through it. A keyed psalmodikon was also known at one time: all forms of the instrument, however, except perhaps the rural ones, seem to have gone out of use with the introduction of the harmonium in Scandinavian schools.

PHILIP BATE

Psalmody (i) (from Gk. *psalmōdia*). The singing of psalms. The Greek term originally meant singing with a string instrument, but has been used since early Christian times (e.g. by Eusebius) to refer to the singing or composition of psalms; a comparable change occurred in the meaning of *psalmos* (*see* PSALM, §I). For a discussion of psalmody in Jewish and Christian antiquity and the Middle Ages, *see* CHRISTIAN CHURCH, MUSIC OF THE EARLY; INFLECTION (1); and PSALM, §§I–II. For a discussion of contemporary Jewish psalmody, *see* JEWISH MUSIC, §III, 2(i).

Psalmody (ii). A general term for music sung in Protestant churches in England and America from the 17th century to the early 19th. Following traditional practices of the Roman Catholic Church, the term was first associated with the chanting of psalms and later with the singing of metrical psalms, but as these were gradually replaced by hymns the term was retained to cover all kinds of music sung by amateur choirs. With the decline of the older type of parish choir in England the term fell into disuse, but it survived in America. It is now the most appropriate term to describe a body of music that, after long neglect, has recently attracted musicological attention.

I. England. II. North America.

I. England

Psalmody in England began with the rise of parish church choirs towards the end of the 17th century. It was a type of music specifically designed to allow such choirs to dominate or replace congregational psalm singing. Two categories of psalmody may be sharply distinguished: that of the country parish church without an organ, sung by a predominantly male choir to which instruments were later added; and that of the town church, sung by children accompanied by an organ. Both types were eventually taken up in Dissenting bodies and spread also to America, Scotland and Wales. Country choirs also sang psalmody outside church and often combined to form choral societies, which aspired to the performance of oratorios; smaller groups sang psalmody in the home for recreation. Psalmody of the country type was reformed out of existence during the 19th century as a result of urbanization and various religious movements. Towards the end of the 20th century it was revived by various groups as 'west gallery music', because in many churches the choir had sung from the gallery at the west end of the church (*see* GALLERY MUSIC).

1. Country parish psalmody: (i) The country parish choir (ii) The music of country parish choirs. 2. Town psalmody. 3. The psalmody of Dissenters.

1. COUNTRY PARISH PSALMODY.

(i) The country parish choir. The only kind of church choir heard in England during most of the 17th century was the kind that sang in the royal chapels, in cathedrals and in half a dozen collegiate parish churches. These professional choirs chanted the liturgy and prose psalms, and sang polyphonic anthems and canticle settings with organ accompaniment. In contrast the music of the ordinary parish church consisted of metrical psalms, sung unaccompanied by the whole congregation, led only by a parish clerk who was often incompetent. Over several generations a traditional manner of singing the psalms had grown up which may be described as 'discordant heterophony' (*see* PSALMS, METRICAL, §III, 1(iv)).

Those who began to encourage the formation of parish choirs towards the end of the 17th century had not the remotest idea of imitating cathedral music. Their sole aim was to improve the singing of metrical psalms by training a few people to lead it. The earliest known reference to a 'choir' in this sense is found in *A New and Easie Method to Learn to Sing by Book*, published in 1686. The anonymous compiler said in his preface:

> I have added several Psalm Tunes in Three Parts, with Directions how to sing them … This requires somewhat more Skill than the Common Way, yet is easie enough, at least for a select Company of Persons with good Voices, to attain unto. It would therefore be a commendable thing, if Six, Eight, or more, sober young Men that have good Voices, would associate and form themselves into a Quire, seriously and concordantly to sing the Praises of their Creator: A few such in a Congregation (especially if the Clark make one to lead) might in a little time bring into the Church better Singing than is common, and with more variety of good Tunes, as I have known done.

It will be noticed that a male choir only is proposed. The three-part harmonization of psalm tunes (two tenors and bass, with the melody in the top part) had been the invention of John Playford, who also probably had male voices chiefly in mind, though he pointed out that women

or children could sing all three parts an octave higher. *The Whole Book of Psalmes in Three Parts* (1677) was probably the first harmonized psalm book intended primarily for parish church use. Yet Playford, though he may have directed a choir at the Temple Church (not a parish church), where he was clerk, stopped short of actually proposing the formation of a parish choir, perhaps because he was afraid of being accused of 'popery'. His book sold only 1000 copies in its first 18 years, but when it was reprinted by his son Henry in 1695 it became an immediate success: there were seven editions in seven years for a total sale of at least 14,500 copies. Clearly parish choirs had blossomed between 1677 and 1695.

The rise of the parish choir seems to have been closely associated with the formation of high-church religious societies, which were founded mostly to encourage Christian morality among young men (the first London societies were established in 1678; outside London, the first was at Romney, Kent, in 1692). They met under the direction of the vicar or rector of the parish for prayers, religious discussion and the singing of metrical psalms. Josiah Woodward, one of the leaders of the movement, was convinced that psalm singing and moral self-improvement were mutually conducive, and the societies were called on to lead the services in some churches. The psalm tunes they practised at their private meetings were at first sung from within the congregation, but the societies soon wanted a special place in church (pew or gallery) where they could sing as a body: the earliest recorded instance was at St Nicholas, Liverpool, in 1695. Not unnaturally they also began to sing on their own and to seek more interesting music than plain psalm tunes. Henry Playford was quick to cater for this new demand with his *Divine Companion* (1701), which was copied by many others, especially in the north of England. It was one thing, however, for the 'singers' to sing an anthem before or after service, but when they took over the metrical psalms with new and difficult tunes they ran into opposition from people who clung to their old ways. 'What terrible outcries do they make ... against any alterations; and if their understanding does not help 'em to any arguments against the thing itself, they immediately cry out Popery' (Chetham, *A Book of Psalmody*, 1718). Thus in a matter of two decades, choirs that had been first intended to promote the singing of the congregation were now bent on arrogating the music entirely to themselves, and even to imitating cathedral music. They were abetted in these efforts by country singing teachers, who often travelled from village to village training choirs and selling books of their own compiling.

It is hardly surprising that many of the clergy now turned against the parish choirs. Edmund Gibson, Bishop of London, thundered in 1724 against

> the inviting or encouraging those idle Instructors, who of late years have gone about the several counties to teach tunes uncommon and out of the way (which very often are as ridiculous as they are new; and the consequence of which is, that the greatest part of the congregation being unaccustom'd to them are silenc'd).

In some cases bishops refused to grant faculties for the building of galleries or pews for the singers, or stipulated that 'some of the singers ... do sometimes disperse themselves into the body of the said church for the direction and assistance of such persons as shall have a pious intention of learning to sing'. Positive clerical support for the singers was rare. A musical clergyman was more likely to want to 'reform' the singing, as at Aston, Yorkshire, where William Mason 'taught the blacksmith to sing Marcello's Psalms like an angel'. At the other extreme, parsons banned the singers altogether or restricted their music; in revenge the choir sometimes moved over in a body to the local Methodist or Dissenting chapel. But the typical Georgian parson's attitude was one of laissez-faire, and the choir soon became a recognized institution in country churches that had no organ. Indeed, apart from secular folksongs and dances, psalmody was the only communal music enjoyed by most country people in this period.

The heyday of the country choirs was from about 1760 to 1820. A typical group of singers near the beginning of this period was that described by Parson Woodforde at Castle Cary, Somerset, in 1769:

> The Singers in the Gallery were, John Coleman, the Baker; Jonathan Croker; Willm Pew Junr.; Thos Penny; Willm Ashford; Hooper the Singing Master; James Lucas; Peter, Mr. Francis's man; Mr. Mellian's man James; Farmer Hix's son; Robert Sweete; and the two young Durnfords.

A broad spectrum of rural society was thus represented, including tradesmen, farm people and domestic servants, many of whom were probably illiterate and learnt their words, at least, by rote. They received no pay from the parish, except perhaps a small gratuity at Christmas or an annual choir feast, but some choirs offered their

1. An 18th-century church choir: engraving by F.H. van Hove from 'The Psalm Singer's Necessary Companion' (1700)

services at neighbouring parish churches, in which case a payment was often made out of the funds of the host parish. The churchwardens' accounts at Cardington (Bedfordshire), for example, record in 1779 the purchase of $2\frac{1}{2}$ quarts of beer to reward the Luton singers. Some parish accounts record payments for books for the choir, others for the singing teacher's fees, but occasionally the vestry refused to make any payments for church music; this might have been because of the strength of nonconformity in the parish, for all ratepayers could vote in a general vestry even if they did not attend the parish church.

The country choirs at first were either entirely unaccompanied, or were supported only by a bass viol (or cello or hybrid instrument of similar compass). Benjamin Hely's *Compleat Violist* (1699) tells how to accompany psalm tunes. In the same year Henry Playford published directions for playing the 'psalterer', a one-string instrument with frets labelled with letters; he claimed that it was the invention of his father, John Playford. In 1761, in the preface to the fifth edition of *The Compleat Psalmodist*, John Arnold recommended the bassoon as 'now in great Request in many Country Churches . . . as most of the Bass Notes may be played on it, in the Octave below the Bass Voices'; by the end of the 18th century a small band of instrumentalists had become a common addition to the parish choir. At Swalcliffe (Oxfordshire) 66 subscribers contributed to the purchase in 1783 of an oboe, a vox humana and a bassoon; a bass viol was added in 1785. This band played until it was replaced by an organ in the west gallery in 1842. The exact composition of ensembles varied greatly from parish to parish: the bass string instrument or bassoon was almost always present to support the bass; a clarinet often took the 'counter' or alto part an octave above pitch, and a flute or violin often doubled the tenors an octave higher, or the sopranos at pitch. In some churches the vicar banished the violin because of its association with tavern revelry. Less frequently may be found oboes, trumpets, serpents, horns, drums and a specially devised instrument called the 'vamphorn' through which the player half sang, half blew. Instruments of tenor register are rarely heard of: the tune, sung by the tenors, was doubled (if at all) in the higher octave. Stringed keyboard instruments were also rarely used. From about 1780 some psalmody books contained separate instrumental parts, particularly for 'symphonies' (introductions and interludes); but the primary function of the instruments was still to double voices, keeping them together and on pitch. One of the largest country choirs reported was at Winterborne St Martin (Dorset). In 1820 it contained 20 singers, including two 'counters'; they were supported by two clarinets playing the tune, two for the countertenor, an hautboy for the tenor (which by this time had yielded the tune to the treble voices) and a cello for the bass.

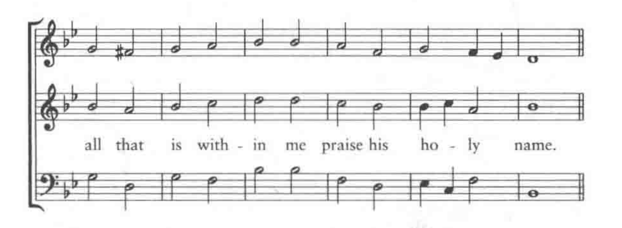
For most of the 18th century the majority of choirs continued to be made up only of men, and hence the basic harmony was tenor and bass, two tenors and bass, or alto, tenor and bass, with the tune in the tenor. An increasing number of psalmody books included treble (soprano) parts as well, but they are frequently inessential to the music or even anomalous, and were apparently not much used. Gradually, however, children and then women were allowed to join the singers, and after a generation of uncertainty the modern soprano, alto, tenor and bass arrangement, with the tune in the soprano, had become widespread by about 1810. Choirs sang metrical psalms and hymns with elaborate tunes, anthems and set-pieces with metrical hymn texts; the more ambitious ones, especially in Yorkshire and the north Midlands, sang settings of the canticles and chanted psalms, and even chanted the whole service. The congregation had to turn round to 'face the music' when, as was most common, the choir was in the west gallery at the back of the church. Inevitably, this created a 'concert hall' atmosphere, and parsons frequently had to complain of tuning up during prayers or sermon, overlong anthems dwarfing the rest of the service, and other abuses. With the coming of more earnest religion in the Evangelical and Tractarian movements, criticism of parochial psalmody (which had always been present) became more and more insistent, and energetic efforts were made to get rid of it. There were always those, however, who saw virtue in the heartfelt singing of the choirs, however unpolished it might be. Sympathetic descriptions have been left by Thomas Hardy, whose father and grandfather had sung in church choirs, and by George Eliot. John Eden, in a sermon at Bristol in 1822, made an eloquent plea against the growing tendency to disband the singers:

> Let it be remembered ... that music, harsh, imperfect, and discordant as it may be in a country choir, is nevertheless a source of innocent and rational amusement to the performers; it occupies their hours of leisure; it is a grateful recreation, when the labour of the day is past; it solaces them in affliction; and it sheds an increase of pleasure on their hours of happiness: if this fails to prove its virtue and value, let me add that it keeps them from seeking amusement in the alehouse, and from the long train of evils commonly incident on such a practice.

But the spread of education and urbanization produced an intolerance for this rough music, a desire for a kind of music that would reflect the improved wealth and standing of the congregation. Reforming Evangelicals wanted to restore the singing to the people, while romantic antiquarians and Tractarians wanted to revive the music of the remote past. More and more clergymen were determined to suppress the singers and their psalmody, and the simplest way to do it was to introduce an organ. This was still beyond the means of most villages, however, and a useful compromise was found in the barrel organ – merely a curiosity before 1790, but a normal feature in country churches during the first half of the 19th century. With it came a roll of tunes prepared by trained musicians, usually in London, and so the psalmody of the towns was quickly introduced into the country churches. The seraphine or reed organ was a slightly later development. Sometimes the singers and instrumentalists were permitted to perform along with the new organ or reed organ, but more often they retired at once, realizing that their day had passed. Indeed, few country choirs of the old kind survived after the mid-19th century: the west of England was their last home. The one at Winterborne Abbas (Dorset) continued just long enough to be described by a music historian (F.W. Galpin in 1906 gave a detailed description of its performance ten years before); it was disbanded shortly afterwards. In Cornwall some choirs and bands lasted into the early 20th century. The psalmody that the old choirs had sung usually disappeared with them, and in Victorian times an entirely different kind of parish church music arose, based on the surpliced choir in the chancel, the diocesan festival, *Hymns Ancient and Modern*, the *Cathedral Psalter* and Novello's octavo series of church music.

(ii) The music of country parish choirs. Henry Playford was the first to provide music for country choirs that went beyond simple harmonized psalm tunes. *The Divine Companion* (1701) was 'fitted for the use of those who already understand Mr. John Playford's Psalms in three parts. To be used in Churches or Private Families for their Greater Advancement in Divine Musick'. As well as some new psalm tunes in a lively and up-to-date style, the collection contained hymns and anthems. The hymns, most of them strophic songs for voice and bass, were no doubt for 'Private Families'. Of the anthems Playford wrote in his preface:

> We have, 'tis true, had Anthems long since sung, and continued in our Cathedrals and Chapels ... But our Parochial Churches, which are equally dedicated to Gods Glory, and innumerable, in respect of those before mention'd, have been altogether destitute of such necessary assistances to Praise their Maker by ... This has made me importunate with my Friends to compile such a set of short and easy Anthems as may be proper for the Places they are designed for, and from such little beginnings in the practice of Musick, endeavour to persuade them into a knowledge of things of a Higher Nature, as Harmonia Sacra, &c.



The 19 anthems are the work of some of the most accomplished professional composers of the day, mostly cathedral musicians: Akeroyde, Church, Clarke, Croft, Robert King, William Turner (ii) and Weldon. In style they are remarkably similar: all are in two or three parts (tenor and bass, or alto, tenor and bass; in either case the tenor part could be sung an octave higher as a treble), simple and short, and entirely homophonic (ex.1). Evidently the composers were writing to instructions from Playford, in a style that was conceived as appropriate for country musicians. There is no doubt that these anthems were used, for every country psalmody collection until 1715 borrowed some anthems from *The Divine Companion*. John Bishop, another professional, provided further materials in his *Sett of New Psalm Tunes* (1710), which was 'design'd for the use of St. Laurence Church in Reading; and are taught by Tho. Batten'. This too was a source for country collections, as were John Church's *Introduction to Psalmody* (1723) and William Pearson's *Second Book of the Divine Companion (c*1725), a sequel to Playford's.

At first country musicians merely borrowed materials from their professional models, sometimes simplifying or

adapting in the process, but they soon began to produce their own music. The earliest known parochial anthem of country provenance is *Hear my pray'r, O Lord* from *A Book of Psalm Tunes* (2/1713) by John and James Green (the Greens were from Wombwell, near Darfield, Yorkshire). The contrast between this anthem, with its unusual harmonies and artless prosody, and those put out by Playford is obvious and striking (ex.2). In some cases there are notable archaisms, such as the organum-like cadence in James Green's *O God my heart is ready* (1715) (ex.3). The early anthems follow Playford's lead in one respect: they are largely homophonic, the only contrasts in texture occurring when one part rests.

Many other country composers followed the Greens in publishing collections that included anthems of their own composition. The West Riding gained an early lead, but in the course of the century every part of England except the extreme north and south-west was represented by at least one local collection. The compilers were generally either singing teachers or booksellers, in some cases both; a few, such as William Knapp of Poole (Dorset), were parish clerks. They can be clearly distinguished from professional musicians and London publishers who from time to time published a book intended to bring country

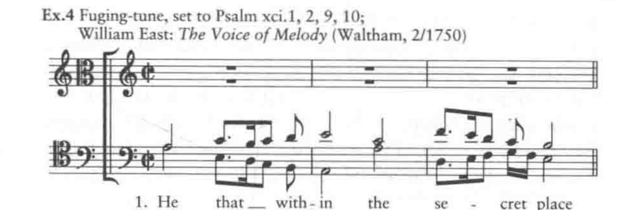
psalmody back into the mainstream of art music: examples of the latter, besides those already mentioned, are Alcock (*c*1745), Broderip (1749, 1764), Langdon (1774), Billington (1784), Arnold and Callcott (1791), Hellendaal (1793) and Bond (*c*1791).

The most successful of all country psalmodies, John Chetham's *Book of Psalmody* (1718), was perhaps a compromise between the two types. Chetham himself was an educated man, schoolmaster and curate of Skipton (Yorkshire), and there are signs that he had links with the cathedral tradition: his was the first country psalmody book to include 'chanting-tunes' that were clearly derived from cathedral chants and set to the canticles – a feature borrowed in many later collections. Chetham's book went through 11 editions in the 18th century, and was used all over the north of England, particularly at Halifax parish church. There it became so venerated that 19th-century organists were obliged to present their own work in the form of additions or revisions to Chetham's – as, for instance, in *Pohlmann's National Psalmody, or New Appendix to Houldsworth's Cheetham's Psalmody, for Home and Congregational Use*, edited by H.J. Gauntlett (Halifax: Pohlmann & Son, 1878).

From the 1720s anthems became longer, more elaborate and in some cases contrapuntal; they grew from two to three, and ultimately to four and even more voices, though the tenor remained clearly the 'leading' part. Indeed in many anthems the tenor and bass seem musically satisfying by themselves, more so than with the upper parts added, which suggests that the others may have been more or less optional. The same anthem often appears in drastically altered forms in different books, or the tenor may be nearly identical in two versions, while the other parts are entirely different, perhaps as a result of the oral transmission of the tenor. Some of the anthems

from Playford and Bishop became so transformed in several stages that by the later 18th century they had become barely identifiable (ex.1*b*).

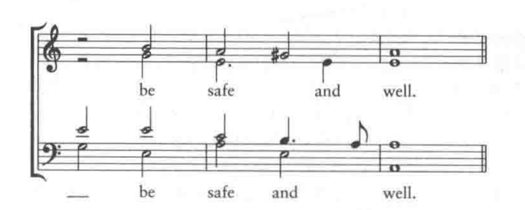


The development of elaborate psalm tunes, though equally characteristic of country psalmody, tended to follow after the development of anthems. One reason for this was that the singers could do as they pleased with the anthem, but in metrical psalms they had to reckon with opposition from both clergy and congregation. Another was that psalm tunes had to be repeated with each verse of the psalm, which hindered any anthem-like elaboration in the setting. One solution was to have an elaborate refrain, repeated with every verse. Only one of the 150 psalms actually has such a refrain – Psalm cxxxvi – and this was, in fact, one of the first to be treated in extended settings with word repetitions. Psalm xxiv.7–10 also has a refrain-like repetition, and this was the text of the first FUGING-TUNE, in the second edition of Chetham's *Book of Psalmody* (1722). This piece, judging by its style and effective structure, was the work of a professional composer. It was very popular and was reprinted (though often in debased form) in many later collections. Apart from these two examples, fuging-tunes are not found before about 1745, though there are increasing numbers of tunes with solos, duets, word repetitions and extended melismas and ornaments.

William East's collections of about 1750–55 show a new trend. They contain services and anthems 'as sung in Cathedrals', including examples by Lawes, Blow, Purcell, Tudway and Maurice Greene as well as some of parochial origin. But they are clearly for local parish church use, being sold by various booksellers at Midland towns 'and by Mr. John Harrot, teacher of Psalmody at Great Bowden [Leicestershire]'. One, a *Collection of Church Musick for the Use of his Schools Waltham Leicestershire*, contains a 'Tribute' to the author, signed 'John Stanley':

> Accept my Friend what Justice makes me do,
> And your Harmonick Notes compels me to:
> Great Playford's Works Immortaliz'd his Name,
> And Tansur's stretch'd the blowing Cheeks of Fame;
> Green, Barber, Chetham, Smith, &c in thought was best,
> Yet all these Worthies are Reviv'd in East ...

The development of country psalmody, from Playford to East, is thus clearly outlined. East's psalm tunes are all 'in the Fugeing, Syncopating and binding taste'; about half of them are attributed to John Everet, of Grantham, whose own collection was published by East in 1757. They show little concern for the problems of strophic repetition; the first verse only is set to music, word repetitions and overlaps included, and the other verses are left to take care of themselves (ex.4). This 'extreme' type of fuging-tune was popular in the remoter country collections in the later 18th century, and was imitated in American psalmody books. More than other elaborate tunes it obscured or vitiated the sense of the words and on these grounds was criticized by such clergymen as John Wesley and such country musicians as John Arnold, who deplored 'these new-fashioned fuguing Psalm-Tunes' in the prefaces of his collections. In more 'moderate' fuging-tunes, such as those of William Tans'ur, the 'fuging' section is in most cases either a repetition of the last line after a full cadence, or an Alleluia or Amen; hence the tune can be sung without it.

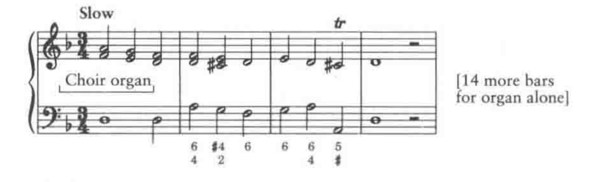


Ex.4 Fuging-tune, set to Psalm xci.1, 2, 9, 10; William East: *The Voice of Melody* (Waltham, 2/1750)

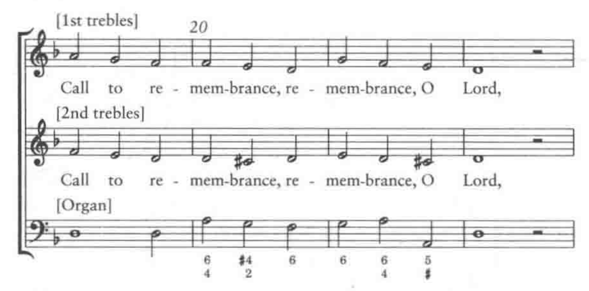
Towards the end of the 18th century increasingly strident objections to country psalmody, particularly on the part of Evangelical clergymen, generated a new type of 'reforming' psalmody collection, which not only tried to impose professional musical standards but also was designed to re-establish congregational singing in country churches, led but not replaced by a choir. Among these were the collections of Newton (1775), Cecil (1785), William Jones (i) (1789, 1795) and Tattersall (1794), all incumbents of country churches, and Gresham (1797), a church organist and schoolmaster. Comprehensive books of psalms and hymns, intended for both town and country use, also became popular, Miller's *Psalms of David* (1790) being the first in a long series which included collections by Benjamin Jacob (1817), Greatorex (*c*1825) and Hackett (1840). In many parishes the vicar and organist combined to compile a local selection whose music was

that of town psalmody (see below). Under Methodist influence, such elaborate music as remained in these collections was often of the set-piece type, settings of metrical psalm or hymn texts in a style derived, or in music actually adapted, from secular and operatic sources. Those few country choirs that survived in Victorian times chiefly sang hymn tunes of the ornate type, until the bands were replaced by the reed organ.

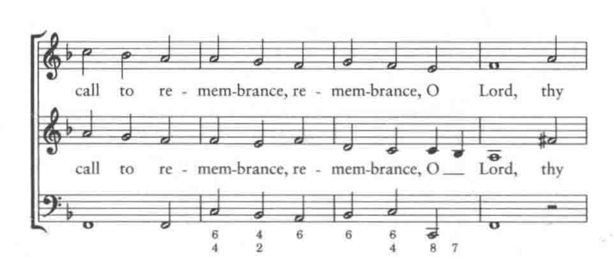
2. Town psalmody. John Arnold, in *Church Music Reformed* (1765), pointed out that



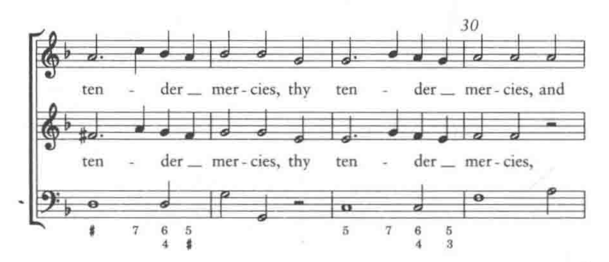
> in the Churches of *London* and *Westminster*, which abound chiefly with large Congregations, it is customary for the People, who chiefly sing by the Ear, to follow the Organ ...; but, in Churches where there is no Organ, they generally follow the Clerk, who sings the Melody of the Tune ... In most Country Churches the Psalms used to be sung formerly much after the same Manner as is now used in the Churches of *London*, &c ... till about half a Century ago, when several Books of Psalmody were printed and published, containing some very good Psalm Tunes and Anthems in four Parts; of which the People in the Country soon became particularly fond.



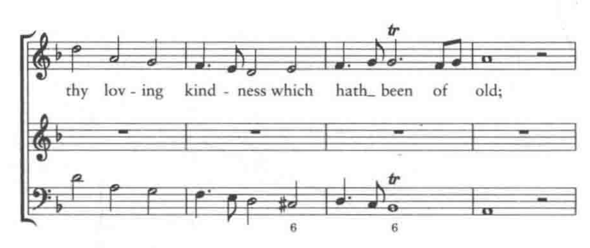
There is a clear distinction between the two traditions; the London churches generally continued to sing psalm tunes of the old type in the old way. What was true of the churches of London and Westminster was also generally true of the larger provincial town churches, particularly those in cathedral cities, where one of the cathedral musicians was frequently organist. Other large cities, such as Newcastle, Nottingham, Birmingham, Leeds and Bath, had more than one church with an organ, and in general organs became more widespread during the 18th century.



Another factor in many town churches was the presence of the 'charity children', also mentioned by Arnold. From early Elizabethan times the statutes of many grammar schools contained a provision for teaching the psalm tunes to the children and taking them to the parish church to lead the singing every Sunday. They wore uniforms, provided by the parish if there was no endowment to clothe them, and they often assembled on either side of the organ in the church's west gallery, providing a strong if at times rather shrill rendering of the psalm tunes. Thus in town church music, unlike that of the country, the emphasis was on the highest voice. Organ settings also had the tunes in the treble, with interludes and elaborate 'givings-out' for playing the tune through (*see* Psalms, metrical, §III, 1(iv)). Until well into the 18th century the charity children had no special music, but their presence is indicated in such collections as Thomas Wanless's *The Metre Psalm-Tunes ... Compos'd for the Use of the Parish-Church of St. Michael's of Belfrey's in York* (London, 1702), which has settings for soprano, alto, tenor and bass with the tune in the treble. The children of the Bluecoat School sang at this church, where Wanless (organist of York Minster) played the organ.



The phrase 'town psalmody' may be properly applied to elaborate music specifically written for the charity children or other choirs. The custom grew up during the 18th century of using the occasion of the annual 'charity sermon', at which alms were solicited for the benefit of the school, to display the singing of the children. Charity hymns were specially written for the purpose and set to music for one or two treble parts and figured bass; anthems, with suitably selected texts, were written in similar fashion (ex.5). The first book to contain this kind of music was Pearson's *The Second Book of the Divine Companion* (*c*1725).



Ex.5 Henry Heron: 'An anthem Sung by the Charity Children of Lime Str[ee]t Ward before the Right Honble. S[ir] Wat[ki]n Lewis Kt. Lord Mayor (and the Sherriffs) of the City of London, on Sunday the 13th of May 1781, at the Parish Church of St. Andrew Undershaft, Leadenhall Street'; William Gawler: *Harmonia sacra* (London, 1781)

About the middle of the 18th century several charities with strong religious connections were founded in London – the Foundling, Lock, and Magdalen hospitals were the most important – and their congregations provided music for their chapels (*see* London, §I, 5). This music was also treble-dominated, consisting of women's or children's voices supported by the organ, and the printed collections of their psalms, hymns, anthems and set-pieces were widely used, first in other private chapels and later in town parish churches. In the 19th century many town churches employed a professional quartet at parish expense; a red velvet curtain was drawn back to reveal

the fashionably dressed singers, who then provided a concert of hymns or anthems with organ accompaniment. Other churches had a surpliced choir of men and boys in the chancel. Despite the efforts of both Evangelicals and Tractarians, choirs in most churches continued to replace the congregation more than to lead it, and the music they sang was increasingly modelled on that of the cathedrals, simplified where necessary.

3. THE PSALMODY OF DISSENTERS. Independent and Presbyterian churches, especially in London and the south of England, were musically conservative during most of the 18th century. Organs were excluded, and the tune supplements to Watts and other collections of psalms and hymns generally contained only tunes of the older type. Gawthorn's *Harmonia perfecta*, dedicated 'to the Gentlemen who support the Friday Lecture in Eastcheap', continued the Presbyterian psalm-singing movement begun earlier by William Lawrence (*see* PSALMS, METRICAL, §III, 2(i)). It included four anthems and a metrical 'Dialogue on Death', but these were more probably used at the Friday meetings than as an accompaniment to Sunday worship.

The first signs of elaborate psalmody in Dissenting meetings came from the north, shortly after parish churches there had begun to sing anthems. Alverey Jackson led a new movement in Baptist circles in Yorkshire and Lancashire from about 1717. At Rossendale (Lancashire) about 1720, elaborate tunes began to be sung and choirs formed to lead them; bands followed later in the century. The 'Deighn Layrocks' (i.e. Larks), the singing society that led this music, became a famous choir which for more than a century was much in demand at local festivals of choral music. Caleb Ashworth, a Baptist minister, began his career at Rossendale and later moved south to the Midlands. His *Collection of Tunes* (1761) is outwardly similar to parish church psalmody books, and was no doubt partly intended for Anglican use: but it has some differences. The anthems in it are 'more proper to entertain and improve those who have made some proficiency in the Art of Singing, than to be introduced into public Worship'. The psalm tunes are printed in one key but directed to be sung in another, indicating unaccompanied singing. There are also two selections from Handel oratorios, at this date unheard of in Anglican cathedrals or parish churches. (Newbigging described the effect produced by 'the weird exultant music of *Glad Tidings* or the *Hallelujah Chorus* sung by the majority of the congregation'.) Stephen Addington, an Independent minister, published a similar *Collection of Psalm Tunes* in 1777 which was many times reprinted. Rippon's *Selection of Psalm and Hymn Tunes* (*c*1792) was even more popular.

The Methodist movement initiated a new style of singing and brought in music originating in the theatre or the concert hall, at first in open-air meetings and eventually in churches and meeting-houses (*see* METHODIST CHURCH MUSIC. Under John Wesley's authoritarian rule Methodist meetings excluded organs and elaborate polyphony, and whole congregations were taught to sing in four-part harmony. Thomas Williams wrote in 1789:

> The method of singing in the congregations, commonly termed *methodistical*, has been often charged with levity ... But the use of song tunes, and trifling airs, ... has almost entirely ceased since they have been supplied with a variety of better compositions, and many of their chapels are remarked for good singing. One custom, which seems to have originated among them, has certainly a very agreeable effect, namely, that of the women singing certain passages by themselves, which are frequently repeated in full chorus.

This innovation was actually first proposed by George Whitefield, leader of the Calvinistic Methodists, in his *Selection for the Tabernacle* (1753). Methodist practices were soon introduced in other Dissenting bodies, particularly in the north of England, where there was a growing enthusiasm for choral singing. When the spinners and weavers of Lancashire and Yorkshire met with their families for many hours of psalmody, with bands of instruments for accompaniment,

> some devoted themselves to oratorios, then composed anthems, and then transferred their talents to Nonconformist meeting-houses. Many old records refer to the innovation, and show how the deacons would tolerate at first only the [string] bass, then admitted a string quartet, and gradually winked at the table-pew or the gallery housing a miscellaneous band.

The connection between choirs (both of parish churches and Dissenting bodies) and oratorio performances is reported in full detail in Millington's *Sketches*, relating to the Eccles area but touching on musical activities over a wide area of Lancashire, Yorkshire and the north Midlands. Groups of singers and instrumentalists met in cottages to practise music for church and chapel, and combined for larger monthly meetings to sing Handel, Haydn, and cathedral music by Greene, Nares, Boyce and others; the musicians of several such local societies gathered for a quarterly assembly, even if it meant walking 20 miles with their instruments. It was on such foundations that the provincial festivals, great and small, were built, with professionals from London providing only the principal parts. Even the London oratorios at Covent Garden and Drury Lane frequently had recourse to choirs from Lancashire and Yorkshire, who often knew their Handel better than any in London.

Another area where nonconformity was particularly strong was south-west England. At Wellington (Somerset), the Baptist meeting-house, enlarged in 1765, had a singing gallery opposite the pulpit, in which a large choir performed psalmody, led by a precentor equipped with a pitchpipe. When a new chapel was erected in 1833 provision was made for an 'orchestra' as well as a choir: the gallery held about 30 people. The orchestra consisted of a double bass played by John Stradling, grocer; cello by Charles Fry, wool sorter; flutes by William Beall, wool worker, and Thomas Slade, factory foreman and also a deacon of the chapel; violins by W. Stuttaford and James Bragg; serpent by George Viney. The hymns were 'lined out' (a practice whereby each line was read out before being sung) by William Horsey, 'formerly draper and grocer, latterly gentleman', until the custom lapsed in 1864. In 1870 a reed organ was purchased and the old singing gallery closed.

Psalmody in worship varied greatly in the 19th century: some ministers disapproved of organs and preferred the bands, while others followed the more fashionable move in the high-church direction, introducing organs, and then anthems and chanted psalms. The representative Victorian collection was Allon and Gauntlett's *Congregational Psalmist* (1858). It contained hymns with tunes both plain and ornate, including some translated medieval hymns, simple 'congregational anthems', and chants, Sanctus settings and sentences. It was adapted for Baptist use in *The Baptist Tune-Book* (1860). The reed organ or harmonium increasingly replaced the orchestra in chapels and by 1886 Minshall was advocating 'a return to the old

custom of having orchestral instruments used regularly in our services'. In many churches at this date for Sunday morning a simple anthem was chosen, which the congregation joined in; in the evening a more elaborate composition was sung by the choir, 'such as a chorus and solo from the oratorios'. The spread of Tonic Sol-fa singing classes, as well as the publication of music in Sol-fa notation, made this congregational participation a possibility.

II. North America

The following discussion of North American psalmody covers the practice of Protestant vocal music in general, including hymns and anthems, in the two centuries after the English settlement of New England (*c*1620–1820).

1. Early psalm books, congregations and singing schools. 2. The rise of choirs and musical composition. 3. Musical forms and styles. 4. Reform.

1. EARLY PSALM BOOKS, CONGREGATIONS AND SINGING SCHOOLS. When the Pilgrims landed at Plymouth, Massachusetts, in 1620 they carried with them Henry Ainsworth's *Book of Psalmes, Englished both in Prose and Metre* (Amsterdam, 1612), which included 39 unharmonized tunes. Sternhold and Hopkins's *Whole Booke of Psalmes* (London, 1562), later called the 'Old Version', also circulated in America during the 17th and 18th centuries, as well as Thomas Ravenscroft's *Whole Booke of Psalmes* (London, 1621), containing four-part settings of the British psalm tune repertory for recreational use. To these English publications 17th-century New Englanders added a metrical psalter of their own: *The Whole Booke of Psalmes* (Cambridge, MA, 1640, 3/1651; published thereafter as *The Psalms, Hymns, and Spiritual Songs of the Old and New Testament*), known as the Bay Psalm Book. The clergymen who compiled it sought fidelity to the holy scriptures. They also favoured simple textual metres, setting almost all of the psalms in common metre (four-line stanzas alternating lines of eight and six syllables, 8:6:8:6), long metre (8:8:8:8) or short metre (6:6:8:6). Before the ninth edition (1698) the Bay Psalm Book was printed without music.

By the early 18th century musical literacy in the American colonies had declined, and psalmody in many congregations was being carried on as an oral practice led by a clerk or 'precentor'. The technique of 'lining out', in which the leader intoned or read the text line by line and the congregation sang back the lines in alternation with the reader, was widespread. The clergy, seeking more control of singing in public worship, reacted. From 1720 polemical tracts began to appear in Boston advocating 'Regular Singing' – singing the psalm tunes as they were notated – as opposed to the freely embellished 'Old Way' that lining out had promoted. The movement to reform congregational singing led to the formation of 'singing schools', instructional sessions teaching the elements of Regular Singing. It also led to the publication of tune books, collections of psalm tunes with instructional prefaces, designed for singing school use. John Tufts's

Introduction to the Art of Singing Psalm-Tunes went through 11 editions between 1721 and 1744; Thomas Walter's *Grounds and Rules of Musick*, first issued in 1721, was still in print in the 1760s.

The reform met strong resistance. Many New England worshippers did not share the belief that the 'Old Way' of singing was a corruption of psalmody. Sanctioned by use, and gratifying in the freedom it allowed singers, the 'Old Way' was set aside only with great reluctance and continued in rural areas throughout the century and later. Yet the appearance of singing schools in many communities began a process of disseminating musical learning whose impact was strong. By 1810 some 350 sacred tune books had been published in North America, a sizable majority of them designed for singing school use. Moreover, the singing school, taught by a singing master, offered musically inclined Americans their first chance to earn money in exchange for musical services. Finally, by teaching musical skills, the singing school inspired a wish for a more elaborate kind of music-making than congregational singing could provide. In that wish lie the roots of the New England church choir and the beginnings of American composition.

2. THE RISE OF CHOIRS AND MUSICAL COMPOSITION. The origins of the Protestant church choir in colonial America lay in a desire to enhance congregational singing and the singers' wish to perform. The first seems to have originated with church leaders, the second with the singers themselves. No thorough study of early American choirs has been made, but evidence suggests that most were formed at the singers' insistence. No meeting-house choirs are known to have existed before 1750, but a number were formed during the 1750s and 60s, and by the 1780s choirs were common.

Typically, choir members were singing school alumni. After a school was held in a town or congregation, scholars sometimes expressed a wish to continue singing as a group. In many towns, 'the singers' petitioned to sit together during public worship. That arrangement was recommended, for example, in Boston's First Church (1758), because 'skilful Singers, sitting together in some convenient place, would greatly tend to rectify our singing on the Lord's Day, and would render that part of Divine Worship more agreeable'. It also gave the choir a chance to perform its own music, including elaborate pices of the kind that began to appear in American tune books during the 1760s.

As long as tune books were geared to the needs of beginning singing schools and congreations, there was no reason for them to contain more than a limited repertory. But as choirs sprang up, stylistic uniformity began to give way. Together with the traditional tunes set in block chords, there was a growing tendency towards texture changes, melismas and fuging-tunes with brief imitative sections. This more elaborate style, cultivated by British psalmodists including William Tans'ur, William Knapp and John Arnold, gained favour in the colonies. Collections by these composers and others circulated in America during the 1750s and 60s, and their music began to appear in American tune books. *Urania* (Philadelphia, 1761), compiled by James Lyon, reflects an increase in the size and range of the printed sacred repertory in the 1760s. With its 198 pages, it dwarfed all earlier American musical publications, and its inclusion of elaborate, modern British music (more than a dozen anthems and set-pieces and several hymn tunes, as well as a selection of psalm tunes), most of it never before published in America, make Lyon's book a landmark in American psalmody. Two publications by Josiah Flagg, *A Collection of the Best Psalm Tunes* (Boston, 1764) and *Sixteen Anthems* (Boston, n.d. [1766]), further established the American tune book as a forum for the publication of 'modern' music. Between 1760 and 1770 the printed sacred repertory in the colonies burgeoned far beyond oral command.

The contributions of native composers also increased. Much of the music in American tune books of the 1770s and 80s was still taken from British sources, but more and more of it was composed by Americans who over the next several decades formed what some historians have called 'the first school of New England composers'. These men were Anglo-Celtic by lineage and Protestant (chiefly Congregational) by religion, born and bred in the towns and villages of Massachusetts and Connecticut. Most were tradesmen who made music in their spare time. Few had any training beyond what they had picked up in singing schools and from British treatises. None were tutored in orthodox European musical grammar. Nevertheless, they composed and published, and saw their music eagerly taken up by their countrymen. The most prominent among them, and the first American psalmodist composer of real consequence, was William Billings, whose *New-England Psalm-Singer* (Boston, 1770) is another landmark. Published at a time when only a dozen or so American tunes had appeared in print, Billings's book, made up entirely of his own compositions, increased that figure tenfold. The patriotic overtones of his prefatory remarks (and of some of the texts he set), together with his unabashed confession of inexperience and proclaimed refusal to follow established compositional rules, provided Americans of the Revolutionary era with an example of a self-reliant native composer.

Billings's example was not ignored. By the end of 1782 compositions by some 20 Americans were in printed circulation. The increase may be traced to two Connecticut collections, *Select Harmony* (Cheshire, 1778) by Andrew Law and *The Chorister's Companion* (New Haven, 1782) by Simeon Jocelin and Amos Doolittle. Like Lyon and Flagg before them, Law and Jocelin were primarily compilers, not composers. Many of the tunes introduced in their books soon became American favourites. The two works also provided a new model for American tune books, for both were eclectic compilations in which British tunes, many of them established favourites, were mixed with American tunes. Later tune books that enjoyed many editions featured a similar combination of European and American music, including *The Worcester Collection* (Worcester, MA, 1786, 8/1803), Andrew Adgate's *Philadelphia Harmony* (Philadelphia, 1789, 12/1811) and *The Village Harmony* (Exeter, NH, 1795, 17/1821).

The postwar years saw activity increase in all areas of psalmody. Tune book production grew from some 60 issues in the 1780s to more than 220 in the years 1801–10. New England psalmodists carried their work southwards and westwards, teaching and establishing their tune books in New York state, Pennsylvania, Maryland and Virginia. By 1810 close to 300 natives or residents of the new republic had published sacred music. And while singing schools and church choirs continued to flourish, more and more singers formed 'musical societies' devoted to

sacred music-making. Such groups proliferated especially after the war, including the Stoughton Musical Society (Massachusetts, 1786; still in existence), the Urania Musical Society (New York, 1793–8) and Dartmouth College's Handel Society (Hanover, NH, *c*1810). The founding of such groups shows the desire of Americans to sing the most challenging and artistic music available to them.

3. MUSICAL FORMS AND STYLES. American psalmodists usually composed for four-part chorus, with the melody in the tenor voice. Set in open score, the music seldom calls for instrumental accompaniment. Most American tunes set only one stanza of metrical text. Plain tunes (settings in block chord texture in which the phrase structure reflects the textual metre exactly) are in the majority, although sometimes the composer transcends the metre by repeating or extending certain words. Fuging-tunes contain at least one section of contrapuntal entries that produce text overlap. Set-pieces (through-composed settings of several stanzas of verse) and anthems (through-composed settings of prose texts) round out the American sacred repertory, though forming only a small proportion of it. Billings's description of the way he composed helps to explain some of the music's irregularities. In *The Continental Harmony* (Boston, 1794), he wrote of composing the tenor part, the 'air', first, then of adding the other voices in turn. The 'grand difficulty in composition', Billings declared, 'is to preserve the air through each part separately, and yet cause them to harmonize with each other at the same time'.

Stylistic differences among American psalmodists may be observed. Oliver Holden, Samuel Holyoke and Jacob Kimball all knew, and perhaps studied with, the immigrant organist-composer Hans Gram. Their music tends to favour full triads and to move according to the formulae of 18th-century European harmony. If the melodic-harmonic idiom of these men resembles that favoured in the cities, it differs from the idiom of Lewis Edson, Oliver Brownson, Abraham Wood, Justin Morgan and Stephen Jenks. These men were self-taught, spending their lives mostly in New England villages and the countryside, unexposed to cosmopolitan musical learning. The folklike melody and unorthodox harmony found in their music suggests that they worked more by trial and error than precept. Somewhere between these two groups might be placed the music of Billings, Daniel Read and Timothy Swan, each of whom composed a substantial body of music in a melodic-harmonic style of his own. Of the three, Billings was perhaps the least pungent in his harmony and the most given to writing melodies with sweep and momentum, which he often did by sequentially repeating small units of text and music. Read's harmony and melodic craftsmanship made him especially skilled at plain tunes and short fuging-tunes, in which he wrote some of the most tersely concentrated music of his time. Swan was capable of strikingly expressive responses to images in the text and unexpected melodic and harmonic twists. The varied melodic-harmonic idiom of these three and their contemporaries suggests that, when a close study of the sacred style of 18th-century New England composers is undertaken, stylistic diversity is likely to be one of its chief topics.

4. REFORM. From the 1760s onwards, American psalmody evolved without reference to any stylistic standard or ideal. In many tune books from the later years of the century, compositions by New Englanders were mixed into a repertory that ranged from European 'common tunes' almost as old as Protestantism itself to British Methodist hymn tunes whose style resembled the italianate solo songs favoured in London drawing rooms and theatres. As cosmopolitan musical taste took hold in the cities during the 1780s and 90s, however, the supposed crudities of Yankee composition began to draw comment. Fuging-tunes were criticized for obscuring the sacred text. *The Massachusetts Compiler* (Boston, 1795) of Holyoke, Holden and Gram prefaced its assortment of European compositions with a lengthy digest from thoroughbass manuals and instructional treatises describing a cosmopolitan framework for sacred styles. But the tide against home-grown psalmody turned decisively only after 1805, when the New England clergy, in a new effort to gain control over music-making in public worship, weighed in on the side of reform. Choirs and their members were attacked for a secular attitude that put musical rewards above spiritual ones. Viewing psalmody as a practice in which solemnity and edification should predominate, the new reform movement advocated a return to the 'ancient' psalm tunes in use before the War of Independence. And it succeeded, discrediting musical elaboration and with it the native composer and the American idiom developed in the 1770s and 80s. This trend led in the 1820s to the formulation by Thomas Hastings, Lowell Mason, and their followers of a strictly circumscribed, devotional musical style for congregations, singing with keyboard accompaniment.

Although the reform movement's success marked the end of the indigenous New England compositional style as a creative force, it did not consign the music to oblivion. New England tunes survived in shape-note collections published in upstate New York, western Pennsylvania, the Shenandoah Valley of Virginia, the Ohio River valley and, by the 1830s and 40s, in tune books compiled in South Carolina and Georgia. In these outlying areas local traditions of polyphonic hymnody took root, carried by singing schools and tune books, drawing on the work of Billings, Read and other northern psalmodists. Meanwhile, in New England from 1829, when *The Stoughton Collection* appeared in Boston, the heart of 18th-century Yankee psalmody was periodically reprinted in tune books whose avowed purpose was to keep the older repertory alive. Those collections presented the music in something like its original form, giving pleasure both to oldsters who had grown up with native psalmody and to younger singers who could find value in the long-discredited music of their forefathers.

NICHOLAS TEMPERLEY (I), RICHARD CRAWFORD (II)

Psalmody (iii). *See* PSALTERER.

Psalms, metrical. Paraphrases of the biblical psalms in verse translation, often designed for singing to tunes of a simple popular type (known today as hymn tunes).

I. Introduction. II. The European continent. III. England. IV. Scotland and Ireland. V. North America.

I. Introduction

Translation of the psalms into metrical verse goes back to Apollinaris in the 4th century, and poetic paraphrases may have been made as early as the 2nd century for the so-called Gnostic psalter of Bardaisan and his son Harmonius. It continued throughout the Middle Ages, chiefly for the purposes of edification and private devotion. Metrical versions of the seven 'penitential psalms' (vi, xxxii, xxxviii, li, cii, cxxx and cxliii) held a special place in the devotional life of the Roman Church, but in the 16th century a new motive was added – that of public worship. Hus and Luther acknowledged the power of congregational singing, which required texts in verse because prose could not easily be sung by the people at large. Thus the enormous increase in the quantity of metrical psalms after 1520 was a direct outgrowth of the Reformation. The first collections of Lutheran chorales (1524) included a number of psalm paraphrases among the freely composed hymns. The more radical reformers, believing that only the inspired words of the Bible were suitable for use in worship, sought to confine the texts to close translations of the psalms and a few other biblical lyrics. They used the verse forms of popular song, partly for ease of learning and partly in the hope that people would set aside the lewd or superstitious songs they knew and sing the psalms instead. Psalms were, in fact, sung in everyday situations as well as in church. They were enormously popular, and were an important element in 16th- and 17th-century music printing and publishing. The tunes were soon harmonized in both simple and elaborate settings.

The German Reformed sect, centred at Strasbourg, included 22 metrical psalms in its *Kirchenampt* of about 1524, and produced a complete psalter by 1538. Zwingli, the first leader of the Swiss Reformed Church, disallowed music in worship altogether, but Calvin threw his influence behind the psalm-singing movement, and between 1539 and 1562 supervised the development of the French metrical psalter. The movement then spread to Britain, the Low Countries, Scandinavia, Eastern Europe and eventually to the colonies in America and other parts of the world. Some metrical versions of the psalms, such as the American Bay Psalm Book, are extremely literal; others, such as those of Isaac Watts, are so freely paraphrased that a metrical psalm of this type cannot be clearly demarcated from a hymn (*see* HYMN, §IV).

For the music of the voluntary parish church choir in England, consisting of psalms, hymns and anthems, which began to appear about 1690 and continued through the 18th and 19th centuries, and for the general practice of amateur Protestant vocal music in North America from the 17th century to the 19th, *see* PSALMODY (ii).

II. The European continent

1. General. 2. France and Switzerland: (i) Monophonic psalters (ii) Polyphonic settings. 3. The Low Countries (French language): (i) Monophonic psalters (ii) Polyphonic settings. 4. The Low Countries (Dutch language): (i) Monophonic psalters (ii) Polyphonic settings. 5. Germany: (i) Monophonic psalters (ii) Polyphonic settings.

1. GENERAL. The creation of a metrical psalter in the vernacular, complete with melodies and attendant polyphonic settings, is the chief contribution of Calvinism to the music of western Europe. The origin, growth and distribution of the psalter form a short but intense episode in the history of music. In less than a century the poetry was written, the psalm melodies were composed and the main corpus of polyphonic music inspired by the psalter was created. This period of growth parallels the growth and spread of Calvinism in western Europe. The Calvinist doctrines and psalter found an especially receptive audience in France, Switzerland, the Low Countries and certain areas of Germany (*see* CALVIN, JEAN; *see also* REFORMED AND PRESBYTERIAN CHURCH MUSIC). The following discussion is organized into four categories, corresponding to the various geographical areas (and languages) in which the Calvinist psalter flourished. Discussed within each category are both the monophonic psalters and the polyphonic settings.

2. FRANCE AND SWITZERLAND.

(i) Monophonic psalters. The history of the Calvinist psalter begins in the Catholic court of France. In 1537 the poet Clément Marot, *valet de chambre* to King François I, completed rhymed translations of 30 psalms, taking the first 15 psalms in numerical order and then selecting the remainder at will. Marot's psalms were very popular at court. Chroniclers reported that monarch, courtiers and courtesans sang them to popular tunes. In 1540 Marot

gave a manuscript of the *Trente pseaulmes* to Emperor Charles V, who urged the poet to continue his work.

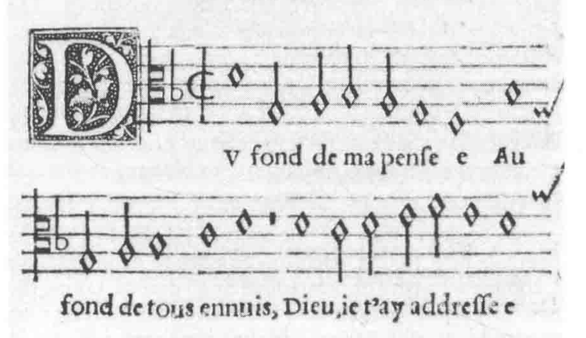
Marot's *Trente pseaulmes* first appeared in print in Calvinist psalters. Jean Calvin, exiled from Geneva and leading a small congregation at Strasbourg, used Marot's psalms in his first psalter, *Aulcuns pseaulmes et cantiques mys en chant* (Strasbourg, 1539). This book contains 13 Marot psalms and six psalms and three canticles by Calvin. *Aulcuns pseaulmes* is a psalter with melodies, but without preface or an appendix of liturgical texts. Several of the melodies were borrowed from earlier Strasbourg songbooks, and at least two tunes in Calvin's first psalter can be ascribed to the Strasbourg musician Matthias Greiter.

Calvin returned to Geneva in 1541, and in the following year brought out his second psalter, *La forme des prières et chantz ecclésiastiques* (1542). This book contains Marot's *Trente pseaulmes*, two Marot canticles, and five psalms and two canticles by Calvin, each text with its own melody. *La forme des prières* (fig.1), which shows one of the most popular of the Genevan psalms, Marot's *Du fond de ma pensée*) begins with a lengthy preface by Calvin on the sacraments and on psalm singing. It concludes with liturgical texts (prayers to be read at worship and forms for the sacraments).

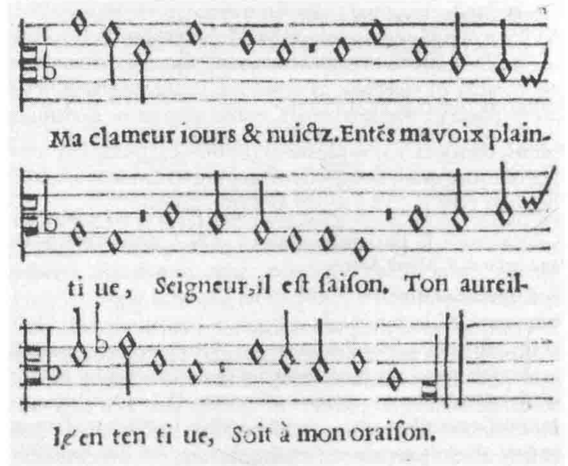
In 1542 Marot fled to Geneva to escape religious persecution. There he revised his first 30 psalms and added 25 new texts to the Calvinist repertory: 19 psalms, four canticles and two table graces. The earliest extant publication of this material is *Cinquante pseaumes en francois par Clem. Marot* (1543). It is an edition without melodies, and bears no printer's name or place of publication. That same year Calvin published a Genevan edition of the *Cinquante pseaumes* with melodies. No copies of this book survive. In fact, not one Genevan edition of *Cinquante pseaumes* with melodies exists today, even though there is evidence that several were printed between 1543 and 1551, when *Pseaumes octantetrois* appeared.

Pseaumes octantetrois de David, mis en rime Francoise, a savoir, quaranteneuf par Clement Marot . . . et trentequatre par Theodore de Besze, de Vezelay en Bourgongne (Geneva, 1551) is the first Calvinist psalter in which the work of poet and musician is acknowledged. Marot, who had died by that time, and Théodore de Bèze, the theologian who continued the work of versifying the psalms, are both mentioned in the title. The musician responsible for the melodies was Loys Bourgeois, who had been active as a music teacher in Geneva since 1545. Bourgeois explained his work in a preface, claiming that he wrote new music for the 34 Bèze psalms, rewrote 12 and revised 24 of the old melodies, and left only 15 untouched. Writers have often credited Loys Bourgeois for work on other Genevan psalters, but his role, though substantial, was confined to this publication; the new melodies for the 1543 edition were probably composed by Guillaume Franc. Bourgeois left Geneva in 1552.

Pseaumes octantetrois was published in Geneva each successive year until 1554. Six new psalms (without music) were added by Bèze to the 1554 edition, though



Car, fauoriz estes & bien aimez,
Du grand Seigneur, qui les Cieulx a fermez,
Et terre confinee.



Dieu a les Cieulx vniuersellement,
Pour sa demeure: aux hommes, seulement,
La terre il a donnee.

O Seigneur Dieu, l'homme par mort transi,
Ne dit ton loz, ne quiconques aussi,
En la fosse deualle.

Mais, nous viuans, par tout, ou nous irons,
De bouche & coeur le Seigneur benirons,
Sans fin, sans interualle.

PSALME CXXX.

Si ta rigueur expresse,
En noz pechez tu tiens:
Seigneur, Seigneur, qui est-ce,
Qui demourra des tiens?

Si n'es-tu point seuere:
Mais, propice à mercy.
C'est pourquoy on reuere,
Toy & ta Loy aussi.

En Dieu ie me console,
Mon ame s'y attend:

h 3

1. *Marot's setting of Psalm cxxx, 'Du fond de ma pensée', from Calvin's second psalter 'La forme des prières' (Geneva, 1542)*

they were not acknowledged in the title until *Pseaumes octante-neuf* was published the following year. The 1556 edition of this book contains another preface by a Genevan musician, Pierre Vallette, who replaced Bourgeois as music teacher for a short time. His preface is a little treatise explaining how to read the musical notation of the psalter; he made no reference to writing or revising any psalm melodies.

The complete edition of the Calvinist psalter was published in Geneva in 1562 as *Les pseaumes mis en rime francoise, par Clément Marot, & Théodore de Bèze*. Antoine Vincent was the merchant printer in charge of producing the tens of thousands of copies that issued from printing presses in Geneva, Paris, Lyons, Caen, St Lo and elsewhere, each copy duly marked 'pour Antoine Vincent'. This extensive venture, involving 24 printers in Paris alone, shows the immense popularity of the Calvinist psalms. A bibliography compiled by Orentin Douen in 1879 lists 44 different editions of the psalter in 1562, 1563, and 1564. As hostile a commentator as Florimond de Raemond wrote in his *L'histoire de la naissance de . . . l'hérésie* (1610) that the psalms of Marot and Bèze 'were received and welcomed by everyone with as much favour as ever any book was, not only by those with Protestant sympathies, but also by Catholics; everyone enjoyed singing them'.

The complete Calvinist psalter contains 125 different melodies for 152 texts (150 psalms and two canticles). 85 melodies are repeated from the 1551 edition; 40 are new. The creator of the new melodies was a certain 'Maître Pierre le chantre'. Since Pierre Dagues, Pierre Vallette, Pierre Davantès and Pierre du Buisson were all active as musicians in Geneva at this time, the identity of 'Maître Pierre' remains a mystery, although recent research has shown that it could be Pierre Davantes. It is known that Loys Bourgeois and the other creators of the Calvinist melodies did not use the French chanson repertory as the principal source of melodies for the psalter, and although there are reliable reports that Marot's psalms were sung to popular tunes, there is very little evidence that the psalter melodies themselves were derived from chansons. Yet ever since Orentin Douen (in his *Clément Marot et le psautier huguenot*, 1878–9) illustrated some similarities between a group of Genevan melodies and some chansons, writers have repeated his conclusion that many psalms are based on specific chansons. In Douen's work, however, the similarities shown are limited to short groups of notes here and there, and can more easily be described as idiomatic coincidences than as direct borrowings. For example, one of the psalm melodies that Douen claimed was a remade chanson is Psalm lxxii, 'Tes jugements, Dieu veritable', which does indeed bear some similarity to the tenor of Josquin's *Petite camusette*. After the almost identical incipits (ex.1), however, the comparison becomes unconvincing.

Pierre Pidoux (1962) showed that several Genevan melodies derive from Gregorian chant. For example, the comparison of Psalm lxxx, 'O pasteur d'Israel, escoute', with the Easter sequence, *Victimae paschali laudes*, reveals a much closer relationship than any displayed by Douen's chanson–psalm pairings (ex.2). Unlike the above chanson example, here very little of the older melody need be discarded in order to find the Genevan adaptation. The relationship is obvious enough to justify calling the sequence a model for the psalm tune. Moreover, comments

Ex.1 The melody for Psalm lxxii compared with the tenor of Josquin's chanson *Petite camusette*

by Loys Bourgeois in his psalter preface of 1551 imply that he used chant for two or three psalms.

(ii) Polyphonic settings. The immense popularity of the Calvinist psalms led composers to use the texts for polyphonic composition. The first settings came soon after Calvin's first psalter of 1539. One year later Jacques Moderne of Lyons included the earliest known polyphonic setting of a Marot psalm in the sixth book of his series *Le parangon des chansons*. The piece is a complete setting of Psalm cxxxvii, *Estans assis aux rives aquatiques*, by a certain Abel, a composer of whom nothing is known. Abel's extended composition in three movements is not based on any known melody. In 1544 Moderne printed a second psalm by an obscure composer, Gentian, whose setting of Marot's Psalm cxxx appears in the second book of the series *Le difficile des chansons*. This composition is also in three movements and freely composed, without reference to the psalter melody.

Later in the decade French printers began issuing publications devoted exclusively to polyphonic settings of the 50 Marot psalms. The first of these was a collection

Ex.2 The opening of the melody for Psalm lxxx compared with the Easter sequence *Victimae paschali laudes* (transposed up a 4th)

Ex.3 Loys Bourgeois' setting of Psalm cxxx in imitative style, from *Le premier livre des pseaulmes* (Lyons, 1547)

of 31 settings in four parts by Pierre Certon, published in Paris by Pierre Attaingnant in 1546. Only a superius partbook without title-page remains, but it is enough to show that Certon used the Calvinist melodies. No reference to the melodies is found in a second book, published that year by Attaingnant as a sequel to the Certon collection and containing 23 settings by Antoine de Mornable.

Loys Bourgeois' polyphonic settings of Marot's 50 psalms appeared in two Lyons publications in 1547. In *Pseaulmes de David*, Bourgeois wrote in a four-voice note-against-note style, with the unchanged psalm melody in the tenor. He labelled this simple polyphonic style and the syllabic text treatment 'a voix de contrepoinct egal consonante au verbe'. For the 24 settings in *Le premier livre des pseaulmes* Bourgeois used three styles, which he again labelled in the title: 'a voix pareille' (note-against-note, with psalm melody as tenor cantus firmus); 'familiere, ou vaudeville' (a freer note-against-note texture, with some ornamentation in the accompanying voices or even in the melody itself); and 'plus musicale' (imitative counterpoint, with each phrase of the psalm melody the basis of a point of imitation – see ex.3, which uses the melody shown in fig.1 above). Only 15 of the 24 settings use known Calvinist melodies.

Other composers who filled single publications with settings of some or all of Marot's *Cinquante pseaumes* are Clément Janequin (1549), Pierre Colin (1550), Claude Goudimel (1551, 1557, 1559, 1560), Pierre Certon, again (1555), Jacques Arcadelt (1559) and Michel Ferrier

(1559). All of these composers except Colin used the Genevan tunes, although Goudimel sometimes composed without them.

Loys Bourgeois, the writer of many of the melodies in *Pseaumes octantetrois* (1551), was also the first composer to produce a polyphonic setting of this enlarged psalter. Only a bass partbook of *Pseaulmes LXXXIII de David* (1554) remains; it shows, however, that Bourgeois used the psalter melodies. Philibert Jambe de Fer also used the psalter melodies, setting only the Bèze texts in his *Psalmodie de 41 pseaumes royaux* (1559). Both Marot and Bèze texts from *Pseaumes octantetrois* form the basis for the polyphonic psalters by Janequin (1559), Thomas Champion (1561) and Claude Goudimel (1562). All three of these publications use the Calvinist melodies.

Soon after the publication of the complete Genevan Psalter in 1562, composers began to write polyphonic settings of all 150 psalms. Four polyphonic psalters, each entitled *Les 150 pseaumes de David*, appeared in 1564: one by Goudimel in Paris, two by Jambe de Fer in Lyons, and one by Richard Crassot in Lyons. All are in note-against-note style with the psalm melody in the tenor. (See below, however, on Goudimel's style.) Other composers who set the complete psalter are Hugues Sureau (1565), Jean Servin (1565), Pierre Santerre (1567), Claude Goudimel, again (1568), Paschal de L'Estocart (1583) and Claude Le Jeune, twice (1601, and 1602–10 in three volumes). These settings are all based on the Genevan melodies. When composers set the entire psalter, they presented the psalm tune as cantus firmus, accompanied by either chordal texture or a more elaborate counterpoint. The given melody, however, was always clearly present. In their prefaces, the composers of the Calvinist repertory stated that they had retained 'the usual melody which is sung in church', because so many people enjoyed singing the psalms outside the church 'in a more melodious setting, from the art of music'.

Claude Goudimel made the most substantial contribution to the Calvinist repertory with his three different settings of the psalter. Between 1551 and 1566 he produced eight books of psalm motets. For these compositions he used the entire text, grouping several stanzas into a single movement. Psalm cxix, for example (vol.iii, 1557), has 28 stanzas and is in five movements. Often the various movements, or even the stanzas, are set off from each other by contrasts in texture, cantus firmus treatment or number of voices used. Imitative counterpoint is the style of these works. In the earlier settings Goudimel did not build the points of imitation on the psalter tunes, but he did use them for the later psalm motets.

Goudimel's second setting of the Genevan melodies is his complete polyphonic psalter of 1564 (part published in 1562). Here he used the note-against-note style with the tune appearing in tenor or superius. There are, however, only 125 different melodies in the Genevan Psalter, some of them being assigned to more than one psalm. When Goudimel set one of these melodies a second time in his 1564 psalter he wrote in a more ornate style. Tenor or superius still carry the unaltered psalm tune, so that, as in the simpler settings, the length of the given melody determines the length of the polyphonic composition. Here, however, the accompanying voices do not move with the melody to form a chordal texture. Instead, each voice is rhythmically independent and indulges in occasional short melismas, brief imitations and ornamental melodic figures. The setting of the text is still mainly syllabic, but the four voices no longer declaim the words together. Goudimel used this more ornate style exclusively in his third setting of the psalm tunes (another complete polyphonic psalter), published in 1568. For purposes of comparison, the openings of Goudimel's three settings of Psalm i are given in ex.4.

The most eloquent testimony to the popularity of the polyphonic settings is the large number that were printed. The publications listed above contain over 2000 settings of the Marot-Bèze texts. Large as this number is, it represents only about two-thirds of the polyphonic repertory based on the Calvinist texts and tunes. More than 100 psalms appeared in instrumental publications, such as Le Roy's *Tiers livre de tabulature de luth* (1552), which contains 21 settings for voice and lute. With the polyphonic *chansons spirituelles* and the settings of psalms by Calvinist poets other than Marot and Bèze, the total number of compositions swells to over 3000, which does not include what was published in countries other than France and Switzerland. Nor does this number include the motet and chanson contrafacta prepared by various Calvinist editors who substituted a Calvinist psalm or *chanson spirituelle* for the original text. The chansons of Lassus were a prime target. Simon Goulart, a minister and publisher of music in Geneva, issued a series of publications in which Lassus's texts were either adapted or completely replaced. In 1597 a certain Louis Mongart prepared a polyphonic psalter named *Cinquante pseaumes de David*. He explained his editing technique in the preface: 'I have accommodated the text of the psalms to French, Italian, and German chansons, and even to several Latin motets of Orland de Lassus, prince of musicians of our century'.

The complete polyphonic Calvinist repertory – psalm setting, instrumental arrangement, *chanson spirituelle* and contrafactum – rivals, in quantity at least, the Parisian chanson, the Italian madrigal and the polyphonic Lutheran chorale. Yet this huge repertory is barely mentioned in contemporary records: only three references are known.

The first is from *Histoire ecclésiastique des églises réformées*, a work formerly attributed to Théodore de Bèze. It tells of the Huguenot Anne de Bourg, who was a prisoner in the Bastille in 1560. Although 'confined in a cage where he suffered all the discomforts imaginable, he rejoiced always and glorified God, now taking up his lute to sing him psalms, now praising him with his voice'.

A second reference to the polyphonic performance of Calvinist psalms is in a letter by a certain Villemadon, courtier to Marguerite of Navarre. He wrote to Catherine de' Medici on 26 August 1559 telling her that when Emperor Charles V visited Paris in January 1540, the musicians of François I and the emperor, indeed all the musicians of France, outdid one another in setting Marot's psalms to music. Everyone in France was then singing psalms. The courtier described his visit to the sick-bed of the dauphin Henri, whom he found singing psalms, accompanied by lutes, guitars, viols, spinets, flutes and the voices of his singers. Unfortunately very few of the earliest settings for Marot's psalms have survived. Perhaps most of them were contrafacta, as later writers such as Florimond de Raemond suggested. The polyphonic psalters of the later 1540s do not contain the earliest settings, because these later publications are by composers not connected with the court from 1537 to 1542, the years

Ex.4 The openings of Goudimel's three settings of Psalm i
(a) from the *Tiers livre contenant huit pseaumes de David* (Paris, 1557)

(b) from *Les cent cinquante pseaumes de David* (Paris, 1564)

(c) from *Les cent cinquante pseaumes de David* (Paris, 1568)

when Marot's psalms were in high royal favour. Moreover, since all of these settings are based on melodies or texts printed in 1543 or later, they do not reflect the activity Villemadon described.

A third reference to the singing of polyphonic Calvinist psalms is in a chronicle by Marcus van Vaernewijck of Ghent (1566–8). In his description of the religious unrest in the Low Countries he commented on the popularity of the psalms among the Calvinists, adding that 'they were also sung in parts in the homes, in the shops, and similar establishments'. This is the only known reference to the actual singing of polyphony in the homes of the Calvinists, and agrees with statements and implications in the titles and prefaces of the polyphonic psalm collections: these compositions were not meant to be sung in church, where polyphony was frowned upon, but in the homes and in places where amateurs gathered to make music. Nevertheless, various writers have suggested that the polyphonic Calvinist psalms were, indeed, sung in church. Such conjectures ignore evidence presented by the publications themselves. Goudimel prefaced his chordal settings published in Geneva in 1565 with the instruction that these settings were not to be sung in church but in the home. As for the more difficult motet-like settings, they were frequently dedicated to *collèges musicaux*, which were groups of amateurs. The evidence from contemporary chronicles and from the publications shows that, in the 16th century at least, both the simple and complex settings of the Calvinist psalms were meant for amateur performance, not for the church.

3. The Low Countries (French language).

(i) Monophonic psalters. The earliest known edition of Marot's complete *Trente pseaulmes* appeared in the Low Countries in 1541, one year before the psalms appeared in Calvin's first Genevan psalter. In 1541 the Antwerp printer Antoine des Gois issued *Psalmes de David, translatez de plusieurs Autheurs, & principallement de Cle. Marot*. This is a psalter without music that contains the 30 psalms of Marot along with 15 by lesser-known poets, some of them identified by only an initial. Ten of the 45 psalms are headed by references to pre-existing melodies to which the texts could be sung. For example, Marot's Psalm x was to be sung 'sus *Dont vient cela*', a popular chanson. The book was approved for publication by Pierre Alexandre, confessor to Mary of Hungary, Regent of the Low Countries. *Psalmes de David* has been considered a Protestant publication because Alexandre was later proclaimed a heretic; and the references to melodies prompted some writers to consider the book an early Calvinist psalter designed for use in secret worship. There could have been no eager Protestant market for this publication, however, because Calvinism had barely penetrated the Low Countries in 1541. The Lutherans

and Anabaptists active in Antwerp would have had little use for a French psalter, since these Protestants spoke German or Dutch. Although there are reasons for believing that *Psalmes de David* may have been Protestant in intent, it certainly is not a Calvinist psalter. It was, however, the first appearance in the Low Countries of Marot's *Trente pseaulmes*, texts that were to be used later by the Calvinists there.

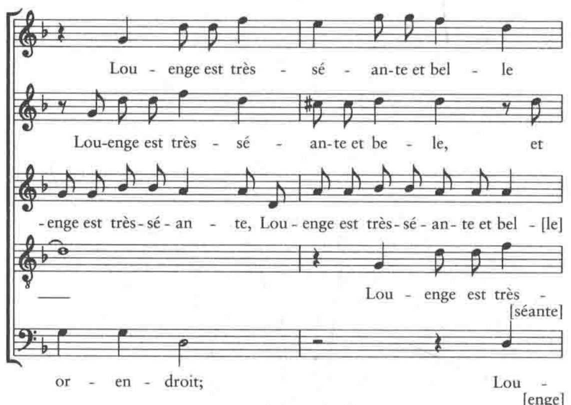
All the Calvinist texts and tunes were published by Christopher Plantin in Antwerp in 1564, two years after the psalter was completed in Geneva. Plantin took precautions because he evidently knew that the Genevan Psalter might be considered a heretical publication. Before publication he requested and received permission to print this book from both the religious and secular authorities. After publication the psalter was again examined and approved by a priest. In spite of these safeguards, the book was condemned and Plantin was ordered to destroy his entire production. The authorities gave as their reason that, although the texts might be pure, the melodies were those used by the heretics.

The public singing of psalms was forbidden by royal decree, and if the Inquisition found psalters in homes they imprisoned the owners. In April 1566, however, the activities of the Inquisition were curtailed for a time, and there was a period of religious freedom. Refugees flocked back from England and Germany, singing psalms in their boats and wagons. In May the Protestants held their first open-air services, usually in the fields just outside the city walls. Thousands of people in Flanders, Holland and Zeeland forsook Mass to hear the preachers of the new religion. Several chroniclers have described the singing of psalms at these gatherings. Marcus van Vaernewijck wrote in Ghent in 1566: 'these psalms appealed to the members of the new religion so much that in the evening they would gather in groups of two to three hundred and sing them in different streets and alleys of the city. . . . One hardly heard any other songs. . . . Out in the fields, the preachers taught the people how to sing them, using simple tunes'. Psalm singing accompanied the frenzied outburst of image breaking in August 1566, which in turn led to strong repressive measures from ruling Spain. Immediately after the image breaking, however, there was even greater religious freedom for the Protestants. They quickly built churches in which, according to chroniclers, they spent the entire Sunday listening to sermons and singing psalms. Within a year the churches in the southern provinces of the Low Countries were torn down by the Duke of Alva and his Spanish troops, whose task it was to subjugate the rebellious Low Countries. Psalm singing once again became a heretical activity, punishable by death.

(ii) Polyphonic settings. Soon after the printed appearance of Marot's psalms in Antwerp (*Psalmes de David*, 1541) composers began using them as texts. The first polyphonic setting of a Marot psalm to appear in the Low Countries was by Benedictus Appenzeller, and was included in a collection of his chansons printed in 1542 by Henry Loys and Jean de Buys of Antwerp. In setting Marot's Psalm cxxx, Appenzeller simply wrote in the typical Netherlandish style of his day, with no reference to the Calvinist melody.

In all, 33 settings of Marot's psalms, canticles and graces appeared in Netherland chanson collections in the 16th century. The earlier settings are all in the typical chanson style of that era and area, and are without reference to known melodies. In addition to Appenzeller, the composers are Manchicourt, Tylman Susato, Gerarde, Clemens non Papa, Crispel, Caulery and Waelrant, all of whom were active in the Low Countries. Later in the century, five composers (Lassus, Noë Faignient, Philippe de Monte, Séverin Cornet, Andreas Pevernage) used the Calvinist tunes as well as texts, but the settings still appeared in chanson collections. These compositions range in style from the homophonic setting of Psalm cxxx by Lassus to the four psalm motets for five voices by Pevernage, which use imitation, expressive dissonance, word-painting, diminution and augmentation of the given melody, and even attempt *musique mesurée*. Pevernage's setting of Psalm xxxiii, *Resveillez-vous, chascun fidèle*, with its short notes, animated motifs and high voices, is an excellent example of a polyphonic idiom in which text determines style. The bright sound and lively rhythmic quality of this piece is an appropriate setting for a text that urges the faithful to rise and praise the Lord with psaltery and harp (ex.5).

The only publications in the Low Countries exclusively devoted to polyphonic settings of the Marot-Bèze texts are by the composers Jean Louys and Sweelinck. Louys set all the texts of Marot's *50 pseaumes*, using the psalter melodies and the first stanza of each text. Entitled *Pseaulmes 50 de David*, his collection appeared in three volumes, published in 1555 by Waelrant and Laet of Antwerp. Like most of the motets published in the Low Countries at this time, the psalms are for five voices. The motifs are often extended to form long, melismatic phrases, rather than being declamatory and brief as in the contemporaneous French motet style cultivated by Sermisy and Certon. Pervading imitation, a thick texture, an avoidance of clearcut phrase divisions and very little chordal writing are characteristics that place Louys' psalms squarely in the mid-century Netherlandish tradition of Crecquillon, Clemens non Papa and Gombert.



Jan Pieterszoon Sweelinck was the only composer who finished the task of setting all of the Marot-Bèze psalms in a florid motet style. Claude Le Jeune presented 12 elaborate settings in his *Dodecacorde* of 1598, and Claude Goudimel worked his way through almost half of the psalter in his eight books of psalm motets. Unlike Goudimel, Sweelinck did not set all the stanzas of each psalm, although he did use the complete texts of 32 of them. Sweelinck brought out his 153 compositions in four books, published in Amsterdam between 1604 and 1621. His work is the climax and crown of the Calvinist repertory. Into a rich fabric of late Renaissance polyphony, ranging from two to eight voices, Sweelinck wove the Genevan melodies in a variety of ways: as unembellished cantus firmus in one voice, as cantus firmus moving from voice to voice, or as basis for equal imitation in all voices. Ex.6 shows the openings of two psalm motets by Sweelinck, the first in cantus-firmus style, the second using equal imitation. Chromaticism, word-painting, echo effects and double-chorus writing are also present. Sweelinck's psalms signal the end of an era in two respects. His vocal music in general is the 'brilliant and noble sunset' (Reese, 1954, p.518) of the great production of the Netherlanders in the field of vocal polyphony; his psalm settings mark the twilight era of the music of Calvinism. The Calvinist churches of western Europe continued to use the psalter, but the period of creative

Ex.5 Pevernage's setting of Psalm xxxiii, from *Chansons d'Andre Pevernage, livre premier* (Antwerp, 1589)

activity begun in Paris by Clément Marot ended in Amsterdam with Sweelinck's contrapuntal masterpieces.

4. The Low Countries (Dutch language).

(i) Monophonic psalters. The first metrical Dutch psalter printed in the Low Countries was the Souterliedekens, a volume of rhymed psalms set to Dutch and French folktunes. Printed by Symon Cock of Antwerp in 1540, this psalter was the first publication in the Low Countries to use movable music type. The question of the confessional character of the *Souterliedekens* has occupied several scholars. Recent investigation has produced evidence of Lutheran influence in the prologue, and has shown that many psalms take the Dutch Vorsterman Bible of 1528 as a textual basis. In fact, several heretical expressions from the marginal glossary of this Bible found their way into the *Souterliedekens*.

The second Dutch psalter printed on Netherlandish soil was the work of Lucas de Heere, a Ghent artist who was also a fervent Calvinist. His *Psalmen Davids na d'Ebreeusche waerhyt . . . op de voysen en mate, van Clement Marots Psalmen* was published in Ghent in 1565. As its title implies, this psalter contains translations of Huguenot psalms with their respective melodies retained. De Heere used the complete Geneva Psalter of 1562 as his source, and although only Marot is acknowledged in his title, nine of De Heere's 37 translations are of Bèze texts, in which the influence of the Dutch Bibles of Liesvelt (1526) and Vorsterman (1528) is clear. He generally used the poetic structure of the French texts so that his psalms could be sung to the Genevan melodies, but in some cases he lengthened the Genevan melody.

There is no evidence that De Heere's psalms were ever used by Dutch-speaking Calvinist congregations, which had been meeting secretly in the Low Countries for about a decade. The probable reason De Heere's psalter was not adopted is that Dutch Calvinists already had one. Since 1551, printers in London and Emden had issued 12 editions of the psalms of Jan Utenhove. Utenhove was of noble birth, but fled his home city of Ghent in 1544 because of his Protestant beliefs. His first psalms, published by Steven Mijerdman of London, were meant for the exiled Dutch Protestant church that Utenhove and others had founded in London.

In 1553 Mary Tudor's accession to the throne made England unsafe for Protestants; the young congregation fled to Denmark and thence to Germany, where they found a refuge in Emden. There Utenhove continued his work of rhyming the psalms, which were printed in Emden by Gillis van der Erven. Utenhove returned to England in 1559, soon after Protestantism was restored by Elizabeth, and his subsequent psalters were printed by John Day of London. He finished his work on the psalms in 1565 (the year in which he died), and a complete psalter was published the following year. Entitled *De psalmen Davidis, in Nederlandischer sangsryme*, most of its texts are translations of the Marot-Bèze psalms, influenced by the Dutch 'Deux-aes' Bible (1561, 1562) popular with the Calvinists, and the majority of its melodies are from the Genevan Psalter.

The complete triumph of the Genevan tradition occurred when Petrus Dathenus issued his *De Psalmen Davids, ende ander lofsanghen, wt den Francoyschen dichte in Nederlandschen overghesett*, published in Rouen, Ghent and Heidelberg in 1566. This is simply the complete Genevan Psalter in Dutch. Dathenus translated

the Marot-Bèze texts, often literally, and fitted his translations to the Genevan melodies. His psalter was accepted by the Dutch synods during the 16th century and remained the official songbook of the Dutch-speaking Calvinist Church for more than two centuries. The Dathenus texts were replaced in 1773 by order of the Dutch government, although the Genevan melodies were retained. This psalter was replaced only in 1967, by the psalter of the Interkerkelijke Stichting voor de Psalmberÿming, and was published in 1973, with 491 hymns, in the *Liedboek voor de kerken*.

(ii) Polyphonic settings. The *Souterliedekens* also provided the first texts and melodies for polyphonic settings of Dutch psalms. Clemens non Papa set all but ten of the *Souterliedekens*, and Tylman Susato published these as volumes iv–vii of his *Musyck boexken* series (1556–7), composing the ten missing psalms himself. All of Clemens's settings are for three voices, each in a partbook: superius, tenor and bassus. The tenor always carries the 1540 melody, and is usually a true tenor part with a soprano or alto written above it and a bass beneath. Occasionally, however, Clemens assigned the melody (always printed in the tenor partbook) to a high voice, and wrote an alto and bass beneath it. The alto part then appears in the superius partbook, even though it is not the highest voice. Evidently Clemens wanted a variety in the cantus firmus texture, but he (or Susato) also wanted all the *Souterliedekens* melodies in one partbook.

Susato's next four volumes in the *Musyck boexken* series appeared in 1561 and contained 123 polyphonic settings of the *Souterliedekens*, set for four voices by Gherardus Mes. The first volume is labelled *Souterliedekens V*, implying that it is a continuation of the series that began with Clemens's four volumes. The title also labels Mes a 'discipel van Jacobus non Papa'. Two of the four partbooks are missing, making an assessment of this work extremely difficult.

The third composer to place the popular *Souterliedekens* in polyphonic setting was Cornelis Buscop. 50 of his settings were published in Düsseldorf in 1568 under the title *Psalmen David, Vyfftich, mit vier partyen*. Buscop's preface indicates that he had composed others for five and for six voices. The published four-part psalms are in modest motet style, each phrase of the *Souterliedekens* melody being used to build one or two points of imitation. Buscop did not, however, use the given melody for each composition; some appear to be freely composed.

Polyphonic settings of early Dutch psalms other than the *Souterliedekens* are very scarce. The few that remain have texts by unknown authors. Although there is some evidence that the Dathenus texts were set polyphonically by Dutch composers in the 16th century, the music has not been found. The earliest known polyphonic publications containing the official Dutch texts are from the following century. These are Dutch editions of the note-against-note settings of the Genevan Psalter by Claude Goudimel and Claude Le Jeune, in which the Dathenus texts are used as contrafacta.

5. Germany.

(i) Monophonic psalters. Metrical translations of psalms are not prominent in Lutheran songbooks. The first published collection of Lutheran chorales, the so-called *Achtliederbuch* of 1524, contains three rhymed psalm translations by Luther himself. In the *Erfurt Enchiridion* of the same year, seven of the 26 songs are metrical psalms. The first publication devoted exclusively to metrical psalms is by the Meistersinger Hans Sachs, who worked very closely from Luther's prose translation of all the psalms, and published *Dreytzehn Psalmen zusingen, in den vier hernach genotirten Thonen* in 1526. In the following decades complete metrical psalters were published by other confessional groups in Germany. The first complete Lutheran psalter, however, did not appear until 1553. It was the work of Burkhard Waldis, and was published in Frankfurt under the title *Der Psalter, in newe Gesangs weise, und künstliche Reimen gebracht, durch Burcardum Waldis, mit ieder Psalmen besondern Melodien.* Waldis's texts and melodies did not find wide acceptance. Nor did the metrical psalms of later Lutheran poets gain the popularity in Germany that the Marot-Bèze psalter did in France, Switzerland, the Low Countries and eventually in Germany itself.

A translation of the Marot-Bèze psalms became by far the best-known psalter in Germany. In 1565 Ambrosius Lobwasser finished his translation of the entire French psalter into German. It was published in Leipzig in 1573, and entitled *Der Psalter dess königlichen Propheten Davids, in deutsche reyme verstendiglich und deutlich gebracht.* The Lobwasser translation enjoyed immediate popularity, and was used by Lutheran congregations as well as Calvinist. As a result, several Calvinist melodies found a permanent place in the Lutheran repertory (e.g. Psalm xlii = 'Freu dich sehr, O meine Seele'; 'Les commandemens de Dieu' = 'Wenn wir in höchsten Nöten sein'; *see* Lutheran church music). One of the reasons for the popularity of Lobwasser's work was that his texts were usually accompanied in print by the homophonic settings of Goudimel. (Part-singing of the psalms was introduced into the German Calvinist service long before it was permitted in Geneva or the Low Countries.)

Lobwasser had many imitators. They modelled their translations on the French psalms, and used either the Genevan melodies alone or the Goudimel settings. In 1588 Philipp von Winnenbergh published his translation with a new arrangement of the Goudimel four-part pieces: the melody was in the superius instead of the tenor. Other translator-arrangers were Paul Melissus Schede (1572), Martin Opitz (1637) and Hans von Bonneck (1634). None of these psalters, however, diminished the popularity of Lobwasser's version.

To counteract the spread of the Calvinist psalms, the Catholics and Lutherans created their own metrical psalters, often imitating the very psalms they were attempting to replace. A metrical psalter for Catholics was prepared by Kaspar Ulenberg and published in Cologne in 1582. *Die Psalmen Davids in allerlei teutsche gesangreimen bracht* contains all 150 psalms fitted to 81 melodies, which are very like their Genevan prototypes. *Der Lutherische Lobwasser, das ist Der ganz Psalter Davids* is the work of Johann Wuestholtz, who claimed in his preface to have corrected Lobwasser's work. The melodies are Genevan. The Lutheran theologian Cornelius Becker, far from bringing out a 'Lutheran Lobwasser', or using the Genevan melodies, sharply criticized the Lobwasser psalter in the preface to his *Der Psalter Davids gesangweis auff die in Lutherischen Kirchen gewöhnliche Melodeyen zugerichtet* (Leipzig, 1602). Becker disliked the 'strange French melodies', which 'sounded sweet only

to worldly ears'. As his title states, Becker used Lutheran melodies for his new translations.

The publication of metrical psalters in Germany continued to follow strict confessional lines. For Lutherans and Catholics, however, the metrical psalm never gained the dominating position that it held in the song repertory of the Calvinist Church.

(ii) Polyphonic settings. The earliest polyphonic settings of metrical psalms in Germany were by Johann Walter (i) in his *Geystliches Gesangk buchleyn* of 1524. In the same year that the first monophonic Lutheran songbooks appeared, Walter made polyphonic settings of the songs, which included Luther's rhymed psalms. Polyphonic settings of the entire psalter came somewhat later. Perhaps the earliest venture was by the Kassel Hofkapellmeister Johannes Heugel, who some time between 1555 and 1570 set for four and five voices the entire psalter (tunes and texts) of Burkhard Waldis. These modest contrapuntal settings survive in a Kassel manuscript (*D-Kl* 4° Mus.94). The Stuttgart Hofkapellmeister Sigmund Hemmel (*d* 1564) did not limit his source to a single monophonic psalter, but selected psalm texts and tunes from various German songbooks, several of them from non-Lutheran centres such as Strasbourg and Konstanz. Hemmel used the given melody if there was one; if not, he chose an existing Lutheran melody that fitted the psalm text. He created his psalter between 1561 and 1564. It was published posthumously as *Der gantz Psalter Davids, wie derselbig in teutsche Gesang verfasset, mit vier Stimmen kunstlich und lieblich von neuen gesetzt* (Tübingen, 1569).

The Lobwasser-Goudimel psalter appeared in 1573. Subsequent polyphonic metrical psalters in Germany were deeply influenced by this exceedingly popular publication. Other poets (e.g. those cited in §5(i) above) fitted their metrical translations to the Goudimel settings. Other composers set other German metrical psalms in homophonic style. One of the earliest examples of this practice is David Wolkenstein's *Psalmen für Kirchen und Schulen auff die gemeine Melodeyen syllaben weiss zu 4 Stimmen gesetzt* (Strasbourg, 1577 and 1583). German composers were also quick to set the monophonic psalters that had been produced to stop the spread of the Calvinist psalms. Ulenberg's Catholic psalter was set by Orlande and Rudolph de Lassus, Sigerus Pauli and Konrad Hagius. Cornelius Becker's Lutheran psalter was set by Sethus Calvisius and Heinrich Schütz. Composers connected with Calvinist centres made more elaborate settings of Lobwasser's texts and the Genevan melodies. Michael Praetorius included ten settings of Genevan psalm tunes in the fourth volume of his *Musae Sioniae*, which he dedicated to Duke Frederick of Rhein-Pfalz, a Calvinist. 11 more Calvinist psalm settings are in other volumes of that gigantic work. Other composers who set more than a few of the German-Genevan psalms are Samuel Mareschall (Basle, 1606), Moritz, Landgrave of Hesse (Kassel, 1612), and Johannes Crüger (Berlin, 1658).

The most significant contribution of the Lobwasser-Goudimel psalter, however, is not the number or quality of the subsequent polyphonic psalm settings it engendered. Scholars of Lutheran church music agree that Goudimel's homophonic psalm settings greatly influenced the texture of the Lutheran chorale. The cantional style (chordal, melody in the soprano), first used in a Lutheran hymnal by Osiander in 1586, is the direct descendant of the simple Goudimel psalm setting. It is a style familiar to all who have sung a Protestant hymn.

III. England

The singing of metrical psalms was a feature of English Protestant worship from the time of the Reformation, and remained so until it gradually merged with hymn singing during the 18th and 19th centuries. For more than a century it was also a common form of domestic music. Some of the tunes composed for the metrical psalms have remained in continuous use for over 400 years, and thus represent one of the oldest English musical traditions still in existence.

1. The Church of England: (i) Introduction (ii) Texts (iii) Tunes (iv) Performing practice. 2. The Dissenting Churches: (i) Presbyterians (ii) Independents (iii) Baptists. 3. Domestic use. 4. Harmonized settings: (i) Harmonized chants (ii) 'Anthems' with metrical psalm texts (iii) Elaborate settings of psalm tunes (iv) Note-against-note harmonizations.

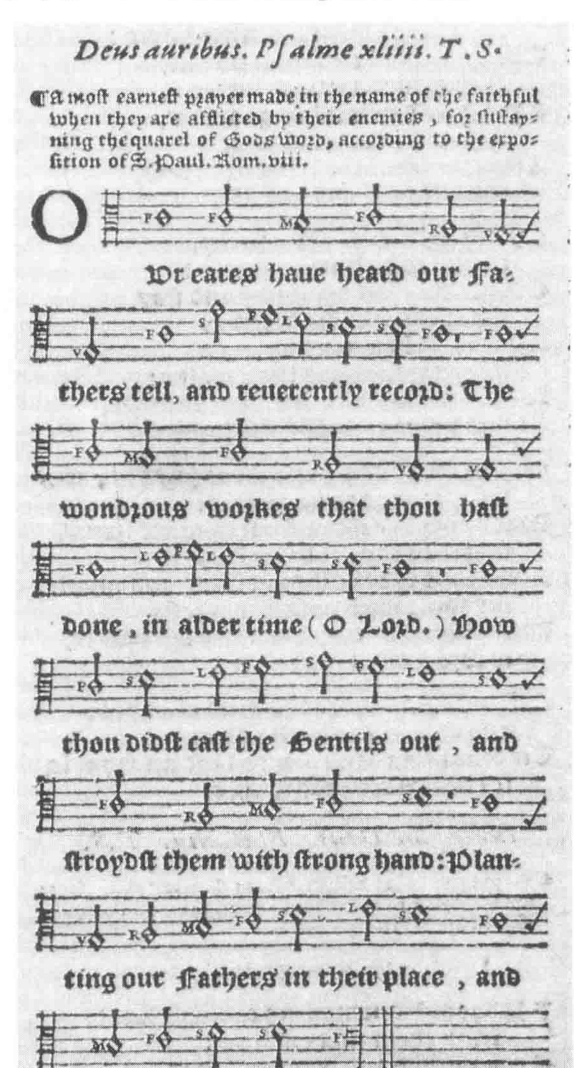
1. The Church of England.

(i) Introduction. The death of Henry VIII in 1547 opened the way for the Protestant reforming party to replace Latin services with English ones, and to introduce many other changes in the practice, discipline and official theology of the Church. Throughout the brief reign of Edward VI (1547–53) the trend moved steadily in favour of the Puritan party, as can be seen by comparing the first (1549) and second (1552) versions of the Book of Common Prayer. In music as in other matters, there was a tendency to get rid of anything associated with Romanism – the chanting of the liturgy, the office hymns (which at one time Cranmer had wanted to retain), the elaborate polyphony of the larger churches and the minor orders of clergy who had kept it up. The predominant influence was that of the Reformed Churches of Germany, Switzerland and France. Unlike the Lutherans, the English reformers held the view that psalms, being divinely inspired, were preferable to any merely human composition; and they introduced metrical translations of the psalms so that the sacred texts could be sung by the people at large. The foreign Protestant Church, established in London in 1550 under the leadership of John Laski to accommodate the many exiles from the Continent, was probably a strong influence on English churches, especially in London. At Laski's church metrical psalms were sung unaccompanied, and it is not unlikely that the same practice was tried out in English churches. Several metrical translations were already available and others were quickly produced. But there is little information about the music used in parish churches at this time. Surviving settings of metrical psalms from the reign of Edward VI (see §4 below) are clearly for choirs, not congregations.

During the reign of Mary I (1553–8), when the Latin rites were restored, the tradition of English psalm singing was developed by exiles abroad, especially at Frankfurt, Geneva, Emden and Strasbourg. After Elizabeth I's accession, metrical psalm singing, though not included in the liturgy, was allowed by the Queen's Injunctions of 1559, and it very quickly became a normal and popular part of both cathedral and parish church practice. In a wave of Puritan feeling in the late 1560s, most surviving parochial choirs were swept away, organs were pulled down, plainchant was condemned in sermons, and metrical psalms became the only form of music generally used in church. (*See* Anglican and episcopalian church music, §6.)

(ii) Texts. Verse translations of the psalms had circulated in private use in Henry VIII's time. Miles Coverdale's *Goostly Psalmes and Spirituall Songes* (*c*1535) included 15 psalm versions with tunes, based directly on Lutheran sources; but it had no lasting influence. Robert Crowley's *The Psalter of David Newely Translated into Englysh Metre* (1549) is the first complete version surviving, though its preface refers to 'other translations'. Several other versions of selected psalms appeared in Edward's reign, but the only one that was to be of any lasting importance was that of Thomas Sternhold. Like Marot of the French psalter, Sternhold was a court poet, who described himself on the title page of *Certayne Psalmes* (*c*1549) as 'grome of the kynge's Majesties roobes'. The preface contains nothing to suggest that he intended the psalms for public use. After his death a larger collection appeared, containing 37 of his versions, all but two of them in the traditional English ballad metre, or common metre. This small beginning became the nucleus of both the English and Scottish psalm books.

In 1553 the Protestant leaders went into exile at Frankfurt; later they split into two parties, those who most disliked the Prayer Book and other compromises with tradition going to Geneva, where, of course, they came under the direct influence of Calvin. The next edition, published at Geneva in 1556/7, was an integral part of *The Forme of Prayers and Ministration of the Sacraments*, devised by John Knox and approved by Calvin, which was to become the prototype for Presbyterian worship. Seven new psalms and a metrical Ten Commandments were added by William Whittingham, a Puritan leader who became Calvin's brother-in-law. For the first time tunes were provided, and the new versions were mostly in metres that would fit the tunes in the French psalter. Further editions appeared both in Geneva and (after 1558) in London, gradually adding more versions – the bulk of them by John Hopkins – until by 1562 the entire psalter had been versified and was published by John Day. A few hymns and alternative



versions were later added. The Elizabethan editions contain a number of concessions to the Anglican party in the form of metrical canticles and prayers arranged in an order that reflects the Book of Common Prayer, and to the exiles from Strasbourg in the form of a group of original hymns, some of Lutheran origin. From 1560 the title-page claims that the psalms are 'newly set fourth and allowed, according to the order appointed in the Quenes Majesties Injunctions'. The Injunctions of 1559 had allowed that:

> for the comforting of such that delight in music, it may be permitted that in the beginning, or in the end of common prayers, eyther at mornyng or evenyng, there may be sung an hymne, or such like songue, to the praise of almighty God, in the best sort of melody and musicke that may be conveniently devised, havyng respect that the sentence of the Hymne may be understanded and perceyved.

From 1566 onwards the passage on the title-page recited these specific times at which the psalms could be sung. It may be noted that the passage is vague about the kind of text and music to be sung, and it was in fact used to justify both anthem singing in cathedrals and metrical psalm singing in parish churches. But it was not long before the statements on the title-page came to be regarded as evidence for the exclusive authority of Sternhold and Hopkins's version, especially since this was often bound up with Bible or Prayer Book.

The complete edition of Sternhold and Hopkins (1573) contained metrical versions of all 150 psalms, with alternative versions of Psalms xxiii, l, li, c, cxxv and cxxxvi. Of these 156 versions, 131 were in common metre (8.6.8.6), six in short metre (6.6.8.6), three in long metre (8.8.8.8), two in the metre 6.6.6.6.4.4.4.4 (all these were iambic), and 14 in other 'peculiar metres' of which no two were alike. Before and after the psalms were 24 metrical songs of various kinds, including three metrical psalms used for special purposes, several canticles and other biblical texts and some original hymns; these were often known collectively as the 'Divine Hymns' (*see* CANTICLE, §4, and HYMN, §IV). The book was completed by 'A Treatise on the Use and Virtue of the Psalmes by Athanasius the great', a collection of prayers for private use and an index of first lines of the psalms. Some editions from 1569 onwards contained also an explanation of sol-fa notation and also printed sol-fa letters on the staves beside the notes (fig.2). Each psalm was headed with a Latin title and a summary or annotation of its contents. The full edition provided tunes for 48 of the psalms and 18 of the hymns; in each case the first verse was underlaid. The other psalms had cross-references, such as 'Sing this as the 3rd psalm'.

The great popularity of the collection, together with its supposed 'authority', left it without a serious rival for over a century. At least 452 editions with music were published. John Day's privilege in the printing of the psalms passed to his heirs, and was acquired in 1603 by the Stationers' Company, who used it to prevent any other version from being printed, and to provide employment for the poorer London printers. Consequently the printing in later editions is often badly botched. The psalm and hymn texts varied little from one edition to another, though from 1621 onwards some small editions omitted four of the hymns and the annotations at the head of the psalms. From 1599 to 1649 some editions, known as 'Middleburg Psalms' because they were first printed by Schilders of Middelburg, had the prose psalms in the margin; they had many more tunes than the

2. *Setting of Psalm xliv, with sol-fa letters against the notes of the tune, from 'The Whole Booke of Psalmes, Collected into Englishe Meter by Thomas Sternhold, John Hopkins' (1569)*

ordinary editions. Many editions omitted some tunes, some reducing the number as low as 29 for psalms and 17 for hymns. Only 18 psalms have tunes in every musical edition. After 1620 more and more editions appeared without tunes, and after 1687 no editions had tunes. The hymn supplement was further cut down and disappeared altogether from many 18th-century editions.

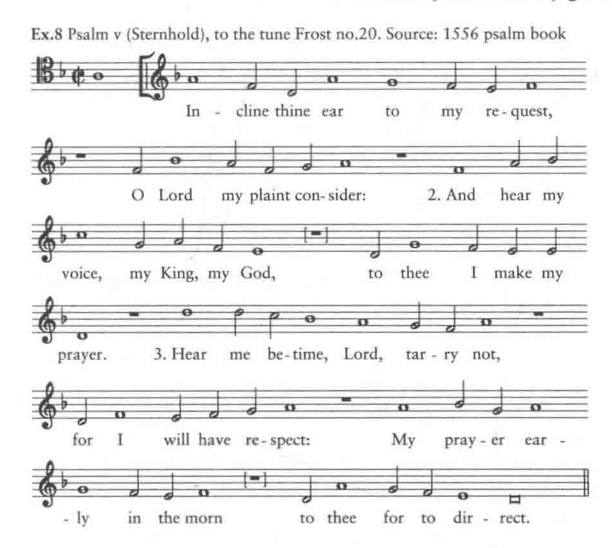
Criticism of the Sternhold and Hopkins translation had been growing almost from its first appearance. In 1696 *A New Version of the Psalms of David, fitted to the Tunes used in Churches* was compiled by Nahum Tate and Nicholas Brady, published by the Stationers' Company, and 'allowed and permitted' by the king in council on 3 December 1696. It contained the psalms only, almost all of them in the three commonest metres; it was never printed with tunes underlaid, but a supplement of tunes was issued with the 1698 edition, containing only nine tunes, all of them from the Old Version. In 1700 a

Supplement appeared, containing metrical canticles and prayers, some new hymns, alternative versions of some of the psalms, and a much larger selection of the old tunes. The *Supplement* was authorized by the queen in council on 30 July 1703, but it was never treated, like the Old and New Versions, as an appendage to the Prayer Book.

The New Version met with bitter opposition, led by William Beveridge, Bishop of St Asaph (1637–1708), and was at first adopted in only a few London churches. The two 'authorized' versions continued side by side, and it was not until the early 19th century that Tate and Brady's became decidedly the more popular of the two. Even so, several London and many country churches were still using the Old Version after 1800, and the last edition was printed as late as 1861. Only one psalm text from it is still in common use: the Old Hundredth, *All people that on earth do dwell*, attributed to William Kethe and still sung to the French tune allotted to it in 1561. On the other hand, the New Version outlived even the appearance of *Hymns Ancient and Modern* (1861) and was still the only hymnbook in use at St Thomas's, Southwark (with no organ), as late as 1879. Several of the metrical psalms from the New Version are still in use, notably *Through all the changing scenes of life* (Psalm xxxiv) and *As pants the hart* (Psalm xlii).

Less important versions, outside the main tradition, appeared as early as 1567 in Archbishop Parker's *The Whole Psalter translated into English Metre*. It was originally written for his own use, but was printed with Tallis's nine tunes, perhaps with the intention that it might be used in public worship: 'The Tenor of these partes be for people when they will syng alone, the other parts, put for greater queers [choirs], or to suche as will syng or play them privately'. However, there is little likelihood that Parker's version was ever widely used in church; indeed, the long hegemony of Sternhold and Hopkins had already begun. In 1660 a Latin translation based on the Old Version was published at Oxford for the use of colleges, under the title *Psalmi aliquot Davidici in metrum Latini traducti*. It was bound with the Latin Book of Common Prayer which was allowed to be used at Oxford and Cambridge colleges. A 1681 edition of the same book (not listed in Wing) contains ten tunes, all standard ones used with the English metrical psalms.

During the 18th century there was an increasing tendency for the more affluent parishes to have their own selections of psalms printed, choosing some from the Old Version, some from the New, and at times adding examples from other translations and even hymns. The earliest local collection of this kind was *The Psalms and Hymns, usually sung in the Churches and Tabernacles . . . of St Martins in the Fields and St James's Westminster* (1688). By 1800 there were hundreds of them. Versions originating with the Dissenters were increasingly drawn upon in these books, above all Watts's *Psalms of David Imitated* (1719). A popular version in the later 18th century was that of James Merrick (1765), in whose unctuous periods some found a pleasing contrast to the rough simplicity of the older translations. Tattersall's *Improved Psalmody* (1794), which had a considerable vogue, used Merrick's version alone, providing music for selected verses of Psalms i–lxxiii (including six settings by Haydn). But most churches in the later Georgian period used an eclectic assortment of psalms and hymns. Some staunch high churchmen continued to believe that only the two 'authorized' versions could legally be used, but the judgment in the case of Holy and Ward versus Cotterill in the Consistory Court of York (1820) made it clear that any hymn or psalm was equally allowable. From that date there was nothing to impede the rise of the modern hymnbook, in which metrical psalms form an insignificant proportion.



(iii) Tunes. The first music printed for Sternhold and Hopkins's psalms was in the Geneva edition of 1556/7, where every psalm had its individual or 'proper' tune. 27 of these 52 tunes were dropped in the 1558 edition, and 17 new ones replaced them. The great majority of the tunes were necessarily in common metre, and were usually of eight lines, though some were of four or 12 lines. In contrast, several tunes were taken from the French Genevan Psalter prepared by Bourgeois under Calvin's supervision. These had the variety of metre characteristic of the French psalms, and it is evident that some of the metrical versions added to Sternhold and Hopkins after the exiles had reached Geneva were specially written in these metres so that the French tunes could be sung to them. The French tunes were fresh, catching and in a few cases based on French popular songs; many of them became English favourites and have remained so (ex.7). By contrast the English tunes were dull and aimless, lacking any kind of popular appeal (ex.8). None of them appears to be drawn from English folksongs of the time, and very few were to enjoy a long life in English psalm singing: those that did (such as Frost, 1953, nos.17, 37, 63, 117, 157) generally had a strong 'modern' sense of tonality and some elements of repetition or sequence that made them easy to grasp.

The origin of these English tunes has not been determined. They may have been already in use in Edward VI's time and may even have been the tunes that Sternhold himself had used when he sang his psalms to the young king. More probably they were the work of the best musicians that could be found in the small band of exiles. The community was made up of devout and learned men, who had given up much of what they had for their faith; they had no need of popular tunes, and they had leisure to learn unfamiliar music. These austere and graceless melodies aptly expressed their mood and ideals. But it was quite another matter when the time came to introduce

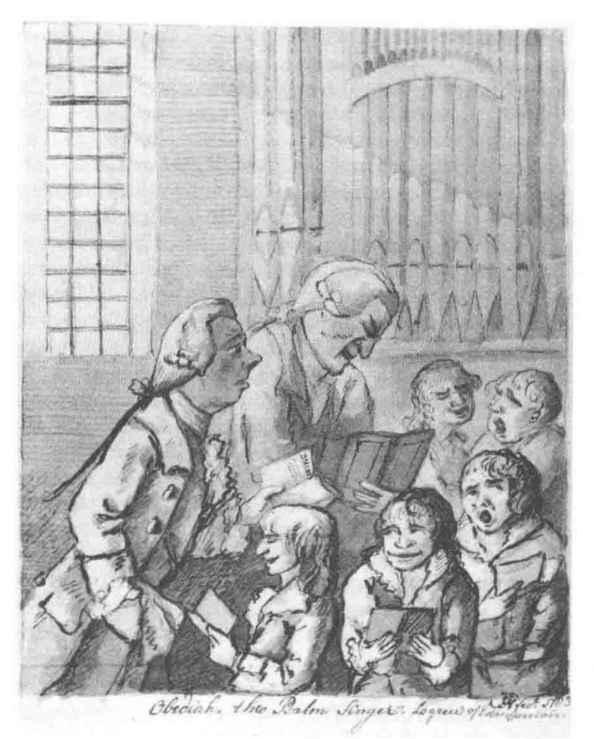
psalm singing to the English people. We read that the singing spread like wildfire from one London church to another in the autumn of 1559. It is hard to imagine that such a blaze was set alight by the spiritless tunes of 1556. It seems far more likely that the Puritan leaders, following Calvin's example, used popular English ballad tunes at this critical time as the only sure way to get the congregations singing heartily. The queen and others called the new psalms 'Geneva jigs'. Wither in 1619 wrote of the impiety of using 'those roguish tunes, which have formerly served for prophane Jiggs' with psalms or hymns. William Slatyer, in his *Psalmes or Songs of Sion Turned into the Language, and Set to the Tunes of a Strange Land* (1642), was bold enough to suggest singing the psalms with such popular tunes as 'Goe from my window', 'Barow Faustus' dreame', 'The Queen of Love', and so on. For this he was severely reprimanded by the Court of High Commission.

But whatever tunes were sung, the printed psalm books show no trace of secular influences. Many of the dullest and most severely modal of the English tunes were allowed to drop, but others were retained. Many of the French tunes survived, and a few excellent German ones were added. The first folio edition of 1565 established a standard set of 48 tunes (the one to Psalm cxx was replaced in 1569) which remained the norm until 1661. However, from 1588 onwards some printers, presumably under the guidance of a musical editor whose identity is now unknown, began cautiously introducing some of the popular 'short tunes' (see below), a tendency that became more marked under the influence of Ravenscroft's harmonized *Psalmes* (1621). For the 1661 folio edition Playford completely revised the selection and allocation of tunes, but still retained most of the old 'long tunes' with the psalms to which they had always been attached, and he did the same in his popular three-part *Psalms* of 1677, perhaps out of a feeling that they had official authority. By that time, however, only a handful of the old tunes were commonly used: those to the *Magnificat* and to Psalms i, lxxxi, c, cxiii, cxix and cxlviii (Frost, nos.4, 69, 99, 114, 125, 132, 174). Thomas Mathew's unique edition of 1688 repeated each tune throughout all the verses of the psalm, in imitation of Dutch psalm books; the tunes he selected were based largely on Ravenscroft.



The tunes printed in the psalm books, however, did not necessarily represent the tunes actually in common use. Ballad tunes apart, Thomas East in the index to the second edition of his *Psalmes* (1594) wrote: 'The Psalmes are song to these 4 tunes in most churches of this Realme'. The four tunes referred to (Frost, nos.19, 42, 45, 121) were all of the 'short' or four-line variety, three common metre and one short metre. None of them had been generally printed in the psalm books. All four are of similar character: simple, small in range, chiefly conjunct in motion, and easily learnt (ex.9). It is impossible to say when they were first introduced or where they came from. The earliest to be printed (in any surviving source) was Frost 121, named 'Oxford' by East, which had appeared in the Scottish psalter of 1564; three of them had appeared in Daman's *Psalmes* (1579), one as the first half of a long tune. Their style is closer to that of the ballad tune than had been that of the long tunes. They could be used for all the psalms in common metre and short metre (137 out of 156) and for many of the hymns as well. East in fact set 103 of the psalms to these four tunes.

The four-line tune gained still more in popularity: East added some new ones (including 'Winchester', to become one of the most popular of all), and Ravenscroft added a large number, including the very fine 'York' and 'Martyrs' (from the Scottish psalm book) and 'St Davids' (which he called 'Welch Tune'). Gradually they were introduced in some editions of the psalm book, and they formed the majority of those provided as a supplement to Barton's *Psalms* (1644). In Playford's revision of the psalm book in 1661, ten short common metre and short metre tunes were printed, but by altering the cross-references he set 114 psalms to them. A similar balance is found in his three-part *Psalms* of 1677, which had a few new short tunes apparently evolved from earlier ones. (In the oral tradition that governed the first hundred years of psalm singing many tunes became altered, most often by confusion between one tune and another; see Temperley, 1998, i, 45)

The later 17th century provided few newly composed tunes of any kind. A more creative period followed the publication of the New Version: 'St James' (first printed 1697), 'St Magnus' (1707) and 'St Anne' (1708) are in the best tradition of four-line tunes. Signs of an interest in greater variety of metre and character also began to appear. The only important tune for one of the psalms in 'peculiar metre' contributed by the 17th century was the one for Psalm civ, presumed to be Ravenscroft's (Frost no.119), still popular as 'Old 104th'. A new tune in the same metre was printed in the *Supplement to the New Version* (1708 edition), later named 'Hanover' and attributed to Handel; today it is ascribed, but with little

Ex.9 Psalm viii (Sternhold), to the tune Frost no.19. Source: East's *Psalmes* (1592), harmonies omitted

better evidence, to Croft. The new tune for Psalm cxlviii (6.6.6.6.4.4.4.4), printed in 1707, was certainly Croft's.

By the end of the 17th century it had become common to ornament many of the old tunes (see §1 (iv) below), and in the 18th century it became more and more usual to write ornaments into the tune from the start. Two or more notes were thus sung to one syllable, as in 'Easter Hymn' (1708). In many of the standard metres this often meant writing a tune in triple time, which indeed became very popular. More elaborate subdivisions of notes, often including dotted notes, became a standard usage: 'Wareham', by William Knapp, can be taken as typical (ex.10). In country churches where no organs were available, volunteer choirs began to prefer tunes that incorporated solos, repeated last lines and even fugal treatments of some lines (*see* PSALMODY (ii)). Tunes of this sort were seldom adopted in the larger town churches, however.

Ex.10 Psalm xxxvi (New Version), vv.5–10, to the tune 'Wareham', by William Knapp (tenor part of a four-part setting in Knapp's *A Sett of New Psalm Tunes,* 1738)

(The later history of the psalm tune is discussed in HYMN, §IV, 3; see also Temperley, 1998)

(iv) Performing practice. Throughout the period that the metrical psalm was in use, the normal occasions for singing psalms in parish churches were before Morning Prayer, before Ante-Communion, before the sermon (giving the parson an opportunity to change his surplice for gown and bands), and before and after Evening Prayer. The place provided for the anthem in the 1662 Prayer Book was not normally used for a metrical psalm. In many cathedrals it was the custom for people to come to hear the sermon after attending Morning Prayer in their parish churches. After the sermon they would sing a psalm, with organ accompaniment if the organist was still at his post. In Elizabethan times some Puritan ministers allowed metrical psalms and canticles to be substituted for the prose versions of the Prayer Book, but this was illegal and was eventually suppressed. (It was proposed again by a committee of the Long Parliament in 1641.)

The psalms were chosen and announced by the parish clerk, who then led the singing while the congregation followed as best they could, or as much as they would. The practice of 'lining out' (fig.4), whereby the clerk would read each line before it was sung (for the benefit of the illiterate), was first laid down in the *Directory for the*

70 PSALM-TUNES for the

Those Psalms which the Clark gives out Line by Line, are generally sung in these Tunes; which is call'd the Old way of Singing.

Psalm IV.

O God that art my righ— teouf— nefs,

Lord hear me when I call;

Thou haft fet me at li— ber— ty,

When I was bound in thrall.

4. *Tune for Psalm iv from John Chetham's 'A Book of Psalmody' (1718); reference is made at the top to the practice of 'lining out', and the music is an attempt to represent the mode of singing psalm tunes known as the 'old way of singing'*

Publique Worship of God (1644), though it may have existed earlier. It turned into a kind of chanting in some places, but disappeared in England well before 1800.

The longer psalms were divided into sections in the psalm book, with little regard to sense, and it was common for only the first section to be sung; though on occasion a long psalm would be sung in its entirety (lasting over an hour, according to Pepys, on 6 January 1661), especially when alms were being collected. Bishop Gibson of London in 1724 charged his clergy to select a course of psalms for each Sunday in the year, and this advice was followed by several compilers.

At first psalms were sung at a brisk pace, as is evident from their early nickname 'Geneva jigs'. The tunes had characteristic rhythms, often refusing to fit into regular measures. But in the course of generations of unaccompanied singing the pace slowed down considerably. The time signature C became more usual than ¢ after about 1620. By the late 17th century the usual tempo had dropped to the singularly slow rate of two or three seconds per note, and most of the rhythmic irregularities in the psalm tunes had been ironed out. This slow pace was maintained for the old tunes throughout the 18th century, despite the efforts of Methodists, Evangelicals and musicians to speed it up. It survives in metronomic indications in Benjamin Jacob's *National Psalmody* ([1817]): for instance 'Old Hundredth', printed in minims, is marked at crotchet = 60, 'Rather Slow'. For newer tunes, however, and particularly those of the Methodist type (*see* METHODIST CHURCH MUSIC, §4), a somewhat brisker tempo was thought proper.

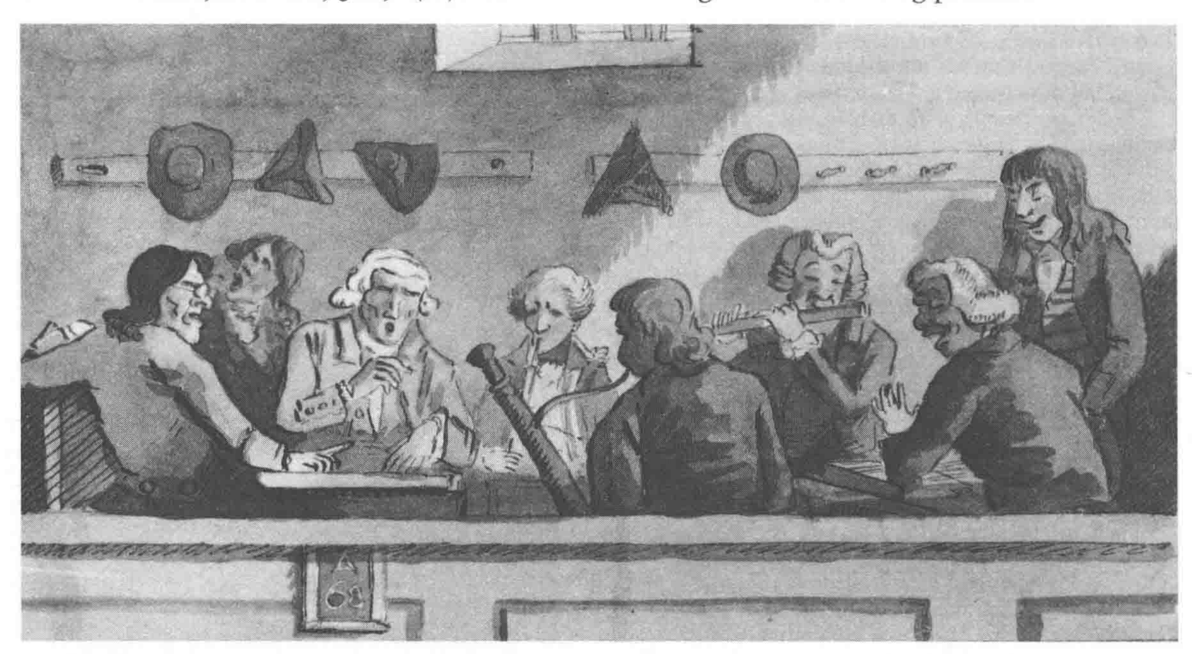
As the tempo of psalm singing grew steadily slower during the 17th century, parish clerks and the more venturesome lay members began to fill in the long period between one note and the next with various kinds of embellishment. Since this practice was entirely uncontrolled the resulting heterophony must have been at times quite discordant. (In Scotland a similar practice survived long enough to be written down by Joseph Mainzer; in the Western Isles and in the southern USA it can still be heard.) It was first recorded in *A New and Easie Method to Learn to Sing by Book* (1686), where the tune 'Southwell' is printed first in the ordinary way, then in an ornamented version, with this explanation: 'The Notes of the foregoing Tunes are usually broken or divided, and they are better so sung, as is here prick'd' (ex.11). Later descriptions of this kind of ornamentation call it the 'OLD WAY OF SINGING', and it is generally associated with lining

Ex.11 Psalm xxv, to the tune 'Southwell' (Frost no.45), from *A New and Easie Method* (1686). (The plain version is given in up-stemmed notes.)

out (see fig.4 above). The practice seems to have come into conflict with the newer, though equally ornate, style associated with country choirs in the early 18th century, and to have died out by mid-century. A style of ornamentation closer to that of contemporary art music prevailed in later psalm singing.

Choirs may have performed harmonized settings of the tunes during the early years of Elizabeth's reign, but this was a short-lived phenomenon, except possibly in cathedrals. Though East and Ravenscroft published fully harmonized psalm books (see §4 below), these were for domestic use. However, improvised two-part harmonization was sometimes practised, and in a few cases gave rise to new tunes which then took on independent existence. This is almost certainly the origin of 'London Old', a short tune popular from about 1640 to 1760 (ex.12). John Playford was the first to make a sustained effort to restore harmony to the parish church, but it was

Ex.12 'New Tune' (up-stemmed), from Playford's *Introduction* (1658 edn) (Frost no.25) and 'Oxford' (down-stemmed), from Ravenscroft's *Psalmes* (1621) (Frost no.121)



The earliest source of 'Oxford' (*Scottish Psalter*, 1564) has no sharps to F.

not until the rise of the volunteer choirs in the 1690s that his work bore any fruit.

Many harmonized collections appeared in the 18th century, with the tune usually in the tenor. The essential harmony was two-part (TB), as in Playford's settings, with an optional alto and sometimes also a treble. Isaac Smith in about 1780 explained that he had not provided a treble part in his collection 'because, except in choirs, proper voices are not easily found'. This reflected the custom that women played only a modest role in church, and were not expected to sing loudly, if at all. It was for this reason that the tenor continued to sing the tune long after a treble-dominated texture had become normal in secular music, though gradually the tenor voices were joined at the higher octave by women and children (see Drage, 1997). In towns with organs, on the other hand, the charity children led the singing, and a texture of SB or SSB was usual. For this medium a *galant* style of tune was evolved after about 1750. Congregational harmony, practised by the Methodists, was hardly heard in parish churches until Victorian times.

Church organs (outside cathedrals and collegiate churches) were rare from about 1570, non-existent between 1645 and 1660, and still rare after the Restoration; they gradually began to appear in the larger town churches. The bulk of metrical psalm singing, therefore, was entirely unaccompanied until late in the 17th century, when some churches adopted a 'bass viol' (actually a cello or gamba), or an instrument invented by Playford called the 'psalmody' or 'psalterer', which had a body like a cello but only one string with lettered frets. Gradually in the 18th century many village churches developed small bands of wind and string instruments that played with the singers in the west gallery (fig.5). They played the voice parts (sometimes an octave higher, often with extra ornaments) and doubtless made it possible to perform elaborate settings which would likely have defeated an

5. *Gallery of Dorking Church, Surrey, with five singers accompanied by a flute, oboe and bassoon: drawing by John Nixon, pen and ink with wash, 1788 (private collection)*

unaccompanied village choir. Gallery musicians of this kind were still playing and singing the Old and New Versions with ornate tunes into early Victorian times, until displaced by barrel organ or reed organ (*see* GALLERY MUSIC).

Organs did accompany psalm tunes from earliest times, however, especially in cathedrals, as Thomas Mace's famous account of the singing at York Minster during the siege of 1644 bears witness. Few organ settings of psalm tunes appear to have survived before 1668, when a page of them appeared in Tomkins's *Musica Deo sacra*. William Godbid also printed up a double sheet for binding in Playford's *Musick's Hand-maide* (1663, 1678). It showed four tunes in a very full harmonization, including thick left-hand chords, but almost entirely unornamented (ex.13). The style of organ accompaniment changed a great deal in the next 50 years. Early 18th-century examples are thinner in layout, but crowded with ornaments; and there are interludes between the lines (ex.14). The singing of the psalm was usually preceded by an even more elaborate 'giving-out' of the tune by the organ alone, often on a solo cornet stop. Many critics

Ex.13 'The tune of the 25 Psalm' (Frost no.45), from Playford's *Musick's Hand-maide* (*RISM* 1663⁷); see also ex.14

complained that the tune became almost unrecognizable under the wealth of added ornament.

2. THE DISSENTING CHURCHES.

(i) Presbyterians. The conforming Puritans, throughout the reigns of Elizabeth I, James I and Charles I, hoped to

Ex.14 'Southwell tune', from *The Psalms by Dr. Blow Set full for the Organ* (*c*1731) (Frost no.45)

complete their work by making the Church of England a fully reformed state church on Calvinistic lines. From time to time the more ardent spirits grew impatient with delay, and either emigrated to the Continent or America, or formed clandestine meetings to conduct worship as they thought best (see §(ii) below). Meanwhile in some areas puritanical innovations were possible within the Church through the sympathy of the incumbent, or in some cases of the bishop.

With the triumph of the Parliamentary forces in the Civil War, success was at last within reach, and the Westminster Assembly of Divines met in 1643 to formulate the worship of the new national church. Their *Directory for the Publique Worship of God* (1644) became the basis for all subsequent Presbyterian worship. As far as music was concerned the Divines allowed for psalm singing before and after the sermon.

It is the duty of Christians to praise God publiquely, by singing of psalmes together in the Congregation, and also privately in the Family. In singing of psalmes, the voice is to be tunably and gravely ordered; but the chief care must be, to sing with understanding, and with grace in the heart, making melody unto the Lord.

To this end they proposed lining out 'where many in the congregation cannot read'. Singing was to be unaccompanied; and they wished the translations to be more literal than those of Sternhold and Hopkins. In 1644 the Westminster Assembly of Divines debated the possibility of imposing a new version that would be closer in sense to the original Hebrew. Francis Rous's version was accepted, with revisions, but it did not please the House of Lords. William Barton's, favoured by the Lords, was rejected by the Commons. The result was that neither was officially adopted, and most people went on using the 'Old Version', as it now began to be called.

After the Restoration, the Presbyterians at the Savoy Conference petitioned for similar concessions, among others; but these being refused, they declined to subscribe to the Act of Uniformity (1662). As a result 3000 Presbyterian ministers were ejected from their livings. From this time the Presbyterians formed a Dissenting Church. After a generation of persecution, they became free under the Toleration Act (1689) to organize their worship in licensed meeting-houses. In the following period they continued to sing largely metrical psalms, using first Rous's version or the American 'Bay Psalm Book', and later that of John Patrick (1679, completed 1691) which was 'fitted to the tunes used in parish-churches'. Singing in the meeting-houses was led by a precentor, who occupied a small desk beneath the great canopied pulpit; lining out was practised. The standard of singing was probably at least as low as it was under similar conditions in the established Church. In the early 18th century an interesting movement to improve it was started by the congregation of the King's Weigh House, Little Eastcheap. They employed a teacher of psalmody, William Lawrence, and established a course of Friday evening lectures which were followed by psalm-singing practices. The lectures, by Presbyterian ministers (and one Independent), were published in 1708 as *Practical Discourses in Singing in the Worship of God*; they enlarged on the duty of praising God in psalms, though some of the lecturers accepted hymns as well. Lawrence compiled a manuscript collection of tunes for the use of the society, consisting largely of standard tunes also in use in the Church of England. He published it in 1719 as *A Collection of Tunes suited to the Various Metres in Mr Watts's Imitation of Psalms of David or Dr Patrick's Version.* Isaac Watts's *Psalms of David Imitated in the Language of the New Testament* (1719) was soon adopted in many Presbyterian congregations. Lawrence's successor as 'conductor of psalmody at the Friday lecture in Eastcheap' was Nathaniel Gawthorn, who published another tune collection, *Harmonia perfecta*, in 1730. It was designed to supplement Lawrence's book, and contained some entirely new tunes, and also several anthems – probably not for use in worship. This suggests that voluntary choirs had already begun to form, perhaps as a result of the Eastcheap Society; certainly they existed in many Dissenting meeting-houses during the later 18th century, though they did not yet imitate the instrumental bands of the parish churches.

English Presbyterianism soon after this period ceased to have a distinctive existence. Its meeting-houses passed into the control of ministers of Arian theology and eventually drifted into Unitarianism; Watts's hymn texts were adapted to the changing beliefs, and metrical psalms dropped out of use. Other Presbyterian congregations joined forces with the Independents. (*See* REFORMED AND PRESBYTERIAN CHURCH MUSIC, §II, 1.)

(ii) Independents. Those who did not believe in a state church, but wanted each congregation to govern itself, were known generally as Independents, or later as Congregationalists. Henry Ainsworth, one of their first leaders, left England with his congregation in 1593 for the greater freedom of the Netherlands. There, in Amsterdam, he brought out *The Book of Psalmes: Englished both in Prose and Metre* (1612) with learned disquisitions and annotations. (*See* CONGREGATIONAL CHURCH, MUSIC OF THE.)

The Independents had the support of the army during the Civil War, and when Cromwell took over political control they enjoyed a period of supremacy. It produced no musical revolution; most people went on singing Sternhold and Hopkins. The Independents suffered the same persecution as the Presbyterians under Charles II. They, too, adopted Patrick's version when it came out, but moved more rapidly away from metrical psalms in the direction of hymns. Watts's *Hymns* appeared in 1707 and were quickly adopted by many Independent congregations. His *Psalms of David Imitated in the Language of the New Testament* followed in 1719, and soon displaced other versions in the use of all but the most conservative groups. They were free paraphrases, omitting or modifying the many passages in the psalms that were thought inappropriate for Christian use. In a short preface Watts urged a change in the style of singing, which should be hearty and spirited; he deplored lining out and the slow pace that was then customary. Many Independent congregations put these ideas into practice, and their psalm singing often had a vitality that was lacking elsewhere until the Methodist revival had had its effect.

Watts's psalms were written in the standard metres, and the first tune books issued with them merely reprinted the Anglican tunes. Several collections later in the century, however, matched new music to Watts's psalms and hymns. One of the most popular was *A Collection of Psalm Tunes* (3/1780) by Stephen Addington, an Independent minister at Market Harborough, who provided a tune for each psalm and hymn. He wanted 'all who have Breath and Voice to praise the Lord; and therefore

would be far from encouraging either Clerks or Choirs of Singers to introduce such Tunes as few can ever sing but Themselves'. The harmony was basically two-part (TB) with an optional alto part; the tunes came from many sources, and some were elaborate. Watts's *Psalms*, and other similarly free paraphrases of scripture, continued in use among Congregationalists, but in the 19th century they merged with hymns as the old disputes about the propriety of verses of human composition faded into the past.

(iii) Baptists. The Baptists began to form a distinct sect in 1608, when John Smyth, leader of a congregation of Separatists, baptized himself at Amsterdam. The General (Arminian) Baptists, like the Society of Friends, resisted any form of congregational singing, on the grounds that only a spontaneous song guided by direct inspiration was compatible with their interpretation of scriptural injunctions. They shifted from this position only in the later 18th century. The Particular (Calvinistic) Baptists, on the other hand, were more receptive to the notion of congregational singing. Benjamin Keach, pastor of a congregation at Horsleydown, Southwark, from about 1673 began gradually to introduce hymns and psalms into the services there. His *Spiritual Melody* (1691) is a collection of these, but without music. There was no lack of opposition, and a prolonged war of tracts and pamphlets was carried on in the 1690s on the propriety of 'singing in the public worship of God'. The dispute erupted again several times in the 18th century. Gradually, however, Keach's example was followed, and Baptist congregations accepted both psalms and hymns. Under Methodist influence, and especially in the North of England, many Baptist meetings began to elaborate their singing, and eventually adopted choirs and bands. They tended, however, to use hymns chiefly as a reflection on the sermon, and consequently needed a very large number to cover the possible range of subjects. John Rippon's *Selection of Hymns* (1787), containing 588 texts, filled this need and, with his *Selection of Hymn Tunes* (1792) became immensely popular. For the same reason metrical psalms dropped out of frequent use well before the end of the 18th century. (*See* BAPTIST CHURCH MUSIC, §1.)

3. DOMESTIC USE. The tradition of using psalms for domestic or private devotions is far older than the Reformation, and many metrical versions, both English and Latin, had long been in existence. The versions of Sir Thomas Wyat the elder, the Earl of Surrey and Miles Coverdale are among the earliest produced in furtherance of the Reformation, and they too were for private use. Coverdale's *Goostly Psalmes* were published with tunes in about 1535: both texts and music were closely modelled on Lutheran sources. He dedicated his book to 'the lovers of God's word', 'That they may thrust under the borde All other ballettes of fylthynes'. This motive was perhaps even more important among the early reformers than that of congregational singing. Almost every 16th-century collection, including Sternhold and Hopkins, mentions in title or preface the idea that the psalms could replace frivolous or lewd secular ballads; the same was true of most French, Dutch and German publications. But it was not only in Puritan circles that sacred music was sung in the home. The *XX Songes* of 1530 was a set of partbooks containing Latin prayers and carols mixed with secular and instrumental music of various kinds. Le Huray (1967) listed 59 such publications between 1530 and 1657; the majority (not all) were undoubtedly designed for home use. Some were metrical psalms, some devotional or moral poems of various kinds; some were a mixture of either or both with secular pieces. Many were explicitly designed for singing with viols, lute, orpharion or virginals; some were even printed in table format, which made them wholly unsuitable for church use. (See Temperley, 1998, i, 27–9.)

The tradition of private psalm singing continued in the 17th century, though the standard of devotion may not have been maintained. Wither wrote in 1619:

> The little reverence that is used amongst us oftentimes in singing the *Psalms*, especially in some private families (I dare not say, in our Churches) is much to be blamed in many respects. S. *Chrysostom* . . . thought it scarce seemly to sit when we sing: But, had he seene with how many undecent gestures, and mixtures of other employments, we dare undertake so holy an exercise, he would have trembled at our presumption.

Those who kept up the custom had to put up with a certain amount of ridicule:

> Such is our contrarietie to vertue and godlinesse, that should we heare a Familie so early gathered together in celebrating Gods praises; those, at their drunken Carols should not receive one reproofe, for every ten scoffes which are cast at these.

But the tradition persisted. Pepys, at home on a Sunday evening in 1664, sang 'Ravenscroft's 4-part psalms, most admirable music' with two other men and a boy. Playford continued to cater for this demand in some of his earlier psalm publications. Editions of his *Introduction to the Skill of Musick* from 1658 to 1670 contain 'the Tunes of the Psalms As they are commonly sung in Parish-Churches. With the Bass set under each Tune, By which they may be Played and Sung to the Organ, Virginals, Theorbo-Lute, or Bass-Viol'. From the 1672 edition onwards there is instead a reference to his *Psalms and Hymns in Solemn Musick* (1671) for those who wished to sing with these instruments. The 1671 book was intended chiefly for domestic use, though Playford also hoped that it might be adopted in churches, and presented a number of copies to the Company of Parish Clerks of London. It was not a successful book. Playford wrote that 'the only exception that ever I heard against it, was, that the largeness of the Volume, and the not having all the Psalms in their order, made it not so useful to carry to Church'. In his 1677 *Psalms* – described in §4(iv) below – he corrected these defects, abandoned the 'domestic' market, and catered solely for parish church use. But the author of *A New and Easie Method to Learn to Sing by Book* (1686) was still providing for the pious private psalmist, and perhaps also for Dissenters:

> 'Tis pity we have not a better Translation of the *Singing Psalms* publickly in use; however, for Private Families there are several well done, especially the last by Mr *Patrick*. . . . The promoting of this (as to the Tune and Melody) is the chief of my design in this Essay. If therefore any Reader come with no better ends, than to accomplish himself to bear a Part in a Drunken Catch, A Smutty or Atheistical Song, I assure him, there's not a Word here design'd for his service, 'till upon better thoughts a *Penitential Psalm* should seem more suitable.

In this book the psalms are set for two trebles or tenors (in the G clef) and bass. With religious toleration and the advance of secular materialism, it is not surprising that family prayers and psalm singing declined. Dr Thomas Bray wrote in 1697 that the singing of psalms in families had fallen into 'disuse', and urged its revival, printing psalms (from the New Version) and tunes for this express

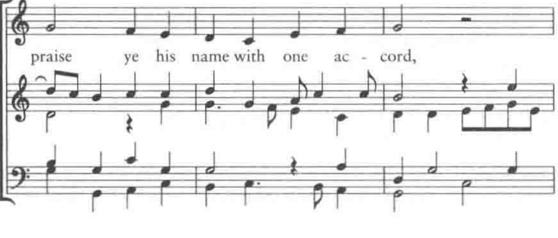
purpose. At the same time he urged ministers to form religious societies in their parishes which would meet for private prayer and singing and would then by their example restore true devotion in the parish church. Many such societies were in fact established. Although the principal result was the formation of voluntary parish choirs, there was also a modest revival of domestic psalm singing which continued in some circles into the later 18th century. Several collections of psalms and hymns for 'Sunday's amusement' bear witness to the persistence of the tradition.

4. HARMONIZED SETTINGS. Various settings of the metrical psalms in harmony were printed from 1549 onwards, but their purpose is not always clear. In Edward VI's reign and the early years of Elizabeth's many parish churches still had choirs; but after about 1570 only cathedrals, chapels royal and a handful of colleges and collegiate parish churches could enjoy harmony. Some publications may represent efforts to introduce harmonized singing in parish churches, but voluntary parish choirs did not exist until shortly before 1700; most were probably for domestic use among cultivated amateurs.

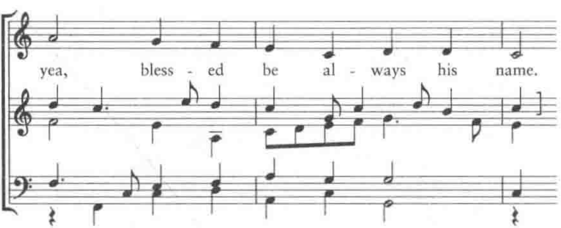
(i) Harmonized chants. The earliest type of harmonized setting is found in Crowley's *Psalter* (1549), where all the psalms are set to the 7th Gregorian psalm tone, in the tenor, harmonized in four parts. Similarly one of the two compositions in Seager's *Psalms* (1553) is based on the 6th psalm tone. These are merely adaptations of the FABURDEN practice which had long been in use for chanting the Latin psalms in churches that had choirs.

(ii) 'Anthems' with metrical psalm texts. The metrical texts were frequently used for compositions of the motet or anthem type. In these settings there is no clearly defined tune for a congregation to sing. Hence they were either for choirs or for domestic use. Early models for these 'psalm anthems' are found in the second composition in Seager's *Psalms* and in Tye's *Actes of the Apostles*, both published in 1553, and in the Wanley and Lumley Partbooks; these were designed for strophic repetition. Through-composed settings of Sternhold and Hopkins's psalms and hymns are extant by Tallis, Farrant, Philip van Wilder, Byrd, Edmund Hooper, Nathaniel Giles, Thomas Tomkins and other leading composers of the day. The use of the Sternhold and Hopkins texts may have been regarded as authorizing these pieces for cathedral use, along with anthems taken from scripture or the liturgy. Especially popular texts were those of the original hymns in the Sternhold and Hopkins supplement: for example, 'A Lamentation' (*O Lord, in thee is all my trust*) was set as an anthem by nine composers including Hooper, Giles, Thomas Ravenscroft and Martin Peerson, in addition to the simple harmonization by Tallis. A curiosity is Thomas Caustun's adaptation of an instrumental *In nomine* by Taverner, to Sternhold's Psalm xx (in Day's *Certaine Notes*, 1565).

Polyphonic settings of versions other than Sternhold and Hopkins were probably for domestic use. These include Croce's *Musica sacra*, adapted by East (1608); Leighton's *The Teares or Lamentacions of a Sorrowfull Soule* (1614); and Robert Tailour's *Fifti Select Psalms* (1615). Metrical psalm texts are also found here and there in sets of lute-songs and madrigals. A later type, influenced by the Italian cantata, is represented by William and Henry Lawes's *Choice Psalmes put into Musick* (1648) and Walter Porter's *Mottets of Two Voyces* (1657), both using Sandys's version, and three psalm settings for voice and figured bass in Playford's *Psalms and Hymns* (1671). This tradition was revived in the later 18th century. John Travers's *The Whole Book of Psalms* (*c*1746–50) has settings of the first few verses of every psalm in the New Version, mostly for solo voice and figured bass, but some for several voices. There are also elaborate settings of metrical psalms by John Broderip (1769), William Hayes (1776) and Hugh Bond (*c*1776).



(iii) Elaborate settings of psalm tunes. Day's *Psalmes in Foure Partes* (1563), discussed below, contains a few settings that are not entirely homophonic: some by Caustun even include brief points of imitation (see Frost, no.160), but these are always alternatives to homophonic settings. A further step was to apply contrapuntal treatment to the whole tune, with overlapping points of imitation. The tune then became in effect the cantus firmus for a polyphonic motet. It was in Scotland that this technique chiefly developed (as can be seen in MB, xv, 1957). An early English example is Parsons's second setting of Psalm xliv in Day's 1563 book (see Frost, 1962, p.48). The earliest fully worked-out English examples are the 14 five-part settings in Cosyn's *Musike of Six, and Five Parts* (1585) (ex.15); others are in Daman's collections of 1591. There is a single example in John Mundy's *Songs and Psalmes* (1594). This type of setting was well suited to domestic use by proficient amateurs, and could be sung as a consort song with viol accompaniment. In England it does not seem to have survived into the Jacobean period.



A unique set of compositions by William Lawes (1602–45) has survived in manuscript (*GB-Och* 768–70), entitled 'Psalmes for 1, 2 and 3 partes, to the comon tunes'. In these pieces Lawes alternated stanzas set to original music for voices and bass, in cantata style, with stanzas for 'Chorus' set to the common tunes in a plain two-part harmonization. There are nine of these 'Psalmes', using six psalms and three hymns from Sternhold and Hopkins.

(iv) Note-against-note harmonizations. The most serviceable type of harmonization was a homophonic one, allowing an occasional syncopation or passing note but otherwise preserving the rhythm of the tune in all parts. It could give pleasure to music lovers (as Ravenscroft's settings did to Pepys); it was also capable of being used in cathedral or church, while the congregation sang the tune in unison. Such settings of the French psalms by Goudimel and Le Jeune had proved immensely successful on the Continent, and John Day in 1563 brought out a large collection of them for English use. It was printed in the form of partbooks, entitled *The Whole Psalmes in Foure Parts, whiche may be song to al Musical Instrumentes, set forth for the Encrease of Vertue: and aboleshyng of other Vayne and Triflyng Ballades* (RISM 1563[8]). There was no reference to church performance, perhaps because of current Puritan mistrust of elaborate music. The production of the book was lavish, and the provision of music more generous than any ordinary church would require. The texts were those of Sternhold and Hopkins, with a few additions; the tunes of the common psalm book (which Day was also printing and publishing) were provided for the psalms that had tunes there, with eight new tunes as alternatives. The settings were for four voices, with the tune most often (not always) in the tenor (ex.16). Many of the tunes were set two or more times by

Ex.15 Psalm cxiii, to the tune Frost no.125, in a five-part setting by Cosyn (1585)

(cantus is editorial)

different composers – Psalm xliv had as many as five settings – and the total number of compositions was 141, including a few prose anthems. But this was not a complete psalm book. Only the first verse of each psalm was printed, and many psalms – those without proper tunes – did not appear at all. Thus, if used in church, it could only be used side by side with the psalm book. It was well suited to the choirs that had survived in some city churches, or to cathedral choirs, and may have been used by them, though there is little evidence. By far the largest number of settings are by William Parsons (who was probably organist of Wells Cathedral); for this reason it has sometimes been called 'Parsons's Psalter' on the assumption that he was the musical editor. The other names are not distinguished, apart from 'M. Talys', assumed to be Thomas Tallis, who provided a setting of 'A Lamentation', already printed in Day's *Certaine Notes*, and a short anthem. After Parsons the principal contributors were Caustun, Hake and Brimle.

Day's collection was not reprinted, and it was 16 years before any similar publication appeared. Archbishop Parker's *Psalter* (*c*1567) is in quite a different class. It contains nine great tunes in four-part harmony by Tallis, including the celebrated 'Canon', and the well-known rhyme in which Parker characterized eight of the tunes. He was the first English compiler to say that a tune should be matched to the mood of the psalm.

In 1579 John Bull, a London goldsmith, sponsored the publication of a collection of four-part settings by William Daman, a Gentleman of the Chapel Royal, without the author's permission. It was similar in scope to Day's, and was also in the form of partbooks, with only the first stanza of each psalm and hymn printed, and only of those psalms for which established tunes existed. Many of the tunes are the same as those in the psalm book, but there are ten new tunes, including four of the short tunes now printed for the first time. There are four new hymn texts, and two prose psalms set as anthems. Cosyn's 1585 collection, also in partbooks, includes 43 settings in six parts, using many of the proper tunes but also some of the short ones. Sometimes the tune is in the tenor, sometimes in another part. Cosyn took a more Puritan stance than Daman by including only psalms, ignoring the hymns and canticles. Both books are explicitly for domestic use – Daman's 'to the use of the godly Christians for recreatyng themselves', Cosyn's 'for the private use and comfort of the godlie'.

A very different kind of book is Thomas East's *The Whole Booke of Psalmes: with their Wonted Tunes, as they are song in the Churches, composed into Foure Parts: all of which are so placed that Foure may sing ech one a Several Part* (1592). As the title implies, this is a psalm book, containing the entire texts of all the psalms and hymns of the standard version. It is small and compact in volume, easy to carry between home and church, and all four parts are shown together at each page opening, with

Ex.16 Psalm c, to the tune Frost no.114, set by W. Parsons in Day's *The Whole Psalmes* (RISM 1563[8])

words of one verse underlaid to every part. East left most of the proper tunes with their usual psalms; but for the many psalms not provided with tunes in the common psalm book, instead of following the cross-references he provided new four-line tunes, using the same four tunes for the great majority of the psalms. (As already pointed out, he stated in the second (1594) edition that these four tunes were the only ones in use in most churches.) The settings were 'compiled by sundry authors, who have so laboured heerin, that the unskilfull with small practice may attaine to sing that part, which is fittest for their voice' (ex.17). Richard Alison, Dowland, Farmer and Michael Cavendish are among the musicians he called on: le Huray pointed out that none of these was a church musician. Nevertheless it seems likely that East hoped that this book would be used in some churches as well as for recreation, or he would not have taken so much trouble to make it conform to parish church conventions. Even the most devout music lover would hardly have needed the whole of Psalm cxix, set to a single tune, for his evening diversion. Though evidence is lacking, East's *Psalmes* may have been tried out in some churches where enough educated musicians could be induced to form a choir. It ran to four editions, the last dated 1611.

East's book was the first complete, harmonized edition of Sternhold and Hopkins. It contained all that was in the psalm books, and more besides. It could thus be used by a choir while the ordinary psalm books were in the hands of the congregation. This was an important new departure, and it sets East apart from all the compilers of harmonized editions who had preceded him. East also initiated (in his 1594 edition) the colourful and peculiarly English practice of attaching place names to tunes. The few names seem to have been distributed at random. The need was for any easily remembered label now that tunes were no longer connected uniquely with particular psalms.

Two publications of 1599 recognized the dominance of the same four short tunes that East had marked out as the most popular. Alison's *The Psalmes of David in Meter* continued the domestic tradition, with only one verse underlaid; the tunes in this case are in the topmost voice, harmonized in four parts with optional accompaniments for lute and cittern, and arranged in table format. Barley's *The Whole Booke of Psalmes, with their Woonted Tunes, as they are sung in Churches, composed into Foure Parts* was a close copy of East, even in its appearance and the wording of its title, and with most of the same tunes. It contained, however, new settings by Morley and Bennet.

Ex.17 Psalm cxlvi (Hopkins), to the tune Frost no.172*a*, set by J. Farmer in East's *Psalmes* (1592)

The next publication in this category was Thomas Ravenscroft's *The Whole Booke of Psalmes . . . Composed into 4 Parts by Sundry Authors* (1621), which was also closely modelled on East in design, format and purpose. Its title shows that it was, like East's and Barley's books, a psalm book, planned for possible use in church as well as at home. But Ravenscroft departed from the practice of all his predecessors by introducing a large number of tunes foreign to the psalm book – no fewer than 33, all of the short variety except the splendid 'Old 104th', already referred to. The sources of many of these tunes are unknown. Eight came from the 'common tunes' in the Scottish psalm book of 1615; one was adapted from Tallis's 'Canon'. The others Ravenscroft called Welsh, French, German, Dutch, Italian and so on, but, with one exception, none of his new tunes has been discovered in earlier sources from these countries. In allocating the tunes to the psalms he claimed in his preface to have taken special care to select tunes 'proper to the nature of each psalm', but a careful study reveals that in fact he used a largely random procedure. And he did not, as had East and Barley, allot the few popular tunes to a very large number of psalms, but portioned out popular and unfamiliar with a fairly even hand. For harmonizations he used some music from earlier books, including Day's, East's and Barley's, and new settings by a number of church musicians of the day as well as many of his own.

Ravenscroft's book was not as popular as East's – there was only one more edition in the 17th century (1633). Perhaps it was because, as Playford put it in 1677, he had been guilty of 'intruding among our *English* Tunes, many Outlandish [i.e. foreign] *Welsh* and *Scotch* Tunes, of neither good *form* nor *ayre*'. Barton in 1644 omitted 'multitudes of tunes [in Ravenscroft] as unnecessary and burdensome', but this at least suggests that Ravenscroft was a possible source for church use. There is other evidence that it was: from 1622, some editions of the common psalm book contained five of Ravenscroft's new tunes and allocations that are not found elsewhere; others appear in a later revision of 1636.

Henry Lawes's *A Paraphrase upon the Psalmes of David . . . Set to New Tunes for Private Devotion: and a Thorow Base, for Voice, or Instrument* (1638) is somewhat outside the mainstream. The metres of Sandys's version are various and subtle: the tunes, all new, lack popular characteristics and seem designed for solo singing. They are set in two parts only, in block harmony. William Slatyer's *The Psalmes of David in 4 Languages and in 4 Parts* (1643–6) is eccentric. It consists of Psalms i–xxii in the Old Version, with texts in English and also translated into Greek, Hebrew and Latin, for purposes unknown; the settings are borrowed from various sources.

John Playford, having begun with tenor and bass only in his *Introduction* (1658), added two optional countertenor parts in his *Psalms and Hymns* (1671); the tunes he printed were chiefly the old ones, emended to bring them

into conformity with contemporary practice. He provided alternative translations (which he hoped would be accepted by 'authority') and hymn texts, and printed only selected verses of the Sternhold and Hopkins texts – but in deference to the establishment printed them in black letter, while the other texts were in roman. The settings were his own. His *Whole Book of Psalms in Three Parts* (1677), in contrast, was a complete psalm book in the East-Ravenscroft tradition; every psalm had a tune printed with it, underlaid with the first verse, and the other verses printed below. Playford made some revisions in the text (not all judicious) and further modernized and reallocated the tunes. But there were few new tunes, and even these seem to have been derived from earlier ones. He gave a revised selection of hymns with several new texts, and four alternative versions of psalms (dropped from later editions). The preface gave an informative statement of his policy and of the state of psalm singing in his time. But his most significant innovation was to set the tunes in three parts throughout – cantus and medius (of nearly equal compass) and bassus. 'All *Three Parts* may be as properly sung by Men as by Boys or Women', and all were printed in G or F clefs (ex.18). Here was a book that could well serve a parish choir, with or without instrumental accompaniment; and eventually parish choirs took full advantage of it. After the second edition, brought out by Henry Playford in 1695, it outstripped all its predecessors in popularity, going into 19 editions with little alteration (one new tune was added in 1700), the last appearing in 1738. (The 20th edition (1757), revised by Joseph Fox, left out five tunes and added 15 new ones and three anthems.)

Playford's was the last harmonized Sternhold and Hopkins, and one of the last books that set out the complete psalms beneath the music. In the 18th century music was provided for organists, parish clerks and choirs, but not for congregations: not until the mid-19th century would the people again have the tunes printed in their hymnbooks. Selections of psalms and hymns in various versions were printed with music, often for the use of an individual church or chapel. The Dissenting Churches, where lining out continued to thrive, frequently printed their tunes in a supplement at the end of the psalm book, and the practice was followed with Tate and Brady's *New Version*, whose *Supplement* was designed for use with either the Old or the New Version.

Ex.18 Psalm xlvii, to the tune 'London New' (Frost no.222), set by Playford in his *Psalms* (1677)

Adaptable tune books continued to appear throughout the 18th century for both Anglicans and Dissenters. They show that many places of worship maintained the conservative tradition of plain old psalm tunes throughout the period of elaborate psalmody. In 1790 Dr Miller's *Psalms of David* was the first of a new type of book influenced by evangelical ideas. It was designed to embody the entire text and music needed for a parish church. The psalms were arranged in order throughout the year; settings were firmly congregational, with the tune in the treble and chords filled in for organ accompaniment. Several other books on the same lines appeared in rapid succession. Beginning with Sampson's *Ancient Church Music* (*c*1800) and continuing with Crotch's *Tallis's Litany with a Collection of Old Psalm Tunes* (1803), an effort was made in some quarters to revive those of the ancient psalm tunes that had dropped out of knowledge.

IV. Scotland and Ireland

1. Scotland: (i) Texts (ii) Music (iii) Performing practice. 2. Ireland.

1. SCOTLAND. Metrical psalms have retained an important position in the Scottish service since the Reformation in 1560. The Scottish Church was persuaded by Calvin's teaching that, first, praising God was the right of the whole congregation and not simply of priests and a select body of singers, and second, that only material from the Bible should be used. The psalms were translated into metre mainly for ease of recollection, but the fact that the original Hebrew psalms were also metrical was regarded as something of a divine injunction. Hymns were gradually introduced in the 19th century but they never entirely supplanted the psalms. Efforts to introduce chanted prose psalms have met with little success.

(i) Texts. The earliest metrical psalms known in Scotland were 22 in *Ane Compendious Buik of Godlie Psalms and Spiritual Sangis* (?Dundee, 1542–6), brought out by the three Wedderburn brothers of Dundee. Commonly known as *The Gude and Godlie Ballatis*, they were Scots translations by John Wedderburn of psalms and hymns by Luther. Though never authorized for use in church, they were very popular for domestic use: the last edition was printed as late as 1621. Apparently they were intended to be sung to common secular melodies, for no music was printed. In one instance the tune of *Exaudi Deus orationem meam* (Psalm lv) is indicated, possibly an adaptation of a Gregorian melody.

The early psalms of Sternhold and Hopkins also seem to have been known in Scotland. John Knox, the leader of the Scottish Reformation, when describing the death of Elizabeth Adamson in 1555, stated that she sang 'Psalm ciii', *My saule praise thou the Lord always* (this is actually Psalm cxlvi by Hopkins). According to the Protestant exiles in Frankfurt in 1554 the singing of metrical psalms 'in a plain tune' was the custom in Scottish churches, but there is no evidence that they formed a part of the service itself.

Although Knox knew the Wedderburn psalms he did not adopt them for the Reformed Church, perhaps because he found the language too broadly Scots, but probably on account of their Lutheran origins. In 1555 he went to Geneva where he came under the influence of Calvinism, and in 1558 he was appointed one of the ministers of the English congregation there. The following year he took to Scotland their Book of Order, *The Forme of Prayers and Ministration of the Sacraments* (Geneva, 1556), which had been rejected in Frankfurt in favour of the Prayer Book. The 11th section contained *One and Fiftie Psalmes of David, in English Metre*, 37 of which were by Sternhold, seven by Hopkins and seven by Whittingham.

The first General Assembly of the Church of Scotland (1560) recognized the Geneva *Forme of Prayers* as its Book of Common Order, and in 1562 it was printed, without the psalms, by Robert Lekprevik of Edinburgh. By 1563 the number of psalms for the Anglo-Genevan Church had increased to 87 (the additional translations were by Pullain and Kethe). These were adopted by the Assembly as the basis for a complete metrical psalter, and new translations of the outstanding psalms were ordered. In fact most were borrowed from the English psalter, with only 21 by Scots (15 by John Craig and 6 by Robert Pont). All the versions were carefully revised and printed with music in 1564 by Lekprevik as an adjunct to the *Forme of Prayers*.

In 1579 an Act of Parliament ordained that 'all Gentlemen with 300 merks of yearlie rent, and all substantious yeomen, etc., worth 500 pounds [Scots] in land or goods, be holden to have ane bible and psalme booke', under specific penalties. 60 editions of the Book of Common Order together with the psalms were printed in the period 1564–1644. Many were printed abroad – in Middelburg, Dort, Geneva and London – probably because printing there was of a better quality without being more expensive. In 1575 Bassandine changed the title to *The CL Psalmes of David*; this was adopted and gave rise to the custom of calling the whole of the service book the Psalm Book.

At first the Assembly had the right to supervise the copy and the printing of the book, but later this vigilance was relaxed, perhaps owing to the Church's increasing involvement with politics. After the first edition of 1564, some of the spiritual songs from the Anglo-Genevan book had been appended, but Bassandine's 1575 edition included metrical versions of the Lord's Prayer (Coxe's), Whittingham's Ten Commandments with a responsory prayer, the first Lamentation, the *Veni creator* from the English Prayer Book and a metrical doxology. Andro Hart, in his edition of 1615, added on his own initiative a metrical version of the Song of Moses.

Many of the editions from 1601 onwards printed the prose version of the psalms in the margin, probably to aid comprehension. Only Raban's edition (Aberdeen, 1633) and Tyler's edition (Edinburgh, 1644), the last of the 1564 psalter, used the Authorized Version; the rest all used the translation from the Genevan Bible of 1560.

The main drawback of the 1564 psalter was its variety of metres. 27 psalms were in metres other than common, long or short, and were not easy for an illiterate people to learn. Some had been created to fit French melodies and were more suited to the French language than the Scots (ex.19). The General Assembly of 1601 proposed a new translation of the Bible and a revision of the psalms. James VI (later also James I of England), who had versified some psalms in *His Majesties Poeticale Exercises at Vacant Hours* (1591) supported the proposal enthusiastically. The Assembly, not wanting to encourage interference from the king but seeking to placate him, charged Robert Pont with the revision. Nothing further was done but James, far from forgetting the matter, set to work himself. Other writers such as Alexander Montgomerie, Mure of Rowallen (compiler of the Rowallen Lutebook), Drummond of Hawthornden and Alexander of Menstrie were also making new versions but, because of the king's declared purpose, could not do so openly.

The strained relations between Crown and Church delayed any new version until the middle of the century. James's introduction of the Five Articles (concerning kneeling at Communion, the Christian calendar, private communion, private baptism and confirmation) in 1618 aroused much hostility. Although the Five Articles were widely disregarded in practice, such a storm had been raised that even moderate reforms were impossible. The Church successfully resisted James's version of the psalms during his lifetime. Such was the king's industry that by the time he died in 1625 he had reached Psalm cxxx. Charles I believed it his duty to see his father's wishes carried out and instructed Menstrie to review them. The result, a substantial revision, was printed as *The Psalmes of King David translated by King James* (Oxford, 1631), commonly known as the 'Menstrie Psalms'. Another version, again thoroughly revised, appeared in 1636. There was considerable opposition to the 'Metaphrase', as James's version was called, although it appears that some congregations did use it. Charles's disastrous attempts to impose a version of the English Prayer Book on the Church of Scotland provoked the signing of the National Covenant in 1638. In the same year the General Assembly, controlled by Covenanters, rejected all Charles's innovations, including the royal psalter.

Ex.19 Psalm lxxxi from the 1564 psalter; text by Pont

The Westminster Assembly of Divines of 1643–7 aimed to produce a new version of the psalms for use throughout England and Scotland. Rous's psalms were revised, first by the Westminster Assembly (which included Scottish commissioners) and subsequently by Scottish divines in Scotland. The Scottish Church as well as the English refused to accept it, and on 8 July 1647 the General Assembly recommended another complete revision. The revisers were permitted to draw on other versions as well as the Westminster one and the 1564 Scottish one. The revision was extensive: of a total of 8620 lines only 1588 are from the Westminster version. Other sources used include James's version, the Bay Psalm Book of 1640 and Rous's original translation. On 1 May 1650 the *Psalms of David in Meeter* came into use, and has remained unaltered as the official Scottish psalter (*see* PARAPHRASES, SCOTTISH).

The Reformed Scottish Churches never adopted the practice of having proper psalms for the day. As a result some of the more obscure psalms are rarely, if ever, sung. *The Church Hymnary: Third Edition* (London, 1973), authorized by the Assemblies of the Church of Scotland and the Presbyterian Churches of England, Wales and Ireland recognized this by including only the most common psalms. In most cases only excerpts from the psalm texts are printed, distributed among the hymns. Of the 57 psalms or psalm portions obtained, all but nine are taken from the 1650 psalter; two are from the psalter of the Presbyterian Church in Ireland and the remaining seven combine verses from each. This hymnary has not been popular. The new edition is intended to include a substantial majority of the psalms, many from the 1650 psalter but also some modern metrical versions; they will once more be printed in their own section at the beginning of the book.

The seceding churches have never adopted hymns at all and still use the 1650 psalter. However, the Free Church of Scotland undertook a new translation of the psalms into modern idiom for the year 2000, issuing *Supplementary Versions of the Scottish Metrical Psalms* from 1994. 51 psalms or psalm portions had been published by 1997.

Nearly all the psalms are in common metre. Including second versions, four are in short metre: Psalms xxv, xlv (2nd version), l, lxvii; four are in long metre: Psalms vi, c, cii (2nd version), cxlv (2nd version); and five are irregular: Psalms cxxiv (2nd version), cxxxvi, cxxxvi (2nd version), cxliii, cxlviii.

The first Gaelic translation of *The Forme of Prayers*, entitled *Foirmna nurrnuidheah* (Edinburgh, 1567) was printed without the psalms, which were not translated until the following century. In 1659 the Synod of Argyll issued the first 50 in *An ceud chaogad do Shalmaibh Dhaibhidh*. Robert Kirk, minister at Balquidder, made an independent translation of the complete psalter, *Psalma Dhaibhidh an meadrachd* (Edinburgh, 1684), but the one recommended by the Assembly was the completed Argyll version of 1694. An amended version by Alexander MacFarlane (Glasgow, 1753), containing fewer Irishisms, became popular in the north Highlands; John Smith's translation of 1787 was more popular in the west. *Sailm Dhaibhidh* (Edinburgh, 1826), a revised version of Smith's translation, was authorized by the Assembly, and, with modern revisions, is still bound with the Gaelic Bible issued by the National Bible Society of Scotland.

(ii) Music. Although the reformers believed that each psalm should be sung only to its own or 'proper' tune, this ideal was never fully realized, with the result that sometimes the same tune had to be used for two psalms. The first Scottish psalter of 1564 contained 105 tunes; 42 came from Geneva, of which 31 were French including some by Loys Bourgeois. A few were German and the rest were presumably by Scottish and English composers; it shared 16 tunes with Day's *Whole Booke of Psalmes* (1562). Out of 28 editions of the psalter printed by 1625 only three omitted the music.

The tunes were unbarred and written in C clefs. The majority were eight lines long. The first verse of the psalm was underlaid; only one note was allowed for each syllable, but long and short notes were interspersed to give a certain rhythmic flexibility. However, the rhythms varied slightly from edition to edition, gradually becoming more regular.

In 1562 the Earl of Moray, later Regent of Scotland, commissioned David Peebles to produce simple four-part harmonizations of the psalm tunes coming into Scotland from Geneva. By 1566 the completed psalter was copied into partbooks by Thomas Wood, vicar of St Andrews. (Two copies by Wood survive, five partbooks in *GB-Eu*, one in *IRL-Dtc* and one in *GB-Lbl*; the contratenor is incomplete.) Most of the settings are by Peebles but other Scottish composers contributed, including John Angus, Andrew Blackall, John Black, John Buchan and Andrew Kemp. The harmonies are simple, with the melody in the tenor (see ex.21).

In spite of Moray's attempt to uphold the musical tradition threatened by the Reformation, standards seem to have declined rapidly. In 1579 an Act of Parliament provided money to revive the decaying 'sang schules' (song schools), but the austere psalm tunes could not revitalize institutions created to study the complexities of Renaissance polyphony. The churches had no musical instruments and choirs were rare, for past experience had shown that they tended to be used for display, thus supplanting congregational singing. Many of the proper tunes, particularly those of French origin, were too difficult for congregations to sing unaided and it appears that many were not sung at all. Editions of the psalter between 1599 and 1611 omitted some of the tunes altogether.

The Middelburg Psalter of 1602, which left out 61 proper tunes, was the first to introduce the principle of common tunes by printing three tunes for 22 psalms. One of these tunes, later called 'Common' (ex.20) was originally the proper for Psalm cviii; the others were 'London', from Daman's psalter of 1579, and 'English', from East's psalter of 1592. The 1615 edition contained 12 common tunes, grouped together at the beginning and distinguished by names after the English practice. In Raban's Aberdeen psalter of 1625 the common tunes, increased to 15, were harmonized, and the local tune 'Bon accord' in reports (i.e. with imitative entries; *see* REPORTS) was added. The harmonized psalter of 1635 contained 31 common tunes.

Only six of the 31 editions printed after Raban's 1625 psalter contained music. One of these was the harmonized psalter of 1635, edited by Edward Millar. In the introduction he expressed his hope of standardizing the harmonies used in churches 'where sundrie Tribles, Bases and Counters set by diverse authors . . . do discordingly rub upon each other'. Some of the harmonizations appear

Ex.20 'Common'

Ex.21 Psalm c from 1635 psalter

to have been his own but he took most ofthem from Wood's psalter, sometimes modifying them. Not all the tunes from the 1564 psalter are included and some are used for different psalms. In all there are 104 proper tunes, 31 common tunes and eight in reports. The harmonies are simple, and he took care to make each part move as melodically as possible (ex.21). The tune is in the tenor throughout except in two reports, Psalm xii ('Bon accord') and Psalm xxi ('Aberfeldy' from Raban's psalter of 1633).

There is no evidence that the Church ever authorized this psalter or even that it was used in church. The common tunes are laid out with the tenor and contra on one page and the treble and bass upside down on the facing page, suggesting a domestic setting where the singers could gather round the book. It is possible that Millar was encouraged by those who supported Charles I's desire for a more elaborate service. Livingston suggested that the tunes in reports were sung as anthems in the Chapel Royal, Stirling, where Millar was appointed Master of Music shortly before the psalter's publication. According to the Records of the Privy Seal the English Service, with choristers and organs, had been in force there since 1617. It is possible that such royal and episcopal associations prevented the psalter from arresting the decline in the standards of church worship.

The 1650 psalter was published without music, a reflection on the state of psalm singing at that time. In 1645 the Synod of Lothian had stopped psalm singing and Scripture reading altogether (replacing them with 'lectures', presumably political); not until 1653 were they restored. In 1666 an edition was published in Aberdeen containing 12 of the old common tunes – 'Abbey', 'Common', 'Duke's', 'Dundee', 'Dunfermline', 'Elgin', 'English', 'French', 'King's', 'London' ('London New'), 'Martyrs' (ex.22) and 'Stilt' ('York') – and 'Bon accord'

Ex.22 'Martyrs'

in reports. A later edition by John Forbes, also of Aberdeen, contained printed harmonized versions and in

addition a short-metre tune, the old proper to Psalm xxv. By the end of the 17th century the 12 common tunes were firmly entrenched and no others were allowed.

The first attempt to improve this state of affairs was made in 1726, when Thomas Bruce challenged the sanctity of the common tunes with his *The Common Tunes, or Scotland's Church Music made Plain* (Edinburgh, 1726); in addition to 11 common tunes ('Common' was dropped) it contained 11 from the 1635 psalter and eight entirely new ones. The latter were short-lived.

The turning-point came in the middle of the 18th century with the beginning of the choir movement in Aberdeenshire. In 1748 Sir Archibald Grant instructed the local schoolmaster to form a children's choir for the parish church of Monymusk. Five years later Grant appointed Thomas Channon, an English soldier stationed in Aberdeen and probably a Methodist, to improve the standard of psalm singing. Channon endeavoured to impose a simpler, more disciplined style of singing, without ornaments, and to encourage singing in parts, normally treble, tenor and bass. His innovations met with considerable opposition in the Aberdeen establishment, not only because he introduced new tunes but because he increased the speed of singing and used a pitchpipe. The choir movement spread, encouraging the production of such tutors as Robert Bremner's *The Rudiments of Music with Psalmody* (Edinburgh, 1756) and anthologies of tunes. The psalms were held in such reverence that it was considered sinful to use them outside actual acts of worship, so practice verses were substituted; many maintained a strong moral tone but some were surprisingly irreverent (see Patrick, 164–78).

Among the first anthologies were Thomas Moore's various psalter 'companions', published between 1750 and 1761. They contained a number of English tunes adapted to the Scottish metres. A large number of tune books followed, reviving old Scottish psalm tunes, importing old English ones and introducing new ones. Similar 19th-century anthologies include R.A. Smith's *Sacred Harmony* (Edinburgh, 1820–25), T.L. Hateley's *Free Church Psalmody* (Edinburgh, 1844), G. and J. Cameron's *The Sacred Harp* (Glasgow, 1849) and William Carnie's *The Northern Psalter* (Aberdeen, 1872). The tune writers, many of whom were amateurs, enjoyed their new freedom to the full and included decorative runs, dotted rhythms and repeat lines (ex.23). Tunes with

Ex.23 'Desert', first two lines

a Scottish flavour using a pentatonic or six-note scale were popular: one of the best known is 'Kilmarnock' (ex.24).

Melodies were also adapted from Handel, Haydn, Mozart, Beethoven and even Palestrina. Inevitably many

Ex.24 'Kilmarnock'

of the Victorian tunes are cloyingly sentimental, such as the ubiquitous 'Crimond', popularized to Psalm xxiii by the Glasgow Orpheus Choir.

In 1899 the Church of Scotland issued a new hymnary and psalter, the latter containing 226 tunes of a generally higher standard. It was followed by *The Scottish Psalter* (London, 1929), containing 192 tunes. Many of the 16th-century tunes were restored: 14 tunes from the French and Anglo-Genevan psalters, 9 common tunes from the 1615 psalter and six more common tunes from the 1635 harmonized psalter. Its four tunes in reports included 'Bon accord' and 'Aberfeldy'. The music was printed in semibreves and minims, and many of the long notes ironed out in the preceding two centuries were restored. As in earlier psalters the pages were split, with music at the top and text at the bottom, so that a psalm could be sung to any tune. This has now been largely superseded by *The Church Hymnary: Third Edition* (London, 1973), which contains only a selection of the most commonly used psalms. The tunes, printed in modern notation, include 12 from the old Scottish Psalters: 'Old 44th', 'Old 100th', 'Old 107th', 'Old 124th', and eight common tunes. A substantially new edition contains more tunes, both old and new. The Free Church of Scotland has retained its own psalter, *Scottish Psalmody*, with 193 tunes, of which 137 are also found in the 1929 psalter. Seven tunes come from the French and Anglo-Genevan psalters, five from the 1615 psalter and six from the 1635 psalter.

(iii) Performing practice. Few details survive concerning early performing practice. According to Walter Steuart of Pardovan's *Collections and Observations . . . concerning . . . the Church of Scotland* (Edinburgh, 1709, ii, 1, §26), the minister or the 'uptaker of the psalm' read over the whole of the intended portion, and then the singing followed without interruption. At the Westminster Assembly the Scots agreed only reluctantly, after some debate, to adopt the English practice of 'lining out' (intoning and singing the lines one by one). In 1746 the General Assembly recommended that this practice should cease but it continued in many churches until well into the 19th century, and can still occasionally be heard in the west Highlands and islands.

To what extent conclusions and doxologies were sung is unclear. The first of these appeared to Psalm cxlviii in Bassandine's 1575 edition. Charteris's Edinburgh edition of 1596 includes 32. The 1635 psalter contains two conclusions and one doxology, all in common metre (which may have been added simply on the printer's initiative). The 1650 psalter contains none, but in 1661 the Synod of Lothian ordered them to be sung with the psalms. Bearing in mind Calvin's principle that all matter extraneous to the Bible should be rejected, it is unlikely that doxologies were ever very popular; in the 17th century the Church may have been under some pressure to adopt them to conform with episcopal practices. The 1929 psalter contained seven in different metres at the end of the book, but they were not generally sung.

There is no information about the speeds at which the early psalms were sung. It is clear, however, that by the 18th century they were sung extremely slowly: as late as 1772 Bremner wrote in his *Church Harmony, or Psalm-Tunes in Four Parts* that the length of a semibreve in common time (¢) ought to be between three and four seconds, although for tunes in triple time, being of a 'more light and airy nature', the time of one second to a minim was sufficient. With the subsequent improvement of church singing standards, the psalms were gradually taken faster. In the 1990s the speed was approximately crotchet = 120 (i.e. three or four times quicker than Bremner's speed), triple-time tunes being rather faster. In those seceding churches that sing unaccompanied the speed was usually considerably slower.

The old slow speeds naturally encouraged the congregations to ornament the tunes with runs, turns and shakes. Bremner wrote in his *Rudiments of Music*:

> Had these nonsensical graces been the same everywhere, it would have been the less matter, but every congregation, nay, every individual, had different graces to the same note, which were dragged by many to such immoderate length that one corner of the church, or the people in one seat, had sung out the line before another had half done: and from the whole there arose such a mass of confusion and discord as quite defaced this noblest part of Divine worship.

In the Gaelic-speaking congregations of the east coast of Ross, Sutherland and Caithness a highly ornamented style of singing was developed which may have originated in the melismas of plainchant. Only six tunes were sung: 'Dundee', 'Elgin', 'French', 'Martyrs', 'Old London' and 'Stilt'. In the middle of the 19th century T.L. Hately, the precentor to the Free Church General Assembly, attempted to notate these so-called 'long tunes' (ex.25). Joseph Mainzer also transcribed them (*Gaelic Psalm Tunes of Ross-shire*, 1844); his edition of 'French' is now sung at the close of the annual National Mod, but as he fitted it into regular bars of 4/4 with four-part harmony it is a poor echo of the old manner. With the retreat of Gaelic from the east coast in the 20th century the long tunes died out. However, the practice of adding grace notes and slurs to the unaccompanied, unison melody still flourishes in some congregations in the west Highlands and islands. They are rather simpler than the long tunes but the melody can only sometimes be identified. (*See* SCOTLAND, §II, 5(iii).)

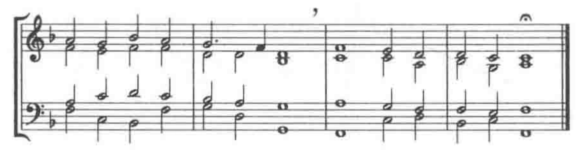
Although choirs were largely discarded at the time of the Reformation, there is some evidence that harmony was sung in centres that had sang schules. James Melville wrote in his diary of 1574 that, as a student in St Andrews, he had learnt many of the trebles of the psalms (the melody being in the tenor); Calderwood claimed that in 1582 crowds in the streets of Edinburgh welcomed the returning minister Durie with Psalm cxxiv 'sung in such a pleasant tune in four parts'. There are a few exceptional references to choirs: in 1587 the Kirk Session of Glasgow ordered the music teacher William Struthers to choose four men to sing beside him in the church, and in 1621 Stirling Kirk Session decreed that the children of the sang schule should sit beside their master in the reader's place. These are isolated examples, however, and the members of the sang schules and others who could sing a part normally sat in the body of the congregation. The table-book format of the 1635 psalter suggests that harmony may have been used in private or family worship, which was strongly encouraged.

Choirs were not formed until the middle of the 18th century, when it was realized that they could assist the singing without taking the place of the congregation, but in the first decades of the 19th century in Paisley Abbey and St George's, Edinburgh, R.A. Smith and Andrew Thomson improved the choirs so much that the congregations felt discouraged. Later in the century Hately in the south and William Carnie in the north-east avoided this danger by teaching huge classes – from 500 to 1000

members – which were congregational rather than choir practices.

The use of instruments in church was banned altogether in accordance with Calvin's principles. Not until the beginning of the 19th century did organs and reed organs begin to appear; some of the seceding churches still consider them inappropriate. With the advent of the organ the melody, for so long in the tenor, was transferred to the treble. However, the distinction is to some extent academic as the majority of the congregation sing in unison at their own pitch. The 1929 Scottish psalter attempted to introduce a modified form of the old style, printing alternative settings known as 'faux-bourdons' in which the tune is in the tenor while the rest of the choir add the harmony (ex.26). In other, two-part versions, a descant was sung above a unison melody, the harmonies being provided only by the organ.

The *Church Hymnary: Third Edition* includes a few prose psalms, some pointed for Anglican chant and some for Gregorian psalm tones. The latter are simpler for a congregation to sing, but in view of the continuing resistance of the average congregation to anything Roman, it will be a long time before they are accepted.



2. IRELAND. The Presbyterian Church in Ireland, like the mother Church in Scotland, has a strong tradition of metrical psalm singing. The Church came into being when the General Synod of Ulster (founded in 1642) joined with the Secession Synod in the Union of 1840. Before the Union, Presbyterian practice had been to use the psalms alone in public worship, although the Scottish paraphrases (and, in a few congregations, hymns) had already come into use in the Synod of Ulster. One of the terms of the union, in fact, was that the paraphrases ought not be authorized, even though they were not prohibited and thus continued to be used by some congregations.

In 1841, 1859, 1868 and 1887 the General Assembly of the Presbyterian Church in Ireland issued revisions of the Westminster *Directory for the Publique Worship of God* (1644). The last of these stated that 'the metrical version of the Book of Psalms, as published by this Church or as used by the Church in Scotland, is the only psalmody authorised by the General Assembly' (the first three had only approved the Psalter 'as used in the Church of Scotland'). The reason for the double approval was that following the Evangelical Revival of 1857 an attempt had been made to introduce hymns. There was strong opposition to this, for while many approved the use of hymns in mission services they were opposed to any such innovation in the 'House of God'.

At the same time, some of the criticisms of the Scottish Psalter of 1650 were considered to have substance, so

Ex.26 'Dunfermline': 'faux-bourdon' setting in 1929 psalter

instead of approving the introduction of hymns it was agreed to revise the Psalter. The result was the publication in 1880 of *The Psalter in Metre, a Revised Version, Prepared and Published by the Authority of the Presbyterian Church in Ireland, with Tunes*. By removing a number of archaisms, by providing a considerable number of new alternative versions, and by introducing a greater variety of metres it was hoped to solve the hymnody problem. But this failed, and the *Church Hymnary* (in cooperation with the Scottish Churches) was approved in 1899. The new psalter was primarily the work of Rev. John Moran and Professor J.G. Murphy. The revision had much to commend it and it is now used universally throughout the Church.

Until the 1970s it was usual for every service of worship in Irish Presbyterianism to include at least one metrical psalm. *The Church Hymnary: Third Edition* (1973), compiled by a number of British Presbyterian churches, contains 57 metrical psalms or portions of psalms. These were included to encourage a fuller use of the psalter and to increase the range of selection. Two versions from the 1880 Irish Revised Psalter are included and in many cases verses and lines from it replace those from the Scottish Psalter of 1650. Paradoxically, however, the inclusion of metrical psalms in *The Church Hymnary* may have led to a decrease in their use as they came to be regarded simply as hymns. This, allied with a great increase in modern hymns and songs in varying idioms (including a number based on psalms), means that the singing of traditional metrical psalms might no longer be as distinctive a part of Irish Presbyterian worship as it was in the past.

V. North America

In the early years of the Protestant settlements of North America, metrical psalm singing was often the only form

of organized music. It occupied a most important place in the cultural life of the people, and was invested with the strong feelings of a struggling community far from home. The Puritans, in particular, treated the psalms and their tunes with veneration, and sang them in everyday situations as well as at church on Sundays. The tradition naturally followed very similar patterns to those of the parent countries in Europe. By the time a more assertively American school of psalmody had arisen in the late 18th century, metrical psalms were rapidly giving way to hymns in most churches.

1. History of psalm singing: (i) Episcopal churches (ii) Pilgrims (iii) Dutch Reformed Church (iv) Puritans (v) Presbyterian churches (vi) German Reformed Church. 2. Psalm books: (i) Function and character (ii) The Bay Psalm Book.

1. HISTORY OF PSALM SINGING.

(i) Episcopal churches. The psalms of Calvin's French psalter were sung in America as early as 1564–5 during the Huguenot expeditions to Florida and South Carolina, just as Sir Francis Drake's men sang psalms, to the delight of the Amerindians, while camping on the coast of California in 1579. However, the first Protestant Church to establish itself permanently on the American continent was the Church of England: at Jamestown, Virginia, a church was built in 1608, the year in which the colony was founded. Commercial enterprise rather than religious fervour was dominant in the minds of the early Virginian colonists. They were content to continue the traditions of the Anglican Church, which was established there by law, as it was later in Maryland, North and South Carolina, Georgia and Nova Scotia. In New England, Anglican churches were organized by the early 18th century.

The bibles and prayer books imported from England had the usual metrical psalms bound in the back – Sternhold and Hopkins, or, later, Tate and Brady. The singing was very much as it was in English parish churches. In the larger town churches organs were gradually acquired: at King's Chapel, Boston, in 1714; at Christ Church, Philadelphia, and St Philip, Charleston, in 1728; at Trinity, Newport, Rhode Island, in 1733; at Trinity, New York, in 1741; and so on. In smaller churches, parish clerks led the people in unaccompanied singing. Tate and Brady's *New Version of Psalms*, which was first published in America in New York in 1710, was very widely used by the mid-18th century. After the Revolution authority over the congregations passed to the Protestant Episcopal Church, and for the first time, in 1790, a selection of psalms and hymns for use in the churches was laid down by authority, and annexed to the Book of Common Prayer. It consisted of the entire *New Version* of Tate and Brady, with 27 hymns. A revised selection was made in 1833, still including a large number of Tate and Brady's psalms, and continued in use until 1866.

The tunes sung with these psalms were at first the same as those used in England, as can be seen from a tune supplement bound in with a Boston edition of Tate and Brady in 1720; they were also largely the same as those used by the Puritan churches. A later tune supplement to Tate and Brady was engraved and probably compiled by Thomas Johnston, who was also one of the first American organ builders; Daniel Bayley's collections indicate a more florid taste. On the whole, however, Episcopal churches were musically more conservative than Congregational ones, avoiding the excesses of the FUGING-TUNE and the elaborate 'set piece'. A most influential Anglican musician was Francis Hopkinson. His *Collection of Psalm Tunes . . . for the Use of the United Churches of Christ Church and St Peter's Church in Philadelphia* (Philadelphia, 1763) contains some fairly ornate tunes, including some of Hopkinson's own, but they are in the *galant* taste of the time, resembling the music of town rather than country churches in England. The prevalence of organs and the stronger links with the mother country tended to keep Anglican church music closer to the European art music of the time. The same tendency is shown in the tunes of *The Book of Common Prayer . . . Proposed to the Use of the Protestant Episcopal Church* (Philadelphia, 1786), and in Jacob Eckhard's Choirmaster's Book of 1809, used at St Michael, Charleston, South Carolina, together with a special *Selection of Psalms and Hymns* prepared by the rectors of the two principal Charleston churches in 1792 (ex.27). (*See* ANGLICAN AND EPISCOPALIAN CHURCH MUSIC, §10.)

(ii) Pilgrims. The band of about 100 English Pilgrims who founded the colony at Plymouth, Massachusetts, in 1620 were members of a group of 'Separatists' who had gone into exile at Leiden in 1609. They had rejected the worship of the Church of England, and so instead of Sternhold and Hopkins's psalms they adopted the version of Henry Ainsworth, pastor of a neighbouring Separatist community at Amsterdam. Ainsworth was one of the most cultivated biblical scholars of his day, and in *The Book of Psalmes: Englished both in Prose and Metre* (Amsterdam, 1612) he offered not only a complete new prose translation of the psalms accompanied by a pithy

Ex.27 Peter Valton (c1740–84): 'St Peters', in Eckhard's book of 1809, where it is allocated to 'Psalm 46' – i.e. Psalm cl (New Version), v.1 of which is underlaid here.

commentary, but also a new metrical version and an excellent selection of tunes. In variety of metres and in his choice of tunes, Ainsworth was as much influenced by the Franco-Dutch psalter as by Sternhold and Hopkins:

> Tunes for the Psalms I find none set of God; so that each people is to use the most grave, decent and comfortable manner of singing that they know. . . . The singing-notes, therefore, I have most taken from our former Englished Psalms, when they will fit the measure of the verse. And for the other long verses I have also taken (for the most part) the gravest and easiest tunes of the French and Dutch Psalms.

Details of Ainsworth's tunes and their origins are provided by Pratt and Frost. Edward Winslow recalled 'there being many of our congregation very expert in music' at Leiden; some of these must have been on the momentous voyage of the *Mayflower*, for Ainsworth's *Psalmes* were used for many years in the Plymouth colony, in the total absence of instrumental or professional aid. Later generations lost their forefathers' skill. In 1681 the Plymouth church decided to institute lining out, and in 1691, on the amalgamation of the Plymouth colony with the much larger and more successful settlement to the north, the church formally recognized the 'difficulties' of many of the Ainsworth tunes and allowed the substitution of easier ones used with the Bay Psalm Book. So Ainsworth's book was never to be widely popular in America, though it was used at Ipswich and Salem, both outside the Plymouth colony, until 1667. It was reprinted several times, but never in America.

(iii) Dutch Reformed Church. The Dutch colony of what is now New York was established in 1613, but the first Church was not organized until 1628, when the Dutch and French Protestant settlers combined; they knew identical tunes, and each sang them in their own language. The Dutch psalter, prescribed by the Synod of Dort (1618), was used with strict invariance for a full 100 years after the English conquest of the colony in 1664. An organ was erected in the New York church in 1727. The first English psalm book for the Dutch Reformed Church was *The Psalms of David . . . for the Use of the Reformed Dutch Church of the City of New York* (New York, 1767). Francis Hopkinson was the translator, and his job was the singular one of adapting the psalm versions of Tate and Brady to fit the tunes of varying metres in the old Dutch psalter. The music still remained unaltered.

The new book did not long satisfy the English-speaking congregations; many of the tunes in peculiar metres were unfamiliar through long disuse, and there was a demand to relax the strict confinement to psalms and to introduce some of the hymns popular in other American churches. The central Synod continued to maintain a strict control over the worship of individual congregations, but after the Revolution it authorized a new book (1789) that included 135 hymns selected by Dr John Livingston. The psalms in this book were selected largely from Tate and Brady's and Watts's versions, with only a few of Hopkinson's remaining; and the great majority were in common, short or long metre. Later editions increased the proportion of hymns, until in *Hymns of the Church* (New York, 1869) the remaining metrical psalms were mixed in with hymns. Similarly, the tunes of the surrounding English-speaking churches were gradually adopted, as for instance in Peter Erben's *Selection* (1806). From the beginning, harmonized versions carried the tune in the top voice. (*See* REFORMED AND PRESBYTERIAN CHURCH MUSIC, §II, 2(ii).)

(iv) Puritans. The Massachusetts Bay colony was founded in 1629 by puritan members of the Church of England, who had at first no idea of seceding from the church, though they rejected its ritual. They brought with them Sternhold and Hopkins's psalms, and we may suppose that they sang them mainly to the handful of four-line tunes then in common use (see ex.9, above). They were not of a temper to concern themselves with artistic improvements in the singing. But they were unhappy with Sternhold and Hopkins because 'their variations of the sense, and alterations of the sacred text too frequently, may justly minister matter of offence'. Accordingly, a group of 30 divines assembled to prepare a still more literal translation, 'that as wee doe injoye other, soe (if it were the Lord's will) we might injoye this ordinance also in its native purity'. They published, in 1640, *The Whole Booke of Psalmes Faithfully Translated into English Metre* (see §2(ii) below).

The Bay Psalm Book, or New England Psalm Book, as this collection became known, was at once adopted by almost every church in the colony. By means of lining out, which was in use in 1647 and perhaps earlier, the people could easily be taught to fit the new words to the old tunes. The compilers referred at the end of the book to 48 tunes to which the psalms might be sung, including 39 common-metre tunes 'as they are collected, out of our chief musicians, by Tho. Ravenscroft'. But it is highly unlikely that more than a handful of these were used in church. Copies of Ravenscroft's and Alison's harmonized settings are known to have been in the possession of early New England settlers, but, as in the old country, they would have been used domestically.

The Bay Psalm Book lasted for over a century, and spread to other American colonies and even to many Dissenting Churches in Britain. There is no doubt that the new psalms continued to be sung to the old tunes. When for the first time a musical supplement appeared, with the ninth edition of 1698, the 13 tunes in it were all standard ones from English sources (see fig.6 below). They were set for tenor and bass, with sol-fa letters below the staves, suggesting that the basses were sung, not played (ex.28). In later editions the tunes were printed without basses. As in English country churches, the speed of singing had slowed to a drawl by this date (*See* OLD WAY OF SINGING). With no strong leadership of any kind, tunes were ornamented at will by individual members of a congregation, and the discordant heterophony that resulted was described by would-be reformers as 'indecent', 'like the braying of asses', 'tortured and twisted as every unskilful throat saw fit' and so on (see ex.11, above). Something of

Ex.28 'Low Dutch Tune', from the Bay Psalm Book (1698)

the chaos that often prevailed may be gathered from entries in Samuel Sewall's *Diary*, describing services at the South Meeting House, Boston:

1705, Dec. 28. Mr. Willard . . . spoke to me to set the Tune; I intended Windsor and fell into High-Dutch, and then essaying to set another Tune went into a key much too high. So I pray'd Mr. White to set it; which he did well, Litchf[ield] Tune.
1718, Feb. 2. In the Morning I set York Tune, and in the 2d going over, the Gallery carried irresistibly to St David's which discouraged me very much.

But the people liked this way of singing, and in some churches persisted with it despite efforts at reform. In the strongly individualistic, Congregational tradition of New England, every church was at liberty to govern its own practice.

Reform got under way in 1720, with the appearance of the Rev. Thomas Symmes's anonymous pamphlet, *The Reasonableness of Regular Singing, or Singing by Note*. In the following year two important singing methods were published by John Tufts and Thomas Walter. Each carried an appendix of psalm tunes, and Tufts introduced a new musical notation based on sol-fa letters. Walter's appendix presented the tunes in three-part harmony. (For discussion of the new era of American singing that resulted from these publications and from the formation of singing schools, *see* PSALMODY (ii), §II.) It is sufficient to point out here that the teaching of singing from notes naturally generated church choirs on the Anglican model, which tended, as in England, to take the singing out of the hands of the people – where the people would let them. The attention that was thus focussed on singing led in turn to a desire for better literary and musical materials to sing. The Bay Psalm Book soon gave way in popularity to more elegant if less literal translations – the *New Version* of Tate and Brady, and (particularly among Congregationalists) Isaac Watts's *Psalms of David Imitated in the Language of the New Testament* (first American edition, Philadelphia, 1729). More conservative congregations stuck to the old book (revised in 1758), but the supplements attached to later editions show that the traditional psalms, as well as the newer ones, were sung to increasingly elaborate tunes.

Two tunes of this date appear to be the first printed compositions of American origin: 'Southwel New' (ex.29), from Walter (1721), and '100 Psalm New' from Tufts (1723; see Temperley, 1997). Some of the earliest tunes containing florid melismas ('Northampton', 'Isle of Wight', '24 Psalm') were drawn from English sources. But at the mid-century two tune supplements from New England, engraved (and possibly compiled) by James Turner and Thomas Johnston respectively, include some ornate tunes. One of them in the Johnston supplement (1755), called 'Psalm 136', comes near to being a fuging-tune, though it is English in origin (ex.30). In the latter part of the century, more especially after the Revolution, there was a burgeoning of elaborate psalmody in which the Congregational churches (descendants of the old Puritan bodies) were often in the vanguard (*see* PSALMODY (ii), §II, 2). It was perhaps partly for the purpose of countering this trend that organs were gradually introduced in Congregational churches towards the end of the 18th century. The first was at Providence, Rhode Island, in 1770; in 1798 Bentley had heard of only four Congregational churches with organs in America – three in Boston and one in Newburyport.

Ex.29 'Southwel New Tune', from Walter (1721) [originally on three staves, 𝄞𝄞𝄢]

Under the influence of the 'Great Awakening' and subsequent evangelical movements, metrical psalms tended to be replaced by hymns, and by 1830 formed a small proportion of the verses in most Congregational hymnbooks (*see* HYMN, §IV, 4). Recently, however, the successor denomination (the Christian Reformed Church) has revived the use of metrical psalms. Versions of all 150 psalms are printed in the *Psalter Hymnal* of this Church. (*See* CONGREGATIONAL CHURCH, MUSIC OF THE.)

(v) Presbyterian churches. The Presbyterians also claimed descent from the Puritans, but retained a more authoritarian and centralized form of church government by Synod. From 1668, and especially in the 18th century, both in what is now the USA and in Canada, a steady trickle of Scots and Scots-Irish produced a distinctive brand of Presbyterianism – one that was strongly resistant to liberal trends. It greatly increased after the Union of England and Scotland (1707) opened the colonies to legal

Ex.30 '136 Psalm Tune', from Johnston's tune supplement to Tate and Brady's *New Version* (1755), here underlaid with the first verse of Psalm cxxxvi

Scottish immigrants. *The Psalms of David in Meeter*, in the Scottish version of 1650, was to Presbyterian minds almost a part of the Bible with which it was usually bound. The success of the Scots in colonizing the frontier outposts of the American and Canadian interiors left them often remote from acculturating influences, and they continued the 'old way' of singing long after it had been forgotten elsewhere. The 12 common tunes were lined out by a precentor, and sung by the people in the kind of slow heterophony described by Joseph Mainzer, which survived well into the 20th century in remote places. In urban centres such as Boston, Philadelphia and New York, there were schisms in the 18th century: 'New Side' synods welcomed the influence of the evangelical movement; 'Old Side' synods preferred to continue in the old ways. The psalm singing was, indeed, often the central issue in the fierce disputes that raged in Presbyterian circles at this date. James Lyon's *Urania* (Philadelphia, 1761) was subscribed to by a number of prominent Presbyterian clergymen; it must have represented the avant garde of Presbyterian singing. In 1774 John Adams, accustomed to the elaborate choir singing of New England, reported that the Old Presbyterian Society of New York was still 'in the *old way*, as we call it – all the drawling, quavering, discord in the world'. A revision of Watts's *Psalms* in a conservative direction, restoring those portions that Watts had deliberately omitted, was prepared by Joel Barlow in 1785, and the synods of Philadelphia and New York left individual parishes to decide whether to use it or to continue to sing the old psalms in the old way. The *Directory for the Worship of God* (1788) at last substituted 'singing psalms or hymns' for the 1644 Westminster directory's 'singing of psalms', paving the way for the authorization of Watts's hymns in 1802. In town churches the sterner kind of Presbyterianism faded gradually; organs were purchased, choirs took over the psalms and hymns. Congregational singing survived only in the wild country places. (*See* REFORMED AND PRESBYTERIAN CHURCH MUSIC, §II, 2(ii).)

(vi) German Reformed Church. Of the various sects that flourished among the German communities in Pennsylvania during the 18th century, only the Reformed Church, with its Calvinist ancestry, sang metrical psalms. The first settlements were founded by Dutch Reformed ministers early in the century. They used the Marburg Collection of psalms in Lobwasser's version, and in 1753 this book was reprinted by Christopher Sauer at Germantown, Pennsylvania, as *Neu-vermehrt und vollständiges Gesang-Buch*, with all the traditional tunes. But the knowledge of the old chorale melodies was disappearing among the people; lining out had to be introduced, and by the end of the century it often happened that the minister and the organist were the only audible singers. At a synod held in Reading in 1794, it was resolved 'that a new hymn-book be prepared, of which the Psalms shall be taken from Lobwasser and Spreng's improved version, and the Palatine hymn-book shall form the basis of the hymns'. This, the first officially authorized book, was published in 1797. The psalm tunes had been greatly reduced in number, by the omission of little-used tunes. Between 1800 and 1850 there was a gradual change to the English language in many churches, and the first English collection, *Psalms and Hymns for the Use of the German Reformed Church in the United States of America*, appeared in 1830: all 150 psalms were still included, but they were largely in Watts's version and drew on Anglo-American sources for their tunes. A newly compiled German book appeared in 1842, and another, *Deutsches Gesangbuch* (edited by Philip Schaff), in 1861. By this time such metrical psalms as survived were embedded in a large collection of hymns, arranged by the church year. Tunes were no longer printed with the words; suggestions for tunes showed, however, an interest in reviving the traditional German chorale melodies.

2. PSALM BOOKS.

(i) Function and character. Of the psalm books printed in America only those for the Dutch and German Reformed Churches contained tunes printed with the psalms. In the Dutch version the tune was reprinted over each verse of the psalm; in the German, the first verse was underlaid and the rest printed beneath. These formats were modelled on European books that had been used with a tradition of accompanied singing. When an organ could not be obtained the congregation was at a loss and the knowledge of the tunes quickly faded. With the introduction of English psalms and hymns the older type of underlaid psalm book disappeared.

The great majority of psalm books in the English American tradition had no music at all (perhaps 80% of the surviving editions up to 1800). Before the era of the singing schools, there were so few tunes that they were known from memory, having been sung unaccompanied for generations. After choirs were well established, they generally sang from their own books containing special selections of psalm and hymn tunes and through-composed set pieces and anthems. Most of the tune supplements date from the intermediate period (about 1720–75).

In the early days, when psalms were lined out, the congregation did not really need books at all in church. They knew the tunes, and they took the words from the parish clerk, elder or minister. No doubt the Bay Psalm Book was designed, as much as anything, for domestic singing and private reading – as the title of the third edition suggests (see §2(ii) below). In the same way the early tune supplements were for the benefit of devout singers at home rather than for the church; bass parts were soon found unnecessary. With the singing school movement came the possibility of learning new music in parts, and for this Walter and Tufts prepared their instructional books. When the music was sung in church it was convenient for the singers to have it in the psalm book. The tune appendix of Tufts was itself used as a supplement for editions of psalm books; others had supplements of similar scope, usually (from 1737 onwards) in three parts. Tune supplements were only loosely attached to psalm books. The same supplement was used for different psalm books and vice versa, while most psalm books had no tunes at all. Evidently it was up to the purchaser to order whatever tunes he liked. Very probably the books with tunes were used by the members of the 'choir' – those who had rehearsed them in the singing school or psalmody society. The tunes attached to the 1774 Tate and Brady are entitled *A New Collection of Psalm Tunes Adapted to Congregational Worship*, which might seem to indicate an effort to prevent choirs from monopolizing the singing. But all the tunes in it are in four-part harmony, many are elaborate, and some are of the fully fuging variety. It seems that in some churches tunes of this sort were actually sung by congregations at

large. With the disappearance of tune supplements and the flowering of psalmody books after the Revolution, choirs took over an increasing share of the music, singing anthems and set pieces in which nobody could take part without rehearsal. When evangelical hymn singing made its way into churches, congregations could once more take their full part (*see* HYMN, §IV, 4). However, psalm books (without tunes) continued to appear until after the middle of the 19th century.

(ii) The Bay Psalm Book. The Bay Psalm Book (1640) was the first English book ever printed in America: 1700 copies were run off on a small press belonging to Harvard College. The compilers, like Barton and Rous in England, eliminated some of the more unusual metres found in the Old Version, thus allowing all 150 psalms to be sung to the few tunes that were at the command of congregations. The collection was thoroughly revised for the third edition of 1651, chiefly by Henry Dunster and Richard Lyon. They polished the versification somewhat and added alternative translations. They further reduced unusual metres, so that 125 (instead of 112) out of 150 psalms were now in common metre; and they added 36 other 'scripture-songs', still maintaining the Calvinistic principle that only inspired words were suitable for singing in worship. The new title was *The Psalms Hymns and Spiritual Songs of the Old and New Testament Faithfully Translated into English Metre for the Use, Edification, and Comfort of the Saints in Publick and Private, especially in New England*. This proved to be the definitive edition. It was reprinted under this title, with scarcely any alterations in the verbal text, for over a century.

When for the first time a tune supplement, printed from wood blocks, was bound in with the ninth edition (1698), the 13 tunes in it, and their basses, were drawn from the 1679 edition of Playford's *Introduction to the Skill of Musick*, though the preface and the idea of using sol-fa letters probably come from the 1672 edition of the same book (fig.6). Lowens has conjectured that the supplement was printed in England as part of a lost London edition of the Bay Psalm Book, but in that case it would surely have been printed from type. The tunes are as set out in Table 1. It is a curious fact that the allocation of 'Lichfield' to Psalm lxix, like the rest, is copied from Playford, where it is actually a misprint for xcvi (through printing 69 for 96): the first verse of Psalm xcvi is printed under the tune in Playford. In New England, however, the tune (as a result of this misprint) came to be associated with the real Psalm lxix, the first verse of which is printed with it in editions from 1705 to 1730. Other misprints closely follow Playford, proving the provenance of the tunes beyond doubt.

For the 1705 edition the music was completely reset in a different style, without basses or sol-fa letters but with the first verse of the allocated psalm underlaid. Many of the tunes are transposed up a tone ('Martyrs' down a 3rd), a somewhat pointless manoeuvre for unaccompanied singing. The reason was evidently that the 1705 tunes were copied from the 1694 or 1697 edition of Playford, where the same transpositions had been made to bring the tunes into line with Playford's *Whole Book of Psalms* (1677). The 13 tunes were reduced to 11 by omitting 'Hackney' and 'Psalm 115'. The printer evidently had little competence in music: there are no clefs, several misprints and 'Oxford' has a key-signature of one flat despite transposition to A minor. These mistakes were

6. The 'York' tune for Psalm lxxiii, with sol-fa letters, from the supplement to the ninth edition (1698) of the 'Bay Psalm Book'

TABLE 1

Frost no.	*Tune name*	*Metre*	*Key*	*Psalm*

174	Psalm cxlviii First Meeter	6:6:6:6:4:4:4:4	C	cxlviii

not corrected until 1726. The next few editions were closely similar to that of 1705, with one other tune, 'Ten Commandments' (Frost no.178), appearing in some editions and not others. The tune selection was evidently a standard one in New England, for the 1720 Boston edition of Tate and Brady had the very same 11 tunes in a different order. One British edition of the Bay Psalm Book (Glasgow, 1720), surviving in an incomplete copy, evidently contained a similar selection, printed by James Duncan, printer to the city of Glasgow.

The 1737 edition carries an entirely different tune supplement of a much more ambitious kind, along the lines of Tufts's and Walter's books. It has 39 tunes in three-part harmony, with sol-fa letters underlaid. The selection of tunes owes far more to Tufts and Walter than to the previous supplements, reprinting some of their most 'advanced' and ornate tunes and such novelties as '100 Psalm New'.

Two copies of the 1744 edition are bound up with the Tufts supplement itself, printed from the plates of the 1738 edition. The 1758 edition has Turner's supplement, first printed with a psalm book of local use only, made by John Barnard, minister of a church in Marblehead. This edition has also a revised text, by Thomas Prince. But the days of the Bay Psalm Book were numbered. A few more editions were still to come, without music, but between 1761 and 1780 the *New Version* and Watts's *Psalms* each appeared in more than ten times as many editions.

Psalter [Psalterium] (Ger.). *See* PSALTERY.

Psalter, liturgical. The term applied to a psalter whose arrangement reflects the distribution of the 150 psalms according to the daily and weekly cycle of the Divine Office. It may also signify the Latin text form of the psalms used in a particular medieval rite (Roman, Gallican, Ambrosian). All these Latin text forms of the psalms were translations of the Septuagint, itself a Greek translation (3rd century BCE) of the original Hebrew text. The earliest Latin translations of the psalms originated in Africa during the 2nd century CE. These translations, dependent on the private initiative of individual Christians, generated a wide array of variant readings, manuscript evidence for which survives from the 5th century to the 8th.

In about 383, partly to resolve the confusion of these multiple renderings, Jerome undertook a revision and correction of the psalter text. Although this revision has been lost, it was for a long time erroneously identified with the 'Roman' psalter. The Roman psalter remained in use for the Divine Office in the city of Rome and its environs throughout much of the Middle Ages. In England, evangelized by Augustine at the behest of Pope Gregory I (pontificate 590–604), the Roman psalter was the favoured liturgical text until the Norman Conquest. It is the source from which the Mass chants of the medieval Roman liturgy were derived.

Jerome, after moving to Palestine in 385, made another revision of the Latin psalter (386–97), for which he was able to draw upon the resources of the Hexapla edition of the Old Testament compiled by Origen (*d* 254). The Hexapla displayed in parallel columns the Hebrew text, the same transcribed into Greek characters, together with the Greek versions produced by three Jewish translators (Aquila, Symmachus and Theodotion); a *quinta* column contained Origen's own critical edition of the Septuagint. Since Jerome intended his revision to be a critical edition of the Latin text, he borrowed Origen's system of textual markings (obelus and asterisk) to indicate passages in which the Latin text contained more (obelus) or less (asterisk) than the Hebrew. As part of the Carolingian liturgical reforms in the late 8th century and the early 9th, this revised psalter (minus the critical apparatus) gradually replaced the Old Latin 'Gallic' psalter. The Irish Church had embraced this version at an early period and was responsible for its exportation to the Continent. Known as the 'Gallican', or sometimes the 'Vulgate', psalter, it was incorporated in most medieval bibles and was the text employed in the Divine Office for the weekly psalm cursus. Jerome revised the psalter a third time, relying primarily on the work of the three Jewish translators recorded in the Hexapla; this *psalterium iuxta Hebraeos* was never employed for liturgical purposes, but it found its way into some complete bibles.

The oldest monastic practice assigned a certain quantity of psalms to each of the prayer times. The number of daily psalms depended on the varying lengths of day and night in different seasons of the year. Thus a given psalm could occur on any day of the week or at any time of the day or night. The name *psalterium currens* is applied to this practice. The systematic weekly distribution of the 150 psalms probably originated in an urban monastic milieu. Benedict of Nursia in his monastic Rule (*c*530) adapted the weekly psalter distribution of the Roman basilical monasteries. The Roman system divided the psalter into two large groups of psalms: i–cviii for the night Office (Nocturns, also known as Matins) and cix–cxlvii for Vespers. (Psalms cxlviii–cl had a fixed place in the morning Office of Lauds.) The regular weekly traversal of the psalms could be interrupted by feasts of the temporal or sanctoral cycle, for which special psalms were required.

A liturgical psalter adapts the biblical text to the requirements of the weekly cursus of psalmody. It can include the antiphons (with music in the case of a 'noted' psalter) assigned to the psalms for weekdays, and it can either rearrange the biblical order or indicate how the psalms are to be fitted into the weekly cycle. The monastic or secular origins of a manuscript containing a liturgical psalter may be ascertained by examining the capitals that indicate the beginning of each day's psalmody. A psalter designed for secular use will have large initials at the beginning of Psalms i, xxvi, xxxviii, lii, lxviii, lxxx, xcvii and cix (the latter begins the vesper block, which may carry indications of daily subdivisions). The monastic sources are more complex: Psalms xx, xxxii, xlv, lix, lxxiii, lxxxv, ci and cix constitute the comparable points of reference, but capitals corresponding to the secular division may also be present. Indications pointing to the division of certain long psalms, a practice not permitted in medieval secular use, is another sign of monastic origins or adaptation. In addition to the Old Testamant canticles required for Lauds (and for the 3rd nocturn of Matins in monastic use), the three New Testament canticles and the *Te Deum*, a liturgical psalter might also include titles that 'christianize' the psalms, psalter collects, invitatories and litanies. Breviaries almost always contain a liturgical psalter. (For brief descriptions of typical psalter manuscripts, see Salmon, 47–9.)

At Milan the liturgical psalter was divided into groups of (generally) ten psalms called 'decuriae'. The group of psalms assigned to Matins (i–cviii) covers two weeks, Monday to Friday, with a different arrangement for Saturday (Psalm cxviii and canticles) and Sunday (three canticles). The psalms assigned to Vespers, on the other hand, are sung through in a single week, perhaps the result of Roman influence. They may be displaced by special psalms for feasts.

The most radical revisions of the primitive Roman cursus occurred during the pontificates of Pius X (1903–14) and Paul VI (1963–78). The first of these reforms permitted the division of the longest psalms, and the number of psalms at Matins was reduced from 18 to nine. Daily recitation of Psalm cxviii was replaced by psalms deleted from Matins. The 1971 revision of the Roman breviary introduced even more profound changes: the recitation of the psalter now covered four weeks instead of one, and certain 'imprecatory' psalms (lvii, lxxxii, cviii in the Vulgate numbering) were eliminated. A few psalms (lxxvii, civ, cv) were reserved for special times of the liturgical year, while others were repeated in the course of a month. The traditional numerical ordering of the psalms was disrupted in favour of thematic congruence with either the time of day (morning, evening) or the day of the week (Friday as a weekly remembrance of the Passion, and Sunday of the Resurrection).

The liturgical changes resulting from Vatican II have stimulated the production of 'liturgical psalters' for use between the readings that form part of the eucharistic liturgy. These psalters are coordinated with lectionary cycles and make varied provision for congregational participation. Although musical styles vary widely, the form of the settings is generally responsorial, and the biblical text may be altered in order to make the language 'inclusive'.

The liturgical psalter of the Byzantine Church divides the psalms into 20 sections called *kathismata*; each *kathisma* is further divided into three *staseis*. During most of the year, two or three *kathismata* are sung at the morning Office (Orthros). *Kathisma* 18 (Psalms cxix–cxxxiii) is chanted daily at the evening Office (Hesperinos) in the autumn and winter except on Saturday, which employs *Kathisma* 1 (Psalms i–viii). After Easter and in the period from 20 December to 14 January Orthros has two *kathismata* and the vesper *kathisma* changes daily.

During Lent a different distribution of *kathismata* at Orthros is adopted, and some of the *kathismata* are repeated at the day hours.

JOSEPH DYER

Psalterer [psalmody]. A bowed string instrument of the late 17th century. It was probably intended for use in teaching choral singing in churches where neither organ nor other instrumental support was available, and it was adapted to the use of the musically untaught. Its invention is attributed to John Playford the elder (1623–86/7). No examples are known to survive, but the instrument appears to have had some currency during the early years of the 18th century, as shown by an advertisement in the 5th and 6th editions of John Playford's *The Whole Book of Psalms* (issued by Samuel Sprint and Henry Playford in 1699 and by Samuel and John Sprint and Henry Playford in 1700) for *The Psalmody*, published by Henry Playford. This book was also advertised in the *Post Boy* (27 June 1699) as 'A Book of Directions to Play the Psalmody, an instrument invented by John Playford, adapted to the tunes in use in all churches. London: H. Playford and R. Meares, 1699'. It contained directions for playing psalm tunes by letters rather than by musical notation, on an unnamed instrument (possibly the 'psalmody' of the title). No details of this instrument are known, but in 1705 Richard Jones described a nine-string instrument that used letter tablature and was played by striking the strings with a small piece of wood, and in 1725 'W.S.' gave detailed instructions for making a one-string, fretted instrument (invented about 30 years earlier) that was apparently played from normal notation. James Leman, in 1729, was the first to use the name 'psalterer'. From his description, the instrument was similar in form to the bass viol of the period but had only two strings, tuned an octave apart and passing over a fretted fingerboard on which the stopping positions were marked by letters. By fingering the instrument according to a prepared letter sequence or code, the player could produce simple psalmody melodies or basses. Printed guides in letter tablature were apparently supplied by certain music sellers.

Leman suggested that a rather more advanced version of the psalterer could be produced by adding a third or 'mean' string between the other two, tuned a 5th above the lower. He left the matter with the observation 'And this I suppose to be the utmost improvement that can be made upon this instrument'. A manuscript of 1737, based on Leman's three-string psalterer, gives directions for numerous psalm tunes and two anthems. The idea of a marked and fretted fingerboard was to reappear in Sweden about 1829, with a more advanced instrument, the PSALMODIKON.

PHILIP BATE/SALLY DRAGE

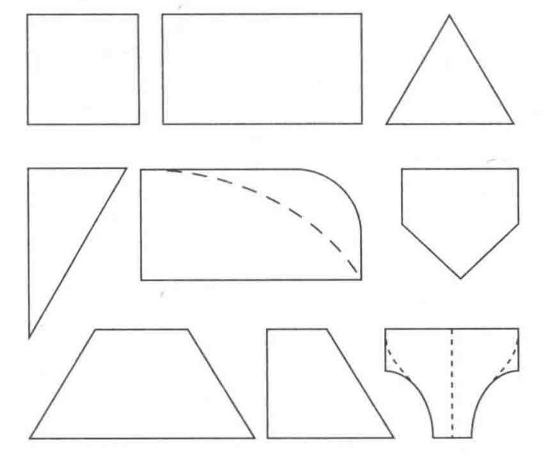
Psaltérion (Fr.). *See* PSALTERY and DULCIMER.

Psaltērion (i). A Greek harp. *See* GREECE, §I, 5(iii)(b), and PSALTERY, §1.

Psaltērion (ii). The psalter of the Greek Septuagint containing the 150 psalms divided into 20 *kathismata*; *see* PSALM, §III, 1.

Psalterium (Lat., from Gk. *psaltērion*). A term used in medieval texts for a variety of instruments, probably including the harp, crwth, PSALTERY, §1 and dulcimer. It is also the modern German term for the psaltery.

Psaltery [sawtry] (Fr. *psaltérion*, *saltere*, *sauterie*; Ger. *Psalterium*, *Psalter*; It. and Sp. *salterio*). An instrument of the zither family (classified as a CHORDOPHONE). It consists of a raised piece of wood, or a wooden box with soundholes, without a neck; it may be rectangular,



triangular or trapeziform in shape (the various forms are shown schematically in fig.1). The instrument may be strung singly or with multiple courses. The strings are stretched parallel to the soundboard over one or more bridges and attached at either side by wooden or bone pegs, or metal pins. In relation to each other, the strings are parallel or fan-shaped in their arrangement, depending on the shape of the psaltery. Usually the strings are plucked, by the fingers or by plectra. (For psalteries struck with hammers, *see* DULCIMER.)

1. The ancient Greek and Latin terms. 2. The instrument: medieval and Renaissance. 3. Baroque, Classical and modern.

1. THE ANCIENT GREEK AND LATIN TERMS. The Latin term *psalterium* (Gk. *psaltērion*) was applied to a variety of ancient and medieval string instruments. It belongs to the category of words (like organum and *antiphona*) that requires special study to trace frequent shifts in meaning. Tentatively the history of the term falls into three stages: its original usage, in its Greek form, as a term for the harp; as a term figuring prominently in ecclesiastical literature concerning the Book of *Psalms*; and its eventual application to box zithers such as the psaltery and dulcimer.

The term was derived from the Greek *psallein* ('to pluck with the fingers'); the related *psaltria* might refer to female players of the more common kithara or lyre, but *psaltērion* itself was reserved for the comparatively rare harp. Athenaeus (xiv, 636), for example, quoted Apollodorus identifying it with the MAGADIS, another term for harp; and Pseudo-Aristotle (*Problems*, xix.23) referred to the unequal strings of the triangular *psaltērion* (*see* TRIGŌNON). (*See also* GREECE, §I, 5(iii)(b).)

The term entered Christian literature by way of the Septuagint, the translation of the Old Testament into Greek made in the 3rd century BCE, which served as the basis for early Christian versions of the Bible. The Septuagint in most cases rendered *nebel*, the Old Testament harp, by either *nabla* or else (especially in the psalms) *psaltērion*. At the same time it translated the Hebrew *mizmor*, which occurs in the superscription of 57 psalms, as *psalmos*, a hymn sung with harp; this led Greek-speaking Jews to adopt for the entire book the name *biblos psalmōn* ('book of psalms'), and eventually simply *psaltērion* ('psalter'). Jerome corroborated these usages in the Vulgate by rendering *nebel* as *psalterium* with even greater consistency than did the Septuagint.

1. Various shapes of psalteries

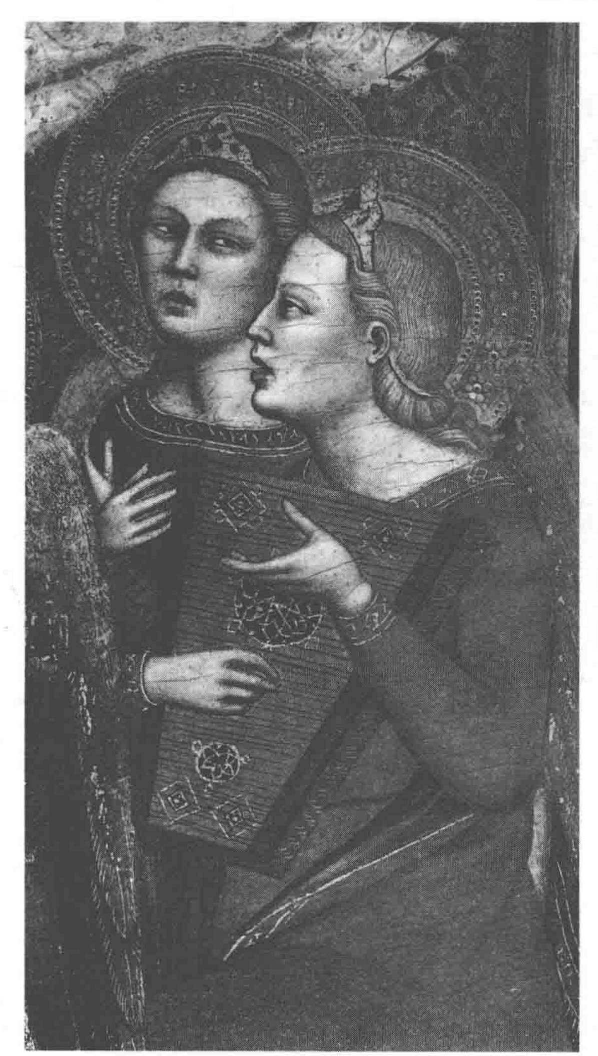
These circumstances, that the Book of *Psalms* as well as one of its most frequently mentioned instruments were both called *psalterium*, have assured for the term a rich existence in Christian literature. Its hundreds of occurrences in patristic and medieval commentary on the psalms serve mostly as starting-points for allegorical exegeses, but a number of passages have at least some organological significance. Eusebius of Caesarea established in his prologue to the Psalter (*PG*, xxiii, 73) the notion that David stands in the midst of his four subordinate Levite musicians, Asaph, Ethan, Heman and Idithun, holding the *psalterium*. Later, Isidore of Seville (*GerbertS*, i, 23) described the instrument as being shaped like the triangular Greek letter *delta*, a reference that is found in most subsequent psalter prologues. Meanwhile, commentary on Psalm xxxii.2, following the lead of Basil (*PG*, xxix, 328), regularly referred to the contrast between the kithara with its soundchest at the bottom of the instrument and the *psalterium* with its soundchest at the top, a feature corroborated by ancient depictions of harps (Wegner, pls.68, 70, 72). These references add little to present organological knowledge but do at least suggest general unanimity among Christian, Jewish and Greek sources in their identification of *psalterium* with the triangular harp. At the same time the Christians declare, rather too categorically, that the instrument had ten strings in imitation of the Ten Commandments, a concept deriving from occasional Septuagint phrases such as 'en decachordō psaltēriō' (Psalm xcii.4).

In the Carolingian period a contradictory tradition arose when the *psalterium* was said to be *quadratum* ('rectangular'). The earliest extant source for this notion, Hrabanus Maurus's *De universo* (*PL*, cxi, 498), pronounced it in the same passage to be both 'quadratum' and 'ut alii volunt, in modum deltae literae' ('as others prefer, in the shape of the letter delta'). Subsequently the two conceptions of its shape co-existed: the triangular in the more conventional psalter commentaries (e.g. Honorius of Autun, *PL*, clxxii, 269), and the rectangular in the group of texts associated with the curious letter of Pseudo-Jerome to Dardanus. The former is illustrated chiefly by depictions of David holding a variety of string instruments, many of which bear resemblance to real instruments (both contemporary and classical); while the latter is illustrated with a schematic rectangular shape traversed by ten lines, suggesting a pseudo-instrument inspired by the text (although some might see a relationship with the roughly rectangular kithara of ancient Magna Graeca). It is this latter instrument which some organologists have singled out as the *psalterium decachordum* (fig.2).

The precise steps leading to the last stage in the history of the term *psalterium* – its application to box zithers which came into the West by way of Moorish Spain and Byzantium – have not received definitive study. The underlying reason for the change in the term's meaning, however, may have been the general resemblance of the prevailing two-dimensional illustrations (in both their triangular and rectangular forms) in early medieval manuscript illumination and sculpture to the more complex yet equally flat shapes of contemporary zithers. Frequently the artist seems to have rendered a harp as a zither by failing to isolate one of its sides as a soundchest

2. Page from an early manuscript of the Pseudo-Jerome epistle to Dardanus, northern France, mid-9th century (F-AN 18, f.13r); King David holds the so-called 'psalterium decachordum' or 'psalterium quadratum' – several other schematic instruments appear, also inspired by the text

and by giving the impression of a solid board or bow behind the strings. This, together with the absence of a neck on either instrument, as well as the general fluidity of early medieval instrumental terminology, renders the final, contradictory application of the term not at all surprising.



2. THE INSTRUMENT: MEDIEVAL AND RENAISSANCE. The early history of the psaltery is as yet unfathomed, as there is insufficient coincidence between verbal descriptions and visual representations. The triangular and rectangular psalteries mentioned in the letter from Pseudo-Jerome to Dardanus may or may not have actually existed when this hoax was perpetrated in about the 9th century CE, but from that time onwards they appear more and more frequently in the visual arts, played generally by David and his musicians or by Elders of the Apocalypse. Some examples are fantasies which could never have worked, while others display a knowledge of craftsmanship that must have been based on fact. The words 'rote', 'rota' and 'rotta', much associated with the lyre family, were sometimes also applied to the triangular psaltery: in one piece of evidence, on an 11th-century capital in the cloister of the abbey of Moissac, a musician holding a triangular psaltery appears with a carved inscription naming the instrument as a *rota*. This carving is one of many that could be mistaken for a triangular harp, but other examples, particularly manuscript illustrations, show that the strings of the psaltery run parallel to the soundboard. The absence of soundholes for many of these representations may indicate that such psalteries were basically raised wooden boards rather than hollow boxes. From the 12th century onwards, however, soundholes appear with greater frequency, suggesting the presence of such a box; at the same period the box was sometimes flanked by a set of strings on each side, thus producing a double psaltery.

In the Middle Ages, European instrumental resources were considerably enlarged by importation from the East, via Byzantium (from the 10th century to the 12th) as well as via the Iberian Peninsula where the Arab invasion began in 711. Andalusia gradually became the melting pot of Eastern and Western culture, and Persian-Arabian instruments spread northwards via Catalonia to France and the rest of Europe. The Eastern SANTUR, an isoceles trapezium-shaped psaltery played by striking the strings with hammers (therefore a type of DULCIMER), was known to Spanish Muslims in the 11th century. The instrument was either brought to Europe from what is now Turkey, or was disseminated in the opposite direction from Europe to the East. In 13th-century Spain, besides the then still popular *rota* and *citara*, there existed two types of psaltery known as the *canon entero* and the *medio canon*; these are depicted in the *Cantigas de Santa María* of Alfonso el Sabio, King of Castile and León (reigned 1252–84). The name *canon* was subsequently absorbed into other languages (*see* CANON (ii)). The *canon entero* and the *medio canon* correspond to the Islamic *nuzha* (rectangular psaltery) and the QĀNŪN (trapeziform in shape, one of the sides being rectangular) respectively.

During the Middle Ages a type of psaltery with incurved sides, known as the 'pig's head psaltery' (It. *istrumento di porco*; Ger. *Schweinekopff*) on account of its shape (fig.4), became very popular. This was generally single- or double-strung. The Latin names 'ala', 'ala entera' and 'medio ala' were sometimes applied to wing-shaped psalteries. The Iberian pig's head psaltery called *ala entera* (whole wing) appears in three miniatures in the *Cancioneiro da Ajuda* (*P-La*). A half-wing psaltery known as the 'Bohemian wing' was used in eastern Europe. Also in eastern Europe there flourished the instrument now known as the psaltery-harp, which combined the basic features of both harp and psaltery and thus contained a double soundbox. Examples of psalteries found further north include the Finnish KANTELE (with related forms found in Lithuania, Estonia and Latvia) and the Russian GUSLI.

The strings of the medieval psaltery were made of metal or gut. Egidius de Zamora (*Ars musica*, *c*1270) recommended brass and silver strings. According to 'Le bon berger' (1379) the triangular *rota* was gut strung (see Marcuse, 1975, p.217). Metal strings for the *qānūn* are mentioned in the 14th-century Persian treatise *Kanz al-tuḥaf*. 'Abd al-Qādir (*d* 1435) prescribed twisted copper strings for the trichordally strung courses of the *qānūn*.

Eastern psalteries such as the *qānūn* and *santur* were (and still are) played in a horizontal position. In the *Cantigas de Santa María*, psalteries are depicted in a vertical playing position. The strings were plucked by the fingers or by plectra, such as birds' feathers, quills cut from birds' feathers or 'dediles' (rings worn on the fingers, with quills attached); the latter technique was used in Spain and Italy, especially in the 18th century (see §3 below). Psalteries played by striking the strings with hammers (such as the *santur*) are more properly defined as dulcimers.

3. Trapeziform psaltery with three strings to a note: detail from the 'Coronation of the Virgin with Adoring Saints' attributed to Jacopo di Cione and his workshop, 1370–71 (National Gallery, London)

The psaltery was widely used up to about 1500, being referred to frequently in lists of musicians such as that of the Feast of Westminster in 1306, where performers included 'Gillotin le Sautreour' and 'Janyn le Sautreour qui est ove Mons. de Percy'. Like most other medieval instruments it had no specific repertory but was used to play whatever music the occasion demanded. Its use as a solo instrument is well demonstrated by Chaucer's often-quoted passage from 'The Miller's Tale':

> And al above ther lay a gay sautrie,
> [On which he made a-nyghtes melodie]
> So swetely that all the chambre rong:
> And *Angelus ad virginem* he song.

The *canon entero* is mentioned in Arcipreste de Hita's *Libro de buen amor* (1330):

> Dulce *canno entero* sal'con el panderete
> Con sonajas d'açofar faze dulçe sonete.

The diatonic psaltery could not cope with the demands of Renaissance chromaticism and in the 15th and 16th centuries was used less. However, chromatic notes were made possible by the development of a dividing bridge system applied to isoceles trapeziform psalteries, as in the *Hackbrett* depicted in Virdung's *Musica getutscht* of 1511 (fig.5; see also §3 below). Rather than adding extra strings for chromatic notes between the diatonic ones, the use of dividing bridges meant that one string or course could serve for two notes. Another line of development was the addition of a keyboard to the psaltery, foreshadowing the invention of the harpsichord (fig.6).

3. Baroque, Classical and modern. In western Europe during the early Baroque period the struck dulcimer and the plucked psaltery evolved along similar structural lines, having a trapezoid soundbox with both divided and undivided courses of strings running either over long bridges comprising several separate sections or over files of individual bridges. This allowed the development of fully or almost fully chromatic instruments with a wider compass. The early stages of these later developments can be seen in the *Hackbretter* depicted in Praetorius's *Theatrum instrumentorum* (1620; pls.xviii and xxxvi) and the simplest model of the *psaltérion* illustrated in Mersenne's *Harmonie universelle* (1636–7; bk 3, p.174).

Already in 1650 Athanasius Kircher referred in his *Musurgia universalis* to a three-octave, plucked *Psalterium* and illustrated one with a few chromatic notes. Preference for one of the two playing techniques was generally divided along geographical lines. The plucked instrument, known as the *salterio*, became the norm in the Mediterranean countries, spreading from Italy to the Iberian peninsula and subsequently to Latin America. The situation in France has not been fully researched but both forms were known and played there.

Few dated Italian psalteries are to be found from the 17th century but there are Italian instruments attributed to that period. The 'modern' psaltery seems not to have been played at all in Spain during the 17th century, since theoretical works refer to the biblical instrument and other documentary references to a *salterio* appear to indicate the string drum, also known as the *salterio* and usually played together with a tabor pipe. There is, however, no shortage of 18th-century Italian and Spanish psalteries, while examples from Latin America also exist. A typical mid-18th-century *salterio* might have had 24 courses of four unison strings running over two or three sectioned bridges dividing the strings in various ratios. It would have had a compass of almost three chromatic octaves from *g* (G is the basic key of the *salterio*). As the century progressed larger instruments were made: with a compass extending down to *c* and courses of six strings in Spain; with additional files of bridges and extra nuts allowing a more convenient tuning pattern in Italy. Bass courses sometimes had one less string than the treble ones.

Several documents from Italy, Spain and Brazil include an explanation of psaltery tuning but only two works are known that deal with playing technique: Pablo Minguet y Yrol's *Reglas y advertencias generales* (1754) and Giambattista Dall'Olio's *Avvertimenti per suonatori di salterio* (1770; reproduced by Count Luigi Francesco Valdrighi in 1879). They confirm the use of a plucking technique with the thumbs and one or more fingers from each hand. There is also evidence of the alternative use of quills attached to rings, perhaps even to thimbles, worn on the fingers. Whereas Kircher had described an alphabetic tablature, both Minguet y Yrol in his *Reglas*

4. (a) Pig's head psaltery: detail of 'Music-Making Angels' from the 'Assumption of the Virgin' alterpiece by Hans Memling, completed 1492 (Koninklijk Museum voor Schone Kunsten, Antwerp); (b) Bohemian wing: miniature from the Passional of Abbess Kunhuta, c1313–21) (CZ-Pu XIV. A. 17)

and Antônio Vieira dos Santos (a Portuguese emigrant living in Brazil during the first half of the 19th century) in a manuscript anthology provide music in numerical notation. Normal notation, however, seems to have been the more usual system. Players of the *salterio* in its 18th-century heyday were usually members of the upper and moneyed classes, such as members of the Corvi and Travaglini families from Spoleto, or belonged to religious orders, e.g. nuns of the Convento de la Encarnación in Avila. The German, Frau Bauer, and the Spaniard, Juan Bautista Pla, better known as an oboist, performed as international virtuosos on the psaltery; Valdrighi also listed some Italian virtuosos.

The corpus of surviving Baroque and Classical music continues to grow as research progresses. It consists not only of anthologies of simple popular, dance and military music for solo psaltery but also accompanied and unaccompanied sonatas for one or two psalteries, chamber music with bowed strings and even concertos or other orchestral works. Emanuele Barbella, Niccolò Jommelli, Carlo Monza and Florido Ubaldi are among the 18th-century Italian composers named in manuscript sources; Vicente Adán, Braulio Canales and Gaspar Esmit [Smith] among the Spaniards. The psaltery was also used to accompany vocal music, both secular and sacred (mostly non-liturgical), with and without obbligato passages.

While little or no psaltery music is known from the 19th century in western Europe, its continued use during the early decades is documented. The Ospizio dei SS Giuseppe e Lucia in Naples, for example, employed a *salterio* teacher among its music staff in 1823–4. Spanish music historians writing in the latter part of the century mention seeing, or hearing of, the psaltery being played in earlier years in eastern Spain. In Mexico the 18th-century psaltery received a new lease of life when late in the 19th century it became a standard component of popular music ensembles. It is to be found in two sizes, the small *requinto* and the larger *tenor*. Such bands today may include several psalteries of each size. Other forms of psaltery are still played elsewhere in the world, e.g. the QĀNŪN and the KANTELE.

For a short time in the early 20th century small rudimentary psalteries in the shape of a right-angled trapezium were produced in some European countries, mainly for teaching purposes. In the second half of the century, Baroque and Classical psaltery music was rescued from oblivion in Europe and the USA as a result of its publication for performance on the dulcimer. Nevertheless a few musicians are using the Baroque plucked technique. A pioneer in this field has been Paul Gifford. Nelly van Ree Bernard has been active in the promotion of the earlier types of psaltery, which are now to be found in many ensembles specializing in medieval music.

JAMES W. MCKINNON (1), NELLY VAN REE BERNARD, MARY REMNANT (2), BERYL KENYON DE PASCUAL (3)

Psaltēs. A chanter in a Byzantine choir. The term was already in use by the 4th century for the liturgical cantor.

Psaltikē (Gk.). *See* AKOLOUTHIAI.

Psaltikē technē (Gk.: 'the art of chanting'). A theory of chanting that first developed in the 14th-century Byzantine Church with the appearance of the AKOLOUTHIAI manuscripts. It taught liturgical singers how to expand traditional melodies through techniques of vocal ornamentation and improvisation. New notational symbols and *hypostaseis* (non-diastematic neumes) indicated the use of the standard embellishments of the *psaltikē technē* in music manuscripts; they were notated in red ink between the principal melodic line and the text (*see* BYZANTINE CHANT, §3(i)(c)). The *hypostaseis* were explained in treatises and exercises for students of chant. Proponents of the theory, such as MANUEL CHRYSAPHES, criticized those who believed that a simple, note-by-note reading of Byzantine neumes was sufficient.

DIMITRI CONOMOS

Psaltikon (Gk.). A liturgical book of the Constantinopolitan Byzantine rite, containing the florid chants sung by the

soloist (*psaltēs*). *See* BYZANTINE CHANT, §§3, 7–8, 10(ii), 11–12, 15; KONTAKION, §2; and LITURGY AND LITURGICAL BOOKS, §IV, 3(xiii).

Psellus [Psellos], **Michael** [Konstantin] (*b* Nicomedia or Constantinople, 1018; *d* after 1078). Byzantine scholar, politician, philosopher and music theorist. Psellus began his career as a government official and eventually became imperial secretary and professor of philosophy at the university in Constantinople. He fell out of favour and in 1054 retired to a monastery on Mount Olympus in Bithynia. Psellus later returned to the imperial court, finally attaining the office of first minister under Michael VII.

The encyclopedic learning which Psellus displayed in his writings and, in particular, his revival of Platonism were important not only for Byzantine culture but also for the influence they exerted on Western humanism. His writings on music include *Eis tēn psychogonian tou Platōnos*, a commentary on Plato's *Psychogony* that draws upon Proclus's commentary on the *Timaeus*; three letters, of which one, a discussion of ancient Greek music, describes the essence and effect of the art; an introduction to rhythm, *Prolambanomena eis tēn rhythmikēn epistēmēn*, based on *Rhythmic Elements* by ARISTOXENUS; and a treatise *On the Resounding Hall at Nicomedia*, which, in its description of an echo, touches on questions of acoustics.

A treatise on the four mathematical disciplines (*Syntagma eusynopton eis tas tessaras mathēmatikas epistēmas*), which includes an introduction to harmonics (*Mousikēs synopsis ēkribōmenē*), was formerly attributed to Psellus, but is now thought to be the work of the monk Gregorius Solitarius, writing in about 1008. This introduction is the earliest known Byzantine treatise on music. In its empirical approach to the study of harmonics it largely follows the school of Aristoxenus, and discusses the names of the notes, intervals, systems, modes, scales and *melopoiïa*. However, the focus of the work, an account of the theory of intervals, moves from the Aristoxenian additive definition of the micro-interval (*diesis*) to a Pythagorean concept of harmonics as a mathematical proportion and draws particularly on the music theory of Theon of Smyrna (*see* GREECE, §I, 6). The later Byzantine scholars GEORGIOS PACHYMERES and MANUEL BRYENNIUS in their more comprehensive treatises on music theory relied heavily on this compendium, quoting many passages verbatim.

LUKAS RICHTER

Pseudo-Aristoteles. *See* LAMBERTUS.

Pseudo-Chilston. The name by which an anonymous treatise in *GB-Lbl* Lansdowne 763 on DISCANT is now generally cited. The treatise was wrongly attributed by Burney and Hawkins to the author of three treatises that follow it in the manuscript. *See* CHILSTON.

Pstrokońska-Nawratil, Grażyna (Hanna) (*b* Wrocław, 16 July 1947). Polish composer. She studied composition with Poradowski at the State Higher School (later Academy) of Music in Wrocław, graduating in 1971. She completed her studies in France with Messiaen and Boulez, participated in seminars in Aix-en-Provence on the music of Xenakis and worked at the experimental music studios in Paris and Marseilles. In 1971 she began to teach at the Wrocław Academy, later becoming professor (1993) and head of the theory and composition department. Among the many prizes she has won in international competitions are honourable mention for *Ostinato* at the 1975 GEDOK competition in Mannheim and third prize for *Ikar* at the UNESCO International Rostrum of Composers in Paris in 1987. Pstrokońska-Nawratil favours musical forms grounded in tradition while eschewing classical stylization; her rich and varied resources are always subordinated to her main goal, expression. She has developed her own formal methods, which she calls 'structure shifting'.

BARBARA ZWOLSKA-STĘSZEWESKA/R

Psychedelic rock [acid rock]. A style of rock that grew out of the hippies' removal to San Francisco in 1965, in connection with the use of the drug LSD or 'acid'. It featured extended blues-based improvisations, surrealist lyrics with performances often loud and accompanied by lavish light-shows. The effect was intended to evoke or support a drug-induced state. Prominent bands included Jefferson Airplane, the Grateful Dead, Janis Joplin's Big Brother and the Holding Company and Country Joe and the Fish, who established an alliance with the Californian folk scene. The underground hippy movement largely died after 1967 owing to its exploitation by the media and promoters. However it developed in the UK in the late 1960s, particularly through the experiences with LSD of some musicians, where the style was often combined with the use of Indian instruments. Lennon's early experiments yielded *Tomorrow never knows*, which contained lyrics from the Tibetan Book of the Dead. Hendrix harnessed guitar distortion to counter-cultural sentiments in songs such as *If Six Were Nine* and *Purple Haze*, and the Yardbirds produced the graphically titled *Over Under Sideways Down*, while the Small Faces' album *Ogden's Nut Gone Flake* captured the British mods' exchange of amphetamines for LSD. Other artists, such as Pink Floyd, the Incredible String Band and Donovan, were also important. Visually, psychedelic bands used a laid-back approach and confident collision of contradictory images, particularly military uniforms with Hindu kaftans (in the UK) or Amerindian clothing (in the USA). In the 1980s such British bands as the Stone Roses attempted to recapture Hendrix's sound, while the Ozric Tentacles and others married the techniques to a resurgent counter-cultural lifestyle which merged with the rave scene. Psychedelia also infused 1980s dance music and styles like hip hop.

Psychoacoustics. *See* HEARING AND PSYCHOACOUSTICS. *See also* PSYCHOLOGY OF MUSIC, §II.

Psychology of music. Psychology of music is the discipline that studies individual human musical thought and behaviour from a scientific perspective. Activities that have been studied using the tools of psychology include sensation and perception, listening, performing, creating, memorizing, analysing, learning and teaching. These activities have been studied across the lifespan of individuals, from birth to old age, and in a variety of social contexts, from domestic, through educational, to therapeutic and professional.

I. History. II. Perception and cognition. III. Affect. IV. Performance. V. Early development. VI. Musical ability. VII. Social psychology. VIII. Neuropsychology.

I. History

1. Antiquity to the 19th century. 2. 1860–1960. 3. The late 20th century.

1. ANTIQUITY TO THE 19TH CENTURY. Speculation concerning sound and music goes back to ancient times. The first reported experiments relating to the psychology of music are credited to Pythagoras in the 6th century BCE. He is said to have demonstrated that the perceived pitch of a vibrating string varies inversely with its length, and is also credited with establishing that the musical consonances of the octave, 5th and 4th correspond to simple ratios formed by different lengths of string. His followers, however, lost faith in the experimental method and instead attempted to explain musical phenomena purely in terms of mathematical relationships. For example, Anaxagoras (*c*499–428 BCE) held that the sense perceptions were too weak to permit the establishment of scientific truth. Later, the music theorist Boethius (480–524 CE), a dedicated Pythagorean, wrote in *De institutione musica* (Eng. trans. in Bower, 1967, p.58): 'What need is there to speak further concerning the error of the senses, when this same faculty of sensing is neither equal in all men, nor at all times equal within the same man? Therefore anyone vainly puts his trust in a changing judgment since he aspires to seek the truth'.

An important dissenter from the numerical stance of the Pythagoreans was Aristoxenus (*c*320 BCE), who argued forcefully that music could not be understood solely by considering mathematical relationships. He foreshadowed modern study of the psychology of music by arguing that musical phenomena were perceptual and cognitive in nature and should be studied as an experimental science. In his treatise *On Harmonics* he wrote (Eng. trans. in Macran, 1902, pp.102–4):

> It is plain that the apprehension of a melody consists in noting with both the ear and intellect every distinction as it arises in the successive sounds – successive, since melody, like all branches of music, consists in a successive production. For the apprehension of music depends on these two faculties, sense perception and memory; for we must perceive the sound that is present and remember that which is past. In no other way can we follow the phenomenon of music.

Aristoxenus was not understood by his contemporaries, nor by the music theorists of the Middle Ages and Renaissance, whose thinking was firmly rooted in the numerical approach of the Pythagoreans. However, because of the Pythagorean influence, music was included in the scientific programme of higher education, the *quadrivium* of the 'related studies' of astronomy, geometry, arithmetic and music; as a result, most of the leading figures of the scientific revolution wrote extensively on music and the way it is perceived (Hunt, 1978).

The generation of thinkers preceding those of the scientific revolution included some remarkable musical empiricists. Two in the 16th century were particularly noteworthy. G.B. Benedetti is considered to have been the first to relate the sensations of pitch and consonance to vibration frequencies. Vicenzo Galilei, the father of Galileo, made a number of important discoveries. He showed by experiment that, although consonant intervals were associated with simple numerical ratios for pipe and

string lengths, this was not true, for example, for the relative weights of hammers nor for the relative volumes of pipes. He also showed that, with the length of a string held constant, varying its other parameters, such as material, thickness and tension, resulted in alterations in its perceived pitch. From such findings Galilei argued against a rationalistic approach to music, in particular explanations based solely on simple numerical ratios, and contended that music perception should be considered an empirical science. In the same vein, anticipating many present-day psychologists, Galilei claimed that disputes over tuning systems were useless, since the small differences in tuning that are at issue were not detectable (Palisca, 1961).

Scientists of the early stages of the scientific revolution, such as Mersenne, Galileo, Kepler, Huygens and Descartes, all made important contributions to the understanding of music perception. At this time, relationships between pitches and rates of vibration were established in strings, pipes and bells, with careful documentation of the involvement of other factors such as material, thickness and tension in the case of strings. The phenomenon of beats was discovered, as was the harmonic series, and sympathetic resonance was explored. Issues such as tuning and temperament were extensively discussed, as were consonance and dissonance (Cohen, 1984). This last issue was particularly strongly debated. Galileo favoured a low-level approach, arguing that consonance was perceived when there occurred a distinct pattern of beating on the eardrum (*see* CONSONANCE), and that dissonance was perceived when the beating was irregular (Eng. trans., repr. in Lindsay, 1972, p.151):

> The offence [the dissonances] give, proceeds, I believe, from the discordant and jarring pulsations of two different notes, which, without any proportion, strike the drum of the ear . . . Those pairs of sounds shall be consonances and will be heard with pleasure, which strike the *timpanum* in some Order . . . that the cartilage of the *timpanum* or drum may not be subject to a perpetual torment of bending itself in two different ways, in submission to the ever-disagreeing percussion.

Mersenne placed the site of the interactions giving rise to the perception of consonance and dissonance further along the auditory pathway. But Kepler argued that high-level factors were instead responsible (Eng. trans. in Cohen, 1984, p.31):

> It seemed best to me to define any sense organ in such a way that the sense perception that brings forth pleasure or grief is not completed until the species of the organ that is destined for the perception in question, as it is affected from outside, has reached inwards, through the guidance of the spirits, the tribunal of the general sense.

Descartes presented what is essentially the present-day view of this issue by distinguishing between sensory consonance on the one hand and musical consonance on the other, the first being considered a low-level and the second a high-level phenomenon (Eng. trans. in Cohen, 1984, p.169):

> But in order to determine what is most agreeable, one should consider the capacity of the listener, which changes like taste, according to the person in question. . . But one can say absolutely which consonances are the most simple and the most accordant ones; for that depends only on how often their sounds unite, and how closely they approach the nature of the unison.

Among the remarkable group of scientists of this period, the one who contributed most to the empirical study of music was Mersenne, whose *Harmonie universelle* (1636–7) is a landmark in the history of the subject. He is credited with several notable discoveries. He devised an ingenious experimental method by which he showed that the vibration frequency of a string varies inversely with its length. In this way, he was able to relate the sensation of pitch to vibration frequency, and so to explain the inverse relationship between pitch and string length that had been known since Pythagorean times. Also using this method, Mersenne was able to estimate the vibration frequency that corresponded to a particular pitch.

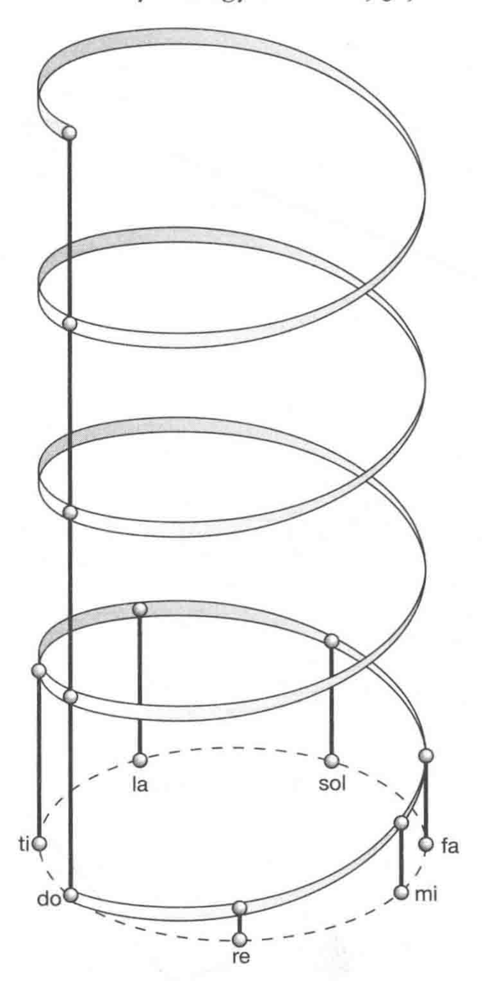
Mersenne also noticed and investigated the phenomenon of beats – the waxing and waning in loudness that occur when tones that are close in frequency are sounded together. In addition, he discovered that complex instrument tones were composed of a fundamental together with a number of harmonics, and was even able to identify by ear the first five components of the harmonic series. Mersenne anticipated later work on timbre by hypothesizing that the sounds produced by different musical instruments could be characterized by the mixtures of harmonics they contain.

Notable among scientists of the late 17th and the 18th centuries who contributed to the understanding of sound were Wallace, Sauveur, Newton, Bernouilli, d'Alembert and Euler. The invention of calculus by Newton and Leibniz was a breakthrough of fundamental importance to the understanding of acoustics. An important mathematical contribution was later made by Fourier (1822) who showed that any curve can be represented by the superposition of a number of simple harmonic curves. Later, Ohm (1843) extended Fourier's analysis to sound waves. Specifically, Ohm's acoustical law states that any complex periodic sound wave can be analysed into an appropriate set of simple waves of specified frequency, amplitude and phase; this mathematical analysis formed an important basis for later theorizing about sound and its perception. Technological advances about this time enabled experimenters to explore the perception of simple sounds with carefully controlled parameters. Such work included the invention of the siren by Cagniard de Latour (1819) and the invention of the tonometer by Scheibler (1834). Resonators, first described by Helmholtz (1863; see §I, 2, below), enabled investigators to analyse complex tones into their constituent frequencies.

Armed with these new technologies, scientists began the systematic exploration of certain basic characteristics of the hearing mechanism. A number of investigators, including Savart (1830), Helmholtz (1863) and Koenig (1899), made determinations of the lowest frequencies that could be heard, and arrived at values ranging from 8 to 32 Hz. Later, Wegel (1922) measured the threshold of audibility as a function of frequency in the range from 20 Hz to 20 KHz. Other scientists, such as Luft (1888) and Vance (1914), attempted to measure the smallest detectable difference in pitch.

2. 1860–1960. An empirical psychology of music slowly began to develop during the latter half of the 19th century – that is, at the same time as psychology became established as an independent scientific discipline. Initially, most studies were limited to the perception of single tones or tone combinations. Helmholtz aimed to provide a scientific foundation for musical aesthetics by attempting to demonstrate how pitch is analysed by the ear and how timbre, intervals, chords, scales, keys and tonality may ultimately be related to the structure of harmonics in

tones. The complete title of his *Die Lehre von den Tonempfindungen als physiologische Grundlage für die Theorie der Musik* (1863) indicates his ambition to bridge the gap between physical and physiological acoustics on the one hand and musicology and aesthetics on the other. Helmholtz emphasized that music had a closer relationship to pure sense impressions ('reine Sinnesempfindungen') than any other art form. At the same time, however, he noted that the same properties of the human ear apparently could serve as foundation for quite different musical systems, thus pointing to the importance of artistic invention and cultural differences.



Unlike Helmholtz, the philosopher Carl Stumpf (1848–1936) had no laboratory of his own but had to make his observations in other institutions in physics or physiology or by using church organs, working with musicians – for instance, the violinist Joseph Joachim – and, not least, relying on his own experience as musician (he played the violin). His *Tonpsychologie* (1883–90) is an extensive treatment of perception and judgment of tones, in succession (vol.i) and heard simultaneously (vol.ii). On several topics he was able to predict results that would be confirmed only much later in more controlled investigations. Thus he discussed perceptual dimensions of timbre such as brightness and darkness, sharpness, fullness and roughness, and the physical correlates of perceived timbre. He observed that the same musical interval seems perceptually larger in higher octaves than in lower, a phenomenon later observed in connection with the mel scale (*see* SOUND, §4). A possessor of absolute pitch, he noted the advantages of this ability, for instance, when following complex modulations, but stressed that good relative pitch is generally more important for musicians. He described consonance in terms of perceptual fusion of the component tones into a single impression, most pronounced for the octave, followed by the 5th, the 4th, 3rds and 6ths, whereas other intervals show little fusion (and are dissonances). Earlier, Helmholtz had described dissonance in terms of rapid beats, an explanation not far from the much later explanation of sensory consonance and dissonance as related to critical bandwidths in hearing (Plomp and Levelt, 1965).

The emphasis on single tones rather than on real music was probably also due to so-called structuralism or association psychology, the first school in empirical psychology. According to this view, psychology should analyse experiences in our consciousness, using analytical introspection by trained observers in order to find the smallest elements in experiences and the principles for how they were combined ('mental chemistry'). The chief proponent of this school was Wilhelm Wundt (1832–1920), who founded the first experimental psychological laboratory in Leipzig in 1879. In the third volume of his monumental *Grundzüge der physiologischen Psychologie* (1911) he devoted much space to rhythm. Results from analytical introspection indicated that experience of rhythm included recurring auditory and kinaesthetic sensations and feelings of tension and relaxation. Rhythm was a popular subject for research by psychologists around 1900, and Wundt and many others studied how successive elements were grouped depending on tempo and on varying types of accent (see Gabrielsson, 1986). Wundt's (1905) emotion theory postulated three bipolar dimensions – pleasantness *v.* unpleasantness, excitement *v.* calmness and tension *v.* relaxation – which recur in many later studies of emotional expression in music.

Beginning in the 1910s, structuralism and analytical introspection were soon abandoned in favour of Gestalt psychology in Europe and behaviourism in the USA. Gestalt psychologists claimed that perception aims at finding good 'figures' (patterns, Gestalts), and that the whole is more than the sum of its parts. Gestalts are formed according to various principles (Köhler, 1929; Koffka, 1935) such as proximity (elements close to each other tend to form a Gestalt), similarity (similar elements tend to form one) and good continuation. Most examples were drawn from visual perception; there was little discussion of music. For instance, a melody (or a Gestalt) may be transposed to another key so that only a few or even none of the original tones appear in the transposed version, yet the melody is perceived as the same. Melodies are usually dominated by small intervals (principle of proximity) and performed using the same timbre (similarity). Of course, rhythms too are obvious examples of Gestalts. Fraisse (1956, 1974) described rhythm in terms of 'temps longs' and 'temps courts'. In production as well as reproduction of rhythms a clear distinction tends to be made between long and short elements, whereas elements of slightly different durations tend to be assimilated (that is, perceived or reproduced as of the same length). Both principles can be regarded as examples of a striving to achieve good Gestalts. Further applications of Gestalt principles to music, using somewhat different terminology, appeared much later (Bregman, 1990).

Gestalt psychology also influenced Géza Révész (1878–1955), the best-known European music psychologist during the first half of the 20th century. His most important contribution to music psychology was probably the so-called two-component theory of musical pitch (1913), meaning a distinction between tone height, continuously rising from low to high pitch, and tone quality ('chroma'), recurring anew in each octave (fig.1). The independence of these two components was later illustrated in a well-known demonstration by Shepard (1964). The German music psychologist Albert Wellek (1904–72) further elaborated this distinction, going as far as indicating the existence of two types of listeners, a 'linear' type who mainly attends to tone height and a 'cyclic' type who focusses on tone chroma (Wellek, 1939, 1963). Such typologies, however, are not now generally accepted. In *Einführung in die Musikpsychologie* (1946), Révész discussed colour hearing, music experience in deaf persons, and such controversial questions as whether different keys have different characters and whether there is any connection between mathematical and musical abilities. Révész described several tests of musicality devised by himself; however, they were never standardized and are thus practically forgotten. He also wrote a monograph (1925) about a musical prodigy.

In the USA, psychology was much influenced by the school of behaviourism. Behaviourists claimed that, in order to become a science, psychology had to abandon the study of phenomena in consciousness ('mentalism') and instead concentrate on the study of behaviours. Although music psychology too has been influenced by this school – see, for instance, the textbook by Lundin (1953) – behaviourism has perhaps had more impact on music education, emphasizing the importance of proper reinforcement to improve the learning of various musical

1. Two-component theory of musical pitch. Tone height is represented by the vertical dimension, tone qualities (chromas) by the circle. Tone quality repeats itself through each octave (each new round of the rising helix): reproduced from E.G. Boring, H.S. Langfeld and H.P. Weld: Foundations of Psychology (New York, 1948), 320

skills, than on music psychology. Indeed, the pioneer of music psychology in the USA, Carl E. Seashore (1866–1949), was not fond of behaviourism. He gathered a large group of researchers at the University of Iowa who investigated the performance of music on the piano and the violin and in singing, using specially designed equipment for accurate recording of timing, dynamics and intonation; he thereby demonstrated numerous 'deviations' from the designations in the musical score (Seashore, 1937, 1938; Gabrielsson, 1986, 1999). This research was interrupted by World War II, but many of the results (e.g. on vibrato) are now standard material in texts on music psychology. It was some decades before studies of music performance again received attention (Gabrielsson, 1999; see also §IV below).

The best-known part of Seashore's work was the *Seashore Measures of Musical Talents* (1919, 1939, 1960), which consisted of tests of elementary abilities such as discrimination of pitch, loudness, duration and timbre, as well as further tests of rhythm and tonal memory. They have been much criticized as lacking real musical content (e.g. Mursell, 1937). However, Seashore's conception of musicality was much broader than is usually supposed. In *The Psychology of Musical Talent* (1919) he described the musical mind in terms of musical sensitivity, musical action, musical memory and imagination, musical intellect and musical feeling, each of these areas including several factors. To find a person's capacity in these different areas, he proposed about 30 different measures, including the six mentioned above and many others, such as acuity of hearing, auditory and motor imagery, precision of movement, timed action, voice control, musical association and emotional reaction to music. These latter measures, however, never came into general use.

The concept of musicality was also discussed by Billroth (1895), von Kries (1926), Révész (1946), Wing (1948), and Lundin (1953). The *Wing Standardized Tests of Musical Intelligence* (1948, 1960) include tests of chord analysis, pitch change, memory, appreciation of rhythm, harmony, intensity and phrasing.

Besides the works already mentioned, a number of textbooks demonstrated the increasing breadth of music psychology during this period: various topics in musical listening and performance (Schoen, 1927, 1940; Mursell, 1937; Seashore, 1938, 1947; Truslit, 1938), the effects of music on behaviour (Diserens, 1926), musical composition (Bahle, 1936) and the social psychology of music (Farnsworth, 1958). An individual treatment of music psychology was proposed by the Swiss musicologist Ernst Kurth (1931), mainly based on his own musical experience and with a terminology much borrowed from physics ('musikalische Energie', 'Kraft, Raum, Materie'). Later reviews on activities during this time are, among others, of works on psychoanalytic approaches to music (Feder, Karmel and Pollock, 1990) and on performance (Gabrielsson, 1999).

3. The late 20th century. Music psychology of the late 20th century focussed on four main topics: (*a*) the cognitive representation of pitch and rhythm (and the emergent properties of harmony and melody); (*b*) the development of musical competence and skill; (*c*) processes underlying musical performance; and (*d*) the affective processes associated with music listening (e.g. preference, emotion). Almost all this work has been directed towards the music of the Western tonal tradition, with particular concentration on the period from Bach onwards.

Since the 1960s the dominant force shaping psychological investigations into music has undoubtedly been cognitive psychology. This sub-branch of psychology grew out of applied research during World War II into such phenomena as the capacity of radar operators to maintain vigilance. Sophisticated experimental techniques were developed which used quantitative aspects of performance on carefully controlled tasks (rather than introspective report) to infer the nature of underlying mental processes (Broadbent, 1958). The main theoretical tool was (and remains) the computational metaphor. The human mind was conceptualized as a complex set of interlinked but specialized programmes. Just as the early (and to a certain extent continuing) preoccupation of cognitive psychologists was with perception and representation of complex inputs (such as language; see Neisser, 1967), so the vast bulk of music psychology research of the late 20th century was concerned with the psychological processes underlying hearing, perception and memory for

music (following the seminal lead of, for instance, Deutsch, 1982). The reasons for this are complex (see Sloboda, 1988) but include the scientific wish to control as many aspects as possible of an experimental situation. Performance studies must loosen these controls, studies of composition must almost abandon them.

However, the emphasis on reception over production has important resonances with the nature of music engagement in contemporary urban and technologically orientated cultures. The vast majority of people in these cultures hear music many times a day but seldom compose or perform it. Psychology, like all sciences, seeks to generalize, and therefore has a predisposition to study phenomena that can be found in the many in preference to those to be found only in the few.

Cognitive psychology has also achieved its greatest successes in advancing the understanding of processes that span seconds rather than minutes or hours. For instance, a great deal is known about how human beings process words and a lot about how they process sentences, but almost nothing about how they process extended discourse, as found in books or plays. Similarly, music research has yielded immense dividends at the level of notes, chords and phrases, but very little at the level of complete works.

It is significant to note how a few core themes run through much of the work on music psychology:

(*a*) The relationship between measurable properties of sound and mental events is not straightforward. The human mind both adds to and subtracts from the acoustic surface in complex and sometimes counter-intuitive ways.

(*b*) These relationships are made more complex by a range of differences between people based on such factors as age, musical experience, social context and biological development.

(*c*) Music is multi-dimensional in its essence, and although it is possible to obtain some understanding of the operation of each dimension in isolation, the interplay of these dimensions in real music creates combinatorial complexities which severely limit the rate of progress of scientific understanding of anything but the most simple musical sequences.

(*d*) The dimensions of music that figure in traditional musical discourse (pitch, rhythm, metre, harmony, form) have proved fruitful concepts for psychological research, and have generally been clarified, rather than challenged, by psychological results.

(*e*) Despite demonstrable abilities of the perceptual system to learn to deal with increasing levels of musical complexity, there are psychological limits that place boundaries on the type of information that human listeners could, even in principle, extract and store from a musical source. Psychology, therefore, offers a strong challenge to the claim that audiences are infinitely educable by the avant garde. It is possible that music could be written that is not comprehensible by listeners, even in principle (Lerdahl in Sloboda, 1988).

Although the cognitive approach dominates music psychology, it has not totally inhibited other approaches. For instance, the study of musical skill and its acquisition has combined insights from cognitive theory with developmental, social, emotional, personality and motivational psychology. The study of the musical capacities of babies and young children has also integrated evolutionary, socio-biological and cross-cultural perspectives within a broadly cognitive approach. Neuropsychological approaches have gained significant momentum following the availability of new methods of recording brain activity during normal perception.

Because music psychology concentrates on the listener, it has yielded fewer practical outcomes than some might wish for. In general, listeners simply enjoy the music they choose and do not feel it necessary to inquire into the processes that lead to their enjoyment. Performers are often similarly reluctant to understand too much about the scientific basis of their art lest it somehow be corrupted by such knowledge. They might rather look to psychologists to offer advice on how to deal with performance anxiety and other psychological problems associated with the life of a musician. Although there exists useful research on these topics (e.g. Wilson, 1994), such research should perhaps be seen as an application of general psychology to musical life rather than an exploration of central themes in the psychology of music. Possibly the psychology of music tends to stand back from these applied problems, focussing instead on more philosophically based questions such as 'what elements is music in the mind made up of, given that it is demonstrably not an acoustic replica of the sound source?', 'what is it that makes a set of sounds cohere together in the mind as a musical unit?' and 'how is it that music can be the mediator of such strong and significant emotion?'. Applications of these questions to performance and composition will come indirectly out of the deepening understanding of the psychological bases of the underlying processes, as much as from piecemeal attempts to provide 'fixes' for particular limited-scale problems. For this reason, a strategic decision has been taken to limit the scope of the following sections of this article to fundamental, rather than applied, research. Much of the applied research focusses on educational problems; a representative body of such research is to be found in the *Journal of Research in Music Education* (1942–).

Although music-related research has been published in almost every psychological journal of note, since 1970 several specialist journals have emerged that cater exclusively to music psychologists: *Psychology of Music* (1973), *Psychomusicology* (1981), *Music Perception* (1983) and *Musicae Scientiae* (1997). They and the sources they cite constitute an almost complete record of the progress of the discipline over the last decades of the 20th century. In addition, the following books provide authoritative overviews of music-psychological research: Howell, Cross and West, 1985; Dowling and Harwood, 1986; Miller, 1989; Riess-Jones and Holleran, 1990; Butler 1992; McAdams and Bigand, 1993; Aiello, 1994; Deliège and Sloboda, 1996, 1997; and Hargreaves and North, 1997.

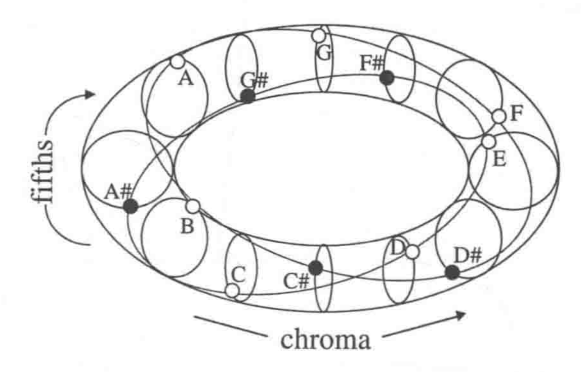
II. Perception and cognition

1. Pitch: (i) Introduction (ii) Cognitive approaches (iii) Psychoacoustical approaches (iv) Auditory scene analysis (v) Unified models and unresolved issues. 2. Rhythm: (i) Surface organization (ii) Grouping and metre (iii) Accent (iv) Rhythmic organization and tempo (v) Rhythm v. form. 3. Timbre: (i) Definition (ii) A set of auditory attributes (iii) A vehicle for source identity (iv) Contributions to perception. 4. Memory: (i) The nature of memory (ii) Recognition (iii) Recall.

1. Pitch.

(i) Introduction. In listening to a piece of music one may experience pitches that are sounded successively or simultaneously as forming coherent patterns which unfold as the piece progresses; one may hear both melody and harmony. Many aspects of these heard patterns – such as the sense that particular pitches seem more 'stable' than others, or that simultaneously sounding pitches fit more (or less) well together, or that the occurrence of certain pitches is highly predictable – appear to conform to the theoretical precepts of tonality or part-writing. Research, however, indicates that several factors that are not reducible to a single principle play a role in our experience of pitch.

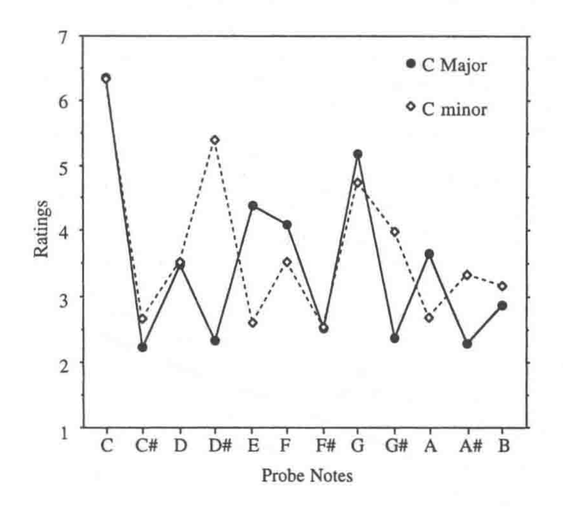


There are two main approaches to the study of pitch cognition, one centring on sensitivity to acoustical frequency and to frequency relations, the other on the influence of generic cognitive processes. Research in the early 20th century generally conformed to the first approach, developing from the pioneering work of Helmholtz. Its proponents, notably Seashore (see Seashore, 1938), believed that pitch constituted the direct correlate of acoustical frequency, the relation between pitch and frequency being mediated solely by the dynamics of our peripheral auditory mechanisms. Hence the experience of a difference between two pitches was

identified with the perception of a difference, or a ratio, between two frequencies. Empirical studies conducted within this research tradition tended to focus on the perception of isolated tones or tone combinations. However, some of the results of this reductionist approach proved difficult to square with the intuitions of musicians and theorists. For instance, Stevens's *mel* scale of pitch (see Stevens and Volkmann, 1940) could be interpreted as implying that the same interval would differ considerably in size according to the register in which it occurred. This type of disparity, together with the emergence of cognitive psychology in the 1950s, stimulated research that focussed on the role of generic cognitive factors in shaping the experience of musical pitch (see Shepard, 1982).

(ii) Cognitive approaches. Early work within this second approach, such as that of Francès (1958), indicated that factors other than frequency relations motivated many types of musical judgment, such as the tendency of performers to flatten or sharpen particular notes of the scale in particular melodic contexts. Dowling (1978) revealed the importance of notions such as scale and contour in musical perception, while Longuet-Higgins (1976) and Deutsch (1982) concentrated on providing accounts of the types of cognitive representation that could underlie the experience of pattern in musical pitch.

The most substantial research programme to have explored the role of generic cognitive factors in organizing pitch is that of cognitive-structuralism, developed initially by Shepard and Krumhansl, and elaborated and extended by the latter and others (see Krumhansl, 1990). The cognitive-structuralist view is that, underlying our perceptions and judgments of pitch relations, there is some form of schema (a mental structure that organizes the information received from our senses and is itself altered by that information, shaping our interpretations of what we encounter and determining the nature of our experiences: see Neisser, 1976). It postulates that the experience of pattern in musical pitch is better explained in terms of a multi-dimensional model than in terms of a one-to-one correspondence between pitch and frequency. In this view, pitches separated by the interval of a semitone can be thought of as being experienced as similar in a manner different from that in which pitches separated by the interval of an octave are similar, semitonal similarity and octave similarity corresponding to different and distinct psychological dimensions. The addition of another dimension, representing perceived similarity of pitches separated by the interval of a 5th, produces a model with structural properties similar to those proposed by Longuet-Higgins and by Balzano (1980, 1982). Fig.2 combines the 'circle of 5ths' dimension and the semitonal or 'chroma' dimension, collapsed across octaves.



A comprehensive series of experiments (many detailed in Krumhansl, 1990) appears to substantiate the existence of a multi-dimensional cognitive representation of pitch. These experiments examined the perception of pitch in a musical context. Listeners were presented with short sequences of pitches or chords; then a single pitch or chord was played and listeners were asked to indicate how well it fitted with the context. Further experiments involved pairs of pitches or chords, with listeners being asked to indicate how similar these were to each other. The listeners were not required to respond in explicitly musical terms; they merely provided numerical ratings of

2. Multi-dimensional, cognitive pitch representation: the 'circle of 5ths' dimension and the semitonal ('chroma') dimension (after Shepard, 1982, p.363)

degree of fit or similarity. Researchers were able to infer from their responses that particular pitches and chords were perceived as being consistently more or less stable or referential according to their relation to the contexts in which they were heard. For example, pitches interpretable as the tonic, mediant or dominant of a preceding major or minor context were judged to fit the contexts better than other scale notes, which themselves fitted better than non-scale chromatic notes (fig.3). Similarly, in both geometric and formal logical representations of listeners' responses to chords that followed harmonic contexts, it was found that triads on the tonic, subdominant and dominant were clustered more closely than were triads on other scale degrees, and that such representations produced coherent 'maps' of inter-key harmonic relations. These results were found even when listeners had only moderate amounts of formal musical training.

These representations of intra-key and inter-key pitch relations are interpreted by the cognitive-structuralists as constituting components of long-term musical memory, and as embodying a tonal hierarchy. It is suggested that the 'tonal hierarchy' is established in the long-term memory of a listener through long-term exposure to music that exhibits consistent and systematic features of pitch usage that conform to principles of Western tonality.

3. Cognitive pitch perception in relation to harmonic context (after Krumhansl, 1990, p.31)

Each instance of a tonal piece is experienced as embodying a specific and unique hierarchy of pitches, its 'event hierarchy' (see Bharucha, 1984); the importance of any particular pitch within the event hierarchy is determined by factors such as its frequency of occurrence or total sounding duration, and the salience accorded to it by its occurrence on metrically strong beats or at phrase boundaries. The regularities of all the different event hierarchies that a listener abstracts through exposure to many tonal works give rise to the tonal hierarchy in long-term memory (see §4 below).

Theoretical studies (see Krumhansl, 1990, chaps.3 and 5) and empirical research (Cuddy, 1997) appear to confirm the outlines of this process in which representations of tonal pitch relations, and tonal harmonic relations, are built up in long-term memory through abstraction and schematicization of the regularities of pitch usage in tonal works; these long-term representations play a significant role in shaping the experience of pitch relations in future listening. Developmental research (Krumhansl and Keil, 1982) has indicated that children systematically acquire sensitivity to tonal-hierarchical relations, with young children differentiating first between diatonic and non-diatonic pitches and later between more and less stable diatonic pitches. However, a number of subsequent studies (Speer and Meeks, 1985; Cuddy and Badertscher, 1987; Lamont and Cross, 1994; Lamont, 1998) suggest that the acquisition of a sense of pitch organization is strongly affected by formal musical training rather than simply emerging with increasing age and experience. Nevertheless, even the responses of very young children were found to be structured in ways that seemed to reflect pitch usage in the music to which they had been exposed.

The model of pitch cognition provided by the cognitive-structuralist research programme provides empirically grounded support for several significant theoretical accounts of pitch organization in music, for example Schoenberg (1954) and Lerdahl (1988), the latter an extension of Lerdahl and Jackendoff's generative theory of tonal musical cognition (1983). Nevertheless, this model has been criticized both by musicologists (Cook, 1994) and by other researchers in pitch cognition, who have objected that the experimental methods employed by the cognitive-structuralists tapped into short-term memory rather than long-term representations and that the model of pitch cognition presented in the tonal hierarchy was too static, taking little account of the dynamic attributes of tonal structure. These objections motivated the 'intervallic rivalry' theory (Butler, 1989), which takes explicit account of the fact that certain intervals such as tritones and semitones are less common than others such as perfect 4ths or 5ths within a diatonic framework (Browne, 1981) and may therefore serve to orientate listeners within such frameworks. In this view, the dynamic apprehension of the commonality or rarity of intervals, rather than the application of a static and hierarchical grid of pitch relations, motivates listeners' judgments of pitch stability.

Experimental research (Brown and Butler, 1981; Howell, West and Cross, 1984; Brown, 1988; Brown, Butler and Jones, 1994) indicates that listeners' responses are affected by diatonic rarity or ubiquity of musical intervals, and also that other factors – notably the ordering of pitches within intervals – play a significant role. On the basis of these findings, Brown, Butler and Jones suggest that the two theories accentuate different aspects of tacit knowledge about tonality: the intervallic rivalry model centres on processes of key discovery, the cognitive-structuralist account on processes of reinforcement of tonal function. Nevertheless, both are necessary for a listener to follow tonal music in real time.

(iii) Psychoacoustical approaches. In parallel with research focussing on generic cognitive factors, advances in the understanding of peripheral or sensory auditory mechanisms (*see* HEARING AND PSYCHOACOUSTICS) spurred the production of theories of pitch perception rooted in the operation of auditory processes. Boomsliter and Creel (1961) suggested that the experience of musical intervals and chords as consonant or dissonant could be accounted for in terms of the periodicities of the neural impulses to which they gave rise. Terhardt (1974, 1978) proposed a theory based on the processes involved in the perception of complex sounds, relying on the fact that a complex periodic sound is usually heard as having a unitary pitch identity (the virtual pitch of the sound, which may or may not correspond to a frequency component physically present in it). He suggested that this perception results from a process of analysing the complex tone into its component frequencies, weighting those components and re-integrating the results of weightings so as to derive a 'virtual' pitch identity for the complex periodic sound. He theorized that processes similar to those involved in complex tone perceptions account for the notion of chords as possessing roots (Terhardt, Stoll and Seewan, 'Pitch' and 'Algorithm', 1982).

This theory has been developed and extended by Parncutt (1988, 1989, 1997), whose account operates on more abstract entities (such as note names) and provides estimations of strengths of pitch relationships between successive chords as well as taking into account musical contextual factors in determining the chords' identities. Like Terhardt, he suggests that the same factors constrain perception of single pitches and chords, these factors deriving from the frequency-resolving power of the inner ear, the latency-period of the auditory nerve and the establishment of a system of pattern recognition based on 'best fit' to the harmonic series. His theory posits that hearing a chord involves an analysis of its constituent pitches, a weighting of these and the assignation of a set of 'virtual' roots to the chord that are weighted according to their likelihood of being noticed. These roots may confer on the chord a unitary identity in perception. The set of chord roots provides an index of the chord's perceptual stability and hence of its capacity to be used referentially; if one root is more more highly weighted than the others the chord is probably stable – a major triad is likely to have a fairly unambiguous root – whereas if several different roots are given the same weighting, the chord is likely to be perceived as unstable (e.g. the *Tristan* chord, which generates several equally likely roots). Parncutt's account provides a rationale for harmonic stability or instability – functionally, consonance and dissonance – that is rooted in the nature of the sensory processes involved in hearing.

(iv) Auditory scene analysis. The theories and findings emerging from cognitive and psychoacoustical research on pitch perception should be viewed as complementary rather than antithetical. Researchers in both traditions

acknowledge the influence of both sensory and cognitive factors in shaping our experience of pattern in pitch, and any theory of pitch perception that aims to be comprehensive must take account of both (for a more extensive review see Cross, 1997). Despite the inclusiveness of these theories, there remain aspects of our experience of pitch patterning – such as the experience of a melody as a unitary entity rather than as a succession of isolated sound events – that they do not address. Such concerns are central to the theory of 'auditory scene analysis' which emerged from the Gestalt theories of the 1920s and received its most coherent and complex form in the work of Bregman (1990). He defines it (1993, p.11) as 'the process whereby all the auditory evidence that comes, over time, from a single environmental source is put together as a perceptual unit'. This theory focusses on the ways in which details of an environment may be inferred from the regularities of the auditory events that it incorporates, and describes how such inferences might arise from the operation of acoustical, psychoacoustical and cognitive processes. Hence a succession of sounds that are heard as coming from the same location might lead to the inference that a single source is producing them, and on that basis the sounds may be experienced as grouped. Similarly, a succession of sounds that vary gradually and slowly in pitch, or vary by small pitch intervals, is more likely to be experienced as emanating from a single source and hence grouped in perception than is a series of sounds that vary rapidly and by large pitch intervals.

Within Bregman's theory, the 'Gestalt laws' (of similarity, proximity, good continuation etc.) are held to constitute 'best guesses' about the nature of the auditory environment, based either on prior knowledge or on the automatic functioning of the auditory system. These best guesses play a significant role in the operation of auditory scene analysis processes, and contribute to our experience of melodies (and of voices in polyphonic textures) as integrated entities in perception. Auditory scene analysis provides an empirical underpinning for aspects of both the expectation-based theories of Meyer (1956, 1973) and the implication-realization accounts of Narmour (1990, 1992). These theories (particularly that of Narmour) are intended to provide accounts of the dynamical flux experienced by a listener as a piece of music progresses, focussing on the principle ways in which a listener's ongoing expectation can be explained by reference to features of melodic structure as they unfold in time.

(v) Unified models and unresolved issues. The disjunct nature of the existing accounts of pitch perception – implicating not only cognitive but also psychoacoustical and ecological factors – derives in part from the strategies adopted by different research traditions, but it reflects a real need to draw on many different sources to account for our experience of pitch pattern in music. It appears that the operation of peripheral auditory mechanisms may determine aspects of harmonic and melodic stability; generic cognitive processes may provide the basis for the abstraction of statistical regularities of pitch usage and for the formation of dynamic and hierarchical schemas; and ecological considerations may determine aspects of temporal integration and segregation of pitches.

A number of theories attempt to integrate peripheral auditory, cognitive and ecological factors within unified frameworks, generally relying on distributed or connectionist ('neural network') models of human cognition. Bharucha's model (1987) is intended to exhibit the sensitivities to pitch structure shown by listeners through a process of unsupervised learning; it embodies multiple levels of pitch representation, ranging from the 'spectral' level (reflecting many of the characteristics of the acoustical signal) to the 'invariant pitch class' level (a highly abstract level of representation in which pitch classes are differentiated by tonal function). Similarly, Leman (1995) has developed a connectionist model that, through exposure to pieces from the tonal repertory, derives a representation of the tonal hierarchy matching that found by the cognitive-structuralists.

Notwithstanding the success of these theories in accounting for our experience of pitch patterning, they require modification to account adequately for the interaction of pitch with other pattern-bearing dimensions of music. Studies such as those of Monahan and Carterette (1985) and Schmuckler and Boltz (1994), and the research of Jones (1993), indicate that temporal structure plays a significant role in determining perception of pitch patterns. Moreover, most of the research elucidating the experience of musical pitch has been directed to the experience of tonal music; little attention has been paid to the perception of post-tonal musics (but see Krumhansl, Sandell and Sergeant, 1987; Dibben, 1994; Stammers, 1995) and almost none to the experience of non-Western listeners of pitch organization within their own music. Castellano, Bharucha and Krumhansl (1984) examined the responses to North Indian music of listeners familiar with the idiom as well as those with little experience of it. Similar processes of abstraction and schematicization appeared to govern the responses of both groups, but only the Indian listeners' responses exhibited a tonal-hierarchical organization appropriate to the music. This study suggests that factors involved in the perception of tonal music by Western listeners may be generalized to the perception of pitch pattern within other cultures, although further research is needed.

See also PITCH and TONALITY.

2. RHYTHM. The perception of RHYTHM involves the perceptual and cognitive organization of events in time, whereby each sound event is situated in relation to those that have already occurred (memory) and those yet to come (expectancy). Different cognitive processes occur over short and long time-spans.

(i) Surface organization. The acoustical signal is first perceptually segmented into separate events corresponding to the attack points of musical elements such as tones and chords (Köhlmann, 1984; Vos and Rasch, 1981). The moment at which an event is perceived to occur is its 'perceived onset' (related to the perceptual centre of phonemes). The time interval between the onset of one event and the onset of its successor is called the 'inter-onset interval' (IOI). The physical duration of an event (i.e. the time interval between its onset and offset) may be shorter than its IOI (e.g. in staccato) or longer (overlapping legato). Rhythmic organization is generally influenced more by IOI than by physical duration (Vos, 1976–7; Vos, Mates and van Kruysbergen, 1995).

IOIs are often perceived categorically in relation to surrounding IOIs (Schulze, 1989). The categories tend to correspond to the note values of music notation and are usually unaffected by typical deviations from metronomic

timing (such as rubato). The category to which an IOI is allocated depends on its metrical context (Clarke, 'Categorical', 1987) and the categorization process may be modelled using neural networks (Desain and Honing, 1989). A listener may assign all notes in a rhythm to as few as two IOI categories (e.g. quavers and semiquavers or simply long and short). This is an appropriate strategy, given that 80% of the notes of typical short classical pieces or movements correspond to just two note values, in the ratio 1:2 or (less often) 1:3 (Fraisse, 1982).

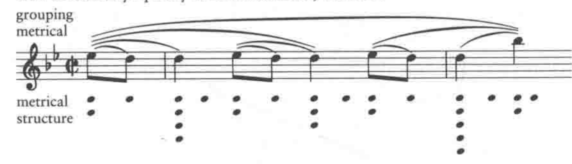
(ii) Grouping and metre. The events of a rhythm are hierarchically organized in two distinct ways, known as grouping and metre (Cooper and Meyer, 1960; Deutsch, 1982; Lerdahl and Jackendoff, 1983; Handel, 1998; Drake, 1998–9). From a perceptual viewpoint, rhythm is characterized by, and may even be defined as, a combination of these two forms of organization.

A rhythmic or temporal group is defined as a series of events that are close to each other in time. Perceptual groups are formed by segmenting the musical surface at events with relatively long IOIs, or at changes of timbre, register, loudness or articulation (Handel, 1981; Deliège, 1986–7; Palmer and Krumhansl, 1987; Clarke and Krumhansl, 1989–90). When grouping occurs on several hierarchical levels at once, the resultant organization is called a 'hierarchical grouping structure'. At the musical surface, groups correspond to short motifs. Motifs combine to form phrases, which in turn group into longer phrases, extended passages, movements and eventually whole pieces. In experiments to investigate grouping structure, listeners may be asked to listen to a long piece of music and indicate where sections begin and end. Segmentations between groupings spanning longer time periods tend to be associated with longer pauses or striking changes in physical event characteristics (Deliège and El-Ahmadi, 1990). Further evidence for the psychological reality of temporal groups has been obtained by adding clicks to a melody and asking listeners to recall their positions (the clicks tend to 'migrate' in the direction of group boundaries: Sloboda and Gregory, 1980), and by counting errors in musical performances, which tend to occur more often at group boundaries than within groups (Palmer and van de Sande, 1995).

METRE is a form of perceptual organization based on temporal regularity (underlying beat or pulse). A sensation of pulse may be evoked by temporal regularity at any level within a sound sequence, or whenever relatively salient events (or motivic patterns) are perceived as roughly equally spaced in time. The musical behaviour that perhaps most clearly reflects the perception of pulse is foot-tapping to music. Cognitively, the process of regularity extraction may be regarded as one of synchronizing an internal time-keeper or clock to music (Wing and Kristofferson, 1973; Povel and Essens, 1984–5; Essens, 1995), tolerating musically typical deviations from periodicity (Shaffer, Clarke and Todd, 1985; Large and Jones, 1998). Temporal regularity may be perceived in the face of considerable deviations from mechanical regularity or rubato. If a sequence abruptly stops, the listener expects the pulse to continue; attention is enhanced at the temporal locations of expected events (Jones and Boltz, 1989).

The perceptual salience of a pulse sensation depends on its TEMPO. Musical pulses are confined to a tempo range of roughly 30 to 300 beats per minute, or an IOI range of 200 milliseconds to 2 seconds (Fraisse, 1982), known as an 'existence region' (Jones and Boltz, 1989). The most salient pulses usually have tempos in the vicinity of 'spontaneous tempo' (the tempo at which a participant in an experiment will tap if asked to do so at equally spaced intervals that are otherwise unspecified: Fraisse, 1957). Spontaneous tempo varies widely from one person to another: inter-tap intervals mostly lie in the range of 400 to 900 milliseconds, with a mean (relative to a logarithmic scale) of about 600. A similar range is observed when listeners are asked to tap in time with a piece of music. Sensitivity to small changes in tempo is most acute in the range 300 to 800 milliseconds (Fraisse, 1967; Drake and Botte, 1993). These phenomena appear to have their origins in the physical properties of the human body and suggest a strong connection between perception of rhythm and human movement (walking, dancing, heartbeats): Truslit, 1938; Gabrielsson, 1973; Fraisse, 1974; Clynes and Nettheim, 1982; Kronman and Sundberg, 1987; Todd, 1992; Davidson, 1993; Shove and Repp, 1995; Krumhansl and Schenk, 1997; Parncutt, 1997.

A metrical structure consists of hierarchical levels of pulsation or rhythmic strata (Yeston, 1976). For example, the cognitive structure corresponding to 3/4 metre includes pulses of crotchets and dotted minims, and usually also includes faster pulses (e.g. quavers) and slower pulses (e.g. groups of two bars, or hypermetre: Rothstein, 1989). The multiple pulses that make up a conventional musical metre are mutually consonant in the sense that every event at every level (except the fastest) corresponds to an event at the next-faster level. Simultaneous pulses can also be dissonant (Hlawicka, 1958; Krebs, 1987). From least to most dissonant, three cases can be distinguished: rhythmic displacement, as in fourth-species counterpoint (same period, different phase); polyrhythm (cross-rhythm) such as three against two (same phase, different period: Handel and Oshinsky, 1981; Beauvillain and Fraisse, 1983–4); and both displacement and polyrhythm (different period, different phase), such as the start of Gershwin's 'I got rhythm' (a displaced series of semiquavers against an accompaniment of crotchets). Complex metres such as 9/8 (when arranged (2+2+2+3)/8), in which the crotchet pulse is effectively displaced by a quaver at every bar-line, have not yet been the subject of psychological investigation (but see London, 1995–6).



Whenever temporal regularity is perceived at different levels – whether consonant or dissonant – listeners tend to focus on, or attend to, a single level of moderate tempo (period near 600 milliseconds) and perceive other levels (and hence all events) relative to that level. In the case of the consonant levels that make up a metre, this level is called the 'tactus' (Lerdahl and Jackendoff, 1983) or 'referent level' (Jones and Boltz, 1989). It may be determined experimentally by asking listeners to tap at regular intervals in time with the music. Listeners can switch their attention to faster and slower rhythmic levels at will. In an oscillator model of metre perception, a primary oscillator (corresponding to the tactus) is situated within the optimum tempo range, and may become coupled with other oscillators tuned to other hierarchical levels (Large and Jones, 1998).

Metre also involves characteristic alternations of weaker and stronger beats within each bar or period. Cognitive representations of metres such as 2/4 and 6/8 have been established experimentally using 'probe-tone'

methodology (more usually used in investigations of tonality see C.L. Krumhansl: Cognitive Foundations of Musical Pitch (London, 1990)); the relative strengths of beats within the metre are quantified on a continuous scale (Palmer and Krumhansl, 1990). Such patterns are presumably learnt by repeated exposure to music in given metres and subsquently recognized during listening.

Grouping and metrical structures are intertwined at all levels of rhythmic organization. For example, the first ten notes of the main melody of Mozart's G minor Symphony K550 (ex.1) imply as many as four different hierarchical

Ex.1 Mozart: Symphony in G minorK 550, 1st movt

levels of grouping (from two-note phrases to all ten notes) and five metrical levels (quavers, crotchets, minims, semibreves, double-semibreves). The second-last note (*d″*) bears the greatest metrical accent because it belongs to all five metrical levels.

Over longer time spans, perceptual hierarchies of grouping and metre are generally neither clearcut nor complete (Clarke, 1988). For example, a listener may be uncertain as to whether bars 1 and 2 of a piece, or bars 2 and 3, group together to form a hypermetre. Similarly, there may be ambiguity as to which motifs at the musical surface belong to which phrases at adjacent structural levels. At any given moment in a piece, a listener will have organized past events into incomplete, tentative hierarchies, and on this basis will have expectations regarding how these structures will be maintained as the piece progresses. In the case of two competing, incompatible metrical descriptions of the same musical surface, a listener may switch from one hierarchical description to another, when evidence in favour of the second becomes stronger than that in favour of the first. It is thus not generally possible to give a definitive hierarchical description of the rhythmic perception of a piece of music.

Metrical ambiguity may be said to occur when two incompatible metrical interpretations exist for the same musical surface – in other words, there are two (dissonant) alternatives for the tactus. Metrical ambiguity is more commonplace in musical works than their notation would suggest (Vos, Collard and Leeuwenberg, 1981; Parncutt, 1993–4). In ambiguous cases, listeners tend to choose one interpretation soon after the piece begins and stick to it in the face of evidence to the contrary (Longuet-Higgins and Lee, 1982; Lee, 1991). The cognitive process of switching attention between dissonant rhythmic levels requires either considerable mental effort or a considerable change in performed accentuation (Tuller and others, 1994).

(iii) Accent. Everyday usage equates ACCENT with loudness: attention can be attracted to an event simply by playing it more loudly (or sometimes more softly) than events in its context. Here accent will be considered synonymous with event salience. Anything that makes an event sound more important than adjacent events, or which attracts the attention of a listener to an event, may be regarded as an accent (Jones, 1987).

The grouping and metrical structures perceived in a piece of music depend ultimately on the timing and 'phenomenal accent' of the events at the surface (Lerdahl and Jackendoff, 1983). The most important contributor to phenomenal accent is typically the IOI between the event and its successor (Steedman, 1977): the longer the IOI following an event, the stronger the accent. The IOI preceeding an event can also contribute to its perceived accentuation, but to a lesser extent (Lee, 1991). Apart from IOI, phenomenal accents are generated by relative loudness (dynamic accents); by articulation (e.g. by switching from legato to staccato); by timbral variation (manipulating the temporal or spectral envelope of events); by adjusting intonation; by melodic contour (melodic accents occur at peaks and valleys in the melodic contour and follow melodic leaps: Thomassen, 1982; Huron and Royal, 1995–6); and by harmonic progressions (harmonic accents occur at dissonances and harmonic changes: Smith and Cuddy, 1989; Dawe, Platt and Racine, 1994–5).

Structural and metrical accents are associated with grouping and metrical structures respectively. At the simplest level, a structural accent occurs at the start and at the end of every rhythmic group (Povel and Essens, 1984–5; Drake, Dowling and Palmer, 1990–91), and a metrical accent occurs at every event in a pulse (or potential tactus). Structural and metrical accents are most likely to be perceived if they occur simultaneously on several hierarchical levels: the greater the number of levels, or the greater the accent at each level, the more salient will be the accent (Todd, 1985–6; Parncutt, 1987; Rosenthal, 1992).

Accents may be either immanent to a (notated) musical work or added to the music during performance. Structural accents are normally regarded as immanent, although they can also be affected by performance (Lester, 1995). Apart from dynamic (loudness) accents, the most important performed accents are AGOGIC (Riemann, 1884). Agogic accents are produced by delaying event onsets or lengthening IOIs relative to the prevailing metrical framework (Gabrielsson, 1974; Sloboda, 1983; Clarke, 1988; Palmer, 1989; Repp, 1990;).

Timing variations in rhythmic performance have various functions. A performance that sounds perfectly regular (mechanical, metronomic) is not generally physically regular (Seashore, 1938; Drake, 1993; Gérard, Drake and Botte, 1993; Penel and Drake, 1998) but deviates from physical regularity in the same direction as, but to a smaller degree than, a typical expressive performance (Repp, 1997–8). Thus one function of timing variations is to make a performance sound regular – paradoxically, by making it physically irregular. Timing variations also have the function of clarifying the grouping and metrical structures, rendering them less ambiguous (Sundberg, 1988; Drake, 1993). Agogic accents can tell the listener where to hear the downbeat of a bar (Sloboda, 1983) or the start of a long phrase (Todd, 1985–6). Finally, timing variations affect the emotional character of a rhythm (Gabrielsson and Juslin, 1996). Timing variations are perceptible when they exceed about 20 milliseconds in typical musical performances (Clarke, 1989), falling to six in monotonic isochronous sequences faster than four events per second (Friberg and Sundberg, 1999).

The ease with which a rhythm can be cognitively processed depends on the way different kinds of accent are distributed within the rhythm. Performances tend to

be easier to understand, remember and reproduce when performed accents correspond to immanent accents (Drake, Dowling and Palmer, 1990–91; Clarke, 1992–3; Tekman, 1996–7). In the absence of performed accents, rhythms are easier to process when different kinds of immanent accent (e.g. melodic, IOI) coincide (Jones, 1987).

(iv) Rhythmic organization and tempo. The perceived organization of a piece of music depends on the tempo at which it is performed (Handel, 1993). Tempo may affect both grouping and metre. The metrical level at which the tactus is located depends on tempo (Handel and Oshinsky, 1981) because distributions of tapping rates to music (measured absolutely, in beats per second) are almost independent of tempo (Parncutt, 1993–4). For example, a listener might tap out quavers when a piece is played slowly and crotchets when the same piece is played twice as fast, thus keeping the tapping rate in the same absolute range. In the case of grouping, the number of elements in a group increases as tempo increases (Clarke, 1982), keeping their absolute length about constant.

Patterns of agogics and dynamics depend on a performer's perceptual organization of a piece, and thus are also affected by tempo (see Michon, 1974). Effects of tempo on timing and dynamics have been studied (Monahan and Hirsh, 1990; Desain and Honing, 1994); analogous effects of tempo on the perception of music performances were reported by Repp (1995–6).

(v) Rhythm v. form. As rhythmic groups become longer and pulses slower, a perceptual transition occurs from the domain of rhythm to that of form (Clarke, 'Levels', 1987). In grouping, the change may be said to occur when a group's duration exceeds that of the psychological present (Fraisse, 1957; Crowder, 1993), defined as a short period of time during which relationships between successive events can be perceived directly, without cognitive reference to earlier periods (memory, rehearsal; similar to Baddeley's 1986 'working memory'). The duration of the psychological present depends on musical tempo and complexity, but it is normally estimated to lie in the range of two to seven seconds. In the case of pulse and metre, the transition from rhythm to form may be said to occur when temporal regularity ceases to imply physical movement or dance (beyond a period of about two seconds: Fraisse, 1974) and rhythmic temporal anticipation is no longer possible (Mates and others, 1994).

3. Timbre.

(i) Definition. Timbre is the auditory attribute that distinguishes two sounds presented in a similar manner and having identical pitch, loudness and duration. This formal definition leaves a wealth of possibilities that resisted scientific experimentation until the late 20th century. Timbre is now understood to have two broad characteristics that contribute to the perception of music: (*a*) it is a multifarious set of abstract sensory attributes, some of which are continuously varying (for instance, attack sharpness, brilliance, nasality), others of which are discrete or categorical (the 'blatt' at the beginning of a *sforzando* trombone note or the pinched offset of a harpsichord sound), and (*b*) it is one of the primary perceptual vehicles for the recognition, identification and tracking over time of a sound source (a singer's voice, a clarinet, a set of carillon bells) and thus involves the absolute categorization of a sound (McAdams, 1993; Hajda and others, 1997).

(ii) A set of auditory attributes. This first approach concerns relative perception: the ways in which and the degree to which sounds are perceived to differ. Early research on the perceptual nature of timbre focussed on preconceived aspects such as the relative weights of different frequencies present in a given sound, or its 'sound colour' (Slawson, 1985). A voice singing a constant middle C while varying the vowel being sung, or a woodwind player holding a given note while varying the embouchure and mouth cavity shape, both vary the shape of the spectrum. Helmholtz (2/1885) invented ingenious devices for controlling spectral weighting to explore these aspects of timbre. However, the real advances in understanding the perceptual representation of timbre had to wait for the development of powerful multi-dimensional data analysis techniques in the 1960s.

Multi-dimensional scaling has no preconceptions about the physical or perceptual structure of timbre. Listeners simply rate on a scale from very similar to very dissimilar all pairs from a given set of sounds that are equalized in terms of pitch, loudness and duration. The resulting judgments are then analysed with a computer program that fits the dissimilarity ratings to a distance model in which sounds with similar timbres are close together and those with dissimilar timbres are far apart. The basic model is expressed in terms of continuous dimensions that are shared among the timbres. More elaborate models also include dimensions or features that are specific to individual timbres ('specificities') and different perceptual weights accorded to the dimensions and specificities by individual listeners or classes of listeners (McAdams and others, 1995). Such techniques have been applied to synthetic sounds (Plomp, 1970; Miller and Carterette, 1975), resynthesized, imitated or simulated instrument sounds (Grey, 1977; Wessel, 1979; Krumhansl, 1989; McAdams and others, 1995; Roussarie, McAdams and Chaigne, 1998), recorded instrument sounds (Iverson and Krumhansl, 1993) and even dyads of recorded instrument sounds (Kendall and Carterette, 1990–91).

Independent acoustic correlates have been determined in many cases for the continuous dimensions (Krimphoff, McAdams and Winsberg, 1994), which is important if these results are to be applied to sound synthesis or the search for sounds in large audio databases. The most common correlates include spectral centroid (representing the relative weights of high and low frequencies), attack time (distinguishing 'continuant' instruments that are blown or bowed from 'impulsive' instruments that are struck or plucked), spectral flux (the degree of evolution of the spectral shape over a tone's duration which is high for brass and lower for single reeds) and spectral irregularity (the degree of jaggedness of the spectral shape, which is high for clarinet and vibraphone and low for trumpet).

Specificities are often found for complex acoustic and synthesized sounds and represent the presence of a unique feature that distinguishes a sound from all others in a given context. For example, in a set of brass, woodwind and string sounds, a harpsichord might have a strong specificity due to the return of the hopper which creates a slight thump and quickly damps the sound at the end; no other sound has such a feature (McAdams and others, 1995).

Individual and class differences are modelled as weighting factors on the different dimensions and the set of specificities. Some listeners pay more attention to spectral properties and ignore temporal aspects while others have the inverse pattern (McAdams and others, 1995). It has yet to be demonstrated that such individual differences have anything to do with musical experience or training. It may be that since timbre perception is so closely allied to sound source recognition in everyday life, everybody is an expert to some degree.

The timbre space models that result from this approach have been useful in predicting listeners' perception in situations other than those specifically measured in the experiments. This suggests that they do in fact capture important aspects of timbre representation and have the most important feature of a scientific model: the ability to predict new phenomena. By exchanging the spectral envelopes on pairs of sounds that differ primarily along the spectral dimension, these sounds have been found to switch positions in the space, as would be predicted by the model (Grey and Gordon, 1978). The timbre space representation has been used as a basis for defining timbral intervals (by analogy with pitch intervals) in terms of directional vectors in the space (Ehresman and Wessel, 1978; McAdams and Cunibile, 1992). Musical transposition is equivalent to a spatial translation of the vector, keeping constant the degree of change along each of the shared dimensions. The difficulty with applying this notion to orchestral timbres is that it does not take into account the specificities of individual timbres that would 'distort' the vector in some sense, and the timbre space available with acoustic instruments and their blends is often full of holes where no instrument exists, limiting considerably the possible transpositions. However, this approach would be quite useful for a palette of synthesized timbres without specificities that were distributed homogeneously in the perceptual space.

Timbre space representations also predict aspects of the phenomenon of auditory streaming – the assignment of successive events to a coherent mental representation – on the basis of which melody and rhythm are then perceived. The further apart the timbres of two instruments are in the perceptual space, the more likely it is that the melodies they are playing will segregate into separate streams (McAdams and Bregman, 1979; Gregory, 1994–5; Iverson, 1995; Singh and Bregman, 1997).

(iii) A vehicle for source identity. The second approach to timbre concerns absolute perception, the sound being represented in reference to a particular category. Categorization is a primary reflex in the perceptual process and is particularly evident in the processing of pitch and duration in music. One reasonable hypothesis is that the sensory dimensions that compose timbre serve as indicators used in the categorization, recognition and identification of sound events and sound sources (McAdams, 1993). This is perhaps the more neglected aspect of timbre and brings with it advantages and disadvantages for the use of timbre as a form-bearing dimension in music (McAdams, 1989).

One of the advantages is that categorization and identification of a sound source may bring into play perceptual knowledge (acquired by listeners implicitly through experience in the everyday world and in musical situations) that helps them track a given voice in a complex musical texture. Listeners do this easily and research has shown that timbral factors may make an important contribution in such voice tracking (Culling and Darwin, 1993; Gregory, 1994–5), which is particularly important in polyphonic settings.

The disadvantages may arise when a composer seeks to create melodies across instrumental timbres, as in the *Klangfarbenmelodien* of Schoenberg. The predisposition to identify the sound source and follow it through time would impede a more relative perception in which the timbral differences were perceived as a movement through timbre space rather than as a simple change of sound source. For cases in which such timbral compositions work, the composers have often taken special precautions to create a musical situation that draws the listener more into a relative than into an absolute mode of perceiving.

(iv) Contributions to perception. Timbre perception is at the heart of orchestration, a realm of musical practice that has received relatively little experimental study. The creation of new timbres through orchestration necessarily depends on the degree to which the constituent sound sources fuse or blend to create the newly emerged sound. Sandell (1995–6) has proposed three classes of perceptual goals in combining instruments: timbral heterogeneity, in which one seeks to keep the instruments perceptually distinct; timbral augmentation, in which a single instrument embellishes another one that perceptually dominates the combination; and timbral emergence, in which a new sound results that is identified as none of its constituents. Blend appears to depend on a number of acoustic factors such as onset synchrony of the constituent sounds and others that are more directly related to timbre, such as the similarity of the attacks, the difference in the spectral centroids and the overall centroid of the combination.

Timbre is also an important component in the perception of musical groupings, whether they are at the level of sequences of notes distinguished by changes in timbre (Deliège, 1987) or of larger-scale musical sections delimited by marked changes in orchestration and timbral texture (Deliège, 1989).

Work on the perception of musical tension and relaxation has focussed on the role of pitch and rhythm in carrying such structures. Timbral modulation can also play an important role in these large-scale expressive aspects of musical experience. Comparing orchestrated music with direct piano transcriptions of the scores for both tonal/metric and non-tonal/non-metric music, Paraskeva and McAdams (1997) demonstrated a modulating role of orchestration on tension and relaxation profiles measured across the excerpts.

Taken together, these areas of research into timbre perception are moving in the direction of creating a true theory of orchestration and timbral control in sound synthesis.

See also TIMBRE (i).

4. MEMORY.

(i) The nature of memory. Every musical activity, whether it be perception, performance, improvisation or composition, involves memory. For instance, to sight-read notes requires recovery from memory of the arbitrary relationship between specific symbols and pitches and the particular set of body and finger movements needed to execute them. Almost every such item of knowledge about music has to be acquired through learning. This learning can take place in formal instructional settings (education

and training) and through the informal experiences of everyday life (enculturation). Memory is thus a capacity that can be improved, not a fixed quantity.

Musicians' interest in memory is often practical rather than theoretical. Performing complex music without the score is a requirement of many professional roles, and accounts of apparently superhuman feats of musical memorizing hold special fascination for performers and audiences alike (Révész, 1925; Marek, 1975). Similarly, musicians at all levels are interested in guidance on how to memorize and how to avoid memory loss. Scientific research on memory, however, has generally been concerned with the broader enterprise of advancing our understanding of the fundamental mechanisms and processes underlying all memory processes, from the exceptional to the ordinary, with issues of applicability following from the research rather than driving it (Baddeley, 1990). Many aspects of musical memory have not received substantial scientific attention: these include optimal strategies for memorization and the nature and time course of memory loss. It is, however, well established that anxiety and emotional distress can cause significant temporary loss of recall, even in cases where appropriate learning has taken place.

Expert memory often entails the ability to make sense of, or to structure, incoming material in terms of previously learnt information. When material cannot be assimilated into familiar structures, memory performance declines. This is shown most dramatically in the case of exceptional memorizers, such as the musical savant 'NP' (Sloboda, Hermelin and O'Connor, 1985) who was capable of memorizing classical piano sonata movements within two or three hearings. This outstanding skill was not transferable to non-tonal music. The lack of familiar structures caused reversion to unremarkable, average performance. The importance of familiar structures has been demonstrated for almost every type of task involving musical memory. For instance, listeners are more likely to be able to tell correctly whether two short consecutive pitch sequences are identical or different when these sequences are drawn from familiar diatonic materials than from unfamiliar atonal materials (Watkins, 1985). This comes about through their lifelong immersion in tonal music, and the attuning of their cognitive system to the structures and regularities shared by this body of music (see Krumhansl, 1991, for a comprehensive review).

These findings lead to a crucial distinction between two types of memory: memory for specific pieces of music and memory for norms and prototypes which may be a shared attribute of many pieces of music. Terms coined for the first type of memory include 'episodic' (Tulving, 1983) and 'veridical' (Bharucha, 1994), for the second type 'semantic' or 'schematic'. If a familiar piece of music is interrupted before its close, veridical memory allows us to reconstruct its actual continuation, whereas schematic memory would allow us to guess a likely continuation (Carlsen, 1981; Schellenberg, 1996; Thompson, Cuddy and Plaus, 1997). Memory failures in performance of a less familiar piece can often be explained as cases of schematic memory overriding veridical memory (Sloboda and Parker, 1985); the performer recalls a plausible continuation rather than the actual one, or confuses two similar junction points and skips or repeats a section (Reason, 1990). Indeed, without a rich schematic memory, veridical memory would be impossible. There would be no way that professional musicians could remember, as by rote, the vast number of arbitrary elements in the large repertory of complex pieces they need to maintain. The more one understands about a piece of music (in terms of awareness of its rich structural interrelationships, both within and outside the specific piece), the easier it is to memorize. In more general terms, the relationship between the level of a specific skill and amount of prior practice on that precise skill is one of the strongest relationships that has been demonstrated in the research literature on expertise (Ericsson, Krampe and Tesch-Romer, 1993). The greater the amount of prior relevant cognitive activity, the greater the skill.

Memory takes two basic forms, namely recognition and recall. Recognition predominates in listening, recall in performance.

(ii) Recognition. Recognition is a process that operates in perception to match incoming information to previously stored information. The most basic form of recognition is the experience of similarity. This simply requires that something heard is experienced as being identical to, or sharing important characteristics with, something heard before. Without the ability to recognize similarity between elements within a piece, the apprehension of form would be impossible. Elementary recognition processes can be demonstrated in early infancy (even before birth). A familiar melody will elicit a different pattern of attention from a strange melody (Lecanuet, 1996). More complex cognitive processes allow recognition of themes under various processes of transformation. For instance, in most tonal contexts listeners are less sensitive to the exact pitch level at which a melody is re-encountered than to the diatonic intervals that it contains (Attneave and Olson, 1971; Bartlett and Dowling, 1980). They recognize an intervallically identical repetition as 'the same melody' irrespective of the pitch on which it starts. There is evidence that even trained musicians find it hard to keep the starting-key of a heard composition in memory if it modulates several times (Cook, 1987–8). Some transformations of musical materials make recognition harder, and it is such transformations that allow composers partly to disguise their re-use of thematic material, whose belated discovery by a listener after many hearings may provide a source of aesthetic satisfaction. For instance, changing the rhythm of a melody can significantly disrupt recognition even though the pitch pattern may be unchanged (Jones, Summerill and Marshburn, 1987). Transformational devices such as retrogression or inversion can make recognition almost impossible without considerable training (Krumhansl, Sandell and Sergeant, 1987–8). Like most musical skills, recognition ability is not static but can improve with experience and training (Pollard-Gott, 1983).

A second form of recognition is identification or naming. This involves the retrieval of a verbal label which could be for an individual note (as in the case of possessors of absolute pitch), a chord (e.g. minor triad, first inversion), a structural device (an interrupted cadence) or an entire piece. Identification must involve recognition of similarity, although there can be many instances of similarity recognition that do not lead to identification ('this piece is familiar but I cannot recall its name'). Identification is not an inherent part of musicality and it is possible for someone to be a sophisticated and sensitive listener without possessing the vocabulary with which to

describe what is heard. Experimental psychology has made a major contribution by devising testing techniques that can demonstrate recognition without naming (by, for example, measuring the accuracy of a listener's judgment as to whether two successively presented excerpts are the same or different), and which can thus be used to assess the musicality of very young children and those without formal music training (Lamont, 1998). In music, as in many other areas of human activity, these techniques often reveal an unexpected level of sophistication in the recognition skills of people whose identification and naming skills are almost non-existent (Jusczyk and Krumhansl, 1993). Nonetheless, professional musicians could not work effectively without a shared language, and a considerable amount of formal music training is rightly devoted to developing identification skills and technical vocabulary.

(iii) Recall. Recall is the reproduction, either in imagination or behaviour, of a previously experienced sequence. Typically, recall requires more mental resources than recognition; a listener will recognize much more than he or she can recall because recall generally requires some form of cue to trigger it. In a situation where, for instance, hearing the name of a piece does not elicit recall, then hearing the first few notes can often trigger it; this explains why prompting is effective in performance situations. Performing learnt music from a score can be seen as a type of cued recall, since an experienced performer will rarely look at every note. For instance, experienced sight-readers use their schematic memory to substitute plausible alternatives for what is actually in the score (Sloboda, 1984). Failures in recall brought about by, for instance, stage fright, can often be explained in terms of unwanted and inappropriate mental contents (such as anxious self-monitoring thoughts) blocking normal retrieval cues (Steptoe, 1989).

Recall can be either an unintended by-product of other activities or the result of deliberate memorizing effort. Most everyday examples of musical recall are involuntary and unintended results of other mental processes. Short pieces of music that are regularly repeated within a culture (such as nursery rhymes, popular songs and television theme tunes) tend to be reproducible without any special effort (Levitin, 1994). Research on involuntary memory suggests that it occurs as a general consequence of any form of attentional processing of material. However, the products of such involuntary processes tend to be rigid and inflexible, recalled as unanalysed wholes. The same can generally be said of the products of rote repetition (Baddeley, 1990).

A flexible and multi-levelled recall complex enough to serve the artistic ends of an expert musician is likely to come about only through a process of deliberate and conscious memorization. Expert memorizers share a number of characteristics (Ericsson, Krampe and Tesch-Romer, 1993; Jorgensen and Lehmann, 1997). First, they have been immersed in the domain for a long time and have had experience of memorizing many pieces. Secondly, they are able to represent the material to be learnt in terms of patterns and structures that have rich interconnections with each other and with pieces previously learnt. Thirdly, they develop multiple interlocking levels of representation, such that if any one of them is temporarily lost it can be re-cued from another level. These levels might include visual, auditory, formal, kinaesthetic and motor. Fourthly, their representations are flexible, so that, for example, they may yield performances with differing styles or levels of expressiveness. An expert piano accompanist will, for instance, rapidly adapt speed, volume and style to match the characteristics of an unfamiliar singer, and may even be able to transpose an accompaniment learnt in one key to a new key with little or no extra rehearsal.

III. Affect

1. Introduction. 2. Extrinsic affect. 3. Intrinsic affect.

1. INTRODUCTION. Affect encompasses many human mental reactions and states that are not traditionally viewed as intellectual. Feelings, emotions and moods are the principal categories of affect. It is one of the most inescapable and characteristic features of music that people report strong emotional reactions to it. Why this is so, and by what means music creates affect, are questions of central concern to psychologists.

Music seems to elicit strong emotion more reliably and frequently than other art forms (Frey, 1985; Williams and Morris, 1996). Three characteristics seem to be key determinants: (i) Music unfolds over time and so is capable of engaging the emotions of expectation and expectations realized or dashed more effectively than static forms such as painting; drama, dance, film and literature share this feature with music; (ii) music uses directly, and often mimics, the most emotionally important signal of the human species: the voice (only drama shares this feature); (iii) music engages the auditory sense, which gives it a general arousing capacity due to the fact that we cannot escape the source of stimulation (as we can, for instance, for a painting by looking away or closing our eyes), as well as providing a link to the most primitive and fundamental feelings and experiences of human life. Infants have an inter-uterine auditory life of some complexity well before they are able to engage the

other senses to the same degree (Lecanuet, 1996). Some psychoanalytic writers have made much of these experiences, as well as early experiences of music during infant–mother bonding (Nass, 1990; Noy, 1968).

There has been a longstanding debate about whether affect is necessary or even relevant to a proper understanding of a piece of music. An extreme position (sometimes taken, for instance, by Stravinsky) denies any relevance of affect to the processes of creating, understanding or interpreting music; affect is an unhelpful by-product. In contrast, theorists such as Meyer (1956) suggest that affect is a natural component of the perception of the formal properties of a piece of music. Instead of distracting a listener from a proper understanding of the music, certain types of affect are proof that a listener has indeed understood it.

In aesthetics, robust arguments for the centrality of affect have been put forward by Kivy (1989) and refined by Davies (1994), Goldman (1995), Levinson (1990) and Radford (1989). Psychology has moved this debate forward by providing concrete data about how and when people experience affect, and also by advancing theories that shed light on the links between music as a structure on the one hand and affective responses on the other. Research has shown that both extrinsic (or associative) and intrinsic (or expressive) processes are at work. Some central themes in this work are discussed below (for more detailed accounts of relevant research and thinking, see Dowling and Harwood, 1986; Gaver and Mandler, 1987; and Sloboda, 1992).

See also Expression, §II.

2. Extrinsic affect. Certain types of stimulus (including music, smells and tastes) seem to become associated in human memory with particular contexts or events in earlier life, and provide a trigger to the recall of these events. This seems particularly so when the earlier events were, in themselves, occasions of strong emotion (Dutta and Kanungo, 1975; Rubin and Kozin, 1984). A number of investigators (Gabrielsson, 1991; Sloboda, 1991) have found examples of specific pieces of music that trigger strong emotion in this way. Such emotions generally lead attention away from the present music on to the remembered past event. Waterman (1996) has shown that even when music does not directly trigger past experiences, many of the affective mental processes are self-referring in some way ('I should have recognized that', 'this is not my type of music'). Because these feelings are linked to the life histories of individuals, they are often highly idiosyncratic. However, common cultural experiences can sometimes lead to shared affect which is still fundamentally extrinsic – for example, the extreme negative emotions felt by many Jews after World War II on hearing the music of Wagner; the strong emotional identification of generational cohorts with the popular music prevalent in their teenage years (Holbrook and Schindler, 1989); and the cultural associations formed by film-music pairings, such as Johann Strauss's *Blue Danube* waltz with the spaceship docking sequence in Stanley Kubrick's film *2001: a Space Odyssey*.

3. Intrinsic affect. There are two distinct types of relationship between musical structures and emotional responses; these may be called iconic and symbolic (following Dowling and Harwood, 1986; see also Beardsley, 1958, and Kivy, 1989). Iconic relationships come about through some formal resemblance between a musical structure and some event or agent carrying emotional 'tone'. For instance, loud, fast music shares features with events of high energy and so suggests a high-energy emotion such as excitement. A fairly comprehensive 'dictionary' of such iconic correspondences can be derived from the work of Hevner, 1936; Scherer and Oshinsky, 1977; and Wedin, 1972. One recent strand in this work has been the suggestion that some musical devices directly suggest gestural and other expressions of emotions by the human body (Clynes, 1977; Scherer, 1990). Equally important has been a development of an understanding of how a performer may mediate affective communication from performer to listener (Gabrielsson and Juslin, 1996).

Symbolic relationships come about where the listener's response is determined by an appreciation of formal and syntactic properties of the musical sequence. It is well established that even short and simple musical sequences set up powerful expectancies in listeners for what will follow these sequences (Carlsen, 1981; Krumhansl, 1995–6; Bharucha, 1994). These expectancies can be based on fundamental properties of human perception, such as the so-called gestalt laws of perception (see Narmour, 1990). For instance, a movement from one note to the next scale step sets up a strong expectancy for further stepwise motion in the same direction. Narmour calls this type of expectancy 'bottom-up' because these expectancies are presumed to result from general perceptual principles that do not require learning. Other expectancies are based on familiarity with musical styles and genres. Listeners familiar with Western tonal music will come to expect certain harmonic and melodic sequences (e.g. I–IV–V will set up an expectancy for I, so that the deceptive cadence I–IV–V–vi/VI is felt as surprising). Confirmations and violations of these expectancies, often operating at a subconscious level, are held to be responsible for some emotional responses to music. Confirmatory evidence shows that points in music identified by listeners as emotional peaks share key syntactic features associated with expectancy (Sloboda, 1991), and points in performances obtaining maximum tension ratings from listeners correspond to points of major syntactic change (Lerdahl, 1987–8; Krumhansl, 1995–6; Narmour, 1995–6).

Most research uses conscious report of listeners as the method of identifying the nature and location of emotional response. There have been few systematic efforts to measure physiological response directly (VanderArk and Ely, 1992); more often, listeners have been asked to self-monitor behavioural effects of physiological changes (such as crying and pilo-erection: see Goldstein, 1980; Panksepp, 1995–6).

It is a feature of the intrinsic relationships described above that a listener can recognize or identify the emotion represented without necessarily feeling it. A necessary consequence of iconic recognition is a cognition such as 'this is happy music'. This may lead to a further cognition, 'this music makes me feel happy', but there is no necessity for this further step. That will depend on factors in the listener (including extrinsic factors of the sort discussed above) rather than in the music. In symbolic relationships, feelings (at least of surprise, or of expectations confirmed) are more intimately connected to the musical experience. Whether such feelings lead to the experience of happiness,

sadness or some more complex emotion will depend on many factors not yet understood. A particularly interesting problem is created by the fact that strong emotion may be elicited by music with which one is very familiar, and which therefore should not surprise the listener at all. Some of the most basic mechanisms involved in the processing of music may be incapable of learning the particular characteristics of a piece or style (Jackendoff, 1991–2; see also Meyer, 1967); for these mechanisms, every hearing is like the first hearing.

Since both extrinsic and intrinsic affect often depend for their operation on acquired knowledge (whether biographical or related to specific musical styles), cultural and developmental factors will strongly influence emotional response. There is considerable evidence of increasing sophistication with age in emotional response to music (Gardner, 1973; Cunningham and Sterling, 1988; Kastner and Crowder, 1990–91). There has been almost no empirical work on cross-cultural differences in affect, but what little has been done (such as Gregory and Varney, 1996) confirms that significant differences exist, although the increasing penetration of Western music into every part of the world lessens the plausibility of carrying out decisive cross-cultural studies using Western music.

IV. Performance

1. Introduction. 2. Performance and skill. 3. Theories of performance expression.

1. INTRODUCTION. The psychology of performance has attracted growing research interest since the late 1970s from a number of quarters: to psychologists interested in skill, performance offers an opportunity to study a variety of cognitive and motor skills; to those interested in musical development, it offers concrete musical behaviour that can be observed and assessed over a considerable period of continuous development; from the perspective of music cognition, it offers a window on to musical thinking; and from within musicology it offers the possibility of examining music in a more dynamic manner than the score allows (Dunsby, 1995; Rink, 1995).

Expression is a central concept in the overwhelming majority of work on performance, since it is fundamental to performance of every kind (*see* EXPRESSION, §II). It has generally been defined as deliberate departures from the indications of the written score, following Seashore's work on performance (1938), although this definition is not without problems (Desain and Honing, 1992; Clarke,

1995). A particular methodological issue is how to distinguish deliberate departures from mistakes: one approach has been to depend on the statistical notion of reproducibility, and to ask individuals to perform the same music a number of times, or to look at the performances of a number of individuals. However, this runs counter to a fundamental principle in musical performance – the idea that performance is a re-creative rather than reproductive act, and that each performance is a unique realization of the performer's conception of the music. In practice, the approach adopted in the literature has varied according to the nature of the task and the quality of the data. When data come from relatively simple musical materials collected under controlled conditions and from subjects who may not be experts, repeated performances and groups of subjects have been used and standard statistical methods adopted (Sloboda, 1983; Clarke, 1992–3). By contrast, when the data are from expert performers playing concert repertory, authors have appealed to the skill and precision of the performers to justify the analysis of individual data points (Shaffer, 1981; Repp, 1992).

2. PERFORMANCE AND SKILL. The detailed study of performance as a skill goes back to Seashore and his collaborators, who pioneered the development of quantitative methods for recording performance data. More recent work has, for technical reasons, been almost exclusively confined to the piano (see Palmer, 1997, and Gabrielsson, 1999, for reviews). These studies have been mainly concerned with the control of movement and timing in performance (Shaffer, 1981, 1982; Palmer, 1989); coordination and independence between hands in solo performance, and between players in duet performance (Shaffer, 1984); the manner in which performers process units of musical material (Palmer and van de Sande, 1993, 1995); sight-reading (Sloboda, 1984–5; Banton, 1995); and pianists' fingering strategies (Sloboda and others, 1998). Shaffer has traced the way in which an abstract musical conception is translated into concrete action and has demonstrated that the specification of movement remains quite abstract, and close to the character of musical knowledge, until comparatively late in this process. Error data from piano performance indicate that performers carry out an unconscious parsing of the musical structure that exerts its influence even at quite surface levels: a performer sight-reading a Bach fugue missed a clef change from one page to the next, and produced a sequence of errors that nonetheless preserved the underlying harmony of the passage (Shaffer, 1981).

The control of timing is particularly important for music performance, since the temporal characteristics of a performance are both a crucial aspect of the musical structure and a powerful means of expression. Shaffer and others have shown that expert performers can achieve remarkable precision and stability in the timing of performance at levels ranging from the individual note up to whole sections or complete pieces (Clynes and Walker, 1982; Shaffer, 1984; Clynes, 1986–7), and sometimes over very long periods of time. Some important questions are how this timing control is achieved, how many levels of performance are directly timed and which these levels are (Shaffer, 1982, 1984).

On the matter of coordination, Shaffer (1981, 1984) investigated the considerable degree of independence between the hands that pianists are able to achieve, either where the polyrhythmicity of the music demands it or for expressive purposes. He further demonstrated that the coordination between players in a piano duet does not depend on one rigidly following the other: a significant element of prediction on the part of both about the future course of the other's expressive performance is involved, despite the fact that the two pianists in his study did not play together regularly and had never before played the piece together. This can be explained either by assuming that the two players held a common representation of the musical structure and used this as the stable reference point from which to make their expressive predictions, or that they communicated their intentions, and coordinated with one another, through physical movement or facial gesture.

Finally, a limited amount of work on practice and rehearsal (Gruson, 1988; Miklaszewski, 1989; Hallam, 1995) has looked at the broad strategies used by performers and some of the more specific changes that take place. Equally, there is a literature on performance anxiety and the efficacy of various attempts to relieve it, though with some exceptions (Steptoe and Fidler, 1987; Abel and Larkin, 1990; Valentine and others, 1995) most of this work is practical and prescriptive rather than psychological or exploratory.

3. THEORIES OF PERFORMANCE EXPRESSION. Empirical studies of performance expression (e.g. Shaffer, 1981; Todd, 1985–6; Clarke, 1988; Gabrielsson, 1988; Palmer, 1989; Repp, 1992) have identified a number of recurring characteristics in performance expression: it can be extremely stable over repeated performances that may sometimes span a number of years (Clynes and Walker, 1982), is found even in sight-read performances (Shaffer, 1981) and can be changed by a performer with little or no rehearsal (Clarke, 1985). These observations have led to the view that expression cannot be understood as a learnt pattern of timing, dynamic and articulation, but must be generated from the performer's understanding of the musical structure.

In principle, every aspect of musical structure contributes to the specification of an expressive profile for a piece, but a number of authors have shown that phrase structure is particularly salient. Todd has described a model which takes the hierarchical phrase structure of the music as its input and gives a pattern of rubato as its output on the basis of an extremely simple rule (1985–6, 1989). The resulting tempo profiles compare well with the profiles of performances by professional players, as Todd's own data, and subsequent data collected by Repp (1992) have shown. A number of other studies have also shown rule-like correspondences between various aspects of musical structure and expression (Sloboda, 1983; Shaffer and Todd, 1987; Clarke, 1988; Sundberg, 1988; Todd, 1992; Palmer, 1995–6). In a study of 28 performances of a short piano piece by Schumann, taken from commercial recordings by many of the 20th century's greatest pianists, Repp (1992) showed a remarkable degree of commonality underlying the expressive profiles of the performances, despite the idiosyncrasies of some of the performers. Although the expressive properties of skilled performances can be extraordinarily subtle, this does not require the expressive rules themselves to be either complex or numerous, since the musical structures that constitute their input can themselves be highly complex. It is this structural complexity which makes the

whole expressive system so rich and variable, thus ensuring that the output of even a very simple collection of expressive rules will be quite diverse.

If expression is based on an understanding of musical structure, then expressive features can be regarded as 'symptoms' of that understanding. This relationship can be understood in two ways: as the inevitable and insuppressible consequence of a particular conception of the musical structure; and as a conscious and deliberate attempt by the performer to make audible his or her interpretation of the structure. Evidence for the unconscious and insuppressible quality of expression comes from attempts by performers to play without expression: Seashore (1938) showed that, while the degree of expression is reduced under these circumstances, it is never eliminated and retains the same general pattern that is observed under normal circumstances (a finding confirmed by Palmer, 1989). Similarly, pianists who tried to imitate an expressionless performance unconsciously introduced structurally related expression into their imitation attempts (Clarke and Baker-Short, 1987). Finally, Sloboda (1983) showed that a melody presented to pianists in two different metrical notations was played with different, metrically related patterns of expression, even though the players had not noticed that the two melodies were identical in every respect other than metre.

Performance expression under these conditions is related to basic structural features of the material, such as phrase structure and metre, and can be seen as the consequence of the performers' spontaneous and unconscious understanding of the musical structure. Nonetheless, it is obvious that performers also consciously and deliberately shape expression in their performances in order to achieve particular structural and stylistic results. Performers dedicate enormous amounts of time to practice and rehearsal (Krampe and Ericsson, 1995), the function of which (apart from dealing with purely technical problems) is to make changes in the degree to which a particular expressive device is used; in the selection of particular expressive options to project a feature of the music (for instance using articulation rather than dynamics to shape a phrase); and in the performer's structural understanding of the music.

Although there is a good deal of empirical support for a generative view of expression, there is also evidence that acoustic factors (Clarke, 1992–3), emotional factors (Gabrielsson, 1995; Gabrielsson and Juslin, 1996) and the human body also play a role. (Other factors include the possibilities of the instrument, the acoustics of the performing environment, the nature of the audience, the mood and intentions of the performer and even the performance ideology.) Movement, and the human body, are particularly significant in this complex set of relationships (Shove and Repp, 1995) because the vast majority of music is produced by human and instrumental action, and is thus indelibly stamped with its bodily and instrumental origins (as ethnomusicologists have also observed: Baily, 1985). Research suggests that performers' spontaneous timing patterns follow fundamental physical laws (Kronman and Sundberg, 1987; Todd, 1992; Feldman, Epstein and Richards, 1992–3), and that natural-sounding performance mimics the behaviour of physical objects moving in the real world. In a study that tested listeners' preferences for different expressive timing patterns in a short melody, Repp (1992–3) found that listeners preferred parabolic curves (which mimic physical laws) over other equally systematic timing functions. Somewhat controversially, Clynes (1983, 1986–7) has claimed that expression in performance is linked to a specific 'pulse pattern' characteristic of the composer of the music being played. However, the results of empirical investigation by Repp (1988–9, 1990–91; see also Clynes, 1995), in which listeners rated performances with appropriate and inappropriate pulse patterns, are equivocal.

If physical motion is a possible basis for patterns of expression in musical performance, there can be no doubt that physical movement is a crucial factor in our total response to live performance, visual as well as auditory. Davidson (1991, 1993) showed that different degrees of expressivity in performance are conveyed by visual information alone, even when the video images were reduced to points of light at the limb joints and head. Expressive moments could be clearly localized and categorized, suggesting that expert performers employ a vocabulary of expressive gestures, possibly associated with specific structural functions. In a similar manner, Kendall and Carterette (1990–91) demonstrated that listeners were successful in picking up the expressive intentions (neutral, normal, exaggerated) of performers on a variety of instruments, and that there was no difference between musicians and non-musicians in their ability to do so.

Recent advances in understanding performance have been strongly influenced by the same kinds of linguistic and computational models that have profoundly affected psychology as a whole. Greater recognition of the close links between biology and psychology may temper the excessive abstraction of some of the previous work, but it is important to avoid a naive reductionism and steer a course between the literal involvement of physical factors, the role of cognitive representations of the body (Jackendoff, 1987; Lidov, 1987) and the widespread use of metaphors of motion in relation to music. A number of aspects of performance remain virtually unresearched, notably the specific changes that take place during practice, expressive performance on instruments other than the piano, ensemble performance and a whole range of issues that fall under the broad banner of the social psychology of performance.

V. Early development

1. Introduction. 2. The infant's environment. 3. Perception: infancy and beyond.

1. Introduction. The developmental psychology of music, a discipline still in its infancy, is concerned with the scientific study of age-related change and the processes underlying change in skills related to music. Change related to growth or development is to be distinguished from change resulting from systematic exposure or training (i.e. learning). Nevertheless, the two types of change may be seen to interact, in the sense that training may be more potent or effective at some stages than at others.

Research within the discipline of psychology typically differs from research within music education or related disciplines both in the questions of interest and in the methods of study. The primary goal of psychological research in this domain is to shed light on the mental processes that underlie music perception and production. A secondary goal is to document the influence of social factors. The methods employed are those of experimental psychology – highly controlled laboratory contexts (supplemented, at times, by field study), systematic observation and measurement, and data-analytic techniques aimed at ensuring that any particular set of findings is not attributable to chance. Although some of the research may have practical implications, these are not the principal concern of the discipline.

2. THE INFANT'S ENVIRONMENT.

(i) Parents' speech. There are indications that infants receive considerable exposure to music or music-like materials apart from the music they might overhear from their parents' stereo, radio or television. Even the speech that parents direct to their pre-linguistic infants incorporates many music-like features that are absent from typical adult speech. For example, mothers' utterances to infants are characterized by high pitch, rhythmicity, repetitiveness, simple pitch contours and an extended pitch range (Fernald, 1991; Cooper, 1993; M. Papoušek, 1996), features that have been documented in many cultures (Grieser and Kuhl, 1988; Fernald and others, 1989; Papoušek and Hwang, 1991). This vocal register, known as 'motherese', 'parentese' or 'infant-directed speech', is more effective in attracting and maintaining infant attention than is typical adult speech (Fernald, 1985; Cooper and Aslin, 1990; Papoušek and others, 1990; Werker, Pegg and McLeod, 1994). Such findings have prompted claims that infants are predisposed to attend to the distinctive pitch contours of maternal speech whose emotional meanings are transparent (Fernald, 1992; M. Papoušek, 1996).

(ii) Caregivers' songs. The vocal interactions of caregivers and infants go well beyond stereotyped 'sing-song'. Caregivers around the world also sing while tending their infants and use a distinctive genre of musical materials for that purpose (Trehub and Schellenberg, 1995; Trehub and Trainor, 1998). Despite the great diversity of musical styles across cultures, musically untrained adults can reliably distinguish unfamiliar foreign lullabies from non-lullabies of comparable cultural origin, tempo and vocal style (Trehub, Unyk and Trainor, 'Adults', 1993). From the perspective of naive adult listeners, the distinguishing structural feature of these lullabies is their simplicity or repetitiveness (Unyk and others, 1992), which may account for their soporific effects.

Parents' play-songs and lullabies are notable for their highly expressive performances, which are finely tuned to the infant's ability and mood. The expressiveness of caregivers' songs enables naive adults to distinguish performances recorded in an infant's presence from those produced in the infant's absence (Trehub, Unyk and Trainor, 'Maternal', 1993; Trehub and others, 1997). Fathers also sing to their infants, but much less frequently than mothers. When they do, however, they adopt the characteristic caregiving style, along with subtly different nuances for their infant sons and daughters (Trehub, Hill and Kamenetsky, 1997; Trehub and others, 1997). Instrumental measurements and expert judgments reveal that, compared to songs performed without an infant audience, performances for infants are higher in pitch, slower in tempo and replete with cues to the singer's heightened emotions (Trainor and others, 1997; Trehub and others, 1997; Trehub and Trainor, 1998). Research on the acoustic cues underlying adults' speech and song has revealed that high pitch signals happiness, affection, tenderness and increased arousal (Fonagy and Magdics, 1963; Ohala, 1984; Scherer, 1986); slow tempo signals tenderness and affection (Davitz, 1964; Juslin, 1997); and perturbations in pitch and loudness signal heightened emotionality (Bachorowski and Owren, 1995).

Improvised aspects of parents' singing include deliberate alterations of lyrics (e.g. word substitutions, pronunciation changes), tempo or metrical structure (Trehub, Hill and Kamenetsky, 1997; Rock, Trainor and Addison, 1999). Presumably, such variations reflect parents' soothing or playful intentions. These expressive performances continue into the toddler and pre-school period, with changes appropriate to the child's development (Trehub and Schellenberg, 1995). For example, mothers use somewhat higher pitch when singing the same song to their infant compared to their pre-school child, but they enunciate the lyrics more clearly for the latter (Bergeson and Trehub, 1999). When young children sing, their performances differ depending upon whether their infant sibling is nearby (Trehub, Unyk and Henderson, 1994).

(iii) Responsiveness to parents' songs. It is unclear whether parents' songs to infants are intuitively driven or whether they are encouraged, to some extent, by favourable reactions from the infant audience. For the most part, experimental investigations of infants' responsiveness to singing and their song preferences have been restricted to laboratory settings involving audio recordings of women or men who are not the infant's own parents. These studies reveal that infants are more attentive when listening to lullabies or play-songs recorded while mothers were singing to their infants compared to performances by the same singers with no infant audience (Trainor, 1996). Infants do not exhibit a comparable 'preference' for men's performances in infant-present contexts unless the performances are electronically transposed into the vocal range of women (O'Neill, 1997). Whether this finding reflects infants' inherent preference for high pitched voices or their greater familiarity with women's voices remains to be determined. Video recordings of infants as they listen to contrastive audio recordings reveal more visible signs of enjoyment of women's singing than of men's. Greater infant enjoyment is also evident for unfamiliar (i.e. foreign) lullabies than for play-songs or adult songs (Trehub and Kamenetsky, forthcoming).

Unfortunately, the presentation of audio recordings to infants necessarily excludes the very features that distinguish parents' live performances from commercial recordings of lullabies and play-songs. From the infant's perspective, mothers' usual performances feature a familiar, loving voice, a variety of expressive features that are finely tuned to the infant's current mood and coordinated facial and body gestures (M. Papoušek, 1996; Trehub and Trainor, 1998). Mothers' songs to infants are literally captivating (Trehub and Nakata, forthcoming): specifically, infants remain fixated on their mother's face throughout her sung performances. By contrast, mothers' speech, however engaging it may sound, is considerably less successful in sustaining infants' undivided attention. In short, parents in general, and mothers in particular, provide a rich musical environment tailored to the emotional needs and musical interests of infants (H. Papoušek, 1996; M. Papoušek, 1996); infants respond with attention and appreciation. This pleasurable musical interaction provides an appropriate scaffold for the child's subsequent acquisition of musical conventions.

3. PERCEPTION: INFANCY AND BEYOND.

(i) Conceptual and methodological issues. Human beings, like other species, can be expected to have biologically based dispositions or biases that facilitate skill acquisition in some domains relative to others. It remains to be determined whether music perception and production capitalize on such predispositions. One means

of shedding light on this question is to ascertain the initial state of the organism before musical enculturation has a significant impact. Ideally, one should evaluate music perception skills at birth, but methodological and practical considerations favour older infants whose motor ability and general alertness make them more amenable to experimental study. Indeed, six- to nine-month-old infants are prime candidates for research because of their inclination to respond to novel auditory patterns (i.e. those they judge as novel) by means of measurable attentional responses such as turning towards the source of sound (Trehub, 1985; H. Papoušek, 1996). The availability of such measurable responses makes it possible to present a melody or fragment to an infant followed by a comparison melody that alters or preserves certain features. In effect, the infant must judge, albeit non-verbally, whether the comparison pattern is the same as or different from the original pattern. In general, the original and comparison patterns are presented at different pitch levels (i.e. keys) so that infants must make their judgments of sameness or difference on the basis of relational rather than absolute cues. By responding to a particular featural change (e.g. pitch, interval, melodic contour, timbre), infants indicate that feature's detectability and salience. Their failure to respond stems either from their perception of the melody as fundamentally unchanged or from their inability to encode and retain information about the original pattern.

(ii) Pitch and temporal patterns. Studies using such methods reveal that infants typically consider a transposed melody as equivalent to the original melody (Trehub, Bull and Thorpe, 1984; Trehub, Thorpe and Morrongiello, 1987); by contrast, robust responsiveness is evident when the original pitches are reordered (Chang and Trehub, 1977) or a single new pitch alters the melodic contour (Trehub, Thorpe and Morrongiello, 1985). Moreover, infants are able to notice subtle distinctions between an original and comparison melody when the comparison is transposed to a related key but not to an unrelated one (Trainor and Trehub, 1993). Infants also respond relationally to rhythmic aspects of auditory patterns, treating faster or slower versions of auditory sequences as equivalent so long as relative durations are preserved (Trehub and Thorpe, 1989). Indeed, disruption of the temporal patterning of musical phrases disrupts infant attention (Krumhansl and Jusczyk, 1990; Jusczyk and Krumhansl, 1993). The available evidence also indicates that brain regions subserving the processing of melodic contour (the right hemisphere) and intervals (the left hemisphere) are comparable in infants and adults (Peretz and Morais, 1987; McKinnon and Schellenberg, 1997; Balaban, Anderson and Wisniewski, 1998).

(iii) Intervals. Ancient and medieval scholars considered tones related by small-integer ratios (e.g. the octave, perfect 5th and perfect 4th) as consonant or pleasant and those related by large-integer ratios (e.g. the tritone) as dissonant or unpleasant (Plomp and Levelt, 1965). In the medieval era, authorities prohibited the use of the tritone because of its presumed demonic implications (Piston, 1941). Although experimental investigations with infants do not reveal heavenly or demonic qualities, they lend credence to the special status of intervals with small-integer frequency ratios. For example, infants retain more information from melodies based on the major triad, which exemplifies small-integer relations, than from those based on the augmented triad, which exemplifies large-integer relations (Cohen, Thorpe and Trehub, 1987; Trainor and Trehub, 1993). When intervals are examined outside a musical context, infants still exhibit good retention of melodic and harmonic intervals such as perfect 4ths and 5ths (i.e. small-integer ratios) and poor retention of tritones (Schellenberg and Trehub, 1996; Trainor, 1997); moreover, they are able to classify intervals on the basis of their consonance or dissonance (Schellenberg and Trainor, 1996). Infants also exhibit more sustained attention when they listen to consonant rather than dissonant harmonizations of melodies (Zentner and Kagan, 1996; Trainor and Heinmiller, 1998). This apparent processing bias for consonant intervals is interesting in light of the pervasiveness of octaves, perfect 5ths and perfect 4ths in musics of the world (Sachs, 1943).

(iv) Scale steps. Unequal-step scales, which are prevalent across cultures, are thought to facilitate perceptual processing (Balzano, 1980; Shepard, 1982; Butler, 1989). To test this hypothesis, infants and adults were evaluated on their memory for the exact pitch relations (i.e. intervals between adjacent scale steps) within a scale after they had listened to one of three ascending-descending scales: the major scale, a scale constructed by dividing the octave into seven equal steps, and a scale constructed by partitioning the octave into 11 equal subdivisions and selecting a seven-tone subset with adjacent tones separated by one or two steps (Trehub, Schellenberg and Kamenetsky, 1999). Not surprisingly, adults performed well on the major scale and equally poorly on the two unfamiliar ones, showing an overwhelming influence of long-term exposure to music based on the major scale. By contrast, infants performed equivalently on the two unequal-step scales, as indicated by their response to a three-quarter-semitone change in one scale step, but they failed to notice the same change in the context of the scale with equal steps. Such findings make it unlikely that familiarity is the principal contributor to the infant music perception skills that have been reported here and elsewhere (for reviews, see Trehub and Trainor, 1993; H. Papoušek, 1996; Trehub, Schellenberg and Hill, 1997; Trehub, 2000). Other findings consistent with processing predispositions rather than culture-specific learning include comparable performance by six-month-old (Western) infants on melodies based on the major scale and the Javanese *pelog* scale (Lynch and others, 1990).

(v) Harmony. Western music historically has highly specific rules for combining simultaneous tones; their cultural specificity makes them unlikely candidates for inherent processing biases. This question has been explored by comparing infants' and adults' ability to detect a small (one-semitone) pitch change that was inconsistent with the key and implied harmony of the original melody and a larger (four-semitone) pitch change that was consistent with the key and harmonic implications (Trainor and Trehub, 1992). Adults detected the smaller pitch change more accurately than the larger, no doubt because their implicit knowledge of musical conventions obscured the 'lawful' change. Infants, however, detected both changes with equal accuracy, indicating that implicit knowledge of key membership and implied harmony depend upon enculturation. Subsequent research confirmed that sensitivity to key membership is evident by five years of age; sensitivity to implied harmony is evident

by seven but undergoes further refinement as a consequence of musical training (Trainor and Trehub, 1994).

(vi) Implications. Infants' precocity in the perception of music and their performance parallels with adults are consistent with a human auditory system biassed to perceive melodies as coherent sequences, to recognize transpositions as functionally equivalent and to favour particular intervals and scales based on unequal steps. Such biases may operate, to some extent, as constraints on the range of possible music or, at least, on music that will be accessible to the untutored masses (Meyer, 1967; Schellenberg and Trehub, 1996; Trehub, Schellenberg and Hill, 1997; Trehub, 2000). Research on infant perception has identified aspects of music that are readily noticed and learnt and those that are likely to require effortful learning or extended exposure. It is clear, then, that infants do not begin life with a blank musical slate but rather with a set of skills that constitute a readiness to listen and learn, at the very least.

Research beyond the infant period is characterized by few central themes, being focussed instead on specific changes in the perception and performance of music that result from enculturation, formal training or environmental circumstances (e.g. Hargreaves, 1986; Pick and Palmer, 1993; Zenatti, 1993; Davidson, 1994; Hargreaves, 1996; Davidson, Howe and Sloboda, 1997; Umemoto, 1997).

(vii) Absolute pitch. Some scholars have proposed a critical period during which the ability to identify or reproduce the pitch of specific musical tones without reference to an external standard (Takeuchi and Hulse, 1993) is readily acquired but after which it is highly unlikely to be acquired despite extensive musical training (Sergeant and Roche, 1973; Miyazaki, 1988; Cohen and Baird, 1990; Crozier, 1997; Ward, 1999). The period in question, which relates to the onset of formal musical training, is commonly set at between three and six years of age.

According to some proponents of this early-learning theory, the underlying explanation resides in young children's inclination to focus on the pitches of individual notes rather than on pitch relations (Takeuchi and Hulse, 1993), which would facilitate the learning of pitch labels. The age-related shift of focus to relative pitch is thought to close the window of opportunity for acquiring absolute pitch. Although this explanation may be intuitively appealing, it is at odds with the infancy research documented above, which reveals relative pitch processing from the very beginning. Moreover, song-singing by four-year-old children confirms their continuing focus on relational features such as pitch contour and rhythm, and their inaccurate production of individual pitches (Davidson, 1994).

If young children perceive melodies relationally, as adults do, what facilitates their acquisition of absolute pitch? Children's cognitive inflexibility, particularly their tendency to focus narrowly on one dimension of a multidimensional stimulus, may be a contributing factor. For example, when pre-school children are asked to sort items on the basis of one dimension, such as colour, they continue to sort by that dimension when subsequently asked to sort by another such as size (Zelazo and Jacques, 1996). Although these children can report the appropriate rule, this knowledge fails to guide their behaviour. In early musical training, especially when it includes distinctive labels for pitch classes, children's usual focus on pitch relations may be transformed into a temporary fixation on absolute pitch. Aspects of language development during this period may also be implicated. At three years of age, children improve considerably in their ability to acquire new words (object labels) from very limited exposure (Rice, 1990); nevertheless, their understanding of language remains limited in several respects (Nelson, 1996). Only at about six do they begin to understand the arbitrary relations between words and their referents; before then, words are inseparable from the objects that they name (Papandropoulou and Sinclair, 1974; Gartner, Trehub and MacKay-Soroka, 1993). Thus, once 440 Hz is named, it can be nothing other than *a'*.

Other scholars have posited an inherited potential for absolute pitch (Bachem, 1940; Baharloo and others, 1998; Gregerson, 1998), which operates in conjunction with appropriate exposure. Not all children who receive early musical training acquire it (Takeuchi and Hulse, 1993), but it is unclear whether cases of failure implicate the type of training (e.g. whether fixed pitch names are introduced), differences in inherited potential or other factors. The high proportion of children who achieve absolute pitch in Japan (Miyazaki, 1988), where musical training begins most commonly in the pre-school period, offers little support for explanations involving heredity. However, it does not rule out the possibility of individual differences in the potential for absolute pitch or any of its component sub-skills.

VI. Musical ability

1. Lines of investigation. 2. Assessment. 3. Talent, inheritance, environment. 4. Gender differences. 5. Practice, motivation, training.

1. Lines of investigation. 'Musical ability' is a general term used to describe the level of musical skill and understanding an individual has achieved at any given time (Boyle, 1992). The level of ability displayed by any individual will be a joint result of aptitude and learning. Aptitude, which refers to the potential or capacity that an individual possesses to acquire musical skills, may limit the nature and time-course of what can be achieved through learning experiences and activities. Four key questions recur when considering this area: (*a*) Are there reliable ways of measuring ability? In particular, can musical aptitude be detected in the absence of significant achievement, and can such aptitude predict later achievement? (*b*) Is musical aptitude made up of a number of independent sub-skills that can be present or absent in differing degrees or combinations, or is there some single factor (musicality) which underlies all types of musical achievement? (*c*) Does aptitude have an innate or inherited component? Is it helpful to explain aptitude in terms of gifts or talents, and can characteristics such as gender be linked to this? and (*d*) What implications do conceptions of ability have on the way in which musicians are selected and trained?

These questions have, of course, been asked of many areas of human behaviour besides music, with the bulk of the research focussing on the concept of general intelligence or IQ (Sternberg and Grigorenko, 1997). Although there is a fair degree of consensus on the way they should be answered with respect to intelligence, the picture is much less clear for music (see Sloboda, 1985; Gordon, 1986; Hargreaves, 1986; Boyle, 1992). Our most reliable knowledge relates to the factors (e.g. cognitive, motivational, social and cultural) that determine how effectively individuals acquire and use musical skills.

2. Assessment. Assessment of ability in musical contexts is normally subjective, unlike competitive sport, where winning a match is an objective measure of skill. Judges, who are often music professionals, listen to prepared performances and then rate these according to implicit or explicit criteria. It is well established that such assessments, even if offered by experienced and trained judges, have limited reliability (Laming, 1990). Ratings may change according to such variables as the gender or attractiveness of the performer (Landy and Sigall, 1974) and are extremely vulnerable to order effects (Hales and Tokar, 1975): for instance, judges often rate a performance in relation to the one they have just previously heard. Jury members of a leading international piano competition gave quite different ratings to the same performance when it was repeated twice within a sequence of recorded performances (Manturszewska, 1970).

For such reasons, it has been a tradition in psychology to attempt to devise objectively scored alternatives to expert judgment, in the form of standardized psychometric tests. Such tests have been applied in three broad areas: assessing aptitude or predicting musical ability, diagnosing musical strengths and weaknesses, and evaluating musical achievement (usually following some type of formal training). However, because it is hard to devise objective measures for qualities such as interpretative power, the most widely used psychological tests have tended to concentrate on relatively simple and short-term perceptual sub-components of musical skill, such as the ability to tell whether two short musical sequences are the same or different in pitch and/or rhythm (e.g. Seashore, Lewis and Saetveit, 1960; Bentley, 1966; Sergeant and Boyle, 1980). A number of comprehensive reviews of standardized musical tests have been published (e.g. Shuter-Dyson and Gabriel, 1981; Abeles, Hoffer and Klotman, 1984; Boyle and Radcoy, 1987). Because, however, most tests are limited in what they can measure, their general use and influence within the world of music have been negligible, except at very elementary educational levels where they have sometimes been used as selection instruments to decide which children should be offered specialist music programmes.

It has often been asserted that some standardized tests assess aptitudes on the grounds that no specific performance skills (such as those acquired through formal

instrumental training) are needed to participate in them. However, great caution is required in drawing conclusions from performance in such tests. Few longitudinal studies have investigated the extent to which specific musical tests can predict long-term future achievement in music, and those that have been conducted have produced equivocal results. For example, Gordon (1968) found that musical aptitude scores predicted children's subsequent instrumental performance achievement after three years of training. However, a number of other studies have confirmed that measures of musical aptitude are not reliable predictors of children's success in music (e.g. Huftstader, 1974; Mota, 1997). Klinedinst (1991) found that musical aptitude scores accounted for less than 10% of the variance of the performance achievement of 205 children (aged ten and 11) who had just completed their first year of formal instrumental music training. A variety of non-musical factors such as boredom, fatigue and confidence in one's ability during test situations can influence an individual's performance in a musical test. O'Neill and Sloboda (1997) demonstrated that fluctuations in children's performance in a musical test were not influenced by differences in individual levels of cognitive skill but by their emotional and motivational behaviour during the test situation. In general, therefore, there is little evidence to suggest that it is possible to pick out those who are going to excel at music in adult life by the administration of aptitude tests at an early age.

3. Talent, inheritance, environment. The question of whether musical ability is influenced primarily by differences in aptitude or training is often argued within the context of the nature–nurture debate (i.e. the extent to which ability is influenced by biological or environmental factors). There is general scientific consensus that the most fruitful question is how the environment and heredity interact, rather than whether one is more influential than the other (e.g. Sternberg and Davidson, 1986; Storfer, 1990; Ericsson, Krampe and Heizmann, 1993; Gardner, 1993; Plomin and Thompson, 1993; Terwogt, Hoeksma and Koops, 1993). However, in Western cultures in general, and in music education circles in particular, it is widely believed that innate talent provides an explanation for exceptional musical ability (Davis, 1994). It is often asserted that precocious musical accomplishment or particularly rapid progress can be explained only by special innate gifts and talents (for examples see Radford, 1990; Gardner, 1993; Winner, 1996). Direct evidence for genetic contributions to musicality, however, is hard to find (Howe, Davidson and Sloboda, 1998), and the limited evidence available suggests that musical ability is less heritable than characteristics such as intelligence (Coon and Carey, 1989). This is consistent with the view that most individuals have the capacity for musical competence (Ericsson, Krampe and Tesch-Romer, 1993). Early musical opportunity and experience may provide better predictors of eventual musical expertise than the presence or absence of early signs of musical ability (Howe and others, 1995). For instance, Ericsson and Lehmann (cited in Lehmann, 1997) have shown a direct relationship between childhood achievements by historically significant musical figures and the presence of a live-in teacher, in the form of a parent or personal tutor.

4. Gender differences. Although no reliable gender differences in musical ability and aptitude have been found (see review by Shuter-Dyson and Gabriel, 1981), a gender reversal is apparent in musical involvement and achievement. More girls than boys are involved in, and successful at, musical activities at school (*Music for Ages 5 to 14*, 1991), and yet men continue to have more prominent roles in the music profession, achieving higher levels of success in their music careers. It has been pointed out that instrumental music is the only known area in which the gender-role differentiated beliefs and self-perceptions in childhood are opposite to the gender differences in participation seen in the adult world (Eccles and others, 1993, p.845). Gendered expectations that boys who engage in music have more natural ability and therefore greater potential for musical careers compared with girls (who are viewed as having to work hard in the absence of any real talent) continue to be transmitted through socialization processes and internalized by girls through gendered musical practices in education, the family, peer groups and the media (O'Neill, 1997). Historical definitions of femininity appear to orientate girls towards musical activities deemed appropriate for their sex, such as singing, and away from forms of public performance that receive the highest recognition and status in society. Sexual difference expresses itself not only in the musical practices and tastes of boys and girls, but also through multiple discourses that are constructed and perpetuated through diverse outlets such as music criticism and journalism, music academia and education, music professionalism, music marketing or musical sub-cultures (Green, 1997). According to Maccoby (1988), once a child understands gender categories, subsequent information may be integrated in terms of this influential classification and gender schemas (e.g. concepts such as masculine and feminine) are extremely resistant to change and contradiction (see O'Neill and Boulton, 1996, for research on children's gender-typed preferences for musical instruments). Increasing individuals' awareness of gendered musical meaning and its influence on identity and subjectivity may assist girls and boys to challenge and transcend accepted gendered assumptions and practices in music.

See also §VII, 2(ii) below and Women in music.

5. Practice, motivation, training. One of the best predictors of musical competence in children and adults is the cumulative amount of effortful practice that is completed over many hours and years (Ericsson, Krampe and Tesch-Romer, 1993; Sloboda and others, 1996). Based on violinists' retrospective estimates of practice, the former study found that by the age of 21 the best violinists in their sample had accumulated approximately 10,000 hours of practice, more than twice the amount done by a group of violinists at the same institution who were training to be music teachers. Similar results have been obtained in a study comparing expert and amateur pianists (Krampe, 1994). High levels of regular practice from an early age have also featured in the biographical accounts of expert performing musicians (Manturzewska, 1990; Sosniak, 1990). After asking young musicians who displayed wide-ranging levels of musical competence to keep diaries on the amount of time they spent practising over a 42-week period, Sloboda and others (1996) found that the highest-achieving young musicians devoted significantly more time to their practice than the moderate and low achievers; the results also indicated that the highest achievers were more consistent in their practice

from week to week and tended to concentrate on their technical practice in the mornings. However, most research in this area provides little information about the quality of practice undertaken and the effectiveness of strategies used by individuals when practising. Notable exceptions include studies by Gruson (1988), Ghent (1989) and Miklaszewski (1989). These studies indicate that, although there are degrees of variability and individual differences in practising behaviour, once musicians attain a certain level of expertise, there are important similarities in their use of strategies. Beginner instrumentalists tend to use fewer and less effective strategies and are less consistent in their practising behaviour than those who are more experienced. In a review of practising research, Hallam (1997) summarizes the following in relation to the practice of novice musicians: (*a*) Novices often appear unaware that they are making errors and have problems in identifying difficult sections. This may be because they do not have appropriate internal aural representations (schemata) against which they can evaluate their performance. (*b*) Novices tend to practise by playing through music rather than focussing on difficult sections. (*c*) When novices begin to identify errors they initially correct them by repetition of the single wrong note. As expertise develops, small sections (half-bar or bar) are repeated when errors are made; error correction gradually changes to a focus on difficult sections which are then worked on as units. Gruson (1988) found that the most reliable predictor of expertise was practice that focussed on repeating sections longer than a bar. (*d*) Novices learning to read music tend to focus first on playing notes at the correct pitch. Attention is then directed to rhythm. This then extends to all technical aspects of playing. Finally, attention becomes focussed on dynamics, interpretation and the expressive aspects of playing. As expertise develops, musicians tend to acquire an overview of the music they are to learn in the early stages of practising a new work, whereby the structure of the music determines how it is divided into sections for practice. (*e*) Changes in practice strategy use seem to be more closely linked to developing expertise than to age.

Although it is widely accepted that the amount of practice undertaken by individuals is an important factor in the acquisition of musical skills, it remains unclear why some individuals but not others persist in the many hours of practice necessary to master a musical instrument. It does not follow from the rejection of innate limits on acquired performance that everyone can easily attain high levels of skill. Contemporary elite performers have overcome a number of constraints. They have obtained early access to instructors, maintained high levels of deliberate practice throughout development, received continued parental and environmental support and avoided disease and injury. When one considers in addition the prerequisite – a level of motivation necessary to lead a child to engage in deliberate practice every day for years and decades, when most children and adolescents of similar ages engage in play and leisure – the real constraints on the acquisition of expert performance skills become apparent (Ericsson, Krampe and Tesch-Romer, 1993, p.400). There is little doubt that motivation to persist in instrumental training is inextricably linked to the social and cultural environment. For example, Sosniak (1985) and Sloboda and Davidson (1996) found that the time a child spent practising was related to the amount of support and encouragement the parents and teachers were willing and able to provide. The nature of this support changes with age, but in the pre-adolescent years it typically included direct parental supervision of practice activities. No amount of social support, however, is likely to make a child without motivation or intrinsic interest in music engage in the long-term effort required to succeed at even modest levels of musical competence.

A review of research into motivation for music is provided by Thomas (1992). Much of this research has been on the relationship between attitudes, self-esteem or self-concept and musical achievement (e.g. Hedden, 1982; Austin, 1991) and the attributions individuals make for success and failure in music (e.g. Asmus, 1989). Junior high school students who attributed the failure of a fictitious music student to insufficient effort or poor learning strategies were more likely to expect improved future performance than students who attributed failure to a lack of ability (Vispoel and Austin, 1993). Before beginning formal instrumental training, children may be divided into two broad groups: those who had a tendency towards adaptive mastery motivational behaviour and those who tended towards maladaptive helpless motivational behaviour (O'Neill, forthcoming). Mastery behaviour is associated with the pursuit of task mastery and high persistence following difficulty or failure; conversely, helpless behaviour is associated with the avoidance of challenge, task choices that emphasize short-term success at the expense of opportunities for future development, and low persistence and performance deterioration in the face of failure (see also Diener and Dweck, 1980; Dweck, 1986). These motivational patterns are especially salient in evaluative achievement contexts and are often quite independent of an individual's actual ability or potential. In other words, helpless and mastery motivational patterns account for the difference between the cognitive skills an individual can use and the skills he or she actually displays under certain conditions. The results of the study showed that children who displayed mastery behaviour made more progress at learning to play an instrument than those who displayed helpless behaviour, while standardized measures of musical aptitude and intelligence did not contribute significantly to the prediction of musical achievement.

During the initial stages of learning to play a musical instrument there are many obstacles to overcome; as a result, individuals experience difficulty and failure very early in their training. In addition, teachers often emphasize the incorrect aspects of performance, which tends to focus attention on an individual's lack of ability rather than encourage the effort and enjoyment associated with spontaneous music-making. Also, unlike academic school subjects where children are rarely given the choice of not pursuing an activity, instrumental training requires a great deal of autonomy on the child's part. For example, it is often up to the child to ensure that practice is done at home or to decide what is practised (i.e. whether new, difficult material is practised or avoided). It is in these circumstances in particular that helpless children may differ from mastery children. For example, helpless children may avoid practising pieces that pose particular difficulties, or give up practising as soon as something becomes difficult, whereas mastery children will seek challenges and persevere until each new skill or technique

is fully mastered. Thus it is likely that mastery children will make faster progress in the initial stages of learning a musical instrument than helpless children.

Evaluative achievement contexts are apparent from the earliest stages of instrumental training and feature prominently in any assessment of musical skills (such as competitions, examinations or public performances). In Western cultures in particular, most instrumental training follows a classical conservatory tradition. The characteristics of this cultural tradition include an emphasis on performances which accurately reflect printed music notation, a focus on repertory with a high standard of technical difficulty and an implicit or explicit focus on competitive events and evaluative situations which form an important part in the decision-making process concerning an individual's progression and reward (Sloboda, 1996). However, it is important to recognize that many individuals learn to play instruments using less formal or traditional approaches (including teaching oneself), such as jazz, pop or folk improvisation. These learning approaches have very different characteristics; moreover, motivational patterns may affect achievement in different ways.

Musical ability depends on a complex interaction involving cognitive, motivational, social and cultural factors, and an individual's experience, education, aspirations and attitudes towards music and musical training. Any full account of the development of musical ability must acknowledge the direct or indirect influence that each of these factors has on achievement.

VII. Social psychology

1. Introduction. 2. Individual differences: (i) Age (ii) Gender (iii) Personality. 3. Social groups and situations. 4. Cultural influences. 5. Applications.

1. INTRODUCTION. The social psychology of music attempts to explain how musical behaviour is related to its social and cultural context. Music is an essentially social activity: we create, perform, perceive and evaluate it using knowledge, attitudes and skills that are shared with other people. Music consists of physical sounds whose organization and patterning can be explained in terms of precise structures, but these structures only acquire musical meaning as a result of the social and cultural context in which they exist.

An important early landmark in the field was Farnsworth's *The Social Psychology of Music* (1954, 2/1969). His intention was to re-establish the importance of what he called the cultural determinants of musical behaviour in relation to its biological and physical bases. He felt that the cultural determinants were given insufficient emphasis in research, which was concerned with establishing absolute standards of musical performance and taste. However, a substantial proportion of Farnsworth's book dealt with perceptual issues (scales, intervals, melody) rather than with truly social psychological ones, though his extensive research on historical trends in musical taste and the eminence of composers is a notable exception.

The role of music in everyday life has changed dramatically as a result of recent social and technological developments (see Hargreaves and North, 1997). As far as the listener is concerned, the growth of the mass media, the availability of inexpensive tapes, CDs and videos, advances in miniaturization and portability (e.g. the 'Walkman'), and the huge potential of the internet mean that the range of music that can be heard by most people, the uses they make of it and the situations in which they hear it are far more extensive than hitherto. As far as musicians are concerned, the development of MIDI is beginning to revolutionize the ways in which music is created, arranged, recorded, stored and transferred between locations. These changes mean that creating, performing and listening to music are part of the everyday lives of more ordinary people than ever before, and that the nature of musical participation, musicianship and musical literacy needs to be redefined. The boundaries between different styles and genres are becoming increasingly blurred, and the uses to which music is put are ever-increasing. Music might be used in therapeutic settings; to promote non-musical aspects of children's learning; to increase work performance in industry; to create a particular mood or ambience in a commercial setting; to establish a 'brand image' in advertising; or to accomplish other aims in medicine, therapy or education.

The interaction between musical behaviour and the social environment can be analysed on three broad levels relating to individuals, social groups and situations, and broader cultural influences.

2. INDIVIDUAL DIFFERENCES. The study of individual differences in musical behaviour, and the ways in which these are influenced by the social environment, has centred largely on three main factors: age, gender and personality.

(i) Age. The influence of the social environment on age-related developmental changes is seen most clearly in musical tastes and preferences. Young children express interest in and liking for a wide range of musical styles and genres. This tolerance declines over the childhood years and reaches its lowest point in early adolescence. It increases again into early and middle adulthood, and then declines once more in later life. These changes almost certainly result from social and cultural influences rather than from any maturational or developmental processes, and these influences can be seen most clearly in adolescence. Many teenagers have extremely strong liking for and affiliation to a relatively small number of popular music styles. The overwhelming importance of pop music in their lives is shown by the massive sales figures of the pop music industry as well as by surveys that show that teenagers spend far more time listening to pop music than they devote to other comparable leisure activities. Research also shows that pop music fulfils many important functions in the lives of teenagers. It can serve as a distraction from the problems of adolescence, and often forms the basis of interpersonal and inter-group relationships. More generally, it has been suggested that music serves as a 'badge' of identity by which adolescents define themselves and others.

(ii) Gender. Many gender differences in musical behaviour can be explained in social psychological terms. Men have traditionally dominated the music profession in Western culture. The vast majority of the great composers have been men, and some instruments (e.g. brass, woodwind and percussion) were traditionally regarded as inappropriate for females, although women are increasingly

employed as professional players of a variety of instruments. Gender differences in music education, however, run in the opposite direction. In the UK more girls than boys learn musical instruments at school. Almost twice as many girls as boys enter national music examinations, generally gaining higher marks than boys. This apparent paradox suggests that gender differences are the product of social forces and conventions rather than of innate differences in musical ability (see §VI, 5). Many of the effects can be explained in terms of gender stereotyping. A growing body of evidence shows that certain instruments, such as the drums, trombone and trumpet, are widely perceived as 'masculine', whereas the flute, violin and clarinet are regarded as 'feminine'. The power of these stereotypes on teachers, parents and pupils is undeniable, and is probably at the heart of women's underachievement in the music profession.

See also WOMEN IN MUSIC.

(iii) Personality. The third area of individual differences in musical behaviour is the study of personality. It has been shown by psychologists that the acquisition of music knowledge and skills depends to some degree on personality and temperament. Several personality traits are normally considered 'masculine' or 'feminine' in the general population (Saville, 1972; Saville and Blinkhorn, 1976); however, in musicians from mid-adolescence onwards these gender-related differences are greatly reduced and in some cases reversed (Kemp, 1982a, 1985, 1996). Musical performance, in particular, is dependent on a personality profile that in some ways can be perceived as androgynous (Bem, 1974). The principal characteristics of the musician's personality are introversion, independence, sensitivity and anxiety, all of which are influenced by occupational factors.

(a) Introversion. Research suggests that musicians at all stages of development reveal tendencies towards introversion, perhaps acquired through years of isolated practice (Kemp, 1981b, 1996). This begins to reveal itself in teenage musicians and becomes more pronounced in those who proceed to higher education and into professional life. Musicians do not generally display the shyness and seriousness normally associated with introversion; its psychological significance in them is more related to a tendency to be self-sufficient and detached, characteristics referred to by Jung as 'living inwards'. Tchaikovsky referred to his compositional process as 'hidden utterances of my inner life' (Vernon, 1970). Musicians develop a rich, symbolic and imaginative inner life in which all valued knowledge and experience are constantly revisited and revised. This internalization of sound permeates the body's nervous system kinaesthetically so that musicians can be said to think with their bodies in the way suggested by Jaques-Dalcroze (Bachmann, 1984). It may well be true that it is this essential capacity that separates the musician from the non-musician.

(b) Independence. In general populations independence is invariably linked with extraversion, but in musicians it is associated with introversion (Kemp, 1981b, 1996). The combination of these two personality dimensions causes the musician to emerge in adulthood as a 'bold introvert' (Drevdahl and Cattell, 1958). Other phenomena associated with independence relate to aspects of the cognitive style of creative people who appear to prefer complexity and possess the ability to operate with thoughts, feelings and ideas that may be in conflict. Their independence manifests itself in their need to seek novel experiences (Kemp, 1996). These qualities are less observable in teenage musicians, who tend to be predisposed towards dependency.

(c) Sensitivity. Sensitivity is a quality that musicians possess at all stages of development. It is, however, wrong to interpret it purely in terms of aural acuity. Musicians' sensitivity is better interpreted as a proclivity towards 'feelingfulness' in which the lower levels of the brain are mobilized in a type of thinking that might be less exclusively cerebral than found, say, in mathematicians or computer programmers, and more open to insight and intuition (Kemp, 1996). These qualities are especially apparent in musicians' thought processes during performance and composition, as well as in their responses to music generally. Surprisingly, musicians may not be the quickest thinkers – their cognitive style requires them to ruminate at some length and depth, and to incubate solutions to problems (Myers, 1980). It is often thought that decisions in performance need to be carried out cerebrally and taken in split seconds; in fact, it may be more accurate to view them as being kinaesthetically based – a form of body thinking (as described above in connection with introversion; see also §IV, above).

(d) Anxiety. The study of anxiety in musicians has generated an extensive literature, much of which relates to performance anxiety and its control; this behavioural research lies outside the scope of this article. Anxiety as a personality trait manifests itself chiefly in adult musicians; the only exception is its appearance in teenagers who attend specialist music schools (Kemp, 1996). While anxiety can be extremely debilitating in the performer, it is wrong to view it as an exclusively negative phenomenon. Its appearance within the personality make-up of performing artists who do not experience performance anxiety suggests that it also has facilitating properties – for example, in ensuring that the performer is 'activated' at an optimum level in order to perform at his or her best (Hamann, 1982; Hamann and Sobaje, 1983). Problems may arise when the individual becomes overactivated and a state of panic can ensue. In other words, although anxiety may be beneficial for motivational purposes, in various circumstances higher levels will cause a disintegration of performance.

(e) Occupational factors. The traits described above are found in varying degrees and combinations in performing musicians, composers and teachers. Research over a fairly long period has suggested that there exist significant differences between the personalities of different types of instrumentalists (Martin, 1976; Kemp, 1981a; Bell and Cresswell, 1984; Kemp, 1996). String players have been shown to be the most introverted, brass players (with the possible exception of horn players) the most extraverted. Of the two groups, string players are also the more sensitive. The predominantly male brass players do not conform to the features of androgyny found in other musicians, preferring to maintain a more stereotyped gender identity. It is more difficult to identify a personality pattern common to all woodwind players. There appears to be a tendency for them to be introverted and lacking in anxiety, although the latter may not generally apply to oboe players. Little research has been undertaken with orchestral percussion players. Keyboard players have

been found to be comparatively extraverted and adjusted, and somewhat submissive and conscientious in outlook. Singers display a consistent profile of extraversion, independence and sensitivity that may reflect the task of singing in which the singer's personality is itself projected rather than the character of an external instrument (Piers, radio broadcast, BBC, 4 Oct 1978).

Composers display most of the personality traits of the performer at significantly higher levels. Not only are they more introverted, more independent and sensitive, they are radical in a way that most performing musicians are not. They are also less disciplined (Kemp, 1981c), perhaps reflecting a need to be free of externally imposed norms in order to adhere to their own well-internalized rule systems. The finding that composers exhibit less anxiety than performers may be accounted for in psychoanalytical terms: by engaging in creative processes, people bring resolution to tensions within themselves and develop new integrations. By extension, it might be thought that creative activity would attract those with severe mental health problems (Post, 1994; Kemp, 1996); this is perhaps borne out by the biographies of Berlioz, Bruckner, Musorgsky, Puccini, Schumann, Tchaikovsky, Wagner and other composers.

School music teachers, on the other hand, typically show lower levels of the personality traits described above as compared to composers. It seems likely, for example, that the rough-and-tumble of school classrooms requires a resilience that many musicians would not be able to generate given their degree of introversion and sensitivity. Student music teachers tend to be significantly more extraverted, less sensitive and more conservative than music students pursuing performance (Kemp, 1982b). Moreover, the gender differences noted above in connection with performers are reversed in teachers, bringing them more in line with the general population. This research suggests that, in order to be accepted in today's classrooms, music teachers need to be less obviously different from the general population while still retaining some residue of the personality characteristics of the musician. This appears not to apply to the private studio teacher, who may retain much of the musicianship-related profile.

3. Social groups and situations. Social psychologists have established that the judgments of an individual often conform to those of an external social group, even if the latter are clearly erroneous. Thus, some people will choose to listen to music that they do not like if they believe that important external groups do like it. One possible explanation for conformity in musical preference is that prestige effects occur when favourable information attached to a particular piece of music influences the listener's response positively. For example, listeners in experimental studies often report liking a piece supposedly played by a concert pianist but report disliking exactly the same piece when it is supposedly played by a music student. A similar process may explain why music by physically attractive performers is evaluated more favourably than that by unattractive performers, or how listeners' interpretations of music may be influenced by the body language of the performer. It seems that some form of perceptual reorganization may occur under these circumstances, such that the listener actually hears the music differently after exposure to specific information about it.

The social environment may also influence responses to music by affecting the autonomic nervous system. In most situations, people tend to prefer music that moderates extreme levels of environmentally induced arousal. For example, after exercising or being insulted, both of which induce high arousal, people tend to prefer soothing music. While exercising, however, people may deliberately increase their arousal by listening to loud, fast music. In other words, musical preference can be driven by the goals people have in a particular situation. Similarly, people tend to prefer music that is consistent with their expectations of that which is typically heard in a particular setting: the Wedding March from *Lohengrin* may evoke tears of joy in a church, but tears of boredom elsewhere. Such effects cannot be explained purely in terms of arousal, and psychologists also draw on contemporary models of human cognition which are based upon the networks of associations between different elements of our thinking. Some aspects of situational influences on musical preference can be explained in terms of the differential activation of these networks, raising the possibility of neural linkages between our musical and social worlds (see §VIII).

4. Cultural influences. Musical behaviour is also influenced by the broader culture in which music is produced and listened to; for example, the vast majority of listeners, composers and performers tend to listen to, compose within and perform the musical genres that are prevalent within their culture. Farnsworth was perhaps the first to investigate these specific cultural influences in detail, documenting the waxing and waning in popularity of classical composers using a variety of measures such as radio airplay and the content of orchestral programmes. These patterns mirror those found in pop music sales charts.

More recently, psychologists have begun to employ computerized analyses to investigate historical and cultural trends in musical behaviour. Several interesting trends have emerged. For example, moderately original themes (defined in terms of their statistical infrequency) are more popular at any given time than either highly original or very unoriginal themes. Over time, however, themes increase in originality as each generation of composers seems to employ ever more drastic measures to capture the attention of the public. These analyses also show that a range of other factors influence composers' work: for example, composers working in cities of high compositional activity tend to produce more original work than do composers in areas of less compositional activity; and compositions tend to become more original and disjointed when composers work under stress induced by illness or warfare. Non-Western cultures provide numerous examples of the non-aesthetic functions of music listening and performance such as storytelling, ceremony and the preservation of ethnic identity.

5. Applications. There are three main areas of research on the applications of music in everyday life.

(*a*) Music education research addresses social psychological issues such as the interaction between teacher and pupil, and how trainee music teachers grow into their new role.

(*b*) Research in health psychology deals with the role of music in therapy – in particular, the direct physiological benefits that music can produce, such as pain relief, or weight gain in neonates.

(c) Social psychologists are also concerned with the commercial uses of music. The music industry is a major contributor to the gross domestic product of many nations. Moreover, when played in shops, restaurants or bars, music has been shown to influence sales volume, the amount customers are prepared to spend, the image of the place in which it is played, the products customers choose, the amount of time they spend browsing or waiting on-hold, and their perceptions of the amount of time spent in the store (*see also* ENVIRONMENTAL MUSIC).

VIII. Neuropsychology

The neuropsychology of music attempts to provide an understanding of how our nervous systems enable us to be musical. A fundamental question is whether specialized areas in the brain may exist for music and, if so, where such systems may be located. This question was first investigated through studies on how brain damage may affect musical abilities. A number of descriptions exist of individuals who suffered musical disturbance following brain damage (Marin and Perry, 2/1999). There are also instances of dissociation between music and other abilities, such as the case of the Russian composer Shebalin, whose Fifth Symphony was written after a stroke that abolished his language function (Luria, Tsvetkova and Fuler, 1965). More systematic and controlled studies have demonstrated that damage to portions of the temporal lobe, an area of the brain containing the auditory cortex, results in deficient processing of melodies (Milner, 1962). The impairment is more marked when the damage is on the right, leading to the hypothesis that there might exist a specialization of function for aspects of music that is complementary to the well established left-brain dominance for language skills.

Subsequent work has suggested that music consists of many subfunctions, each of which has its own organization in the brain. Thus brain structures in and around the right primary auditory cortex seem critical for extracting pitch from the overtone structure of complex tone (Zatorre, 1988), while surrounding regions may be involved in computing interval relationships, maintaining pitch information for short periods in memory (Zatorre and Samson, 1991) and encoding information relevant to timbre, such as rise time or harmonic envelope (Samson and Zatorre, 1994). Findings have also emerged indicating that damage to areas of cortex important for perceiving music also disrupts the ability to imagine music, suggesting that the ability to represent musical information in the mind is dependent on the same brain areas as when music is actually heard (Zatorre and Halpern, 1993). Basic auditory discrimination capacity remains largely intact in these patients, leading to the possibility that the cortex might be important for processing patterns of information rather than for the elementary acoustic elements of music.

New scanning and imaging methods have allowed the measurement of brain activity in undamaged humans during normal musical activity. These studies have confirmed the importance of the right temporal cortex to music, since this area is active when listening to melodies. However, complex interactions exist between many brain areas even for the simplest task. For instance, remembering the pitch of a single tone while other tones are sounded requires the coordinated activity of many distinct areas within both cerebral hemispheres (Zatorre, Evans and Meyer, 1994).

Despite evidence of the importance of the right cerebral cortex, normal musical functioning depends on intact processing and communication between both halves of the brain. This is shown in patients with 'amusia' (the specific loss of essentially all music processing skills; Peretz and others, 1994). Such individuals are unable to perform many simple musical tasks, such as recognizing a tune familiar since childhood, yet display no trouble with language or other cognitive skills. The best documented of these cases suffer from damage to both hemispheres, indicating the coordinated nature of the underlying processes. Such cases also provide additional evidence for the independence of music from other abilities, and support the notion of specialized neural circuitry for music.

Musical training has been shown to affect brain organization. For example, the region of the brain that controls the fingers of the left hand in players of string instruments has been reported to be more highly developed

than for the right-hand fingers, indicating that an expansion of the cortical systems for motor control of the fingers may take place (Ebert and others, 1995). Similarly, other studies suggest that the fibres connecting the two halves of the brain may be more numerous in musicians, perhaps as a result of the fine coordination of the two hands that is necessary for playing many instruments (Schlaug and others, 1995). These and other findings suggest that a great deal of flexibility may exist in the brain, and that experience, particularly early in life, may change its organization; such plasticity may play a major role in developing expertise in music.

Ptaszyńska, Marta (*b* Warsaw, 29 July 1943). Polish composer and percussionist. After graduating from the music academies of Warsaw and Poznań she received a French government grant to study with Nadia Boulanger (1969–70). In 1972 she settled in the USA when a grant from the Kosciuszko Foundation enabled her to study at the Cleveland Institute of Music (1972–4) with Erb, Cloyd Duff and Richard Weiner. During her time there she gave many lectures on Polish music and made concert appearances throughout the USA with a wide repertory that included her own works. She has taught at Bennington College, Vermont (1974–7), the University of California (1977–81), Indiana University, Northwestern University and the University of Cincinnati; in 1998 she was appointed professor at the University of Chicago. Her *Siderals* and *Classical Variations* won prizes in Percussive Arts Society competitions in 1974 and 1976, and in 1986 *La novella d'inverno* was placed second at the UNESCO International Rostrum of Composers in Paris. She was a recipient of the Polish Cross of Merit and the Alfred Jurzykowski Foundation Award (New York). Her music, which ranges widely from pointillism to cantabile writing, is colourful and often delicate, with a keen sense of architecture and occasional use of aleatory procedures. Percussion instruments feature prominently in her works of the 1970s, while music after 1978 is more lyrical with a predominance of melodic and harmonic textures. She is often inspired by surrealist paintings.

WORKS
(*selective list*)

Stage: Oskar z Alwy [Oscar from Alva] (op, 6 scenes, Z. Kopalko, after Byron), S, Mez, T, Bar, B, chorus, orch, 1971; Soirée snobe chez la princesse (music-theatre), 2 kbd, tape, mimes, light projection, 1979; Mister Marimba (childrens op, A. Osiecka), 11vv, children's chorus, orch, 1993–5

Orch: Improvisations, 1968; Phantasy in Black and White, 1973; Spectri sonori, 1973; Crystallites, 1974; Perc Conc., 1974; Conductus: a Ceremonial for Winds, ww, 1982; La novella d'inverno, str, 1984; Mar Conc., 1985; Sax Conc., 1988; Ode to Praise all Famous Women, 1992; Fanfare for Peace, 1994; Conc. grosse, 2 vn, chbr orch, 1996

Chbr: 4 Preludes, vib, pf, 1965; Scherzo, xyl, pf, 1967; Passacaglia and Fugue, org, perc, 1968; Jeuparti, harp, vib, 1970; Madrigals (Canticum sonarum), wind qt, str qt, tpt, trbn, gong, 1971; Sonospheres III, fl, cl, trbn, vc, pf, perc, 1973; Siderals, 2 perc qnts, light projection, 1974; Mobile, perc, 1975; Classical Variations, timp, str qt, 1976; Dream Lands, Magic Spaces, vn, pf, 6 perc, 1978; Kwiaty Księżyca [Moon Flowers], vc, pf, 1986; Ajikan: Unfolding Light, fl, perc, 1990; Poetic Impressions, ww qnt, pf, 1991; 4 Portraits, str qt, 1994; Mancala, 2 vn, 1997; Scherzo di fantasia, euphonium, pf, 1997; Linear Constructions in Space, perc ens, 1998

Solo inst: Model przestrzenny [Space Model], perc, 1971–5; Arabesque, hp, 1972; Stress, tape, perc, 1972; 2 Poems, tuba, 1973–5; Touracou, hpd, 1974; Quodlibet, db, tape, 1976; 6 Bagatelles, hp, 1979; Graffito, mar, 1988; Hommage à I.J. Paderewski, pf, 1992; Spider Walk, perc, 1994; Olympian Rings, steel drum, 1998

Vocal: Epigrams (Gk. poems), chorus, fl, hp, pf, perc, 1977; Un grand sommeil noir (P. Verlaine), Mez, fl, hp, 1978; Sonety do Orfeusza [Sonnets to Orpheus] (R.M. Rilke), 1v, chbr orch, 1981; Listy polskie [Polish Letters] (cant., S. Wyspiański and others), S, Mez, Bar, chorus, chbr orch, 1988; Pieśni rozpaczy i samotności [Songs of Despair and Loneliness] (Rilke, P. Verlaine, W. Shakespeare, F. García Lorca, L. Staff), Mez, pf, 1989; Holocaust Memorial Cantata (L.W. Hedley, Y. Menuhin), S, T, Bar, chorus, chbr orch, 1992; Cantiones jubilationis (M. Duffy), women's chorus, 1995; Distant Echoes (Hedley and others), Mez, str qt, 1995; Liquid Light (Duffy), Mez, pf, perc, 1995

Principal publishers: Marks, Presser, PWM

MICHAEL MECKNA (with BARBARA ZWOLSKA-STESZEWSKA)

Ptolemaic Kingdom. *See* EGYPT, §I.

Ptolemy [Klaudios Ptolemaios; Claudius Ptolemaeus] (*b* ?Ptolemais, after 83 CE; *d* 161 CE). Greek mathematician, geographer, astronomer and music theorist. He probably had access to an observatory at Alexandria, where he spent his working life. His major work, on mathematics

and astronomy, was the *Almagest* (Arabic, *al-majistī*; Ptolemy's original title was *Mathēmatikē suntaxis*); a compendium of the work of earlier Greek astronomers, it describes a geocentric universe.

His three-volume *Harmonics* (*Harmonika*), written during the mid-2nd century, constitutes the most learned and lucid exposition of music theory in antiquity, its logical, systematic comprehensiveness making it a 'worthy counterpart' to the *Almagest* (Düring). In it Ptolemy discusses the principles and purposes of the theory of harmonics (i.1–2); the principles of acoustics (i.3–4); the theory of intervals, with a critique of the theory of the Pythagorean and Aristoxenian schools (i.5–11); the theory of the genera, with a critique of various divisions of the tetrachord (i.12–ii.1); a description of the helicon (a geometrical instrument devised, like the monochord, for measuring interval ratios using stretched strings; ii.2); the theory of 4th, 5th and octave species (ii.3); the Perfect System (*systēma teleion*) and the derivation of modes by transposition or modulation, with a critique of the Aristoxenian theory of *tonoi* (ii.4–11); a description of the monochord (ii.12–13); tables of the genera and the 'mixtures' (*migmata*) of genera usual in practice (ii.14–15); the use of the 15-string 'monochord' (iii.1–2); comparisons of the relationships between notes and the parts of the human soul (iii.3–7) and between the heavenly bodies, with tables (iii.8–16). An inscription from Canopus (Heiberg, ii, 149ff) draws a more detailed comparison between the planets and elements on the one hand, and the outer notes of tetrachords and their related numbers on the other.

Ptolemy's basic postulate was that the two criteria of judgment or reason and empirical observation should not contradict each other. Believing sense perception to be fallible, he discovered in the monochord, which enables acoustic phenomena to be expressed in visual, geometric terms, a precise scientific instrument by which to measure the numerical ratios of consonances. He therefore conceived of music theory in terms of precise mathematical calculation.

Citing such authorities as DIDYMUS on the difference between the Pythagorean and Aristoxenian theories of music, he criticized the Pythagoreans for frequently postulating theoretical relationships that do not correspond with reality; on the other hand he criticized the Aristoxenians for designating intervals by *diastēma* ('distance apart', i.e. by summation; *see* GREECE, §I, 6(iii)) rather than in terms of precise mathematical ratios.

The Pythagoreans are attacked for defining in different ways intervals smaller and greater than the octave. For example, Ptolemy claims that they wrongly excluded the 11th (8:3) from the consonances while admitting the 4th (4:3), because the 11th was a ratio neither multiple (i.e. in the form $nx : x$) nor superparticular (i.e. in the form $(x + 1) : x$, where x is a positive integer): these were the mathematical formulae favoured by the Pythagoreans to define consonances.

Ptolemy arranged intervals between notes of definite but unequal pitch (*anisotonoi*) according to the simplicity of their ratios, as *homophōnoi*, or multiple ratios (e.g. the octave, 2:1, or the double octave, 4:1); *sumphōnoi*, or the first two non-multiple superparticular ratios (the 4th, 4:3, and the 5th, 3:2) and their octave extensions (the 11th, $2:1 \times 4:3 = 8:3$, and the 12th, $2:1 \times 3:2 = 3:1$); and finally *emmeleis* ('in the *melos*', i.e. melodically useful), or the superparticular ratios according to the formula above where x is greater than 3, for example, the whole tone (9:8). He also proved mathematically and acoustically that the Aristoxenians wrongly defined the 4th as two and a half whole tones and the octave as six whole tones.

Similarly, in examining the classifications of the tetrachord by his predecessors, he showed that the results they obtained had not been confirmed by empirical observation. After citing the classifications of Archytas, Eratosthenes, Didymus and Aristoxenus, he calculated his own tetrachords, using superparticular ratios, as follows:

One enharmonic tetrachord: $5:4 \times 24:23 \times 46:45$

Two chromatic tetrachords: the 'soft' (*chrōma malakon*) – $6:5 \times 15:14 \times 28:27$; and the 'high' or 'tense' (*chrōma syntonon*) – $7:6 \times 12:11 \times 22:21$

Three diatonic tetrachords: the 'tense' (*diatonon syntonon*) – $10:9 \times 9:8 \times 16:15$; the 'soft' (*diatonon malakon*) – $8:7 \times 10:9 \times 21:20$; and the 'even' (*diatonon homalon*) – $10:9 \times 11:10 \times 12:11$

The enharmonic tetrachord entails the pure 3rd (5:4) of Archytas and Didymus. The divisions of the 'soft' and 'tense' chromatic tetrachords are probably very close to the corresponding divisions in Aristoxenus's genera of the same name. Of the diatonic tetrachords, the 'tense' adapts the ratios of Didymus by exchanging the order of the two upper intervals, and the 'soft' is a counterpart, though differing in some respects, to Aristoxenus's 'soft' diatonic tetrachord; the 'even' includes a harmonic division by three into intervals of three-quarters of a tone, as in the archaic *spondeion* scale.

Ptolemy also discusses tuning in instrumental practice, using different genera in the two tetrachords of one octave. Whereas the lyre has two tunings, *sterea* ('hard', ?diatonic) and *malaka* ('soft', ?chromatic), the kithara has six different tunings, called *tropoi* (in the Hypodorian mode), *iasti-aiolia* (Hypophrygian), *hypertropa* (Phrygian), *tritai* (Hypodorian), *parhypatai* (Dorian) and *lydia* (Dorian). Ptolemy's association of them with the ethnic names of the modes suggests that they were commonly used in the imperial era.

For the derivation of the octave species, Ptolemy used a 'monochord' with one string for each of the 15 notes of the double octave making up the Perfect System. The notes can be identified by *thesis*, that is, their absolute position on the strings, or by *dunamis*, their function relative to other notes within the mode in question.

In discussing *metabolē* ('change', including transposition and modulation) Ptolemy distinguishes between a simple transposition of a whole melody to another pitch while retaining the same intervals within it, and a more basic 'modulation' of part of the melody, involving a new sequence of intervals and, thus, a change of genus (*see* METABOLĒ). Only the second of these is true modulation, and it alters the ethos.

Instead of the 13 (or 15) transpositional notes, a semitone apart, of the Aristoxenian school, Ptolemy's system consists of seven *tonoi*, each spanning a complete octave. These are derived from the three oldest modes (Dorian, Phrygian and Lydian) with the aid of a cycle of 4ths, the result of which is a sequence of modes pitched either a whole tone (1) or a semitone ($\frac{1}{2}$) apart, in the following order: Mixolydian – ($\frac{1}{2}$) – Lydian – (1) – Phrygian – (1) – Dorian – ($\frac{1}{2}$) – Hypolydian – (1) – Hypophrygian – (1) – Hypodorian. Since the notes *mesē*

in each are tuned in the middle octave *e–e′*, Ptolemy's transpositional notes correspond to an octave species.

The *Harmonics* culminates in a metaphysical discussion, largely on Pythagorean and Platonic lines, of the music of the spheres. Ptolemy draws various analogies between the relationships of the elements of music and those of the human soul (the microcosm) and the movements of the planets (the macrocosm). For instance, he compares the intervals named by him *symphōnoi* to the parts of the soul, the genera to the virtues and the Perfect System to the ecliptic. His last chapter, which is fragmentary, contains astrological speculations about the characteristics of planets and musical notes.

A century after the composition of the *Harmonics*, the Neoplatonic philosopher PORPHYRY wrote an informative commentary on it, referring to Ptolemy's sources and giving his own evaluation of many earlier authors. He took particular pleasure in discussing such distinctions as the quantities and qualities of notes. The *Harmonics* was translated into Arabic in the 9th century, and two important Byzantine (Greek) editions were made by Nicephorus Gregoras (*c*1335) and his pupil Isaac Argyrus, the former including Gregoras's own emendations and original material, interlinear glosses and scholia (annotations).

The various theories put forward by Ptolemy greatly influenced the Byzantine theorists Georgios Pachymeres and Manuel Bryennius, and his influence also extended to Western Europe, where he was known in the Middle Ages chiefly through Boethius's *De institutione musica*. His musical and astronomical systems were still current in Kepler's writing. The edition of A. Gogavinus's Latin translation (Venice, 1562) by Wallis was exemplary in its day; the standard modern edition is that of Düring, and is based on 84 manuscripts.

LUKAS RICHTER

Public Enemy. American rap group. While working with DJ Hank Shocklee at Adelphi University, Long Island, under the auspices of the college radio station manager Bill Stephney, Chuck D (Carlton Douglas Ridenhour; *b* Roosevelt, Long Island, NY, 1 Aug 1960) honed his rapping skills and formulated the concept of a rap group that would be musically experimental and commercially successful. With the addition of Flavour Flav (William Drayton; *b* Roosevelt, Long Island, NY, 16 March 1959) and 'Minister of Information' Professor Griff (Richard Griffin), they released their début album *Yo! Bum Rush the Show* (Def Jam, 1987). Their subsequent albums for the Def Jam label, particularly *It Takes a Nation of Millions to Hold Us Back* (1989) and *Fear of a Black Planet* (1990), increased the collaged atmosphere of musical frenzy created by the 'Bomb Squad' production team of Hank and Keith Shocklee, Carl Ryder and Eric 'Vietnam' Saddler. Multi-layered, fragmented and rhythmically volatile, the music evoked cities in chaos, while Chuck D's eloquent raps conveyed an urgency in their delivery and apocalyptic imagery.

Memorably describing rap as the 'black CNN', Chuck D became the focus of a new mood of militancy among young blacks, yet the group's music and message had appeal for rebels of all ethnic backgrounds. Controversy

followed the outspokenness of the group and their support for the Nation of Islam leader, Louis Farrakhan, and, after making anti-Semitic comments in 1989, Professor Griff was ousted from the group. In the same year, their 'Fight the Power' was used to striking effect in Spike Lee's film, *Do the Right Thing*. The later albums, *Apocalypse 91 ... The Enemy Strikes Back* (1991) and *Muse Sick-N-Hour Mess Age* (1994) were less dense and turbulent than their best work, yet still powerful. By the mid-1990s their influence had waned, but they continued to record, with Chuck D assuming a role of spokesman and theorist through lectures and writing. Public Enemy remain one of the most significant bands in popular music through their setting of a new agenda for the lyrics and music of hip hop.

Puccini. Italian family of musicians.

(1) **Giacomo Puccini** (i) (*b* Celle dei Puccini, Lucca, bap. 26 Jan 1712; *d* Lucca, 16 May 1781). Composer. He lost his father, Antonio Puccini, at an early age and, together with his brother Michele (*b* Celle dei Puccini, Lucca, bap. 26 Dec 1714; *d* Lucca, 27 Sept 1782), who became a churchman and a musician, settled in Lucca in 1719 where he began to study music. In 1732–4 he completed his studies with Carretti in Bologna, where he met Padre Martini, with whom he corresponded for many years. From 1739 until his death he was director of the republic's *cappella di Palazzo*, and from 1740 organist at the cathedral of S Martino as well as being *maestro di cappella* and organist at the other principal churches in Lucca. A vivid picture of his frenetic activity as a composer, director and organizer of musical events in and around Lucca emerges from his diary, the *Libro delle musiche annue ed avventizie* (1748–58, in *I-La*). From 1743 he was a member of the Bologna Accademia Filarmonica. Pietro Guglielmi was one of his pupils.

Giacomo's output is mostly of sacred music, of various kinds, for a wide variety of ensembles. The most solemn occasions were those for the annual feast of S Croce, with Mass and Vespers for two choirs and two instrumental groups, augmented by the *mottettone*, a grand composition for two choirs and two orchestras (one from 1753 has survived). His style is distinguished by good vocal writing and counterpoint and uses the Baroque technique of contrasting diverse vocal and instrumental groupings, always with marked rhythm. The treatment of the text shows considerable variety, alternating fugal with homophonic sections and brilliant, fast movements with slow, expressive ones, with frequent recourse, in the soloists' parts, to aria style, and, in the obbligato writing, to concerto style. He also composed dramatic music for the *tasche* (elections of the government of Lucca, usually held every two years). The *tasca*, in three parts or *giornate*, each by a different composer, had librettos in praise of liberty drawn from classical history. Musically they consisted of a symphony, a series of recitatives and arias, and some choral pieces. The orchestra was made up of strings and basso continuo, with the addition of an increasing number of wind instruments. The arias were in the standard contemporary forms, but were particularly notable for the variety of vocal styles and their adherence to the texts.

WORKS

MSS in I-Baf, Bc, Li, Ls, PAc, Sd, TLp

Sacred: 2 masses, 4vv, orch/str; 17 messe brevi, 3–8vv, orch; Christe, 2vv, bc; 2 Gl sections, 1v, orch/bc; 7 Cr, 4–8vv, orch; 23 ints, 2–4vv, orch/bc; Grad, 3vv, orch; 3 Alls; Off, 4vv, org; Requiem, 8vv, orch; Responsory, 8vv, orch; Pss, 4vv con violini a beneplacito; 58 pss, 2–8vv, orch/bc; 20 versetti, 1–8vv, orch/bc/unacc.; Versi sagri, 4vv unacc.; 15 hymns, 2–8vv, orch/bc; 10 TeD, 3–8vv, orch; 4 Bs, 3–4vv, orch/bc/unacc.; 10 Mag, 4–8vv, orch; 2 Lits: 4vv, orch, 3vv, unacc.; 12 Lamentations: 9, 1v, orch, 3, 1–2vv, bc; Improperia, 4vv, bc; 20 motets, 1–8vv, orch/bc

Tasche, all perf. Lucca: Dione Siracusano, 1732; Lucio Giunio Bruto, 1735; Marco Genuzio, 1738; Solone, 1741; Teramene, 1744; Tarquinio Collatino, 1747; Dione Siracusano, 1750; Curzio Cavalier Romano, 1753; Marco Manlio Capitolino, 1755; Tarquinio Collatino, 1758; Roma liberata dalla signoria de' re, 1760; L'Arminio, 1763; La confederazione dei Sabini con Roma, 1765; L'esilio di Marco Tullio Cicerone, 1768; Il Narsete, 1770; Marzio Coriolano, 1773; Roma liberata dalla congiura di Catilina, 1775; Marco Manlio Capitolino, 1777

Other works: Il martirio di S Valentino (orat), Bientina, Pisa, 1754; Cori da cantarsi in occasione dell'estrazione del primo collegio dopo le tasche, 4vv, orch; Solfeggi in chiave di contralto

(2) **Antonio (Benedetto Maria) Puccini** (*b* Lucca, 30 July 1747; *d* Lucca, 10 Feb 1832). Composer, son of (1) Giacomo Puccini (i). With financial help from the government of Lucca, from 1768 he studied under Carretti and Abate Domenico Maria Zanardi in Bologna, where he met his future wife, Caterina Tesei (1747–1818), an excellent keyboard player, teacher and copyist. In 1771 he became a member of the Bologna Accademia Filarmonica, through the offices of Padre Martini, to whom he had been entrusted by his father. He was invited to present his works for the feast of S Antonio, patron of the academy. Having returned to Lucca he worked with his father, preparing to succeed him in his post at the Cappella di Palazzo and as organist of S Martino, which he did, by decrees of 1772 and 1779. After the suppression of the Cappella di Palazzo (31 July 1805) by the new governors, he continued to produce and to organize the music for the feasts of S Croce and for other liturgical occassions. He was a loving and able custodian of the family's rich library, and compiled the valuable *Repertorio* (1818) of its contents.

Antonio's sacred compositions consist of a free series of closed movements in various styles, some of which are concertato with soloists, double choir and orchestra,

some *a cappella*, in motet style, and some in aria style. His *Messa da Requiem* (1792) was greatly prasied for its 'gusto patetico e capriccioso'. His *tasche* reveal a new and personal style: the opening symphonies, which are sometimes in sonata form, employ a harmonious Classical style and an orchestra larger than the one his father used; the arias and the accompanied recitatives achieve variety and expression through unexpected interpolations from obbligato instruments.

WORKS

MSS in I-Baf, Lc, Li, Ls, PAc

Sacred: Mass and vespers for Holy Saturday, 4vv, orch; 14 messe brevi, 2–8vv, orch/bc; 5 Ky, 2–4vv, orch; 3 Gl, 4vv, orch; 6 Cr, 2–8vv, orch; Bs, 4vv, orch; 15 ints, 2–8vv, orch/bc; Grad, 2vv, bc; Seq, 3vv, small orch; Int and Ky for Mass of the Dead, 4vv, orch, 1789; Dies irae, 4vv, orch, 1789; Off, San, Ag, Comm, Absolution for the Dead, 4vv, orch, 1790; Salmi, 4vv, bc; 20 pss, 4–8vv, orch/bc; 2 ants, 2–4vv, orch/org; 6 hymns, 4vv, orch/bc; 2 TeD, 4vv, orch; 3 Mag, 4vv, orch; Lit, T, B, org; 10 lamentations, 1–2vv, orch/bc; Improperia, 4vv, bc; Responsories, 3vv; 7 motets, 2–4vv, bc

Other works: Il genio, cantata, S, orch; Duetto nella terza giornata delle tasche, 1791

(3) Domenico (Vincenzo Maria) Puccini (*b* Lucca, 5 April 1772; *d* Lucca, 25 May 1815). Composer, son of (2) Antonio Puccini. He was first taught by his parents and – with a bursary from the Lucca authorities, like his father – continued his studies in Bologna (1793–6) under Mattei and in Naples (1797–9) under Paisiello, which undoubtedly directed him – the first of his family – towards a theatrical career, and he remained in frequent, friendly correspondence with him. Having returned to Lucca, after the dispersal of the Cappella di Palazzo where he worked with his father (he also played beside him on the organ of S Martino), Domenico was from 1806 to 1809 director of the small Cappella di Camera (founded by Napoleon's sister, Elisa Baciochi, then Regent of Lucca) and of a municipal chapel from 1811 to 1815. His sudden death in that year was not, as has been claimed, the result of poisoning for political reasons.

In an early 19th-century engraving by Luigi Scotti, Domenico appears with other well-known contemporary musicians, a sure sign of the esteem that his music enjoyed. Domenico's output is more varied than that of his father and grandfather: besides sacred music, often sensitive to changing political conditions, he wrote instrumental and vocal chamber works, but was chiefly involved in opera composition. His style is completely theatrical, even in sacred and vocal chamber compositions; it differed from that of his father so much that his father could not complete his unfinished *Te Deum*. The style is very simple and fluid; in his operas, especially the comic ones, he reveals an outstanding dramatic sense and a fresh and spontaneous inspiration, along with the assimilation of styles present in the comic operas of the time, particularly those of the *farsa*.

WORKS

MSS in I-Lc, Li, Ls, Sac, TLp

Inst: 2 syms.; Concerto di cimbalo o pianoforte con strumenti obbigati; 42 suonate, org; other sonate, org

(4) Michele Puccini (*b* Lucca, 27 Nov 1813; *d* Lucca, 23 Jan 1864). Teacher and composer, son of (3) Domenico Puccini. He began a strict musical education in Lucca under his grandfather Antonio and Marco Santucci and then continued in Bologna under Pilotti (in 1836 he was admitted to the Accademia Filarmonica) and at the Naples conservatory. On his return to Lucca he became a teacher at the Istituto Musicale Pacini, where he was director from 1862. For many years he was also organist at S Martino (a post he took over directly from his grandfather) and a piano teacher at the Istituto femminile di S Ponziano.

Michele Puccini was most important as a teacher, having among his pupils Fortunato Magi, Luigi Nerici and Carlo Angeloni. A surviving treatise on counterpoint is evidence of his teaching activity, while a harmony treatise by him has been lost. He also carried out the first research into the history of music in Lucca, leaving manuscript notes and some published articles; he transmitted his interest in this subject to Nerici. After a few unsuccessful attempts at opera, Michele distinguished himself chiefly as a composer of sacred music, particularly of the massively-scored works for the traditional Santa Croce celebrations. A *mottettone* of 1845 is especially outstanding.

Besides the celebrated Giacomo, Michele Puccini had another musician son, Domenico Michele (*b* Lucca, 19 April 1864; *d* Rio de Janeiro, 12 March 1891), who studied at the Milan Conservatory and emigrated in October 1889. He lived at Buenos Aires, Juiuy (as a teacher) and Rio de Janeiro, and is known to have composed.

(5) Giacomo (Antonio Domenico Michele Secondo Maria) Puccini (ii) (*b* Lucca, 22 Dec 1858; *d* Brussels, 29 Nov 1924). Italian composer, son of (4) Michele Puccini. He was the greatest composer of Italian opera after Verdi.

1. Education and early works. 2. The Bohemian period. 3. Acquiring a style. 4. Realism and poetry. 5. Idealism and power. 6. Exoticism and tragedy. 7. Renewal or death. 8. *La rondine*, or disenchantment. 9. New forms. 10. The last experiment. 11. Assessment.

1. EDUCATION AND EARLY WORKS. Born into a family that had supplied his native city with musicians for the previous four generations, Puccini began his musical education (after completing his classical studies) in 1874 at the Istituto Musicale Pacini in Lucca, with his uncle Fortunato Magi. It was Carlo Angeloni, however, who intoduced him to the study of orchestral scores, particularly those of Verdi. He had his first success as a composer during these years with the motet *Plaudite populi* (1877) and with a Credo, both of which were performed on 12 July 1878 in honour of San Paolino, the patron saint of Lucca. (The Credo was later inserted into his *Messa a quattro*.) His unusual gifts were recognized and in 1880 he was sent for further study to the conservatory in Milan, then the theatre capital of Italy. He was supported by a small bursary, augmented by a modest allowance from his uncle, Nicolao Cerù. In Milan he met Alfredo Catalani, who had already made a name, and through him he came into contact with the Milanese group of Bohemian artists known as the *Scapigliati*, which comprised leading intellectuals, including Boito, Faccio and Marco Praga.

In his first three years in Milan Puccini laid the foundations of his future success, first with the violinist and composer Antonio Bazzini, then, after a month, with the established opera composer Ponchielli. Puccini was eager above all to learn the art of the *coup de théâtre*, the mastery of which he would later display in many of his works. From Amintore Galli, professor of the history and philosophy of music, he learnt the fundamental principles of Wagnerian aesthetics. Finally, by attending performances of nearly all the major operas of Bizet, Gounod and Thomas at La Scala and other theatres, he gained direct experience of the French style which was to become one of the most distinctive features of his art.

While still a student he composed a *Preludio sinfonico* in A major (1882) and, a year later, as part of his diploma, a *Capriccio sinfonico*. This was performed on 14 July 1883 by the conservatory orchestra, under the baton of Faccio, the leading Italian conductor of the time, who was to include it in two more programmes in Turin the following year. It was remarkably successful and met with the approval of the critic Filippo Filippi, one of the foremost champions in Italy of German Romantic symphonic and lyric music.

The *Capriccio* is a substantial composition for full orchestra, similar in form to a symphonic poem. It displays Puccini's structural skills and tonal inventiveness. But the *Preludio* is more interesting. In its intense concentration, and in the ethereal sonority of the opening, there are noticeable echoes of the prelude to *Lohengrin*. However, the best of Puccini's compositions, apart from his operas, is undoubtedly the *Messa a quattro* also composed during these years. The liturgical passages of the Mass have always appealed to the imagination of opera composers, who see in them an undeniably dramatic quality, as revealed here in the martial opening of the Gloria and in the initial theme of the Credo. Touches of the sacred style are also present: the opening of the Kyrie displays elegant choral counterpoint in four parts, composed in strict form. The work is full of striking passages, from the intensly dramatic Credo to the simple elegance of the Agnus Dei. The work shows Puccini drawing on a great and vital family tradition, while exploring new possibilities. The techniques he demonstrates here mark the beginning of a new style that was to play an essential role in his creation of theatrical effect.

2. THE BOHEMIAN PERIOD. Puccini's first opera was *Le villi*, which he entered for the Sonzogno Competition of 1883. It was rejected by the examiners, who were chaired by Ponchielli; the official reason given was that the score was illegible. It is possible, however, in view of the unusual qualities of the work and the gifts of the composer, that the publisher Giulio Ricordi, himself an excellent musician and in a position therefore to recognize new talent, had some influence on the decision. If *Le villi* had been successful it would have been published by Sonzogno; instead, the opera ended up in the hands of his rival. News was spread that there would be a private performance of the work in the house of Marco Sala, a member of the *scapigliatura*. Boito and Praga were present and a subscription was raised for a production, which opened at the Teatro Dal Verme on 31 May 1884. As anticipated, *Le villi* was a success, in spite of the shortcomings of its libretto, by Ferdinando Fontana. Ricordi had found Verdi's successor.

The work's symphonic unity is achieved by the prominence of two orchestral intermezzos and a prelude, in which are interpolated reminiscences and anticipations of the vocal parts. They establish a dramatic cohesion using interwoven melodies, a technique which, from *Manon Lescaut* onwards, was to characterize Puccini's compositions. The most original music is given to the tenor, notably a splendid *romanza*, in which Puccini displayed gifts which he was to develop fully in the next few years: melodic originality, harmonic delicacy, dramatic intuition and flexibility in the orchestra.

During the early years of his career Puccini's life was overshadowed by the death of his mother. It was also complicated by his relationship with Elvira Bonturi (the wife of a Luccan grocer, Gemignani), with whom he had a son, Antonio, in 1886. It was not until after the death of Elvira's husband that they were able to marry in 1904. Early in these difficult years Puccini and Fontana began their next collaboration, *Edgar*, an opera based on a poem by Alfred de Musset. The first night at La Scala (21 April 1899) made little impression and Puccini began revising the score. In 1892 he reduced it from four acts to three and later, in 1905, he pruned it again for a revival in Buenos Aires, but even then it achieved no more that a *succès d'estime*.

Fontana insisted on keeping to the allegorical subject but at the same time, to please the *Scapigliati*, he tried to create opportunities for theatrical moments in the style of a grand opera. The result was a libretto lacking in coherence in which symbolic contrasts between guilt and purity, virtue and vice (personified by Fidelia and Tigrana, on the pattern of Micaëla and Carmen in Bizet's masterpiece) were grotesquely inserted into a drama of action. Consequently the original identity was lost, without being replaced by a new one. Puccini failed to achieve a true unity; he merely linked together a few passages, using recurring motifs. Nevertheless, from a strictly musical point of view, many sections in *Edgar* are worthy of consideration. Chief among these is the first part of the third act, when the fake funeral of Edgar takes place. Puccini treated it with complete sincerity, his imagination responding to the idea of death, a subject which in the future would inspire some of his best theatrical moments. Unfortunately the dramatic structure forced him to make a number of concessions to *scapigliatura* taste. However, the lesson was very useful to him: from then he chose his subjects himself and prescribed the dramatic style of the libretto before setting it to music. *Edgar* was the only real failure of his career.

3. ACQUIRING A STYLE. The circumstances surrounding *Manon Lescaut* were very complicated. Leoncavallo, Praga, Domenico Oliva, Giacosa and Ricordi all worked on the opera from 1889, but in 1891 Luigi Illica took charge, strengthening the parts which Puccini found weak, without altering others for which he had already composed music. Illica introduced a few minor characters, made the beginning of the third act more lyrical and suggested a finale 'alla marinesca'. But above all he solved the problem of the chorus by converting it into a roll-call of prostitutes (Act 3). Working out a detailed plan, he enabled Puccini to transform what was to have been a static *pezzo concertato* into an ensemble of action (something Verdi had set out to achieve in the third act of *Otello*, but without success).

With *Manon Lescaut* Puccini's genius caught fire. After the near-failure of *Edgar*, he resolutely tackled the problem of drama in music postulated by Wagner, combining the technique of the leitmotif with the Italian concept of the *dramma in musica*, in which melody was the main support. In the first act of *Manon Lescaut* Puccini went beyond the limits of the genre, skilfully adapting symphonic structures to the demand of the action. The thematic material used in the opera sets up a network of relationships, linking characters to real situations and emotions, with the result that the music often plays a dominant part, freeing itself from the requirements of the narrative to suggest sophisticated symbolic associations. A good example of such flexibility is the name-theme ('Manon Lescaut mi chiamo'), first heard when Manon's carriage arrives in Amiens in Act 1. Puccini took this theme and varied it like a leitmotif, repeating it at key moments of the action, almost as if it contained in essence the heroine's own future and that of her lover. The precision with which Puccini links tonality to the articulation of recurrent themes and melodies further reveals his deliberate dramatic intentions.

Puccini generally delineated from the opening bars of his operas the atmosphere in which the action was to develop. In *Manon Lescaut* he sketched the historical local colour of the 18th century, particularly its lecherous and hypocritical aspects. The opening theme of the opera is drawn from his own three minuets for string quartet (1884), and suggests the musical style of the period. In the first part of the second act, the life of the boudoir is depicted: the gallantry of the courtiers is contrasted effectively with the combination of passion and corruptibility that dominates the lovers' duet.

In the opera's devastating conclusion, in the desert of Louisiana, the composer emphasizes the central theme – love understood as a 'curse' and a passion of despair – by introducing his first example of 'music remembered', as he was to do in an equally unforgettable way on the deaths of Mimì, Butterfly and Angelica. Themes already heard follow each other, integrating the past with the present. Such restriction in thematic invention produces a compact poetic unity to the opera. The music has no need

to describe anything because all that happens is the logical result of what we have already seen. The end of Manon is the inevitable consequence of her way of life and is thus a metaphor for love, just as the desperation of Des Grieux is not his alone but that of the entire audience who witness the death.

A masterpiece of late Romanticism, the fourth act of *Manon Lescaut* brings to mind the endings of *Don Carlos* and *Aida*. At the same time it makes evident the enormous difference separating it from the *melodramme* of Verdi, in which death was the only option for characters prevented from realizing their legitimate earthly aspirations. 'I do not want to die', Manon cries in her isolation. Until the end, the lovers look for impossible ways of escape, because the only certainty is life. Such values, desperate and sensual, belong to the restless *fin-de-siècle*. With *Manon Lescaut*, Puccini's financial problems came to an end.

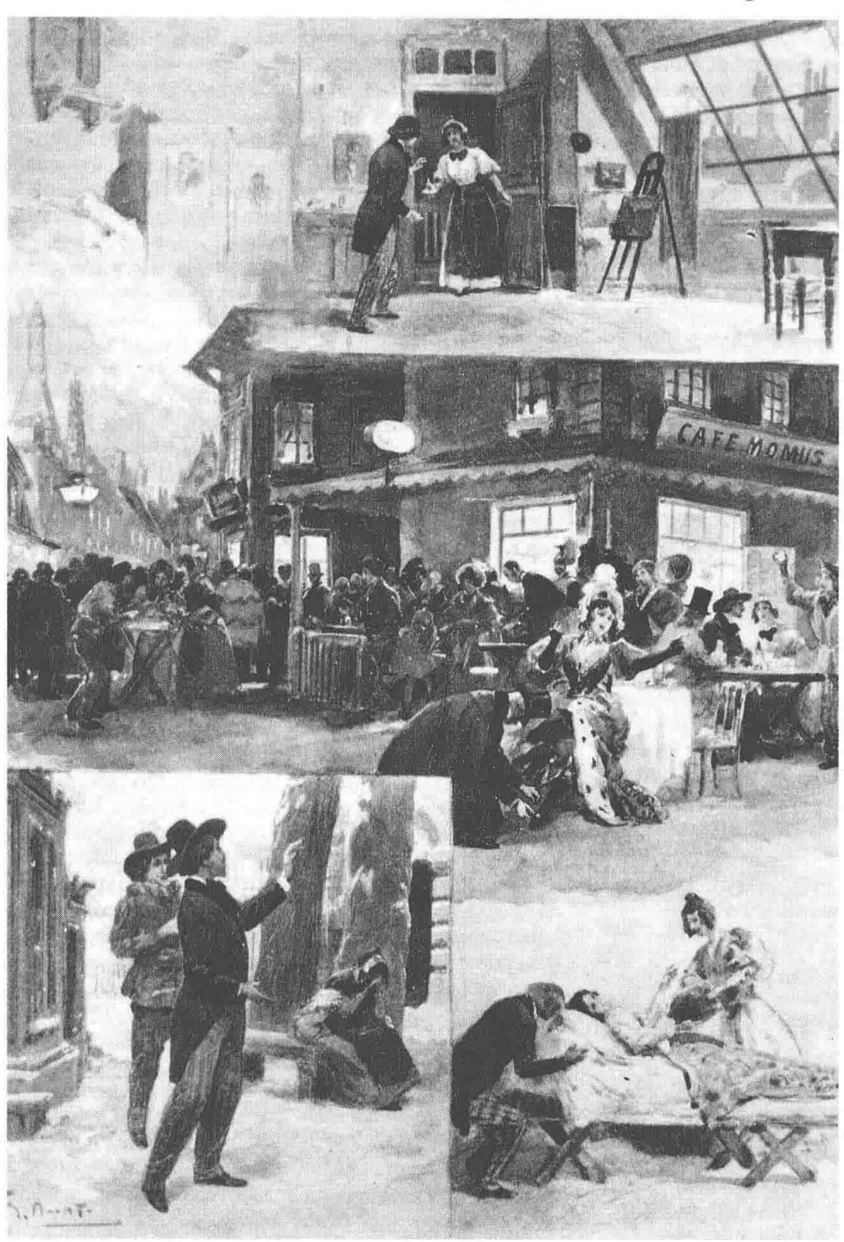
4. Realism and poetry. *La Bohème* was the outcome of open rivalry between Puccini and Leoncavallo. Both maintained that they had a prior claim to the subject. Leoncavallo was probably in the right, but that is of little consequence because his version, finished after considerable delay, nearly a year after that of his competitor, is now merely an example of the taste of the period, while Puccini's, right from its première, has been an important work in the international repertory.

A working method which functioned perfectly was set up between Puccini, Illica and Giacosa. Priority was given to the dramatic structure, which gave Puccini his first musical ideas. The outline was then versified, according to a fixed scheme:

1. Outline of the drama: Illica, Puccini
2. Musical sketches, with indications for verse: Puccini
3. Versification: Giacosa
4. Composition, orchestration: Puccini
5. Revision of drama: Illica, Puccini
6. Revision of verse: Giacosa, Illica, Puccini
7. Revision of music: Puccini

Puccini attached great importance to poetic metre and often asked his collaborators to adjust the verse according to his requirements, which differed from the traditional demands of 19th-century opera composers. This was due partly to his propensity to create a sonorous image of the subject (take, for example, Liù's aria, 'Tu che di gel sei cinta', for which the music was written first, then the verse) and partly to his tendency to depart from earlier formal structures. The secret of this working group, that produced Puccini's three best librettos, was the genuine respect that each member had for the others. Watching over the group, as always, was Giulio Ricordi, who saw to it that the necessary balance was maintained.

Illica and Giacosa succeeded in extracting a coherent operatic drama from the novel *Scènes de la vie de Bohème*, in which Henri Murger had joined together brief narratives in the style of a serial. The verse and the dramatic qualities of the libretto required music which would follow the action naturally. This problem of finding a new relationship between a close-knit drama and a traditional lyrical style had been confronted by Puccini's contemporaries. Verdi created successful works in a mixed style, and *La traviata* fitted an everyday element into the *melodramma* framework. But it was *Falstaff*, constructed on a swift succession of recitatives and arioso passages, which revealed definitively to Puccini the way of escape from the restrictions of number opera. In *La bohème* he set to music action in which every gesture reflected ordinary life; at the same time, he created a higher level of narrative, conveying metaphorically a world in which time is fleeting, in which the young are the chief characters. An ironic disenchantment is evident even in the most intensely poetic moments, and love rises from a necessarily mundane situation, and returns to it.



To establish the individual and collective picture of a group of penniless artists, Puccini loosely combined different types of sound: extended lyrical melodies, flexible motivic cells, tonality as a semantic tool, brilliant and varied orchestral colouring. The frame of the action rests on moments in which the characters reveal themselves. For example, the meeting between Mimì and Rodolfo, marked by a lyrical expansiveness and thus by a psychological stretching of time, articulates the narrative as a 'conversation in song'.

The frequent recourse to elements intended to denote and signify everyday life in *La bohème* can be set within the general context of late 19th-century interest in realism. Such 'reality' permeates especially the bright fresco of the second scene, in which Puccini co-ordinates numerous events, entrusting them to small choral groups and soloists, and ensuring appropriate timing and cuts from one scene to another which are almost film-like in their lightning rapidity. The surroundings thus play an active part in the drama, rather than being merely local colour, as in the operas of Mascagni or Leoncavallo.

While in the first two scenes of *La bohème* happiness reigns supreme, in the next two everything speaks of nostalgia, sorrow and death. The last scene mirrors the first (we are in the same cold attic), more compressed in its dimensions but divided in the same way into contrasting halves, the first merry, the second dramatic. The time of the action is not specified; it is as if no time has passed since the beginning of the opera, or as if we are already living in the eternal spring of memory. The sharp impression of *déja vu* is confirmed by the reprise of the opera's opening theme; the orchestral fragmentation of the opening is now replaced by mixed instrumental timbre. This reprise can be interpreted strictly as a moment of amplified recapitulation in cyclical form, but it is equally evident that the intensified dynamics produce a sensation of emphasis, almost concealing the nostalgia which dominates the scene. As the opera progresses, the music, recapitulating what has already passed, moves towards absolute time, recollecting every shade of meaning in the text and reconstituting it as something new, a collective memory founded on the order in which the themes are reintroduced.

Released from the restrictions of conventional narrative, the opera reveals the symbolic weight of a tragic event which brusquely interrupts the passage of time. Rodolfo and all those who share his feelings have no time to reflect: the tragedy stops the action and fixes the sorrow in the eternity of art.

5. Idealism and power. The story of Floria Tosca, created by Victorien Sardou in 1887, entered Puccini's life two years later, when Prévost's story of *Manon Lescaut* had been lying on his desk for some time. Though it took him four years to decide about *Manon* another six were to pass before he made up his mind about *Tosca*. In the interval, the contract with Sardou was passed from

Ricordi to Franchetti and careful negotiation was required to get it back to Puccini.

Tosca has little to do with realism. The characters do not belong to the lower classes or the bourgeoisie, indeed their catastrophe has nothing to do with their social position; it arises rather from their nature and their ideology. The link with reality instead comes from the connection between the historical and the fictitious in the original play. The action is set in Rome on 17 June 1800, three days after the Battle of Marengo. The political background is a crucial factor in the fates of the famous singer Floria Tosca, and of Mario Cavaradossi, who embodies the ideals of the French Revolution. Both the play and the opera have their focal point in the complex character of the Sicilian baron, Vitello Scarpia, whose roots lie in the universal history of political regimes which have never lacked men who have used power to their personal advantage.

The principal characters are inserted in a fully rounded picture of papal Rome at the beginning of the 19th century. Puccini studied every detail of the liturgy, from the rites specifically followed in Rome (for the first finale) to the sound of the bells for the morning song in the third act, into which he introduced a sonnet in Romanesque dialect specially written by the poet Gigi Zanazzo. Baron Scarpia is placed at the centre of the action, introduced by three chords before the curtain rises which link him firmly to the image of the church.

Tosca is distinguished from the preceding operas in that it strictly follows the Classical unities. A decision was made to eliminate from the libretto those parts of the play which contradict the unity of action and place. From this derives the high relief given to three places in which the

action evolves: the church of Sant'Andrea della Valle, the Palazzo Farnese and the platform of the Castel Sant'Angelo. The intense concentration of events in the opera also obliged Puccini to adopt an accelerated time scheme and consequently to modify the formal narrative technique based on the recurrence of themes and reminiscences used to identify figures and situations without any particular hierarchy. Instead he devised a close musical pattern to provide an agile commentary to the frenzied succession of events. He made use of the chords associated with Scarpia, and the hexatonic scale related to them, as a pivot for the opera. In addition, he sprinkled his harmonic palette with dissonances, and frequently pushed orchestration, dynamics and voice to their limits, loading them with laceratingly expressive tension.

The dynamic development of the drama did not preclude lyrical elements. Love (which for Tosca involves furious jealousy) does not occupy a dominant place as an element in itself, but as a relief from the tensions of a difficult and oppressive life, like a breath of sensual happiness experienced somewhere far from the world, a refuge from the tentacles of papal Rome. But the ephemeral and sensual evocation of a night of love is also one of the most characteristic moments of the decadent modern art of Puccini in its lack of heroism. Because the only genuinely lay character in the opera could not appeal to other religions, to the exaltation of art or to memories of Rome, he had to prepare to die with desperate awareness. Cavaradossi is conscious of his inevitable death even when Tosca waves the safe-conduct at him. In fact, if we are to accept the logic on which the opera is built, only a believer can have faith in his confessor. The scene which symbolizes the whole opera confirms his lack of faith, when Floria flings herself from the ramparts of the Castle, surrendering her body to the city with the cry 'O Scarpia, avanti a Dio!'. Only at this moment, after the drama of politics and bigotry has ended with an impossible challenge, can the return of the desperate melody of Cavaradossi's aria conclude the opera, a symbol of sensual love, the only certain and real value.

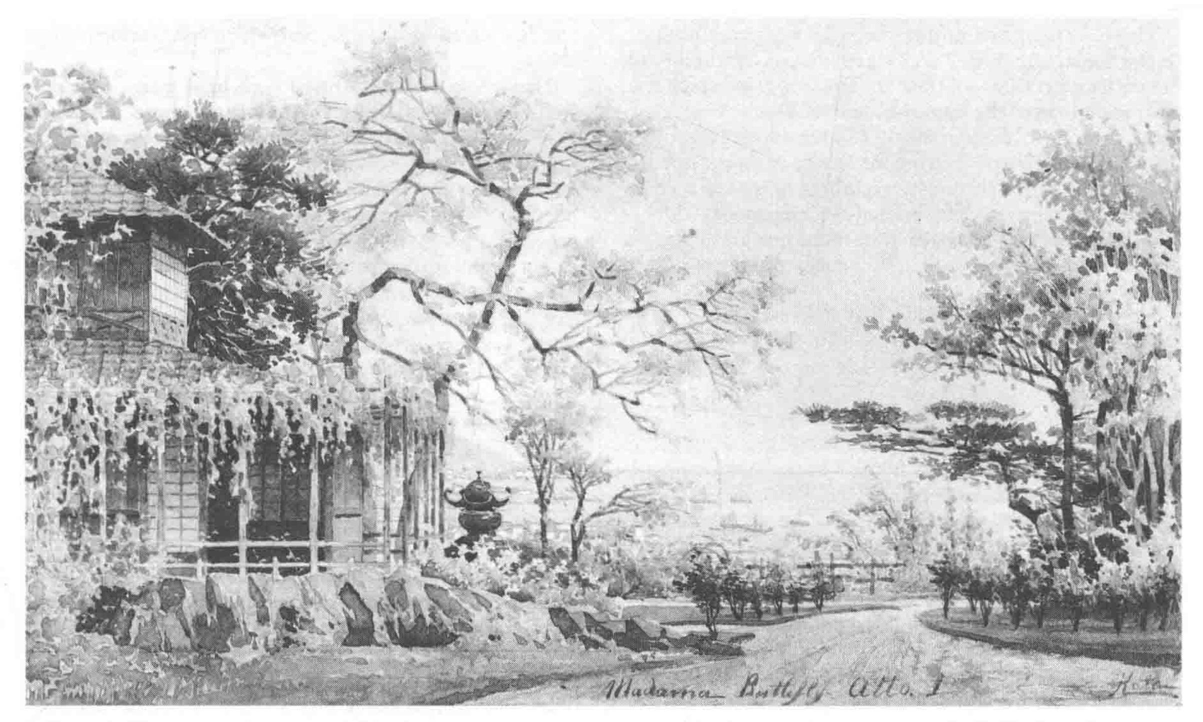
Tosca is still one of the operas most vividly present in the collective imagination. Its vitality is derived above all from Puccini's technical skill. The composer stuck faithfully to his intention to represent a reality, real surroundings and characters, putting the music at the service of the drama. Imaginative tone colour, melodic inventiveness and motivic elaboration have their origin in economy and lead on to still bolder achievements in structure which bring him in line with the developments in European opera of the time. Combining the late 19th-century sensibility of the play by Sardou with modern modes of expression, ardently admired by Arnold Schoenberg and Alban Berg, though no less passionately deplored by Mahler, Puccini, in the best way possible, ushered in the 20th century.

6. Exoticism and tragedy. At the beginning of the new century the conflict of interests between publishers and impresarios had reached its height when Puccini and Ricordi decided to return to La Scala for the first production of *Madama Butterfly* (17 February 1904). A hostile claque boycotted the performance. The work was withdrawn and revived three months later at Brescia. Puccini did not rewrite it but made some important changes. He divided the second act into two parts, which had almost no effect on the original structure, although the enormous strength of the earlier version, in which the audience shared Butterfly's endless waiting, was lessened somewhat. He also cut many little scenes of local colour from Act 1, inserted Pinkerton's brief aria and revised 'Tu, tu, piccolo Iddio!', making the voice rise to top A and increasing the emotional impact. Most significantly, he changed the theme which accompanied the heroine's entrance and the associated melodic phrases, bringing forward the dissonance of the 7th and making the melody descend. This elongation increased the tension enormously, a crucial change given that the opera depends entirely on this theme.

Such ingenuity was inspired by a subject which had attracted Puccini at first sight when he attended a performance of David Belasco's *Madame Butterfly* in London in June 1900. He was taken by the strongly sentimental drama, and thus delayed for a few more years complete acceptance of the changed role of the 20th-century composer.

The Japanese subject re-awakened his interest in the exotic, a subject which had been tried in early 20th-century theatre but had not really caught on in Italian opera. In order to create the atmosphere, Puccini questioned artists and representatives of Japanese culture, transcribed melodies from records sent from Tokyo and studied collections of Japanese songs. The exoticism of the opera caries great weight: almost half the first act alone is dedicated to Japanese colour, built on authentic themes (at least ten have been identified as genuine, or as arrangements of genuine themes). Puccini also introduced oriental or quasi-oriental touches into his harmonic language, drawing close to French composers, particularly Debussy. To give a characteristic tone to the tragedy he strengthened the percussion, including a tam-tam and Japanese bells along with *campanelli a tastiera* (glockenspiel) and tubular bells.

The use of a subject which marked a kind of return to the past had important effects on dramaturgy. Here, more than in any of his other works, Puccini came close to the Wagnerian process of leitmotif elaboration. This happened because for the first time he was faced with a psychological drama, dominated by a single female character who acts as a catalyst on the outer world. Cio-Cio-San, a 15-year-old girl, sees marriage as a way out of the dubious profession of a geisha. But she is deluding herself, and must restore the social order, which she has disturbed, by sacrificing herself. It is the eternal law of all tragedy, based on the increasingly acute conflict between the obstinacy of Butterfly's convictions and the outside world from which she has become alienated. Musically themes are transformed until they become a reality which, at the very moment when the heroine's conviction seems to be confirmed, gradually defeats her.



The macrostructure of the score is worked out with exact symmetry: an extended fugue opens the first act, symbolizing American efficiency; another fugue, much shorter, sounds wearily at the beginning of the next act, representing the heroine's three years of loneliness. In the same way, a 6th chord, which closes the scene of the entrance of Butterfly and her friends, appears several times, notably at the end of the first act and in the tragic conclusion. It weaves a thread through the entire score, from the love duet, sustained by a refined *Bögenform*, to the great visionary solo, 'Un bel dì vedremo', to the final hummed chorus.

3. Scenes from the original production of 'Tosca', Teatro Costanzi, Rome, 14 January 1900: illustrations by Dante Paolocci from 'L'illustrazione italiana' (28 January 1900): (top vignette) Act 3, Cavaradossi's execution; (lower left) Act 1, Tosca joins Cavaradossi in the church of S Andrea della Valle; (lower right) Act 2, Cavaradossi is interrogated by Scarpia in the Palazzo Farnese; (below) the final scene in Act 2, Tosca has placed candles beside the body of Scarpia

The exaggerated success of certain passages has done them harm. They are too frequently sung out of context, whereas they are in fact stages on which the drama hinges right up to its tragic epilogue. At the first French production in 1906, the director Albert Carré had the idea of showing the heroine's isolation on stage by keeping Kate, Pinkerton's wife, out of the room. Puccini supported him and in this way achieved a much more coherent dramatic perspective. The position of the American wife on the stage takes on a key importance. Kept outside the room she becomes a phantom of the private obsessions of the unapproachable heroine, to whom she will remain alien. Moreover, her total lack of musical identity – only a few notes are devoted to her in a sound world in which everything is linked by notes – subordinates Kate to the function of a traumatic resolution. When Butterfly finds herself confronted by her she understands in a single instant what throughout the entire opera she has refused to understand.

The ending of the opera was thus made definitive, thanks to a few revisions. Butterfly dismisses everyone and remains alone with Suzuki, in the darkness, while the music whispers anxiously around her and the opera's themes return, interwoven in feverish variations, reminding her of the past and propelling her towards her final decision. Finally death comes, with a piercing 6th chord, as the curtain falls. This last unresolved chord, recalling the finale of Act 1, reminds us that the 15-year-old child has become an 18-year-old woman on her last day of life, when the flight of the Butterfly has ceased for ever.

4. Design by Vittorio Rota for Act 1 (a hill near Nagasaki; in the foreground a Japanese house with terrace and garden) in the original production of 'Madama Butterfly', La Scala, Milan, 17 February 1904

7. Renewal or death. When Giacosa died in 1906, Puccini tried to find other collaborators, but with no particular success. Several attempts were made for a collaboration between Puccini and Gabriele D'Annunzio between 1900 and 1913. The project was undoubtedly attractive: to bring together the highest profile Italian composer of his time and a great, established poet, the fading interpreter of decadent aesthetics. From the point of view of publicity, the combination could not have failed to benefit Ricordi, who nevertheless put no direct pressure on the composer. But nobody who knows D'Annunzio's work could imagine anything less reconcilable with the dramatic and aesthetic world of Puccini. D'Annunzio's grand rhetoric and impressionistic verse could only have restricted the composer's artistic development. Puccini was obliged to take on personal responsibility for working out the dramaturgy of his next opera, based on Belasco's *The Girl of the Golden West*. His visit to the Metropolitan Opera House, New York (his first foreign début), was held up by long indecision about the choice of libretto and by a family crisis: Elvira suspected her husband of having an affair with a servant, who eventually committed suicide.

Puccini experimented with forms of expression which departed from the restrictions of verisimilitude, continually moving further towards the poetic than had so far been seen in European theatre. The increasing distance between the social class of his characters and the musical expression of their states of mind forced new creative solutions. In fact, late Romantic examples of sentiment and passion had sunk to plots that were realistic only in name. The development of the description of the setting, so important in *La fanciulla*, corresponds closely to the key points of the plot – especially the game of poker and the man-hunt – and creates unbearable levels of tension concentrated in crucial moments. These passages anticipate later experiments, mediated through different cultures and traditions, with the emerging Expressionism. They share common roots which go back to the theatre of the *fin-de-siècle*, which gave renewed importance to the human spirit as a source of passion and obsession – a tendency which later led composers to choose subjects in which the text was simply a vehicle for inner feeling.

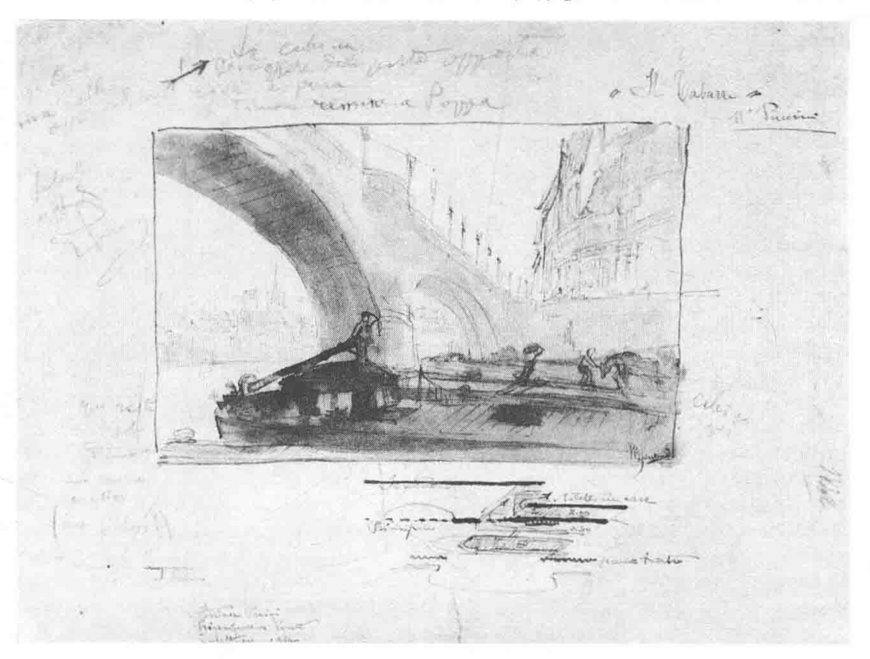
The first act of *La fanciulla del West* presents us with a veritable crowd of characters, through which Puccini emphasized the responsibility of the orchestra more than he had ever done before. The connotative power of the leitmotifs associated with individual characters is reduced, and the wider framework is conceived as a broad symphonic exposition in which every element is subject to vigorous development. The result was not always successful, but in the scene of the poker game the evocative power of the full orchestra makes us think that Minnie is overcome by momentary madness, when she metaphorically possesses her lover having won his life in the game. It is as if Puccini crossed the strict limits of unified dramatic motivation in order to lay bare a human dimension disturbed by the deepest impulses, an idea frequently explored on the European stage at the time. The beginning of Act 3 is even more taut and rigorous, with the great scene of the pursuit of Johnson, in which the chorus and soloists follow the cadences of the orchestra. The passage, which ends with the bandit's capture, is based on a slow introduction and four movements handled with a sophisticated symphonic technique. The vocal power of *La fanciulla* reaches its height in 'Ch'ella mi creda libero e lontano', when Johnson, in contrast to Cavaradossi, makes his farewell to life, prepared to die in the presence of everyone, like a character in a fairy-tale.

This brief heroic parenthesis supplies a dynamic prelude to the finale, on which Puccini gambled the credibility of his entire opera. In contrast to *Turandot*, in which the clear statement of the tragic element makes the final scene seem contrived, the arrival of Minnie turns everything upside down (almost reviving the finales of rescue opera), interrupting a musical fabric carefully arranged to accommodate the happy ending. Behind the concept of redemption, emphasized from the prelude to the first act onwards, is a faith in the power of love which overcomes every obstacle.

Never before *La fanciulla* had Puccini been able to envisage on such a large scale the unusual proportions of spectacular episodes and the exciting acceleration of action at key points. His natural impulse to find a new and more advanced balance between the music and the mise en scène was to become fundamental to his art. From this point of view he found himself in step with cinema, which had been making progress for several years. *La fanciulla* does not use the ambience of the gold rush merely as an exotic background, but shares with the Western's classical devices of spectacle, conflict between good and evil and simple morality. On an intertextual level, moreover, *La fanciulla* contains a number of allusions to Wagnerian drama, including, in the scene in which Johnson is wounded (Act 3), a literal quotation of the chromatic motif which opens *Tristan*. This shows that Puccini was moving decisively towards a plurality of styles: the veneer of the Western and its realistic corollaries on the one hand and on the other the great European theme, not to mention an aura of fable which crowns the whole work.

Puccini showed that the way of renewal did not lie in the choice of subject but in the development of musical language. Opera as a spectacle was being replaced in the public's affections by cinema. In 1910 it needed only the sound track to reach its full potential. Before his death Alban Berg would attempt an ideal compromise between the two arts, conceiving an interlude in *Lulu* as film music. Puccini did not go as far as imagining a collaboration between these media, but the idea of mingling them – and his optimism about the power of opera was equal to Berg's – led him to provide in *La fanciulla del West* one of the most important and vital contributions to such a synthesis.

8. 'LA RONDINE', OR DISENCHANTMENT. After *La fanciulla* the restlessness which usually seized Puccini as soon as he had written the last note of a score was replaced by a deliberate period of research and reflection and greater serenity of judgment. Just when his activity seemed to be moving in the right direction, Giulio Ricordi died (1912), and because of a misunderstanding with Ricordi's son Tito, who became director of the firm, Puccini passed *La rondine* over to Sonzogno.



The extremely generous terms offered by the impresarios of the Carltheater in Vienna for an operetta brought the composer face-to-face for the first time with a subject that was not drawn directly from the stage or from literature. Willner and Reichert's story of Magda, a courtesan who finds true love with a young man from the country, but decides to leave him, is interwoven with references to *La traviata*, to Massenet's *Sapho* and even to Johann Strauss's *Die Fledermaus*. Puccini commissioned Adami to prepare a libretto for him, omitting all spoken dialogue, and he began to write a genuine lyric comedy, an antidote to the war which was tearing Europe apart.

The whole plot is suffused with light irony, aimed at well-known people like D'Annunzio, whose pursuit of grandiose ideas is parodied in the poet Prunier, and Richard Strauss, evoked in a fleeting quotation from *Salome*. Yet *La rondine* has nothing in common with operetta, despite the numerous dance numbers, especially the omnipresent waltz, which Puccini placed at the heart of Act 2, and several modern dances, including a fox-trot, a one-step and a tango. His aim was to suggest the frenzied atmosphere and *joie de vivre* which are essential to the first two acts; at the same time he was indicating his modernity. Such dances, popular for some time in the US, were becoming fashionable in European art music, especially in France, and offered composers the possibility of enriching their rhythmic range. The world in which the characters of *La rondine* move is cynical and detached, made up of people animated by a spirit of practicality, concerned with amusing themselves and following the fashions of Paris. For this frivolous worldliness, fashionable dance rhythms were indispensable.

Many melodies, a few themes (each devoid of development and used as reminiscences), two arias, a duet and many waltzes: *La rondine* is constructed on this simple frame. It is no short cut to regain the favour of a nostalgic public; rather, it has a precise dramatic function. The whole dramatic spectrum of the second and third acts is built on Magda's first two numbers ('Chi il bel sogno di Doretta' and 'Ore dolci e divine'), so that everything we see thereafter has the characteristic of *déja vu* as musical episodes are reprised. It is a subtle way of fixing an idea: until the end, when Magda is forced to choose her future, she lives not in the present but in a nostalgia for the past.

After the lively visual and musical scene of the Bullier Ball, with the toast to love, in the style of a late 19th-century central finale, a postcard-like scene of a terrace overlooking the Côte d'Azur surrounds the lovers in an ecstatic pose in Act 3. Three months later they are still intent on recalling their meeting, as though to convince themselves that they are truly living in reality. But their conversation turns, to the rhythm of a waltz, to reminiscences of their life in Paris; the heroine succumbs to their fascination, and finally, faced with the prospect of marriage and children in the country, chooses to return to Paris as a courtesan.

This finale is alluring and attractive not only because of its delicate signature of bells but also because it is completely consistent with the underlying assumptions of the action. Magda leaves the love nest on the Côte d'Azur without being compelled; rather, she has understood very well what it would cost her to trust too much to the illusion created at the Bullier Ball. But Puccini was not satisfied and soon after completing the work he began to revise it, preparing two other versions. In the third version, following a few changes to the text of Act 3 and the introduction of a new passage, Ruggero leaves Magda after discovering her past from an anonymous letter. However, everything is more modern in the first version; novelty is lost irreparably if Ruggero dismisses Magda on the strength of an anonymous accusation. It is better to accept that a touch of sentimentality played its part in this revision. Through Magda, Puccini leaves the past behind, though with regret, to face a present which holds out the prospect of quite different adventures. Written in

5. Set design by G.B. Santoni for 'Il tabarro', with annotations by the composer: watercolour (Museo Teatrale alla Scala, Milan)

the atmosphere of his concluding masterpieces, *La rondine*, with its brilliant, ironic music, sprinkled with cynicism, is a precious gem.

9. New forms. Puccini's next project was a triple-bill of one-act operas. The aesthetic unity of *Il trittico* is an indispensable premise to its formal unity because the structure of each opera is determined by the need to provide a coherence to the entire evening. Puccini succeeded in compressing the dramatic material, but faced the new problem of drawing together three different genres in one project: the 'dramatic', the 'sentimental' and the 'buffo' (in the broad sense of the word). He knew how to achieve an organic unity by using suitably varied *tinte*. The expressive violence of *Il tabarro* is startling; the delicate music and the nature of the drama in *Suor Angelica* are moving; and *Gianni Schicchi* is very amusing, even if the macabre element tarnishes the laughter.

It was Puccini's habit to establish meaningful connections between the action and its setting, but here the musical and dramatic interplay between action and setting enabled him to create new musical forms which he had had in mind since the beginning of the century. Having established his own model in *Il tabarro*, he agreed terms with Forzano for the other two. The original play provided him with a perfect starting point: the flowing of the Seine, conveyed musically, suggested a comparable succession of events, experienced on the edge of the metropolis, and influenced the behaviour of the characters. We are then led to the ascetic closed convent of *Suor Angelica*, where prayers, the chiming of bells, hymns in Latin, a modal style and cool, delicate timbres mark a complete detachment, the result of confinement and renunciation, from the world of earthly affections. In *Gianni Schicchi* the learned language of the characters and Rinuccio's *stornello*, in which all the great Tuscan artists of the time are celebrated, gradually build a portrait of Florence. This is finally revealed behind the image of the entwined lovers who throw open the door of the terrace. The overwhelming rhythm revives all the devices of the realistic tradition of the Italian comic genre, from farce to 18th-century *opera buffa*. The unity of Puccini's conception in *Il trittico* emerges from the balance between background music and individual episodes, from the juxtaposition of one act with another, and, ultimately, from the importance of the shared element of time.

In *Il tabarro* the relationship between dramatic and musical development is perfectly proportioned. The first part is dedicated to introducing the characters who inhabit the slums of Paris. The second focusses on the clandestine love and nostalgia of Michele; action develops which will lead to a conclusion dominated by homicide with a surprise ending. The novelty of the music is evident when its structure is considered in relation to the plot, which is clearly articulated in the following scheme: exposition, peripeteia, catastrophe. To this correspond three long sections in the score (a broad opening Maestoso, a central Allegretto and a concluding Allegro with a sustained introduction), the themes of which seem to subordinate the action to the requirements of the musical form. This procedure, bringing classical features up to date, brilliantly solves the problem of compression (necessary in a one-act opera) and also secures for the score a unity never before achieved by Puccini.

Suor Angelica too has a solid structure, derived from the juxtaposition of episodes, shot through with themes and reminiscences. The outline is clearly indicated by the composer in the libretto by means of carefully planned breaks; a sort of *via crucis* in seven stations lived through by the heroine. Each of these sections has a character which makes it an independent episode, but there is a studied homogeneity in the melodic material which links the first to fourth stations, followed by a noticeable gap which isolates the fifth, in which the atmosphere of the convent's routines is traumatically disturbed. This episode creates the premise for the finale (stations 6 and 7), when the dramatic temperature rises until the miracle occurs that concludes the work.

Gianni Schicchi is perhaps the most successful of the three scores, particularly from the technical point of view. To revive the tradition of *opera buffa*, Puccini made

6. First page of Puccini's autograph sketches for the finale of 'Turandot', completed by Alfano in 1926 (I-Mr)

rhythm the unifying element of his music. Before the curtain rises, the lowest instruments of the orchestra enter loudly with a dominant pedal, while the other instruments soar into the upper registers, beginning a quaver ostinato figure. The two themes generated by this opening impulse continue for about two thirds of the score, marvellously embodying the unstoppable progress of the plot. In the solo 'Avete torto!' Rinuccio becomes detached, responding sensibly to the hysterical protests of his family. The passage is one of the longest Puccini wrote for a tenor, and it is the first of four closed numbers given to three main characters, to which are added duets, trios and choruses. A close analysis of the structure (recitative–arioso and a three-part *stornello*) almost suggests that Puccini was aiming to revive 18th-century models, in which arias were as much an integral part of the dramatic action as were recitatives.

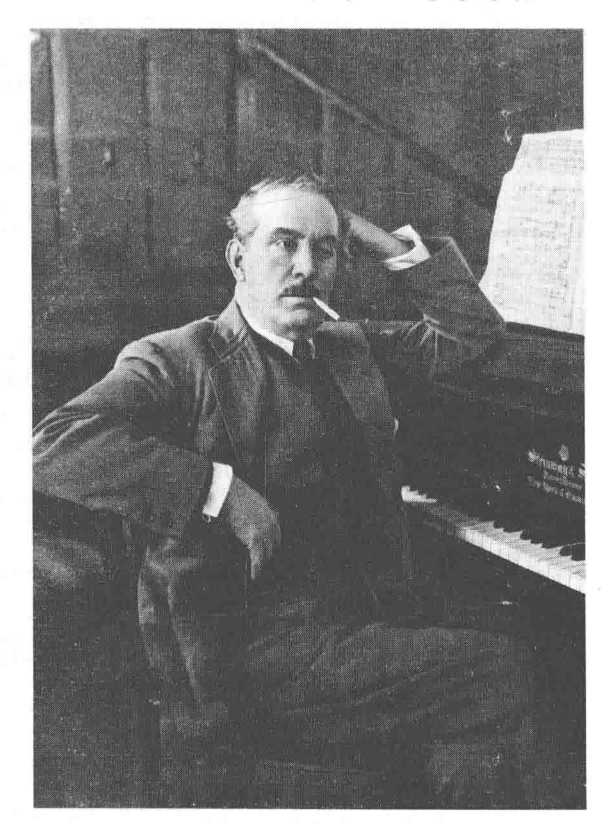
Gianni Schicchi concludes *Il trittico* with laughter, arising partly from its robust plot, but also because from a structural point of view, it has all the marks of a final symphonic Presto, almost as if we had been listening to a performance of three movements. To break the flow of the three works, interwoven with conflicts between symphonic and operatic genres, between open and closed forms, that are merely superficial, Puccini returned to a gesture: the dismissal pronounced by Schicchi belongs to 20th-century theatre, for his words break the illusion of the mise en scène, putting us once more in control of the fiction with which we began.

10. THE LAST EXPERIMENT. The last five years of Puccini's life, though dedicated exclusively to *Turandot*, were not enough for him to complete the work. He died from a heart attack, the result of an emergency operation on his throat to save him from cancer, on the morning of 29 November 1924. He had completed the orchestration of the first scene of the third act, and had had time to depict in an unforgettable way the slave-girl Liù's sacrifice for love. But he had not reached the decisive passage in which the love between the Chinese princess and the Tartar prince Calaf was to triumph.

Analysis of this final work reveals its superb degree of cohesion. The problem of structure is particularly delicate because, beside the symphonic and thematic articulation, the framework made up of a succession of 'closed' numbers stands out strangely. These numbers are cited

by those who see in the opera the voluntary epitaph placed by the author on the tomb of Italian *melodramma*; they interpret them as an attempt to rediscover the essence of a glorious past. But it is equally legitimate to maintain that the 20th-century crisis had ushered in a long experimental phase in Puccini's career, directed to finding a link between the apparatus of *melodramma* and the more advanced European experience of his time. This involved the study of atmosphere and the combination of several styles, the true constants of an unceasing exploration of genres and forms. Seen from this perspective the unfinished masterpiece is the most ambitious experiment ever attempted by an Italian composer before the radical change of direction which followed World War II.

There is no Italian opera, before *Turandot*, in which such an organic attempt is made to integrate music and drama. Puccini set out to recreate the legendary world of ancient China, and wanted to create a close link between the exotic and fairy-tale elements by means of a particular musical *tinta*. It is of little importance that the source of much of the melodic chinoiserie was a music box: he did not claim true authenticity nor had he any philological ambitions. His aim was only to distance the audience from prevailing conventions by the originality of his invention. Almost as if it were one of the *dramatis personae*, the orchestra, handled delicately even in the most barbaric moments, sets the atmosphere step by step. Puccini was now at the height of his powers, inventing colouristic effects which are violent and jewel-like at the same time.



The immense musical apparatus is doubly linked to the demands of the stage. Puccini had often before planned the musical structure of a libretto to correspond closely with the dramatic events, and in every work there is a grand scene in which the visual elements interact with the aural. For *Turandot* he had a special project: the Aristotelian unity of time, itself a traditional ingredient, becomes a pretext for tracing an arc through the three acts in which the passing of time becomes a character in the drama, assuming a symbolic value. The 'thawing' of the cruel princess, a solution on which Puccini gambled the credibility of the end, is placed at the height of a symbolic interchange of colours, produced by lights, costumes and scenes, and reinforced by changing tone-colour.

The macrostructures of *Turandot* appear ambivalent. In particular, the first act, a jewel of cohesion, reveals a symphonic form in four movements, with a slow introduction and two scherzos (the episodes of the three ministers), but it can be read as being in the 'normal' form of 'closed' numbers (1. Tempo di attacco. 2. Adagio. 3. Tempo di mezzo. 4. Cabaletto; Ashbrook and Powers, 1991). Puccini also uses musical themes throughout the opera (although fewer than usual), which generally reappear as reminiscences, except for the violent opening statement, which is treated like a Wagnerian leitmotif, and runs through the score up to the death of Liù.

It seems therefore more legitimate to analyse the first act as a juxtaposition of episodes, each one with its own meaning, and the entire work as the product of a compositional method that is deliberately fragmented. This is a genuine touch of modernity which can be added to the work's many other achievements. This approach allows us moreover to overcome the fictitious opposition between symphonic structure and separate numbers and could open a new and more fertile phase of investigation into Puccini's last masterpiece.

The incomplete finale of *Turandot* is spoilt by Franco Alfano's inadequate ending, which provided a necessary conclusion so that the opera could be put into circulation. But he could not rise to the task of developing appropriately the 23 pages of notes left by Puccini on his bed-side table in the hospital in Brussels, where he had been working on the opera up to the last. It must be admitted that to undertake to finish the work would have been a hard task for anyone, and that the finale was in any case a problem for Puccini himself, who had begun the orchestration even before he had finished composing, a procedure which was quite unusual for him. He probably knew it was necessary to complete and refine what he rightly considered his best music, to put the end on a solid footing, in order to provide the context for the problematical duet. Unfortunately Puccini did not complete his last masterpiece, but if he had lived he would have worked to remove every incongruity, as he had done on other occasions. We are left with a splendid and exceptionally extensive 'fragment', produced by an artist at the peak of his creative and intellectual form.

11. Assessment. Puccini succeeded in mastering the orchestra as no other Italian had done before him, creating new forms by manipulating structures inherited from the great Italian tradition, loading them with bold harmonic progressions which had little or nothing to do with what was happening then in Italy, though they were in step with the work of French, Austrian and German colleagues. Unfortunately he died without leaving an heir. Liù's death does no more than coincide, beyond hagiography, with

7. Giacomo Puccini

the end of a certain Italian way of composing opera, leaving actual content out of account. Opera was dying, under attack from other kinds of spectacle which competed for the favours of the public. Consequently it fell victim to debts which would have made it necessary to rethink the whole system of production. Already by 1921 La Scala had begun to transform itself into an autonomous company. Soon afterwards all the principal theatres in Italy were to follow its example. The advantages of this new system had often been admired by Puccini in European theatres, particularly in German-speaking countries. It would have guaranteed him a future less restricted by the need to fill the theatre at all cost. The fact that he did not live to enjoy this new phase is to be regretted; it is impossible to know where his readiness to reinvent himself would have taken him, what techniques he would have adopted, how he would have lessened the distance between experimentation and contact with the public. It is also a regret that has increased lately with the analysis of the '*Turandot* fragment'. Puccini's contribution was something very valuable: he made it possible for Italian musicians of the liberation (from Maderna to Berio, Bussotti and Nono) to bring Italian opera – despite contemporary alienation, the postwar crisis and the nascent rhetoric of pseudo-patriotism – within the ambit of great contemporary European music.

WORKS

published in Milan unless otherwise indicated; detailed bibliographical information in Hopkinson

OPERAS

Title	*Genre, acts*	*Libretto*	*First performance*	*Sources; publication; remarks*
Le villi	leggenda drammatica in due quadri, 1	F. Fontana, after A. Karr: *Les willis*	Milan, Dal Verme, 31 May 1884	*I-Mr**; unpubd
2nd version	opera ballo, 2		Turin, Regio, 26 Dec 1884	vs (1885); rev. edns (1888 and 1892)
Edgar	dramma lirico, 4	Fontana, after A. de Musset: *La coupe et les lèvres*	Milan, Scala, 21 April 1889	*Mr** (Acts 1 and 3); vs (1890)
2nd version	3		Ferrara, Comunale, 28 Feb 1892	copy of 1st version with autograph changes, *Mr*; vs (1892)
3rd (definitive) version	3		Buenos Aires, Opera, 8 July 1905	vs (1905)
Manon Lescaut	dramma lirico, 4	D. Oliva and L. Illica, after Abbé Prévost: *L'histoire du chevalier des Grieux et de Manon Lescaut*	Turin, Regio, 1 Feb 1893	*Mr**; fs and vs (1893)
La bohème	opera, 4	Illica and G. Giacosa, after H. Murger: *Scènes de la vie de bohème*	Turin, Regio, 1 Feb 1896	*Mr**; fs (1898), vs (1896)
Tosca	melodramma, 3	Illica and Giacosa, after V. Sardou: *La Tosca*	Rome, Costanzi, 14 Jan 1900	*Mr**; fs and vs (1899)
Madama Butterfly	tragedia giapponese, 2	Illica and Giacosa, after D. Belasco's stage version of a magazine story by J.L. Long	Milan, Scala, 17 Feb 1904	*Mr**; vs (1904)
2nd version	2		Brescia, Grande, 28 May 1904	changes in autograph, *Mr*; vs (1904)
3rd version	2		London, CG, 10 July 1905	vs (1905)
4th version	3		Paris, OC (Feydeau), 28 Dec 1906	fs (1906; 1907, with changes to text)
La fanciulla del West	opera, 3	G. Civinini and C. Zangarini, after Belasco: *The Girl of the Golden West*	New York, Met, 10 Dec 1910	*Mr**; fs (1911), vs (1910)
La rondine	commedia lirica, 3	G. Adami, after A. M. Willner and H. Reichert	Monte Carlo, Opéra, 27 March 1917	autograph lost; fs and vs (1917)
Il trittico			New York, Met, 14 Dec 1918	*Mr**; fs and vs (1918)
Il tabarro	opera, 1	Adami, after D. Gold: *La houppelande*		
Suor Angelica	opera, 1	G. Forzano		
Gianni Schicchi	opera, 1	Forzano, developed from a few lines in Dante: *Inferno*, xxx: 32–3, 42–5		
Turandot	dramma lirico, 3	Adami and R. Simoni, after C. Gozzi and F. von Schiller	Milan, Scala, 25 April 1926	*Mr**; vs (1926); inc., completed by F. Alfano

OTHER VOCAL

Sacred: Motet, Cr, in honour of S Paolino, 1878, unpubd: Messa a quattro, T, Bar, vv, orch, 1880, *I-TLp**, vs (New York, 1951) [incorporating Motet, Cr]; Salve del ciel regina, S, hmn, before 1880, *Li**, unpubd; Requiem, S, T, B, org/hmn, before 1905, frag. *Ms**

Choral: I figli d'Italia bella (cant.), solo vv, orch, 1877; Cantata a Giove (1897)

Songs: Melancolia (A. Ghislanzoni), 1881, unpubd; Allor ch'io sarò morto (Ghislanzoni), 1881, unpubd; Spirto gentil (Ghislanzoni), 1882, unpubd; Noi leggeramo (Ghislanzoni), 1882, unpubd; Storiella d'amore (Ghislanzoni), 1883, in *Musica popolare* (4 Oct 1883); Menti all'avviso (Romani), romanza, 1883; Sole e amore (Puccini), mattinata, 1888, in *Paganini* (1888): Avanti, Urania! (R. Fucini) (Florence and Rome, 1899); E l'uccellino (Fucini) (1899); Inno a Diana (C. Abeniacar [F. Salvatori]) (Florence and Rome, 1899); Terra e mare (E. Panzacchi) in *Novissima* (1902); Morire? (Adam), in *Per la Croce rossa italiana* (*c*1917–18); Inno di Roma (Salvatori) (Florence and Rome, 1923)
Pedagogical: Solfeggi, 1888, unpubd

INSTRUMENTAL

Orch: Preludio a orchestra, E/e, 1876, autograph, Museo Casa natale; Preludio sinfonico, orch, A, 1882 (1977) [used in Le villi and in first version of Edgar]; Adagietto, 1883, sketch *Li**, unpubd; Capriccio sinfonico, perf. Milan, 14 July 1883, *Mc**, arr. pf 4 hands (1884); Scossa elettrica, march, 1896, unpubd
Chbr: Scherzo, str qt, *c*1880–83, *Li**, unpubd; Str Qt, D, *c*1880–83, parts *Li**, unpubd: Crisantemi, str qt (1890); 3 minuets, str qt, 1884 (1892), nos.1, 3 rev. (Paris, 1898); La sconsolata, vn, pf, 1883, unpubd
Kbd: several unpubd org pieces, before 1880; Foglio d'album, pf, ?1907 (New York, 1942); Piccolo tango, pf, ?1907 (New York, 1942)

GABRIELLA BIAGI RAVENNI (1–4), MICHELE GIRARDI (5)

Puccitelli, Virgilio (*b* San Severino Marche,1599; *d* San Severino Marche, 26 Dec 1654). Italian writer and priest. As a young man he is said to have lived in Rome and also to have travelled much. About 1630 (or somewhat earlier) he entered the service of Prince Władysław Sigismund of Poland, who reigned from 1633 to 1648 as King Władysław IV. From 1634 he acted as a secretary to the king, for whom he went on private missions (to Italy in 1638–9 and France in 1640) connected with, among other things, the organization of musical life at court. A year after the death of the king, who had granted him an annuity for life, he returned to Italy. He lived first at Naples and then at San Severino.

Puccitelli wrote the texts for nine operas performed at the Polish court and for a number of ballet introductions, three of which are known. The themes of his *drammi* range from the pastoral (*Dafne*, 1635; *Narciso trasformato*, 1638) through the hagiographic (*La Santa Cecilia*, 1637) to the epic (*Il ratto di Helena*, 1636, 2/1638; *Armida abbandonata*, 1641; *L'Enea*, 1641; *Andromeda*, 1644; *Le nozze d'Amore e di Psiche*, 1646; *Circe delusa*, 1648). Their plots are based on a fusion of the neo-Platonic theory of love and Baroque moralism, presented with restraint. They are in three or five acts and are characterized by a combination of elements of different dramatic genres, strong emphasis being laid on tragic hieratic elements; heroic characters are identified panegyrically with the king. The effects possible with the theatrical machinery of the time were widely applied. The texts make use of *versi sciolti* for the recitatives and short-line stanzas for the choruses and arias. Solo and tutti passages alternate in the choruses. The music of these operas is lost but it is known that it was composed by members of the royal chapel: Marco Scacchi set *Il ratto di Helena*; the composers of the other operas perhaps included Kaspar Förster (ii), Marcin Mielczewski, Bartłomiej Pękiel and Scacchi.

Puchenberg, Matteo. *See* BUECHENBERG, MATTEO.

Püchler, Wolfgang (*fl c*1596). German composer. *See under* PÜHLER, JOHANN.

Püchner. German family firm of woodwind instrument makers. It comprises four generations of master craftsmen. The firm was founded in 1897 by Vinzenz Püchner (*b* Graslitz [now Kraslíce], 8 July 1870; *d* Nauheim, 23 Nov 1948) in Graslitz, building flutes, oboes, clarinets and bassoons, each of which he played competently. By the 1920s his catalogue advertised no fewer than 144 models of woodwind instruments. When his three sons joined him in partnership in 1937, the firm was employing a work force of about 50 and exporting 70% of their production. In 1945, the new Czech government expropriated and later nationalized the former Sudeten German business. The West German government having designated Nauheim for the re-settling of ex-Graslitz woodwind makers, Vincenz's son Josef (1897–1988) and grandson Walter (*b* 1930) re-established the workshop there in 1948. Since then, the firm has become once again a leading maker of oboes, clarinets and bassoons. Their bassoons especially have established a solid reputation in England, as well as in America, where from the 1960s a model built to the specification of the teacher Hugh Cooper became popular. In 1998 the business re-organized as J. Püchner-Spezial-Holzblasinstrumentebau GmbH, under the direction of Walter Püchner and his three children Gabriele, Ulrike and Gerald.

WILLIAM WATERHOUSE

Puchner, Hans. *See* BUCHNER, HANS.

Pucitta [Puccitta], **Vincenzo** (*b* Civitavecchia, nr Rome, 1778; *d* Milan, 20 Dec 1861). Italian composer. After studying at the Conservatorio di S Maria della Pietà dei Turchini in Naples, he began as an opera composer in Senigallia in 1799 with a work of unknown title. During the following seven years he wrote mostly farces or one-act comedies for theatres in Venice and Milan, including a one-act opera inspired by Goethe's *Werther* in 1802. In the same year his *opera buffa Il puntiglio* was given at La Scala, establishing his reputation, and in 1804 he had his first great success with the farce *La burla fortunata*, which was widely performed until 1833 under various titles. According to Fétis, he went to Lisbon in 1806, where an *Andromaca* was performed. He was then music director of the Italian opera in Amsterdam and from 1809 to 1814 composer and music director at the King's Theatre, London. In those years this theatre was a showcase for Angelica Catalani, the most famous soprano of the time. For her Pucitta composed a series of operas, both *buffa* and *seria*, tailoring his music to her elaborate vocalism such as in the principal role in *La vestale* (1810), his most widely acclaimed serious opera. The peak of his success in London was the royal gala performance of his opera based on Monti's tragedy *Aristodemo* in June 1814. During this time Pucitta provided much of the repertory of Catalani's highly remunerated solo concerts, at which he often conducted the orchestra. He became her accompanist and went with her on tours of Scotland, Ireland and England and, in 1815, of Holland, Belgium and Germany. In 1814, when she was made director of the Théâtre Italien in Paris, he became her house composer. However, the Paris public took such a dislike to him and his music that when Catalani appeared in his new opera *La principessa in campagna* in 1817, she had it advertised without his name. Because of this situation and after disputes with her husband, he returned to Italy that year.

In 1819 Pucitta toured Austria and Germany with his pupil, the English soprano Elizabeth Ferron (or Feron), whom he had engaged on a four-year exclusive contract. The tour was successful, Ferron often being compared with Catalani and singing much of the same repertory that Pucitta had formerly composed or arranged for her. In April 1820 she made her début at La Scala in *La principessa in campagna* and was well received, but the opera was not. Shortly thereafter she bought her freedom from the contract for 12,000 francs. The two operas that Pucitta composed for the next carnival season in Rome and Milan were fiascos and he ceased to write for the stage. In his later years he edited collections of popular Marian melodies.

ANDREA LANZA

Puebla (de los Angeles). City in Mexico. It is the capital of Puebla state and was an important musical centre from the 16th century to the 19th. Founded in 1531, it soon became the second largest city in Mexico, surpassed in size, wealth and grandeur only by the capital. By 1640 it had several fine *colegios* for secondary and advanced studies and about 30 sumptuous churches, magnificently decorated by local artists and craftsmen. During the 17th and 18th centuries it welcomed world-famous native painters and writers, including the renowned poet Sor Juana Inés de la Cruz. About 19 printers published in Puebla during the 17th century, and from 1646 the city had the first public library in the Americas, an extraordinary collection of 5000 volumes donated by Bishop Juan de Palafox y Mendoza (1600–59).

The colonial city also enjoyed the dramatic traditions of Spain; lavish church processionals, costumed *máscaras* (pageants) and sacred and secular *comedias* and *autos* all used music extensively. In the 16th and 17th centuries most were staged in the cathedral plaza, a large area that was also the site of bullfights. Bishop Palafox temporarily interrupted some performances in 1644 by vetoing the city government's plans to stage two *comedias a lo divino* for Corpus Christi in front of the cathedral, 'as had been done since time immemorial'. Local colour was added to the scene by the great dances and pageants performed by Indians, who also participated in some church festivals. The secular *juntas* and *bailes* held by negroes were apparently so frequent and lively as to need periodic official regulation, and their influence is demonstrated by the frequent appearance in the villancico-cycles of such song types as the *negrilla* and *guineos*. The elaborate villancico 'cycles' or 'sets' were of particular importance in the 17th century. They usually contained nine villancicos of several verses, and many in Puebla had texts by Sor Juana Inés de la Cruz. The churches encouraged the composition of picaresque villancicos and *chanzonetas*, performed at Vespers and Matins on important festivals and saints' days. From the early 17th century secular

comedias with music were usually staged in a *corral* or *coliseo*; a succession of these theatres operated intermittently in Puebla. The seventh such theatre was the municipal Nuevo Coliseo (1760).

During colonial times musical life centred on the cathedral with its services renowned throughout the Indies. At the old cathedral (completed 1539) *maestros de capilla* who were also composers included Pedro Bermúdez (1603–*c*1606), Gaspar Fernandes (1606–29) and the famed Juan Gutiérrez de Padilla (1629–64), who ended his service in the new cathedral, dedicated by Bishop Palafox in 1649 and one of the finest examples of Herreriano architecture. There Padilla assembled and composed an extensive library for his choir, which included the brilliant organist–composer Francisco López y Capillas. Padilla was succeeded as *maestro de capilla* by his tenor soloist and assistant, the composer Juan García (1664–*c*1678). Carlos Valero was given a brief interim appointment in 1678; his successor was the important composer Antonio de Salazar (1679–88). Other *maestros de capilla* who were composers included Miguel Matheo de Dallo y Lana, Francisco Atienza and, at the end of the 18th century, Manuel Arenzana.

As in most Spanish churches the large choir of the cathedral bisects the central nave, and is enclosed on three sides. The musicians, with the *capellanes* and other church officials allowed inside, sat in double rows of seats facing each other. This arrangement encouraged antiphonal effects (with double choirs and alternating plainchant and polyphony) and the extensive use of instruments. During Padilla's time the favoured instruments were the organ, harp ('cross-strung', and capable of chromatic notes) and bass viol, forming a continuo, duplicated for each choir in polychoral music; these were supplemented by recorders, *chirimías* (shawms), cornetts, sackbuts and treble, tenor and bass *bajoncillos* and *bajons* (bassoons), frequently used to double or replace voices. In Spanish and colonial churches the musicians playing shawms, cornetts and flutes were customarily expected to sing during Advent and Lent, when only the organ and bassoon were used with the singers. Padilla's staff in 1651 included ten instrumentalists, six of whom were also singers. Instrumental colour was frequently varied for each verse of such parts of the liturgy as the *Magnificat*, *Salve regina* and psalms. Early in the 18th century violins came into use and by the end of the century the basic cathedral orchestra consisted of violins, flutes, trumpets, horns, double bass and organ, with an occasional viola. Around 1800 Manuel Arenzana frequently added extra violins, clarinets, bassoons and timpani to this group.

Between 1810 and 1821 the wars of independence against Spain caused frequent disruptions, but Puebla remained an important centre. During the rest of the 19th century, however, a constant succession of invasions, battles and political conflicts inevitably caused a decline. Puebla remains a large city but has never regained its earlier cultural leadership. Its cathedral archives, however, contain the largest collection of 16th- to 19th-century polyphony in Mexico, including 20 large choirbooks and quantities of printed and manuscript partbooks, many of them rare. There are extensive holdings of works by Morales, Guerrero, Palestrina and by other composers from the 16th century to the 18th, and one of the largest collections of music by colonial composers working in Mexico. Another extensive collection of 17th- and 18th-century polyphony, the Colección Jesús Sánchez Garza from the SS Trinidad convent (founded at Puebla in 1619), was long in private hands; it has since been deposited at the Instituto Nacional de Bellas Artes, Mexico City. In recent years, the Puebla state government has issued a series of historical publications, including villancico-cycles for 1678 and 1680, with texts attributed to Sor Juana Inés de la Cruz.

ALICE RAY CATALYNE

Puel, Christoph. *See* BUEL, CHRISTOPH.

Puente, Gioseppe de (*fl* Naples, 1606). Italian composer of Spanish extraction. He is known only by *Il primo libro de madrigali* (Naples, 1606), for five voices. The madrigals are shorter and generally more chordal than those of his Neapolitan contemporaries. The identifiable texts are by Marino and Guarini (six each), and G.B. Leoni, A. Parma and Rinuccini (one each). In *Luci seren'e chiare* Puente appears to quote part of Gesualdo's setting of the same text, published in his fourth book of madrigals (1596).

KEITH A. LARSON

Puente, Giuseppe del. *See* DEL PUENTE, GIUSEPPE.

Puente, Juan Manuel de la [García, Juan Manuel] (*b* Tomellosa, nr Guadalajara, 8 Aug 1692; *d* Jaén, 19 Dec 1753). Spanish composer. He took the surname de la

Puente from his grandfather. He was a choirboy at Toledo Cathedral, where he composed his first pieces under the tuition of Ardanaz, Bonet de Paredes and Ambiela. From 1711 until his death he was *maestro de capilla* at Jaén Cathedral, becoming a prebendary in 1716.

His extant sacred music (mostly in Jaén Cathedral, with much of it dated 1709–35) embraces various vernacular genres into which the new Italian style was introduced at the beginning of the 18th century. He also wrote secular cantatas, which were common at the time but which are rarely preserved in such a large collection. This would suggest that he may have been involved in theatrical performances in Jaén. The villancico *Ah de la prisión confusa* (*E-JA*, dated 1711) is a remarkable example of an early Spanish recitative accompanied by two violins. Few Latin pieces have survived, though an inventory of 1760 lists 48. A 19th-century copy of his *Stabat mater* (*JA*) confirms that his music continued to be performed well after his death.

Much of de la Puente's output is preserved in bound books, which is relatively unusual. In 1760 Francisco de Viedma, *maestro de capilla* at Alcaudete Parish Church, Jaén, and owner of these books, presented them to the Jaén Cathedral chapter. Only three of the original nine volumes have survived.

WORKS

299 sacred vocal pieces, 1–18vv, with and without insts, 294 of which in *E-JA*, others in *E*, *GRcr*, *PAL*, Santuario de Aránzazu: 150 cants. (incl. new texts adapted to previous compositions), 117 villancicos, 19 tonadas, 4 motets, 3 pss, 2 orats, 1 mass, 1 auto sacramental, 1 res and sequence Stabat Mater

14 secular cants., S, with and without vn acc., *JA*, several later adapted to sacred texts

Further Lat. works, lost, listed in inventory of 1760, *JA* leg.460

MIGUEL-ÁNGEL MARÍN

Puente, Tito [Ernesto Antonio] (*b* New York City, 20 April 1923; *d* New York City, 31 May 2000). American percussionist, bandleader, composer and arranger. He began performing with Los Happy Boys and other local bands as a child prodigy, and as a teenager played with Noro Morales and Machito. Following wartime service in the US Navy (1942–5), he studied at the Juilliard School of Music (1945–7). In 1946 he joined Jose Curbelo's band alongside the upcoming vocalist Tito Rodríguez. The following year he left to form the Piccadilly Boys, later called the Tito Puente Orchestra, and which became a training ground for such musicians as Mongo Santamaría, Willie Bobo, Ray Barretto and Johnny Pacheco. Along with fellow 'Mambo Kings' Machito and Rodríguez, Puente performed regularly at New York City's Palladium Ballroom. During the 1950s he also recorded a series of albums devoted to authentic Cuban percussion. In the 1960s he made important recordings with the Cuban female vocalists Celia Cruz and La Lupe, and his career continued to flourish through the next three decades. He also collaborated with such musicians as Woody Herman and the trombonist Buddy Morrow. He composed over 400 songs, made well over 100 recordings and gained four Grammy awards and eight Grammy nominations. Among his most famous tunes are *Oye como va* (later popularized by Chicano rock star Carlos Santana), *Ran Kan Kan*, *Picadillo* and *El rey del timbal*.

In addition to his popularization of Cuban-based dance music, he was renowned as a Latin jazz performer, best known for his brilliance on the timbales and vibraphone, although also playing the conga, piano and saxophone. He also recorded jazz big band and bossa nova albums. He hosted his own television show in 1968, appeared in the 1992 film *The Mambo Kings* and became a symbol of the New York Puerto Rican identity, marching prominently in Puerto Rican parades. Puente played and recorded with nearly every major jazz and Latin musician, and won numerous awards, including an honorary doctorate from Old Westbury College (1994) and a star on the Hollywood Walk of Fame. See also S. Loza: *Tito Puente and the Making of Latin Music* (Urbana, IL, 1999).

LISE WAXER

Puerto, Diego del [Didacus a Portu] (*fl* early 16th century). Spanish theorist. He studied in Salamanca, where he became *cantor* at the Colegio Mayor de S Bartolomé and curate at the church of Laredo. He wrote *Portus musice* (Salamanca, 1504/*R*; ed. Rey Marcos), published in Latin with marginal annotations in Spanish. The last pages, including details on the tuning of the vihuela, are also in Spanish, and the treatise is probably the first Spanish publication to contain polyphonic music. Del Puerto was more concerned with practical than theoretical aspects of music and his definitions are concise with few digressions. He presented a personal interpretation of the theory of the three *genera*, which he called diatonic, chromatic and compound. He criticized Guidonian hexachordal theory because of its inadequacies as a training system, but offered nothing better in its place, merely remarking that the use of letter-names was to be preferred; in this respect he was closer to Ramos than many Spanish theorists. He expounded mensural notation effectively, and his treatise is particularly noteworthy for its explanation, often in markedly aesthetic terms, of techniques of composing in three and four parts.

F.J. LEÓN TELLO

Puerto Rico. Country in the Greater Antilles associated with the USA, with Commonwealth status from 1952. The first contact of Europeans with the Caribbean island was in 1493 during Christopher Columbus's second voyage to America. Colonization by Spain began in 1508, and the seat of government became established at San Juan, now the island's largest city and the centre of commercial and cultural life.

I. Art music. II. Traditional music.

I. Art music

During the first three centuries of Puerto Rican history, musical life centred on the church and the military garrison. Early records are scarce because many ecclesiastical archives and other sources of information were destroyed in fires, hurricanes, sackings and sieges. Early in the 16th century an organist and a *chantre* were requested for the cathedral, whose construction had begun in 1511. At the end of the 16th century the cathedral, described as being as beautiful as any in England, possessed a fine organ. Capitulary Acts of 1660 indicate that the permanent musical staff of the cathedral consisted of an organist and a *sochantre*, but in 1672 two new posts were created, *maestro de capilla* and cantor. From 1698 until 1756 there is no record of specific nominations to posts in cathedral music. However, from 1756, records show a succession of organists, *maestros de capilla* and other musicians attached to the church. These musicians, including both clerics and laymen, provided the first regular music instruction in Puerto Rico.

Secular music before the 19th century was connected mainly with public celebrations. Among these were events of religious significance, but mounted at the expense of secular authority: Corpus Christi and the celebration of the patron saints of Spain, of the Spanish West Indies, and of Puerto Rico. In addition, *fiestas reales* were organized on occasions connected with accessions of Spanish monarchs and with other significant events in the Spanish world. The accession of Fernando VI in 1746 was marked by processions, balls, *comedias* and other festivities extending over a period of nine days, and similar events occurred in 1789 on Carlos IV's accession to the throne. During the 18th and 19th centuries, military musicians were important figures in the colony's musical life. Attached to Spanish units serving in the Antilles, these musicians also performed for balls and other civil celebrations and provided the nucleus of orchestras formed for opera and concerts. They were among the first teachers of wind instruments in Puerto Rico, and many remained after completion of their military service as teachers, performers and founders of musical families.

Construction of the island's first permanent theatre began in 1824; the building, still in use as the San Juan Municipal Theatre, was officially inaugurated in 1832. A philharmonic society was formed by a group of professionals and amateur musicians. Among the goals of this society (many of which were realized) were the establishment of a music academy, the organization of an orchestra, and the presentation of locally mounted operas and zarzuelas.

One of Puerto Rico's first native composers was Felipe Gutiérrez Espinosa (1825–99). He wrote the first opera on a Puerto Rican subject, *Guarionex* (?1856), as well as two other operas, a zarzuela and a large quantity of religious music. Concerts by visiting artists began in 1827 with a series of three recitals by the pianist Eduard Edelman and the cellist Henry Femy. The British tenor William Pearman visited Puerto Rico in 1832, giving the first documented musical performances in the San Juan Municipal Theatre. Louis Moreau Gottschalk and Adelina Patti spent a year touring Puerto Rico in 1857–8, during the period when San Juan and Ponce, the island's second-largest city, were becoming regular stops in the itineraries of touring Italian opera companies. Short works of light lyric theatre, including *tonadillas* and *sainetes*, were regularly presented by theatrical companies, and the first complete opera (Rossini's *Il barbiere di Siviglia*) was given by a visiting Italian company in 1835.

19th-century Puerto Rican art music includes symphonic fantasias and overtures, religious music, instrumental chamber music and a considerable amount of piano music. An important species of piano music, cultivated well into the 20th century, is the Puerto Rican *danza*. Originally a social figure dance, the *danza* became a highly stylized form of concert music in the hands of such skilled native composers as Manuel Tavárez (1842–83), Juan Morel Campos (1857–96) and Braulio Dueño Colón (1854–1934). A generation of composers was active during the first half of the 20th century, but economic depression, complicated by the island's change of sovereignty from Spain to the USA in 1898, caused the decline or collapse of traditional agencies of musical patronage. Among these composers, whose production was limited almost entirely to chamber music, piano music and songs, were José I. Quintón (1881–1925), José Enrique Pedreira (1904–59) and Augusto Rodríguez (1904–93).

During the 1940s and 50s the insular government created a number of new educational and cultural agencies, and as a result music began to regain its traditional importance. A Division of Community Education was created in 1946 and soon began to commission film scores from young Puerto Rican composers. A government-owned radio station began operation in 1949, expanding into television in 1958. In 1955 an Institute of Puerto Rican Culture was created, and a newly organized Puerto Rico SO was established in 1958. These government branches engage performers and commission new works either directly or through grants to such groups as ballet and theatre companies.

Most of the art music composed during the 1950s displays the deliberate use of folk elements in a conscious attempt to create a distinctive Puerto Rican music. Since 1960, however, composers have taken a much more eclectic view, embracing styles and techniques ranging from post-Romantic to serial, aleatory and mixed-media expression. Composers active in Puerto Rico in recent decades have included Jack Delano (1914–97), Héctor Campos-Parsi (1922–98), Amaury Veray (1922–95), Luis A. Ramírez (1923–95), Ignacio Morales Nieva (*b* 1928), Rafael Aponte-Ledée (*b* 1938), Luis M. Alvarez (*b* 1939), Francis Schwartz (*b* 1940), Ernesto Cordero (*b* 1946), William Ortiz (*b* 1947) and Raymond Torres Santos (*b* 1958).

Music education in Puerto Rico is administered through two governmental programmes and by numerous private academies. One government programme was created in 1947 to provide every elementary school child with an understanding of the basic elements of music. The second programme is a network of junior conservatories, the Free Schools of Music, which offer specialized instruction for children aiming to become professional musicians. Further technical instruction is given at the Puerto Rico Conservatory of Music, established in 1960. University studies in music are conducted, and academic degrees granted in recognition of higher musical studies, at the Inter-American University of Puerto Rico, San Germán, at the University of Puerto Rico, Río Piedras, and at the Catholic University of Puerto Rico, Ponce. All of these

institutions employ as instructors Puerto Rican composers and performers, many of whom have undertaken advanced studies in the USA or Europe.

The Puerto Rico Casals Festival was established in 1957 under governmental auspices and with the musical direction of Pablo Casals, who had made Puerto Rico his home. The annual three-week festival, taking place in the Performing Arts Center in metropolitan San Juan in June, has presented such ensembles as the National SO of Washington DC, the Detroit SO, the Los Angeles Chamber Orchestra and the New York PO, with the Puerto Rico SO as the resident anchor. Soloists and chamber ensembles have been of the same high calibre, but more recently the conservative programming of the festival has been altered to incorporate contemporary works, including those of island composers. Recent festival directors have included Odón Alonso and Penderecki.

II. Traditional music

1. Introduction. 2. African-derived genres. 3. Hispanic genres. 4. Instruments.

1. INTRODUCTION. Until the 20th century, interest in Puerto Rican folklore and customs was expressed principally through travellers' descriptions and the introduction of folk themes in 19th-century Puerto Rican *costumbrista* literature; precise knowledge of the island's traditional music from the 16th to 19th centuries is therefore slender.

The predominant elements in the traditional music of Puerto Rico have been traced to Spain and West Africa; Spanish settlement and colonization began in 1508, while West African influence is due to the direct importation of African slave labourers until the 19th century and the introduction of black Americans at various periods. The indigenous Arawak Indian contribution is minimal; so rapid was the Spanish domination of the island's indigenous population that within a few generations of the Conquest scarcely a trace of Arawak influence could be noted in Puerto Rican life.

Early descriptions of the musical and ceremonial use of Arawak implements are limited to gourd rattles and to the *bastón*, an ornamented stick struck heavily against the ground. The *areito* (a ceremonial dance) was practised throughout the Greater Antilles by pre-Columbian inhabitants and performed on a wide variety of occasions, involving instruments and antiphonal chanting. Attempts to reconstruct Arawak music and chant on the basis of the few extant descriptions or through supposed vestiges in the traditional music of later periods have been fruitless.

2. AFRICAN-DERIVED GENRES. African influences have been strong, particularly in the coastal regions. Several Puerto Rican traditional music customs clearly display indebtedness to African antecedents, although they have by no means remained unaffected by contact with Spanish music and the Spanish language. Among the most important of these forms are the *bomba*, the *plena* and the *baquiné*.

The *bomba*, which some writers have associated with the Cuban *conga* and with the more generalized Antillean *bamboula*, is practised in Puerto Rico's coastal lowlands. This dance is characterized by the use of drums as accompanying instruments, by responsorial singing, and by individuals or couples spontaneously dancing within a circle of participants. Song texts may be improvised by a leader and repeated by the chorus of participants, or they may consist of traditional texts in which leader and chorus sing alternating stanzas.

Many other names of dances associated with the *bomba* and presumably of African origin have been noted. Among these are the *bamulé*, *belén*, *candungo*, *candungué*, *cucalambé*, *cuembé* (*quembé*), *cunya*, *curiquinqué*, *gracimá*, *guateque*, *holandés*, *kalindá*, *leró*, *mariandá*, *mariangola*, *sicá* and *yubá*.

Another form showing marked African influence is the *plena*. The Puerto Rican *plena* is a short narrative song that describes, often with sharply satirical intent, an individual or an event. While somewhat similar in function to the Spanish *romance* (ballad) and the Mexican *corrido*, the characteristic *plena* differs from these in its brevity and its marked use of African-derived rhythms (ex.1), patterns of vocal usage and dance.

The earliest documented performances of the *plena* date from the first decade of the 20th century. It has been suggested, however, that the style (if not the name) of the *plena* was current in Puerto Rico half a century before. The first known performances are attributed to English-speaking Afro-Caribbean immigrants from the Virgin

Ex.1 *Los muchachos de Cataño, plena* (Cruz, 1967)

Islands and St Christopher, who had settled in Ponce on Puerto Rico's southern coast. The earliest accompanying instruments appear to have been the tambourine and *güiro* with guitar or concertina. The heavy striking of the tambourine, on the beat in binary metre, is believed to have been extremely important in establishing the definitive style of the *plena* which developed in the 1920s.

The characteristic form of the *plena* consists of the alternation of stanzas and refrains (either improvised or composed) by soloist and chorus. Many *plenas* have become classics of popular traditional music, and have become known throughout Puerto Rico and abroad. Among these is the following text, which refers satirically to the arrival in Ponce of a newly appointed Roman Catholic bishop:

> Mamita llegó el obispo,
> llegó el obispo de Roma.
> Mamita, si tú lo vieras
> que cosa linda que cosa mona!

Baquiné is the communal vigil over the body of a dead child during the night preceding Christian burial. As the child is presumed to have died without sin, the occasion is more one of rejoicing than one of grief. However, songs of consolation are sung to the bereaved parents, and occasionally African deities are invoked in order to repel an evil spirit:

> Huye, huye pronto
> maligno adversario
> en la sombra va el niño
> libre de tu mano.
> Babacó y Ogún
> le tienden los brazos,
> Yeyemá y Changó
> deshojan un ramo.

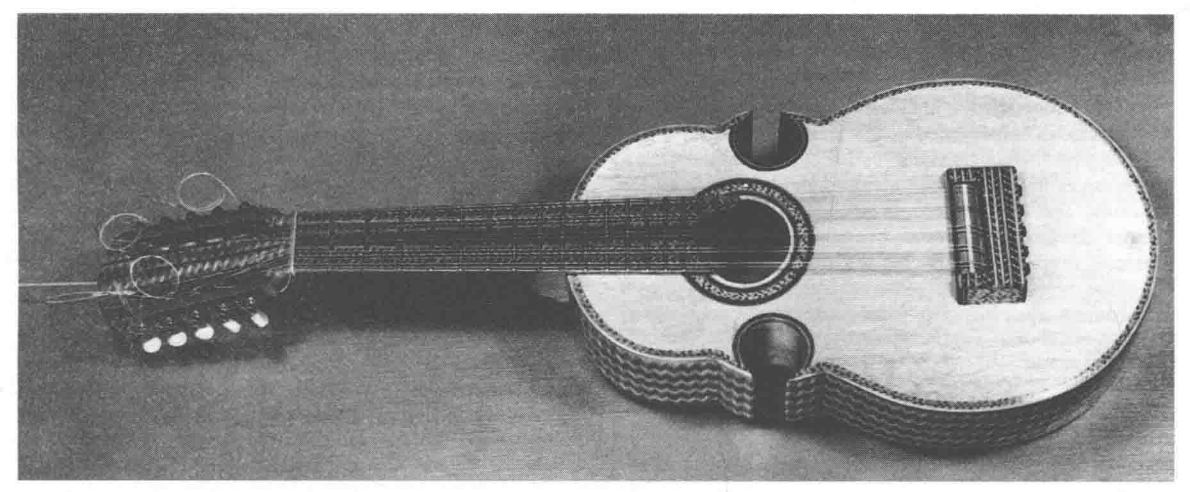
3. Hispanic genres. In contrast to the African-related traditional music of Puerto Rico's coastal lowlands, many of the songs and dances from the interior mountains are strongly derived from Spanish sources. Here, many folksong species are based on the Spanish *décima*, a ten-line stanza of octosyllabic or hexasyllabic structure.

The most important form practised in the interior is the *seis*. As dance music, the *seis* is in simple binary metre, richly syncopated and frequently overlaid with triplet figurations in melody or accompaniment (ex.2). Formerly

Ex.2 *Seis del Dorado* (López Cruz, 1967)

certain types of *seis* were performed by couples in two opposite rows. More than 80 types of *seis* have been identified, distinguishable by tempo, rhythmic figuration, melody type or choreography. Many are named after the style of dance-steps associated with them, for example the *seis enojao*, *seis chorreao* and *seis zapateao*. Others are named after a town or region, such as *seis de Comerío* or *seis de oriente*; still others bear the names of musicians who popularized them, such as *seis de Andino* and *seis de Villarín*.

As accompaniment to song, the *seis* is closely associated with *décima* texts. The improvisation of *décimas* on family social occasions and during community festivities is fundamental to Puerto Rican traditional custom. In a *seis de controversia* two singers may engage in a contest, improvising *décimas* according to a subject and rhyme established by the contest judge. Subjects for improvisation cover a wide range, from praise of an individual or the celebration of an event to themes of love or popular religion.



The repertory of Puerto Rican *bailes de garabato*, or popular folkdances, also includes the *vals criollo*, the *mazurca* and the *polca*, all modifications of the corresponding 19th-century European social dances.

Religious music in Puerto Rico centres on the *aguinaldo* and the villancico, both descendants of the 16th-century Spanish villancico. In modern popular usage the two names are almost interchangeable and refer to a specific repertory of well-known songs whose texts deal with the Christmas cycle. The most common themes are the Nativity, the Three Kings and praise of the Virgin or Child. The melodies are usually in simple or compound binary metre; the rhythmic syncopation that many *aguinaldos* or villancicos display may be the result of African influence, although this has not been fully investigated.

The *Cruz de mayo* or Fiesta de Cruz, a popular religious festivity involving a great deal of music, enjoyed a revival during the 1960s and early 1970s after several decades of decline. Dedicated to the Virgin Mary in early May, the *Cruz de mayo* consists of nine consecutive evenings of fiesta. This festival, a form of the traditional Roman Catholic Novena, formerly took place within homes or private patios, but has become a public event sponsored by civic and fraternal groups. The music performed consists of a traditional cycle of songs (19 in one local usage) concerning the Cross, the Virgin, the month of May and the Holy Family. Rhythms, tempos and forms are based on such traditional species as the waltz and march. The traditional group of accompanying instruments (*conjunto típico*) consists of guitar, *cuatro* and *güiro*, although in some localities this orchestra is expanded to include flutes and violins or instruments associated with popular commercial music. The cycle ends with social dancing and general festivity.

Another traditional religious activity, the *rosario cantao* (sung rosary), also involves music of Spanish derivation. It is a family or neighbourhood observance arranged for the purpose of redeeming a vow made to a saint. The event lasts all night, and is divided into periods of singing (*tercios*) and relaxation, the latter consisting of games, stories and banter. After the final *tercio*, at daybreak, a dance begins which may last until noon.

4. Instruments. Traditional instruments include drums of various types, the modern representatives of a continuous tradition of African music in the Caribbean. The isolated use of musical bows has also been observed. The

Cuatro (Instituto de Cultura Puertorriqueña, San Juan)

marímbula, an Antillean modification of the African LAMELLOPHONE, serves as a bass instrument during many popular festivities involving music. Maracas and *güiros*, descendants of pre-Columbian Arawak instruments, appear in most types of Puerto Rican folk and popular music.

The construction and playing of plucked-string fretted instruments have also been cultivated. Guitar construction, tuning and playing technique follow Spanish usage, but a number of other instruments, unique to Puerto Rico or with counterparts in other regions of Latin America and the Caribbean, have evolved. Among these is the *cuatro* (see illustration), descended from the Spanish vihuela and used widely in popular genres. The modern *cuatro* is made of indigenous woods and exists in a wide variety of shapes while retaining the plectrum technique of the ancestral *vihuela de peñola*. Formerly, the *cuatro* had four double courses of strings tuned in 4ths (*e–a–d′–g′*). At the end of the 19th century a fifth single or double course was added below, giving the pitch *B*.

The *tiple* and *tres* are smaller instruments of the same general type as the *cuatro*. The four or five single-string courses of the *tiple* have had no standardized tuning; there have been as many as 16 generally accepted arrangements. The *tres* has three single strings, tuned *b–g′–d″*. Other plucked instruments that have been used in traditional music are the flat-backed *laúd español* and the *bordonúa*; the latter, which has become rare, has five courses of strings, tuned *A–d–f♯–b–e′*.

DONALD THOMPSON/R (I), □ (II)

Pueyo, Salvador (*b* Barcelona, 10 Feb 1935). Spanish composer. He studied at the Barcelona Conservatory (1954–63) with Caminals (piano), Toldrá (conducting) and Zamacois (composition). In Paris he was a pupil of Ohana (composition) at the Ecole Normale de Musique and of Pierre Schaeffer (musical research) at the ORTF. He holds a chair in composition and instrumentation at the Barcelona Conservatory, where he has taught since 1987. Among the many acknowledgements of his activities are the Barcelona municipal prize (1964) for *Abstracciones* and the Barcelona Conservatory Prize (1968) for *Antítesi*.

Pueyo's works have been performed in various countries and he has received commissions for international festivals. His song cycle for soprano and strings, *Cap al meu silenci*, was first performed in Carnegie Hall, New York, by Montserrat Caballé. In 1997 the orchestra of the Gran Teatro del Liceo gave the première of the first orchestral movement, *Marta*, from his opera *Terra Baixa*, under the direction of Cristóbal Halffter. Among his best-known works is the *Simfonía barroca*, performed on

more than 300 occasions by prestigious orchestras and conductors, among them Yehudi Menuhin.

Some of his music is in a traditional vein, while other pieces make use of more novel resources, such as electronic and electro-acoustic media. He has also carried out research, published by the government of Catalonia, on the musical origins of the Catalan national hymn, *Els segadors*, and has worked as musical consultant of the Centro de Documentación Musical de Cataluña. His music is characterized by his respect for the sounds of Cataluña, blended with his own personal gestures; Pueyo's individual output forms an important part of the body of Catalan national music.

WORKS

DRAMATIC AND VOCAL

Stage: Yerma (ballet, after F. García Lorca), Barcelona, Liceo, 9 Oct 1992; Terra Baixa, op, 1996; Kux, my Lord! (incid music)
Film score: El extrano caso del Dr Fausto (1970s)
Choral: Threnos, S, chorus, ens, 1962; Kohelet, S, Mez, spkr, chorus, orch, 1967–9; Vespres de Sant Pere, Mez, Bar, spkr, chorus, fl, eng hn, org, 1968
Solo vocal (1v, pf unless otherwise stated): Primer cicle de cançons, 1961; Segon cicle de cançons, 1961; 4 ambientes, 1963; Trio, op.11, Mez, fl, gui, 1963; Cap al meu silenci, 1986–7, arr. S, str/orch, 1986–7; Eternament, 1997

INSTRUMENTAL

Orch: Suite, 1962; Abstracciones, 1963–4; Antítesi, 1965; Simfonía barroca, str, 1975; Conc., ob, str, 1983–5; Rondó, chbr orch, 1991; Morta fiamma, 1995; Marta, 1996; Simfonía concertant, vn, str, 1998
Chbr: Quartet en un teps, cl, bn, vn, pf, 1962; Evolucions, fl, cl, vn, va, vc, 1963; Conceptes, ob, cl, bn, 2 vn, va, vc, 1966; Wind Qnt, 1968; L'Orant de Pedret, fl, cl, 1978; Quintet, 2 vn, eng hn, bn, hpd, 1976; Fantasía trío, 1984
Solo inst: Suite, pf, 1960–5; Tema amb variaciones, pf, 1960–5; 6 soliloquis, pf, 1960; Sonata, pf, 1961; Fuga, org, 1962; Fuga, pf, 1962; Pensar . . ., org, 1972; Fuga aequalis motus, org, 1973; Repòs, 1983; Sonata, op.60, pf, 1995

MARTA CURESES

Puffett, Derrick (Robert) (*b* Oxford, 30 Nov 1946; *d* Cambridge, 14 Nov 1996). English musicologist and editor. He read music at Oxford (BA, 1967) and after becoming a research fellow at Wolfson College, Oxford, he took the doctorate with Joseph Kerman and Frederick Sternfeld in 1976 with a dissertation on the song cycles of Othmar Schoeck. He continued to teach at Oxford and work as a freelance writer until he was appointed lecturer in 1984 at Cambridge, where he also became director of music studies and fellow at St John's College. At Cambridge he was also active as an editor, preparing nine volumes of *Music Analysis* (1987–95), books on Strauss's *Salome* and *Elektra* (1989–90) and several translations (of Dahlhaus, Nattiez, Schenker and Berg), two of them with Alfred Clayton.

During his 20 years as a writer Puffett examined a wide variety of musical texts from the late 19th century (Tchaikovsky, Richard Strauss, Mahler and Bruckner), and the early 20th century (Schoenberg, Berg, Webern, Schmidt and Schreker). His planned analytical study of Elgar never came to fruition, but he did publish works on a range of English 20th-century composers such as Bax, Tippett, Goehr and Holloway. Puffett was unique among analytical writers for his elegance, wit and play of fantasy: he reclaimed technical musicology for literature. He brought a welcome breath of musicality, humanity and commonsense to a calling never particularly noted for any of these qualities. Because he was truthful and honest with himself, he expected to find these virtues in others. He would never set himself a musical problem which was not, in the end, soluble simply by acknowledging the evidence of his ears. Nothing false – one might almost say nothing theoretical – was ever allowed to pass unchecked by those rigorous and sensitive organs.

Puffett suffered since childhood from muscular dystrophy. As his condition worsened his writing became ever sharper, more perceptive and entertaining: it glittered with a sort of liberation. A 'What if . . . ?' fantasy about early Webern; a wonderfully original piece of writing about Debussy; and, most notable of all, a study of Berg's op.6 *Drei Orchesterstücke*, a virtuoso exposition of a piece that has baffled other commentators: these, together with the massive torso of a posthumously published piece on the adagio from Bruckner's Ninth Symphony, must stand as his testament.

HUGH WOOD

Puget. French family of organ builders. In 1834 Théodore Puget (*b* Montréal, Aude, 15 Nov 1799; *d* Toulouse, 31 March 1883) founded a firm in Toulouse. He directed it until 1877, passing it on to his son Eugène (*b* Lagrasse, 28 Feb 1838; *d* Lavalanet, 7 Jan 1892), whose brother Jean-Baptiste (*b* Toulouse, 22 Oct 1849; *d* Toulouse, 22 Sept 1940) worked with him and then led the firm from 1892 to 1922. By World War I the company could claim nearly 400 organs built, rebuilt or restored, including the cathedrals of Albi, Béziers, Narbonne, Pamiers, Rodez and many organs in Toulouse. Jean-Baptiste's son Maurice (*b* Toulouse, 7 Dec 1884; *d* Toulouse, 17 Aug 1960) was the last director of the firm. Another son of Théodore, Baptiste Puget (*b* Fanjeaux, 5 Dec 1826), set up an independent business. Puget organs are ubiquitous in southern France west of the Rhône; the work of the earlier generations is generally considered to be the most refined of the family's output. From 1870 the firm turned increasingly to pneumatic action, becoming its leading advocate in France and thereby making inroads even into the Parisian market. Puget, Merklin (who promoted electropneumatic action) and Cavaillé-Coll (who remained faithful to mechanical action) are arguably the three principal organ builders of 19th-century France in terms of quantity, quality and geographical span of work. Under Maurice Puget electropneumatic action prevailed.

GUY OLDHAM/KURT LUEDERS

Puget, Loïsa [Louise-Françoise] (*b* Paris, 11 Feb 1810; *d* Pau, 27 Nov 1889). French composer and singer. She showed talent at an early age and took lessons from her mother, a singer; she later studied composition with Adolphe Adam. She composed about 300 *romances*, which were extraordinarily popular: the most famous was *A la grâce de Dieu*. Her popularity reached well beyond Paris, as documented by editions in different languages and in piano arrangements. Contemporary periodicals chronicle many of her concerts and publications, and she was hailed by the renowned critic Henri-Louis Blanchard as the 'queen of this genre of music'. Between 1830 and 1845 she published illustrated volumes of songs entitled *Album* or *Collection des romances*. Most of the texts were written by the poet-actor Gustave Lemoine, who became her husband in 1845. Lemoine's texts treat a wide variety of subjects, from the innocence of *Demain, je serai dame*, to the flagrant sentimentality of *Appelle-moi ta mère*, and the sensational treatment of suicide in *Morte d'amour!* After her marriage, Puget's compositional output decreased dramatically.

In addition to *romances*, Puget composed two one-act operettas: *Le mauvais oeil* and *La veilleuse, ou Les nuits de milady*. The première of the former received a very favourable review from Hector Berlioz. Puget's output also includes some solo piano works and *Mystère de Paris*, a set of quadrilles for four hands.

WORKS
(*selective list*)

published in Paris unless otherwise stated

Le mauvais oeil (operetta, 1, E. Scribe and G. Lemoine), Paris, OC (Bourse), 1 Oct 1836

La veilleuse, ou Les nuits de milady (operetta, 1, Lemoine), Paris, Gymnase, 27 Sept 1869

*c*300 songs (texts by Lemoine unless otherwise stated), 1v, pf, incl.: Le voleur idiot (1834); La coquette de soixante ans (?1835); Le lys dans la vallée (?1835); Le chasseur et la laitière (1838); Demain, je serai dame (1838); Je veux t'aimer sans te le dire (1838); La reine des fous (1838); Tempête (1838); L'aigle (1839); La chanson du charbonnier, ou Blanc et noir (1839); Fleur des champs (1840); Morte d'amour! (1840); La Narbonnaise (1840); Le rhin allemand (A. de Musset) (?1840); La sérénade du pâtre (?1840); A la grâce de Dieu (c1840); Le ciel sur terre (1841); Appelle-moi ta mère (1844)

JUDY TSOU

Pugliese, Osvaldo (*b* Buenos Aires, 2 Dec 1905; *d* Buenos Aires, 24 July 1995). Argentine tango pianist, bandleader and composer. Trained at a private conservatory in Buenos Aires, he started as a cinema pianist but soon found a place in tango bands, including those of Roberto Firpo, Pedro Maffia, and Pedro Laurenz. After 1929 he jointly led the Vardaro-Pugliese Sextet, one of the most distinguished ensembles of the 1930s, and only in late 1939 did he form his own first band, which made the first of its more than 600 recordings in 1943. His own virtuosic piano skills contributed much to his band, whose sophisticated arrangements pushed the 'evolutionist' trend in tango music to its limits: Pugliese has been aptly described as the Wagner of the tango. The band toured to the Soviet Union and China (1960), to Mexico and Cuba (1981) and to Japan (1965 and 1979), and made some notable appearances on French television in 1984. In December 1985, soon after his 80th birthday, Pugliese played a memorable concert in the Teatro Colón, Buenos Aires. He was a prolific composer, making a particular mark with the rhythmically original *Recuerdo* (1924) and the even more original and controversial *La Yumba* (1943). A lifelong communist, he was imprisoned several times for his beliefs, once for six months (1955) by President Juan Domingo Perón.

SIMON COLLIER

Pugnani, Gaetano (*b* Turin, 27 Nov 1731; *d* Turin, 15 July 1798). Italian violinist and composer. His principal teacher was G.B. Somis, a pupil of Corelli. At the age of ten he began his career as a second violinist in the orchestra at the Teatro Regio, Turin, though his official appointment was delayed until 19 April 1748. A royal stipend enabled him to study composition with Francesco Ciampi in Rome (1749–50). On his return to Turin he resumed his modest orchestra post, though with doubled

salary. He became principal of the second violins in 1763. By that time he had acquired an international reputation. On 2 February 1754 he performed one of his own concertos at the Concert Spirituel in Paris, where his first published works appeared the same year. The *Mercure de France* wrote: 'the connoisseurs insist that they have never heard a violinist superior to this virtuoso'. From 1767 to 1769 he served as conductor at the King's Theatre in London, where his first opera, *Nanetta e Lubino* (1769), met with success. He also appeared in concerts with J.C. Bach and other prominent musicians. In 1770 he became first violinist of the king's music in Turin, a post his teacher Somis had held and which included the leadership of the Teatro Regio orchestra. In 1776 he also became general director of instrumental music, and in 1786 was appointed supervisor of military bands. From 1780 to 1782 he toured northern Europe with his illustrious pupil Viotti. A commission for Naples in 1784 initiated a period of activity in which he wrote four operas in five years, as well as some ballet music. His last foreign journey took him to Vienna, where on 22 March 1796 he conducted his orchestral suite based on Goethe's *Werther*. During his last years he saw the decline and ultimate dissolution of Turin's musical establishment as a result of the war with France.

Pugnani was a vital link in the uninterrupted tradition from Corelli to Viotti. Gratefully, Viotti called himself 'élève du célèbre Pugnani' on his printed music; among Pugnani's other pupils were Borghi, Bruni and Polledro. His playing was known for its power, eloquence and rich cantilena; his 'arco magno' (grand bowing) became proverbial. He probably played an important part in the development of the modern bow: he himself used a bow (called an 'archetto alla Pugnani') that was straighter, longer and equipped with a screw, and he may have exchanged views with the Parisian bowmaker Tourte *père* in 1754 and with the younger François Tourte in 1772–3, both of whom were engaged in bringing the bow into its present form. Pugnani also preferred to use thicker strings, perhaps because they were better able to withstand the greater pressure of his bowing.

Gaetano Pugnani: portrait by an unknown artist, c1755–60 (Royal College of Music, London)

As a composer Pugnani reached far beyond the violin into the field of opera, symphony and chamber music, and must be considered an important representative of mid-century Italian Classicism. His symphonies exemplify the Italian theatrical style best known through its Mannheimer and Viennese proponents. He preferred a four-movement sequence with a minuet in third place. His chamber music stands midway between that of Sammartini and Boccherini, and often dispensed with a figured bass, though not always successfully. Several of his trios and quintets required an obbligato keyboard part and assorted instruments. His only known violin concerto follows the form established by Tartini but reflects the *galant* style of the 1760s.

Burney observed that Pugnani, 'though an able and celebrated professor on the violin, seems to have begun writing for the voice too late in life to arrive at great excellence in lyric compositions'. Nevertheless, his operas are not without interest or merit. After his initial comic opera for London, the rest were either serious operas or *feste teatrali*; the latter traditionally incorporate machinery, spectacle, choruses and dance. Pugnani's *Tamas Kouli-Kan nell'India* (1772), with its military display, staged battles and burning cities all within an exotic Persian setting, earned another performance in Florence in 1774. Formal innovations in his two serious operas of the mid-1780s reflect the influence of the Mannheim librettist Verazi. In *Achille in Sciro* (1785), which includes all Metastasio's choruses, the second and third movements of the sinfonia are used as dance music for an opening spectacle. In a new action ensemble Deidamia interrupts a duet between Achilles and Ulysses, and Achilles' cavatina of three stanzas in Act 3 is interrupted with interjections from Deidamia and Ulysses, who leaves before the last stanza. Almost more surprising is his serious opera for Naples, *Adone e Venere* (1784), based on a mythological subject with lavish use of chorus and ballet, normally excluded from *opera seria*. Pugnani's orchestration contains excellent string writing, often in four parts. He treated wind instruments both as soloists and as ensemble players, as well as writing wind dialogue with strings and with the voice. His operas of the 1780s have clarinet parts. He wrote imaginative programme music for battles and storms, and indulged a penchant for melismatic display in word-painting and programmatic effects in his obbligato recitatives and arias.

BORIS SCHWARZ/MARITA P. McCLYMONDS

Pugni, Cesare (*b* Genoa, 31 May 1802; *d* St Petersburg, 14/26 Jan 1870). Italian composer. From 1815 to 1822 he studied in Milan, with Rolla (violin) and Asioli (composition) among his teachers. In 1823 he contributed to the ballet *Il castello di Kenilworth* performed at La Scala, but *Elerz e Zulmida* in 1826 was the first wholly by him. In the following years he specialized in this genre, but from 1831 to 1834 attempted opera with a series of five works which began successfully with *Il disertore svizzero* and ended with the fiasco of *Un episodio di San Michele*. In this period, and rather unusually for an Italian composer, he also composed orchestral music, publishing two sinfonias, both in one movement and one of them for two orchestras in canon. From 1832 to 1834 he was *maestro al cembalo* and music director at La Scala. Then, however, he left, in disgrace (allegedly because of a passion for gambling), and he spent some years in poverty in Paris, where he was briefly associated with Bellini. In 1843 he began a long collaboration with the celebrated choreographer Jules Perrot, which resulted in more than 30 ballets, principally for Her Majesty's Theatre in London (under Benjamin Lumley). Some of these have remained famous (*Ondine*, 1843; *La Esmeralda*, 1844; *Catarina, ou La fille du bandit*, 1846; *Le jugement de Pâris*, 1846), and some are still performed. Other important productions resulted from collaborations with Cerrito, Saint-Léon, Paul Taglioni and Petipa. In 1851 Pugni went to St Petersburg as ballet composer to the imperial theatres. There he produced some 35 works,

including revivals of former successes and new ones, such as *Doch Faraona* ('Pharoah's Daughter'), 1862, and *Konyok gorbunyok* ('The Little Hump-Backed Horse'), 1864.

The reasons for Pugni's success can be found in the music's *brio*, its imaginative fancy and expressive quality, and in its subservience to the functional requirements of the choreography, a subservience which is, at the same time, its greatest artistic limitation. The ballets to which Pugni contributed all or part of the music are said to number more than 300.

WORKS

BALLETS

only those published in piano excerpts or, where stated, complete piano score

Perf. Milan, La Scala, pubd Milan: Elerz e Zulmida (L. Henry), 6 May 1826 (?1827); Edoardo III, ossia L'assedio di Calais (Henry), 15 Feb 1827, with music by Rossini, Mozart, Meyerbeer (1827); Pellia e Mileto (S. Taglione), 28 May 1827 (1827); Agamennone (G. Galzerani), 1 Sept 1828 (1828, 1832); Adelaide di Francia (Henry), 26 Dec 1829 (1830); Guglielmo Tell (Henry), 19 Feb 1833 (1833); Monsieur de Chalumeaux (Galzerani), 14 Jan 1834 (1834)

ANDREA LANZA

Pugno, (Stéphane) Raoul (*b* Montrouge, nr Paris, 23 June 1852; *d* Moscow, 3 Jan 1914). French pianist, teacher and composer. He made his début as a pianist in 1858, and with financial help from Prince Poniatowski he then studied at the Ecole Niedermeyer. From 1866 to 1869 he was a student at the Conservatoire, where he won a *premier prix* for the piano (1866), harmony (1867) and the organ (1869) and a *première médaille* for solfège (1867). However, as an Italian citizen, he could not compete for the Prix de Rome. He took an active part in the Commune of 1871 and in May was made music director of the Opéra. On the fall of the Commune he escaped any retribution and in 1872 became organist and in 1878 choirmaster at the church of St Eugène-Ste Cécile, a post he held until 1892. In 1874 he also became choirmaster at the Salle Ventadour. From 1892 to 1896 he was professor of harmony at the Conservatoire and from 1896 to 1901 professor of the piano there. In 1893 he resumed his concert career and was soon recognized as perhaps the leading French pianist of the time. Excelling in the music of Mozart, Chopin and Franck, which he did much to popularize, he was noted for his lightness of touch and for his extremely flexible and polished technique, demonstrated in the recordings made in 1903 for the Gramophone and Typewriter Co. in Paris. He was also an excellent chamber music player, and his recitals with Ysaÿe, which began in 1896, were celebrated. An early exponent of Wagner in France, he and Debussy provided the two-piano accompaniment for a famous concert performance of parts of *Das Rheingold* on 6 May 1893. He composed, mostly before resuming his concert career, a considerable number of stage works in the lighter genres and salon music, now forgotten, but created a more lasting influence through his many piano pupils.

WORKS

DRAMATIC

unless otherwise stated, first performed Paris and published there shortly afterwards in complete vocal score or excerpts

A qui la trompe (opérette, 1, M. Richard [H. de Sartem]), Asnières, 13 Dec 1877, unpubd

Ninetta (oc, 3, M. Hennequin and A. Bisson), Renaissance, 26 Dec 1882

La brigue Dondaine, 1886

Le sosie (opéra-bouffe, 3, A. Valabrègne and H. Kéroul), Bouffes-Parisiens, 8 Oct 1887

Le valet de coeur (opérette, 3, P. Ferrier and C. Clairville), Bouffes-Parisiens, 19 April 1888

Le retour d'Ulysse (opérette-bouffe, 3, F. Carré), Bouffes-Parisiens, 1 Feb 1889

La vocation de Marius (opéra-bouffe, 3, Carré and A. Debelly), Nouveautés, 29 March 1890

La petite Poucette (vaudeville-opérette, 3, Hennequin and M. Ordonneau), Renaissance, 7 March 1891

Tai-Tsoung (grand opéra, 5, E. d'Hervilly), Marseilles, 11 April 1894, collab. E. Guinet

Ballets and pantomimes: La fée cocotte (G. Marot and E. Phillipe), 1881; Les papillons, London, 1884; Viviane (E. Gondinet), 1886, collab. C. Lippacher; La danseuse de corde (A. Scholl and J. Rocques), 1892; Pour le drapeau, 1895; Le chevalier aux fleurs (A. Silvestre), 1897, collab. A. Messager, unpubd; Mélusine, unpubd; Les pauvres gens, unpubd

Incid music: Les rois en exil (P. Delair), 1883; La città morta (La ville morte) (G. d'Annunzio), completed by N. Boulanger, unpubd

La résurrection de Lazare (orat, E. Favin and C. Grandmougin), 1879

OTHER WORKS

Sonata, d, pf (Paris, 1873); Concertstück, pf, orch (Paris, 1900); numerous pf pieces and songs, pubd Paris

Pedagogical works: L'art de travailler le piano, i: Etude des gammes (Paris, 1908), collab. C. Bresselle; Les leçons écrites de R. Pugno: Chopin (Paris, 1910; Eng. trans., 1911)

GUY BOURLIGUEUX

Puhel, Christoph. *See* BUEL, CHRISTOPH.

Pühler, Franz. *See* BÜHLER, FRANZ.

Pühler, Johann (*b* Schwandorf, Oberpfalz, before *c*1550; *d* ?*c*1591). German singer, teacher and music editor. There is evidence that he was a singer in the court chapel of Emperor Ferdinand I at Vienna from 1557 to 1564. From 1564 to 1569 he served in a similar capacity at the court of Archduke Ferdinand of the Tyrol, who transferred his household from Prague to Innsbruck late in 1566. He sang tenor at the court of Duke Wilhelm in Landshut in 1573 and from 1580 he held an appointment as organist and schoolmaster in Regensburg. He was active as an editor and brought out two sets of compositions by his friend Christian Hollander, *Newe teutsche, geistliche und weltliche Liedlein* (1570) and *Triciniorum … fasciculus* (1573), and a miscellaneous collection of German songs, *Schöner ausserlessner geistlicher und weltlicher teutscher Lieder* (RISM 1585[37]). He also edited a collection of poorly translated chansons by Lassus, reputedly his teacher, under the title of *Etliche ausserlessne kurtze gute geistliche und weltliche Liedlein* (1582). A manuscript collection by Pühler dating from about 1590 was published at Regensburg in 1875 by Joseph Renner under the title *Auswahl deutscher Madrigale von Meistern des 16. Jahrhunderts*. It is possible that Pühler was related to Wolfgang Püchler, composer of two litanies (in RISM 1596[2]).

Puilloys [Puyllois], **Johannes.** *See* PULLOIS, JOHANNES.

Pujol, Franc (*b* Barcelona, 15 May 1878; *d* Barcelona, 24 Dec 1945). Spanish choirmaster and composer. He studied solfège and the piano with Font and Buye at the Conservatorio del Liceo, Barcelona, and took composition lessons with Millet. Much of his work centred on the Orfeó Català, which he joined in 1897: in 1900 he was appointed assistant teacher to the conductor and, when the Palau de Música Catalana was opened as the choir's home, he became administrator and librarian; shortly thereafter he was appointed assistant conductor, succeeding Millet as conductor in 1941. He was also choirmaster of S Felipe Neri from 1902 and of Nuestra Señora de la Merced from 1906. Following the principles of Pius X's *Motu proprio*, he contributed to the dignifying of church music, both in his own works and through promoting the use of Renaissance polyphony. He was president of the Barcelona section of the ISCM, a member of the Instituto Español de Musicología and an editor of the folksong collection *Cançoner popular de Catalunya*. Apart from a great number of choral pieces – folksong arrangements as well as sacred and secular works – he produced numerous sardanas, some of them of great virtuosity intended for competitions of local *coblas*, many instrumental arrangements of traditional music and compositions for piano, chamber ensembles and orchestra. His principal publisher is Unión Musical Española.

A. MENÉNDEZ ALEYXANDRE/ANTONI PIZÀ

Pujol, Joan Pau [Juan (Pablo)] (*b* Mataró, nr Barcelona, bap. 18 June 1570; *d* Barcelona, 17 May 1626). Spanish organist and composer. On 18 March 1593 he became assistant to the aging *maestro de capilla* of Barcelona Cathedral, Julià-Andreu Vilanova, taking charge of the choirboys. Between 29 October and 16 November of that year he became *maestro de capilla* of Tarragona Cathedral, and on 23 January 1595, was appointed to the same post at Nuestra Señora del Pilar, Zaragoza, where he remained for 17 years; Pontac was one of his students there. On 1 March 1596 the cathedral chapter authorized Pujol to go to Jaca to receive minor orders and he became a priest in August 1600. From 1612 until his death he was *maestro de capilla* of Barcelona Cathedral. During this period he evaluated the music published in liturgical books in the diocese, was a consultant on organ building projects in the region and directed the chapel of S Jordi at the Palau de la Generalitat.

Pujol was one of the most prolific composers of sacred and secular music in his time. A series of Advent motets written at Tarragona and other works from S María del Mar in Barcelona, though, have been lost. His polychoral works are notable for their highly resourceful antiphonal and rhythmic effects. He was particularly successful in the treatment of psalm-tone cantus firmi. While much appreciated in his day, he is one of the most berated composers in the history of Spanish music: Collet's division of Spanish polyphony into regional schools according to their degree of 'mysticism' allocates Catalan composers, especially Pujol, the worst place. Others have repeated and expanded on such negative judgements. In the last few years, however, there has been a renewed interest in this composer, whose works are widely disseminated and still need to be catalogued.

EMILIO ROS-FÁBREGAS

Pujol, José (*b* Catalonia; *fl* ?1734–98). Catalan composer. Querol cited the libretto of an oratorio, *La nave del mercador*, apparently set by Pujol in 1734, but otherwise the earliest reference to the composer is his name on the cover of his Lamentations for Holy Saturday, dated 1737. On 25 October 1738 he and other local church composers criticized Bernardo Comes y de Puig's *Fragmentos músicos* (Barcelona, 1739). Probably during the next year he was appointed *maestro de capilla* at Barcelona Cathedral in succession to Francisco Valls. It is evident from printed librettos and the dates on other works that he continued to compose at the cathedral until at least 1768. For his oratorios (of which about 20 printed librettos are in *E-Bc* and *Mn*) he preferred texts using *cánticos* with *coplas* (refrains) and four to five characters (several of them are allegorical or unidentified) complemented by two choirs. The extant works are mainly liturgical or devotional, many with several soloists supported by an instrumental group of two violins, two flutes and continuo. Pairs of trombones, oboes, trumpets (*clarins*) or *oboe dulze* (their parts notated in the bass clef) may be added to (or replace) the flutes.

WORKS
all in E-Bc

Missa in Adventum et Quadragesima, 4vv; Missa matinal, 8vv; Missa 'Gaudent in coelis', 8vv (doubtful); Missa, 9vv (inc., doubtful)
Compline setting, 4vv; Lamentatio 2a para el Sabbato Santo, 1v, 1737; 3 Mag, 6–8vv; Salve regina, 10vv (inc.); Vesperas pro virginibus, 4vv; Vesperas pro defunctis, 8vv
Motets etc.: Afferentur regi; Beatam me dicent; Eripe me de inimicis, 12v; Continet in gremio; Fiat mihi santuarium; Gloriose Virginis; Miserere; Specie tua; Si queris beneficia; Sumite psalterium
Orats: Ab arce sublime; A S Tomás; De un enigma; Que caiga, que muera; 5 others (untitled)
Cants.: A Maria dichosa; Triumfar con tal prontitud (A nuestra Señora)
Villancicos: Absorta a tanto; El plectro sonoro; Mas ay; Oh amante corazón; Para un velo/Angelicos giros; Que hermoso

GRETA J. OLSON

Pujol, Juan Bautista (*b* Barcelona, 22 March 1835; *d* Barcelona, 28 Dec 1898). Spanish pianist and composer. He studied with Pedro Tintorer before going to the Paris Conservatoire in 1850 for further training. While in Paris he won two prizes in piano competitions, and after completing his studies he toured France and Germany. In 1870 he returned to Barcelona and established a piano studio, where his pupils included Albéniz and Granados. Pujol was influential in getting new works performed in Barcelona, including Bizet's *Carmen*. In 1888 he founded a music publishing company.

Pujol composed numerous salon pieces for piano, typical among them being his Fantasía-Muzurka *Rosas y Perlas*. He was known especially for his fantasias on themes from Meyerbeer's *L'Africaine* and Gounod's *Faust*. His fantasia on themes from *Faust* gives evidence of his keyboard facility; it contains a variety of virtuosic devices, including chromatic passages, fast running octaves, treacherous right-hand embellishments, and extended passages of repetitive figurations demanding considerable stamina.

LINTON POWELL

Pujol Vilarrubí, Emíli [Emilio] (*b* Granadella, 7 April 1886; *d* Barcelona, 15 Nov 1980). Catalan guitarist, vihuelist, musicologist and composer. His youthful studies of solfège and the bandurria led to his performing with a student ensemble at the 1898 Paris World Exposition, in the presence of the French President Felix Faure. After hearing Francisco Tárrega, he took up the classical guitar, remaining a pupil of that master from 1902 until his death in 1909. Pujol went on to become a celebrated guitarist, with concert débuts in London and Madrid in 1912. His tours to South America began in 1919, and he performed in Europe repeatedly from 1921. In contrast to his more successful contemporary, Andrés Segovia, who plucked with his fingernails, Pujol always advocated, but never insisted on (Purcell, 1981), Tárrega's right-hand technique, in which the fingertips rather than the fingernails were used. This produced a softer tone, eliminating

many of the string's overtones, but it also limited timbral possibilities.

As a composer, Pujol published over 125 highly idiomatic original works for guitar. He also brought out nearly 300 transcriptions and arrangements in his series Bibliothèque de musique ancienne et moderne pour guitare (Paris, 1927–). His interest in teaching led to his appointment as professor of the vihuela at Barcelona Conservatory in 1945. Additionally he gave regular courses in the vihuela and Spanish guitar at Lisbon Conservatory (1946–9) and taught the vihuela and early music at the Chigiana Academy, Siena (1953–63). His greatest legacy may well be his multi-volume *Escuela razonada de la guitarra, basada en los principios de la técnica de Tárrega*, a method book whose four volumes, appearing over several decades, contain a wealth of historical information, studies and repertory along with explanatory text. Volumes i (1934) and ii (1937) reflect Tárrega's teaching, while in volumes iii (1954) and iv (1971) Pujol's own teachings predominate. As a musicologist, with little formal training but great enthusiasm, Pujol popularized the Spanish vihuelists, editing four volumes in the series Monumentos de la musica española. He published a number of articles stemming from his work transcribing and studying the vihuela repertory. His announcement in 1936 of his discovery of a supposedly original and intact 16th-century vihuela at the Musée Jacquemart-André has remained controversial (Cook, 1983). He also uncovered numerous sources of Baroque guitar music. In 1970, the Spanish Ministry of Education and Science awarded him the Cruz de la Encomienda de la Orden Civil de Alfonso X, 'el Sabio'.

THOMAS F. HECK (with RONALD C. PURCELL)

Puk. Korean generic term for 'drum', but usually used more specifically to refer to an undecorated shallow double-headed barrel drum used in folk music. It has two tacked cowskin heads, roughly 35 to 40 cm in diameter, and a body about 20 to 25 cm deep. Essentially the same instrument, decorated with coloured dragon motifs and referred to as *yonggo* ('dragon drum'), is also used in court music. The history of this drum is not well documented, but it resembles two instruments (*taego*: 'large drum'; and *sogo*: 'small drum') described in the treatise *Akhak kwebŏm* (1493).

The decorated *yonggo* is now used in military processional music (*taech'wit'a*): it is suspended, one skin upwards, by a shoulder sash attached to two metal rings on the drum body; the standing player strikes it with two large padded mallets. The undecorated *puk* now appears mainly in two roles: as the only accompaniment for professionalized folk narrative singing (*p'ansori*) and in the highly popular four-instrument percussion band called *samullori*. In the case of *p'ansori*, the player sits and the drum is placed on the floor in front of him; he strikes the left head with his open left palm, and both the right head and the wooden body with a slender, cylindrical wooden mallet held in the right hand. For *samullori*, the *puk* may be placed on the floor or inclined while supported by the player or suspended from a sash while dancing; the primary drum stroke in this loud genre is hitting a single drum head with the cylindrical wooden mallet in the right hand.

ROBERT C. PROVINE

Pulgar Vidal, Francisco Bernardo (*b* Huánuco, Peru, 12 March 1929). Peruvian composer. He began his musical studies (piano and violin) in Lima, and then studied harmony, counterpoint and orchestration with Andrés Sas. He also studied fugue and composition, with special attention to dodecaphony, with Roberto Pineda-Duque in Bogotá. He received the degree of Professor of Music at the Lima National Conservatory, and graduated as a lawyer at the Universidad Mayor de San Marcos, where he also completed studies in art and literature. He received the Dunker Lavalle Prize for composition three times (1954, 1959, 1983), and in 1971 his cantata *Apu Inqa* won him the only prize at the Choral-Symphonic Composition Contest, organized on the occasion of the 150th anniversary of Peruvian Independence. In 1995 he was awarded the KUNTUR National Folklore Prize.

Pulgar Vidal belongs to the generation of composers which, during the 1950s, moved away from the use of native material. The pre-Hispanic musical culture of Peru is looked upon by these composers quite differently. They are equally concerned with the most advanced contemporary tendencies, using polytonal, polyrhythmic or aleatory elements. Indigenous musical instruments (e.g. *antaras*, *pututos*) and Creole instruments (such as the *cajón*) are used to produce microtones and unusual sonorities. Pulgar Vidal believes that there is no need to draw from folk sources, and above all from the outdated Inca pentatonicism, in order to affirm Peruvian originality.

ENRIQUE ITURRIAGA

Puliaschi, Giovanni [Gian, Giovan] **Domenico** (*b* Rome, late 16th century; *d* Rome, 1622). Italian composer, singer and chitarrone player. He entered the papal chapel as a tenor and chaplain before 1606, in connection with which he was a canon of S Maria in Cosmedin, Rome, between 1614 and 1622. He also served in the household of Cardinal Scipione Borghese, 1612–22. He was by all accounts one of the most remarkable singers of his time. As he mentioned in a short essay on singing at the end of his *Musiche varie* (1618), he could sing both tenor and bass. He visited the Florentine court in January and February 1620, and an admiring report of his singing there (together with Francesca Caccini and her children) states that he could sing alto as well as tenor and bass and could also play the chitarrone. He is presumably the 'Giovanni Domenico' whom Giustiniani praised as one of the best tenors and basses of his time, and it may have been for him that Caccini composed the two 'arie particolari', covering both tenor and bass ranges, which appear in his *Nuove musiche e nuova maniera di scriverle* (1614).

Apart from a song (in RISM 1621[14]) and an aria from *Amor pudico* (1614, *I-Bc*) all of Puliaschi's known music is contained in his *Gemma musicale* for solo voice and continuo (Rome, 1618[13]), which, since it contained so many misprints, he caused to have reprinted about a month later as *Musiche varie* (Rome, 1618[14]); both editions include seven solo motets by G.F. Anerio, who, dedicating the *Gemma* to Puliaschi, commended his 'most beautiful voice' and his songs and stated that he wrote his motets specially for Puliaschi to sing. Puliaschi's own contribution consists of six sectional sonnet settings, four ottava settings over the romanesca, four sets of strophic variations and two madrigals, together with a further madrigal by 'N.' (Nobile) to which he provided elaborate embellishments. These contents are typical of Roman songbooks of the period.

What is exceptional is the extraordinary virtuosity of some of the songs. Since all are in the tenor or bass clef Puliaschi must have written them to sing himself, and their two most spectacular features – the many leaps, sometimes of two octaves, down to very low notes (on occasion prompted by the words) and the chains of roulades – are no doubt those that best showed off Puliaschi's phenomenal powers; indeed a reason for publishing it, connected with Puliaschi's concern to have it printed accurately, may have been so that those who had heard his performances could have a record of them. In the concluding essay already referred to (reprinted in *GaspariC*) he to some extent explained his technique and made other interesting observations about singing that are worth reading in conjunction with Caccini's famous essay in his *Le nuove musiche* (1601/2).

NIGEL FORTUNE (with JOHN WALTER HILL)

Pulido (Silva), Esperanza (*b* Zamora, Michoacán, 29 Sept 1900; *d* Mexico City, 3 Dec 1991). Mexican music critic, scholar, pianist and composer. After studying the piano with Antonio Gomezanda in Mexico City, she was a pupil of André Schaeffner, Lazare Lévy and Alfred Cortot in Paris. She gave début piano recitals in New York City in 1938 and in Paris in 1948. Upon resettling in 1949 in Mexico City, she assisted Adolfo Salazar as writer for the newspaper *Novedades* and contributed extensively to Mexican and foreign journals. In 1963 she established *Heterofonía*, Mexico's longest running musicological journal, and was its editor until her decease.

ROBERT STEVENSON

Puliti, Gabriello (*b* Montepulciano, nr Arezzo, *c*1575–80; *d* Istria or Trieste, 1642/3). Italian composer. He entered the Franciscan order before or at the time of his first appointment as *maestro di coro* of the monastery at Pontremoli in 1600. In 1602 he was an organist at the monastery in Piacenza. In 1604 he was at the monastery in Pola (now Pula) and in 1605 he was *maestro di cappella* in Muggia, near Trieste. Between 1606 and 1609 he was an organist in Capodistria (now Koper) and from 1609 to 1612 he was in Trieste. In 1614 he was back in Capodistria and in 1616 he was in Pirano (now Piran). He was elected *guardiano* at the monastery of Capodistria and lived there between 1618 and 1620. Puliti served at Albona (now Labin), 1621–2, before returning to Capodistria between 1622 and 1624. In 1628 he was elected discretus at the monastery of Pago (now Pag) Island, concluding his career in Trieste about 1638. His death is recorded in the acts of the Franciscan order for the province of Dalmatia, but the exact date and place are unknown. Working in the most important cities of Venetian Istria, Puliti benefited from noble patronage and from acquaintances with other Franciscan composers working in Dalmatia, for example Ivan Lukačić, and Giacomo Finetti, *maestro di cappella* of S Maria Gloriosa dei Frari, Venice.

Puliti was a prolific composer. However, less than half of his output seems to survive: 15 of his published volumes are extant, and the latest known is marked as op.36. Sacred vocal music outnumbers collections of secular vocal and instrumental music. The quality of the surviving works varies and his music shows both modern and traditional tendencies. His early publications are those of an undistinguished beginner. He seems to have been slow in accepting the monodic style, his first known collection consisting entirely of monodies dating from 1618. At least three volumes in the same style followed in quick succession around 1620. These monodies show him at his best: they demonstrate a good sense of balance between syllabic and melismatic passages, although some of them show a bias towards virtuosity. Some of the madrigals in his *Baci ardenti* are in praise of the Archdukes Maximilian Ernst and Ferdinand II of Austria. *Pungenti dardi* contains a parody of a sacred monody by Bartolomeo Barbarino and a parody of Palestrina's madrigal *Là ver l'aurora* appears in the second book of masses (1624). The title 'Accademico armonico detto l'allegro', which appears for the first time in the madrigal book of 1609, and his friendship with the poets of Capodistria, may suggest that Puliti was a member of the Accademia Palladia.

BOJAN BUJIC/IVANO CAVALLINI

Pullaer [Pulaer], **Louis van** (*b* Cambrai, *c*1475; *d* Cambrai, 21 Sept 1528). South Netherlandish choir director and composer. In 1485 he was an *enfant de choeur* at Cambrai Cathedral, where he remained as a singer until 10 October 1494. By the middle of the following year, he had become the director of the children's choir at St Denis, Liège. He returned to Cambrai in 1503 and on 5 April assumed the directorship of the cathedral choir, replacing his former mentor, Denis de Hollain. On 23 April 1507 Pullaer was dismissed for neglect of his duties, but on 17 June 1507 he was appointed choir director at Notre Dame in Paris – a position he assumed on 22 December. In 1509 he received a benefice at St Germain-l'Auxerrois, while in 1514 he took part as a singer in the funeral office for Anne of Brittany. He remained at Notre Dame until 1527, when he returned to Cambrai as a canon of the cathedral. His *Missa 'Christus resurgens'* for four voices (with the second Agnus Dei for five) (in *F-CA* 3) is a parody mass based on Richafort's motet *Christus resurgens* in which the pre-existent material is treated rather freely.

ALLAN W. ATLAS/ERIC JAS

Pulli, Pietro (*b* Naples, *c*1710; *d* 1759 or later). Italian composer. His earliest known activity as a composer dates from autumn 1731, when he provided six arias for the revival, with musical alterations by Giuseppe Sellitto, of Leonardo Vinci's *La mogliere fedele* at the Teatro Nuovo, Naples; the libretto, by B. Saddumene, calls him 'famosissimo sonatore di arceliuti e contrapuntisto'. In other works he is named simply as Neapolitan *maestro di cappella*. He worked at least until 1734 in Naples, where he set the two dialect operas, *Li zitelle de lo vòmmero* (1731) and *La marina de Chiaja* (1734). These works are of some historical interest, since they involve quasi-Arcadian settings, a new, scenographically decorative element.

The remainder of Pulli's operas were produced in north Italy, suggesting that he had moved there at least as early as 1739. He probably went first to Modena, where Brosses found his music for the translation of Lamotte's comedy *Le Carnaval et la Folie* (*Il Carnevale e la Pazzia*) not at all to his Gallic taste; he grumbled that only a Pergolesi or a Hasse could have done justice to the play. Pulli's other operas were all serious. *Caio Marzio Coriolano* was his most successful work, revived in Naples (1745), Venice (1747) and Modena (1750).

Pulli's flute sonatas are transitional in style, with three movements, medium–slow–fast; the slow movements are in contrasting keys, and two of them cadence on that key's dominant; the bass of one last movement is written partly in Alberti figuration. Harmonic rhythm is comparatively slow, and the composer shows an interesting predilection for the subdominant key area.

WORKS

Li zitelle de lo vòmmero (chelleta, B. Saddumene), Naples, Fiorentini, 1731
La marina de Chiaja (chelleta, Saddumene), Naples, Fiorentini, 1734 [? rev. of 1731 setting, with lib. rev. by G.A. Federico]
Il Carnevale e la Pazzia (ob, after A.H. de Lamotte: *Le Carnaval et la Folie*), Modena, Ducale, carn. 1739–40
Le nozze del Piacere e dell'Allegria (festa teatrale), Modena, Molza, carn. 1739–40
Vologeso re dei Parti (os, after A. Zeno: *Lucio Vero*), Reggio nell'Emilia, Pubblico, spr. 1741, arias *I-Fc*
Caio Marzio Coriolano (os, 3, Z. Seriman), Reggio nell'Emilia, Pubblico, 1741, *Vnm*
Zenobia (os, P. Metastasio), Milan, Regio Ducal, 26 Dec 1748
Il Demetrio (os, Metastasio), Milan, Regio Ducal, carn. 1749, arias *MOe*
Olimpiade (os, Metastasio), Modena, Corte, Jan 1751
Andimione, *F-Pn*

6 arias in L. Vinci, La mogliere fedele, Naples, Nuovo, aut. 1731
Arias and sinfonias, *B-Bc*; *F-Pn*; *GB-Lbl*; *I-Bc*, *Fc*, *MOe* and *S-Uu*

4 sonatas, fl, bc, 1759, *I-Nc*

JAMES L. JACKMAN (with MARITA P. McCLYMONDS)

Pullois [Puyllois, Puylloys, Pyllois, Pyloys, Pilloys, Puilloys, Pylois, Pillays], **Johannes** [Jehan, Jean] (*b* ?Pulle, nr Antwerp; *d* 23 Aug 1478). Franco-Flemish composer and singer. From 1443 to 1447 he was a choral vicar and *zangmeester* at the collegiate church of Our Lady in Antwerp, where Johannes Ockeghem and Johannes Philibert were among his colleagues. (He is not to be confused with Johannes Kijk, a singer in the Confraternity of Our Lady at 's-Hertogenbosch.) After an unsuccessful audition for the Burgundian court chapel, Pullois travelled to Rome, where he entered the papal chapel in December 1447. He remained on the roster until August 1468, working once again with Philibert and serving four popes. While in Rome, Pullois acquired many ecclesiastical benefices in the dioceses of Cambrai and Utrecht, and also acted as procurator for two benefices on behalf of Ockeghem. He spent his last ten years as a residential canon at the church of Our Lady in Antwerp, becoming head of the chapter in 1476.

Pullois' compositions are preserved in a number of important 15th-century sources of mainly Italian provenance. The complete *Missa sine nomine* appears in *I-TRcap* (Trent MS 93) and *TRmp* 87; individual movements are also found in *TRmp* 90 and elsewhere. Its style places it among the earliest generation of continental cyclic masses, probably from the 1440s. Each movement presents the same mensuration pattern, a similar opening motto, and a tenor with similar melodic characteristics. The mass also contains many resemblances to cyclic settings by English composers (see Curtis). Other scholars (Strohm, 242; Reynolds, 150–57) have identified distinctive musical traits that appear in other works by Pullois, as well as quotations from works by other continental composers associated with Pullois in manuscript sources. The mass may have been brought to Italy from Antwerp by Pullois in 1447, as part of a group of six sold to Johannes Philibert, then a member of the Ferrarese court chapel (Strohm). Most of the other sacred works, and especially the chansons, appear to have been composed later than the mass. The Christmas motet *Flos de spina* is preserved in several Roman sources copied later in the 15th century. Its florid vocal lines are reminiscent of works by Ockeghem and Regis. Many of the secular works appear in Italian chansonniers of the 1460s and contain features such as *tempus imperfectum* and more pervasive imitation typical of the second half of the century. The ballade *La bonté du Saint Esperit*, in praise of an unnamed pope, may have been written for the coronation of one of Pullois' employers, Calixtus III (1455–8), Pius II (1458–64) or Paul II (1464–71). Two intabulations of Pullois' songs appear in the Buxheimer Orgelbuch (*D-Mbs*).

PAMELA F. STARR

Pulsator organorum (Lat.: 'a beater of organs'). The term appears in a number of medieval texts, where it means simply a 'player of the organ'. Some 20th-century writers on the organ, however, have explained the word 'pulsator' by claiming that the cumbersome keys of the medieval organ could be depressed only by a blow of the fist.

The Latin verb *pulsare* (which means to beat not only in the sense of to strike but also to palpitate) has been associated since classical times with the playing of musical instruments. For example *pulsare lyram* ('to play the lyre') was in common Roman usage with no connotation of heavy beating. The application of such a connotation to medieval organ playing can be traced to 19th-century Germany, where the similarity of *pulsator organorum* to *Orgelschläger* was observed. The German phrase did indeed mean a beater of organs (it occurs in Johann Seidel's influential *Die Orgel und ihr Bau*, Breslau, 1843; Eng. trans., 1852). It follows a German tradition traceable back to Praetorius, who in his *Syntagma musicum*, ii (1619), claimed that the broad, stiff keys of old organs, such as the one at Halberstadt, could only be depressed by use of the player's fist. It is now believed, however, that even if Praetorius was correct in this particular instance, the majority of medieval organs, whether equipped with the earlier slides or the later keys, were played with the fingers rather than the fist. This is borne out by iconographic evidence, by what we know of the music played, by contemporary literary references to digital dexterity and by the absence of any reference before Praetorius to the actual striking of organ keys.

JAMES W. McKINNON

Pulse (Fr. *battue*; Ger. *Takt, taktschlag*; It. *battuta*). Used synonymously with BEAT to refer to regularly recurring articulations in the flow of musical time. TACTUS is often used interchangeably with either 'beat' or 'pulse', but historically 'tactus' has a somewhat different meaning (*see* RHYTHM, §II, 5). Pulses need not be phenomenally present in music, though they typically are. Rather, the sense of pulse arises through the listener's cognitive and kinaesthetic response to the rhythmic organization of the musical surface (*see* RHYTHM, §I, 4). Pulses usually are evenly spaced, though they need not be; for example, the 'limping' rhythms of Slavic folk music obtain that quality precisely in their arrangement of non-isochronous pulses. A clear sense of pulse is a necessary condition for musical metre, as it forms the temporal anchor for higher levels of metric structure (measures or bars marked by downbeats) as well as smaller levels of metric subdivision. Beats or pulses must fall within a certain temporal range, close to what historical discussions of *tactus* have defined relative to the average heartbeat rate of a resting adult. Very rapid or extremely slow articulations do not give rise to a sense of pulse – a reflection of the limitations of our psychological capabilities. The pulse of musical passage is a crucial, though not the only, aspect of our sense of tempo. Rapid tempo is correlated with a rapid pulse rate, and slow tempo with a slow pulse rate.

See also METRE and TEMPO; for bibliography *see* RHYTHM.

JUSTIN LONDON

Punctum (Lat.: 'point', 'dot'). A term with several meanings, the commonest of which relate to Western medieval notations. In the oratorical terminology of classical Latin, however, 'punctum' signified a short clause or brief section (e.g. Cicero: *Paradoxa stoicorum*, prooem. §2; *De oratore*, ii, §41, 177; Ausonius: *Idyllia*, 12, prooem.), and this meaning was also taken up by some medieval writers on music (§§3 and 4 below).

(1) In Western chant notations the *punctum* was a neume signifying a single note. It was nearly always written as a dot, and it usually represented a note lower than those on either side (*see* NOTATION, Table 1).

(2) A single note of music. 13th-century theorists used 'punctum' to mean not only a note written alone, but also a note joined to others in a ligature.

(3) From the mid-12th century onwards 'punctum' is found in many monastic statutes, always in strictures regarding the phrasing of psalm-singing (*see* INFLECTION). Here it seems to signify a unit less than a half-verse, that is, a phrase or clause. (The words 'punctatim' and 'punctando' mean 'in phrases', 'phrased' etc.; see Van Dijk.)

(4) In a well-known passage in the treatise by Anonymus 4, 'punctum' is used as the equivalent of CLAUSULA: '[Perotinus] fecit clausulas sive puncta plurima meliora'. This does not agree with classical usage, where 'clausula' had the quite specific and different meaning of 'cadence' (see, besides Cicero, Quintilian: *Institutio oratoria*; Quintilian did not use the term 'punctum'). Nor did theorists up to the middle of the 13th century equate *punctum* and clausula; for instance, the St Martial Anonymus (ed. Seay) used only (2) above, and Johannes de Garlandia likewise, although on one occasion he seems to have meant the tenor note in a piece of organum, implying a phrase of several notes in the duplum part above (Reimer, ii, 36–7). The only places where 'punctum' signifies 'phrase' are in those parts of Johannes's treatise designated by Reimer as unauthentic. In the treatise by the Anonymus of St Emmeram (ed. Sowa, and Yudkin) 'punctum' still means a single note. Anonymus 4, however, used both meanings side by side, sometimes in the same sentence (Reckow, i,

83, l.7; 86, l.20). The author specifically identified 'punctum' as a term that instrumentalists used for clausula: 'quidam dicerent: post primam clausulam notarum, quod alii nominant proprie loquendo secundum operatores instrumentorum punctum, et dicerent tunc: post primum punctum' (Reckow, i, 56). 'Clausula' here had its less specific meaning of 'phrase'.

Johannes de Grocheio used 'punctum' to mean a single note only once, and the expression 'finis punctorum' to signify the vertical stroke denoting the end of a section in a composition (Rohloff, 1943, p.55). But in his discussion of the textless *stantipes* (*see* ESTAMPIE and DUCTIA) he called the individual sections of these pieces *puncta* (singular *punctus*). He said that each *punctus* consists of two parts, identical except for their endings, called respectively *apertum* ('open') and *clausum* ('closed'). Grocheio seems to have thought six *puncta* were standard for the *stantipes* and three for the *ductia*, but he mentioned some *stantipes* of seven and some *ductiae* of four *puncta* (Rohloff, 1943, p.52). Pieces such as these are not rare in medieval music (e.g. lai, *estampie* and *dansse real*) and the word 'punctus' itself is found by the various sections of two pieces in the Robertsbridge Manuscript (*GB-Lbl* Add.28550) exactly according to Grocheio's usage. The first piece has four *puncta*, the second five.

Both 'clausula' and 'punctum' survived in keyboard music. Several short exercises in a 15th-century Breslau manuscript (*PL-WRu* I F 687) are called 'clausula'; and six short imitative pieces in the 16th-century Mulliner Book (*GB-Lbl* Add.30513) are entitled 'Point'.

Pūngī [pugī, pūṅgī, poṅgā, poṅgi]. A common South Asian name for a double clarinet with bottle-gourd wind cap. *Pūngī* means 'tube' or 'pipe' in modern North Indian languages; it is rather a generalized term, and many local names are found.

The *pūngī* usually consists of two small pipes of naturally cylindrical materials (cane, bone etc.); at the top of each is partially excised a single beating reed. The number of finger-holes varies, but often one pipe is melodic, the other a drone, though the latter may have several tuning-holes, sealed with wax. Some modern specimens may also have a third long metal drone pipe. The top end of the pipes is fixed into a bottle-gourd with wax, resin etc., the neck of the gourd serving as the mouthpiece (see illustration). In some areas the blowing-tube – and, in the North-West (Rajasthan, Sind, Gujarat), even the whole wind cap – may be of wood. Many writers call this mouthpiece an 'air-reservoir', and relate the instrument to the bagpipe, but, as with other capped reed-pipes, it has no reserve of air at all; with the *pūngī*, however, the player's puffed-out cheeks have this role, as it is usually played by circular breathing (*nāksāsī*: 'nose-breathing'). In West India a larger type occurs, with a large gourd (*dudhiā*) mouthpiece, apical or lateral blowing-hole and, often, a wound palm-leaf bell.

Pūngī played by a snake-charmer, Varanasi, Uttar Pradesh

Its use is largely restricted to itinerant specialists such as snake-charmers (except in the West, as in the *tarpo*, and the North-West, as in the *muralī*).

Other names found are *bīṇ* and *nāgbīṇ* ('serpent's *bīṇ*') or *bīṇ jogī* ('magician's *bīṇ*') in North and Central India and Pakistan; *tumbā*, *tumbī* and *tomṛā* (all meaning simply 'gourd') in North India; *tarpo*, *dobru*, *pavri* and *mahuvar* in Gujarat and Maharashtra; *sāpuṙer bā̃si* ('snake-charmer's pipe') in Bengal; *nāgeśvar* in Orissa; *nāgasvaram* in Andhra; and *mākuṭi* and *pambatti kuḻal* in Tamil Nadu. Several of these names may also be applied to oboes.

ALASTAIR DICK/R

Punk rock. An aggressive style of rock that was part of a deeply contradictory movement initiated in London by Malcolm McLaren in 1975. Having managed the US glam rock band the New York Dolls, McLaren moulded the Sex Pistols, gaining them notoriety through astute management. The music blended established techniques of instrumentation, forms and chordal repertory, but articulated them with abandon and ferocity. From pub rock

bands like Eddie and the Hot Rods came simple chord structures and a disdain for slick performance; from American precursors like Iggy Pop and Lou Reed came challenging lyrics and a sense of confrontation; echoes can be found of the Who and the early Kinks in an aggressive instrumental attack and use of minimal riffs. Many bands, such as the Sex Pistols and the Stranglers, publicly espoused nihilism which, in the case of the Gang of Four, the Fall and Siouxsie and the Banshees, gave rise to musical experimentation, while others, including the Damned and the Rezillos, employed a reckless humour which simultaneously celebrated and derided tacky bourgeois values. The Clash's refusal of apparent polish initially qualified them as punk, but they represented a more genuine, radical, proletarian streak. By the end of 1977 punk had been stylistically co-opted into the New Wave, but remained part of a much larger culture of resistance, most visible through fanzines praising punk's do-it-yourself aesthetic, confrontational dressing and the independent labels' challenge to the major labels' stranglehold on the industry. Stylistic reverberations include grunge bands such as Nirvana and 1990s bands like Rancid, which are often hard to distinguish from thrash metal.

Punktmusikschrift (Ger.). *See* BRAILLE NOTATION.

Puntale (It.). *See* ENDPIN.

Puntato (It.). Sometimes *puntato* means that notes are to be played staccato when indicated by 'points' (dots) above or below the notes in question. *Puntato* may also be used for 'dotted' notes in the sense of a dotted quaver (generally followed by a semiquaver). *See also* PIQUER.

Punteado (Sp.; Fr. *pincé*; *It. pizzicato*). The modern term for the technique of plucking the strings of a guitar with the fingertips or nails of the right hand. Historically, the manner of playing derives from lute technique, and was used by baroque guitarists in conjunction with strumming technique (*see* RASGUEADO). The Italian term pizzicato was the one used most widely in the Baroque era, since Italian guitarists were the main developers of the technique and repertory for the instrument in that period (*see* GUITAR, §4). Punteado is the term most commonly used from the late 19th century to the present.

JAMES TYLER

Punto, Giovanni [Stich, Johann Wenzel (Jan Václav)] (*b* Zehušice, nr Čáslav, 28 Sept 1746; *d* Prague, 16 Feb 1803). Bohemian horn player, violinist and composer. His master Count Thun sent him to study the horn, first under Josef Matiegka at Prague, then with Jan Schindelarž at Dobříš; he completed his studies (*c*1763/4) in Dresden under A.J. Hampel, whose hand-stopping technique he later improved and extended. After his return home (1764) he served the count for four years and then ran away with four colleagues, crossing the border into the Holy Roman Empire, where he assumed his Italian pseudonym. He began travelling through Europe in 1768, breaking new ground as a touring horn virtuoso. He visited England in early 1772, performing at least ten times in London, most often as a concerto soloist (*LS*). Punto's use of hand-stopping was criticized by some in London (*New Instructions*; *LS*), probably because it was still novel, but others were more favourable, such as Burney, who wrote from Koblenz in July or August 1772: 'The elector has a good band, in which M. Ponta [?Panta], the celebrated French horn from Bohemia, whose taste and astonishing execution were lately so much applauded in London, is a performer'. For a while he was employed by the prince of Hechingen, and in 1769–74 he was at the Mainz court. Between 1776 and 1788 Punto appeared 49 times at the Concert Spirituel in Paris (Pierre). In 1778 he met Mozart there, who was much impressed by his playing and composed for him and J.B. Wendling (flute), Friedrich Ramm (oboe) and G.W. Ritter (bassoon) the Sinfonia concertante KAnh.9/297*B* (now lost). In 1781 Punto was a member of the Prince-Archbishop of Würzburg's band, but in 1782 he returned to Paris in the service of the Count of Artois (later Charles X). In 1787 he visited a number of Rhineland towns and in the following year was engaged by Mme Mara to appear in her concerts at the Pantheon, London. From 1789 to 1799 he was again in Paris and under the Reign of Terror held the post of violinist-conductor at the Théâtre des Variétés Amusantes. In 1799 he went to Munich and in 1800 to Vienna, where he met Beethoven, who composed the Horn Sonata op.17 for him; Punto and Beethoven gave its first performance on 18 April. On 18 May 1801 Punto gave a grand concert at the National Theatre in Prague; his performance was highly praised by the *Prager neue Zeitung* (1801, no.39, p.473). In 1802 he toured with J.L. Dussek, with whom he gave a concert at Čáslav (16 September). He made another short visit to Paris, then returned to Prague where he died after an illness of five months. He was given a grandiose funeral, with Mozart's Requiem played at the graveside.

Punto was a *cor basse* player, as were many of the leading soloists of the day; he used a silver *cor solo* made for him in 1778 by Lucien-Joseph Raoux of Paris, and was acclaimed by music critics as a virtuoso of the highest order, perhaps the greatest horn player of all time. Works written by and for him show that Punto was a master of quick arpeggios and stepwise passage work. Mozart's high opinion ('Punto bläst magnifique'), expressed in a letter of 1778, was shared by Beethoven, and virtually all contemporary writers referred to the vocal quality of his playing. Fröhlich's comments are typical:

> What distinguished Punto, in a way that one has never heard in any other artist heretofore, was his most magnificent performance, the gentlest portrayals, the thunder of tones and their sweetest indescribable blending of nuances with the most varied tone production, an agile tongue, dexterous in all forms of articulation, single and double tones, and even chords, but most important, a silver-bright and charming cantabile tone.

Among his students were Jean Lebrun, Heinrich DOMNICH and Pierre Joseph Pieltain. Punto arranged other composers' works for himself (sometimes publishing them in his own name), including pieces by Carl Stamitz, Sterkel, Rosetti, Joseph Michel and Dimmler (*GerberNL*). Though many of his works were published in the 1780s and 90s, Punto was evidently composing and arranging

Giovanni Punto: engraving by Simon-Charles Miger after Charles-Nicholas Cochin II, 1782

before then, for his pieces are listed in Breitkopf's catalogue of 1778. He also revised Hampel's horn tutor and produced a curious book of daily exercises for the horn. A portrait by C.N. Cochin was engraved by Miger.

REGINALD MORLEY-PEGGE/HORACE FITZPATRICK/THOMAS HIEBERT

Puppet opera, puppet theatre. Usually a mixed genre containing both music and spoken dialogue, performed on a specially designed stage by puppets (string, hand or rod). The works may take the form of serious or comic operas, plays with incidental music or interpolated songs, or ballets. Because of the caricature nature of puppets, most works written for them have been comic adaptations, mock-heroic dramas or satires of popular dramas. Before the 5th century BCE, puppets had a widespread existence in all civilized lands, and they continued to have a place in performances of mystery plays and liturgical dramas as well as the *commedia dell'arte* throughout the Middle Ages and the Renaissance.

The earliest known Italian operas for puppets (*fantoccini*) were 17th-century burlesques staged in Venice at the Teatro S Moisè by the Florentine nobleman Filippo Acciaiuoli (1637–1700). *Leandro* (1679), *Damira placata* (1680), *Ulisse in Feaccia* (1681) and *Girello* (1682) were staged during the Carnival season using wooden or wax figures while the music was performed by singers behind the stage.

In France a serious attempt to establish a permanent puppet (*marionnette*) theatre was made in 1676 by Dominique Normandin, Sieur de La Grille, one of Lully's singers in the Académie Royale de Musique, who obtained royal permission to set up a troupe and a Théâtre des Pygmées in the Marais area of Paris. La Grille's finely crafted marionettes were capable of dancing and of miming singing; it had been his intention eventually to present operas, and the *livrets* of the first two productions at the Théâtre des Pygmées reveal the use of singers and instrumentalists in Lullian parodies. The popularity of these works, together with La Grille's evident ambition, led Lully to initiate a campaign of harassment against La Grille, who was forced to change the name of the troupe and to discontinue the employment of musicians. As a result the theatre closed in 1677.

During the 18th century the development of the Parisian THÉÂTRES DE LA FOIRE and their continual struggle for survival contributed to the establishment of the marionette theatre. The Théâtres de la Foire were constantly harassed by the licensed Comédie-Française and the Académie Royale de Musique, and the puppet theatres, considered beneath official contempt, became a haven for persecuted or aspiring directors, actors, authors and musicians. This incessant rivalry stimulated a renewed interest in dramatic parody. The enlivening of these burlesques and operatic travesties by VAUDEVILLE played a part in the birth of the *opéra comique*. Without the marionette theatres at the annual fairs of St Germain and St Laurent, the production of parodies and *opéras comiques* would have been limited to the short periods of tenure of the human theatres. About 40 puppet *opéras comiques* have survived. Several of them, by such authors as Carolet, Favart, Fuzelier, d'Orneval, Le Sage, Piron and d'Orville, found their way into the series of publications entitled *Le Théâtre de la Foire, ou l'Opéra-Comique* (Paris, 1721–37). The importance of the marionette theatres, however, stood in direct proportion to their necessity; with the establishment of the Opéra-Comique and the Théâtre-Italien, and the replacement of the vaudeville by the *ariette*, they were quickly abandoned.

Puppet theatres have played a small but significant role in the history of the English stage. For a short time, when the Puritans closed the orthodox theatres during the

interregnum, this form of popular entertainment provided the only home for dramatic activities. Descriptions of the puppet theatres at Bartholomew and Southwark fairs are noted in the diaries of Samuel Pepys and John Evelyn. It was in these humble surroundings that the notable Punch made his début and became synonymous with English puppetry. By the end of the 17th century, puppets had been immortalized in numerous literary works including D'Urfey's *Don Quixote*, Jonson's *Bartholomew Fayre* and Addison's Latin poem *Machinae gesticulantes*.

In the 18th century, operas, satires and artificial heroics filled the puppet theatres, now referred to as 'Punch's theatre'. Martin Powell (*fl* 1709–29) opened a well-fitted one in London in 1710; *The Tatler* and *The Spectator* regarded Powell's theatre in Covent Garden and the opera at the Haymarket as the two leading diversions in London. For three seasons, Powell responded to the craze for Italian opera by staging satires of contemporary society, opera burlesques and mock-heroic tragedies. Following his success, Punch theatres opened yearly in unused concert halls or even in converted tennis courts. The Licensing Act of 1737 restricted regular theatrical activities, and many actors, musicians and playwrights sought refuge in the less conspicuous puppet theatres. Ballad operas now made up the bulk of the puppet theatres' repertory, and contributions were made by such notable 'proprietors' as Charlotte Charke, Henry Fielding, Samuel Foote and Charles Dibdin.

Between 1770 and 1790 London was invaded by Italian *fantoccino* troupes, who mostly staged popular French comedies and light operas. Joseph Haydn visited one of these theatres, the Théâtre des Variétés Amusantes in Savile Row, in November 1791, and wrote in his diary: 'The puppets were manipulated well; the singers were bad, but the orchestra was quite acceptable'. By this time, puppet theatres were as brilliantly fitted as Europe's finest opera houses. It was at this level of existence that puppets found favour with the royal courts throughout Europe.

Puppets were displayed in their own elaborate theatre in plays and operettas at the summer palace of Prince Nicolaus Esterházy. The theatre flourished between 1773 and 1783 under Haydn's musical guidance. At least two of Haydn's own compositions were among the productions: *Philemon und Baucis* and *Die Feuersbrunst*. Other puppet works attributed to Haydn are: *Hexenschabbas*, *Genove*, *Die bestrafte Rachbegierde* and *Demofoonte*. Two more works were included in the puppet repertory: *Alceste* by Carlos d'Ordonez and *Die Fee Urgele* by Ignace Pleyel. In the closing years of the 18th century, the craze for puppets faded. The success enjoyed by the puppet theatre, usually at the expense of the human theatre, had now shifted to its living counterpart.

During the late 19th century and the first half of the 20th there was an enthusiastic regeneration of interest in the puppet theatre, and in several countries puppetry reached an artistic level of significant potential. Illustrious names associated with the theatre, opera and stage design rediscovered in the puppet theatre an ideal medium for experimental work; many men of letters turned to it as a means of legitimate dramatic expression, including Edward Gordon Craig, G.B. Shaw, García Lorca, Anatole France and Alfred Jarry. Among operas composed specifically for marionette performance during this period are Hindemith's *Das Nusch-Nuschi* (1921), Falla's *El retablo de maese Pedro* (1923), Satie's *Geneviève de Brabant* (1926) and Ernst Toch's *Die Prinzessin auf der Erbse* (1927); these were followed by Birtwistle's *Punch and Judy* (1968). Other composers who added to the repertory include Britten, Casella, Caturla, Chausson, Copland, Honegger, Krenek, Liuzzi, Lualdi, Malipiero and Smetana. The early 20th century saw the establishment of a number of permanent puppet theatres, including two in Munich and others at Baden-Baden, Salzburg, Milan, Paris, Moscow and Chicago.

JOHN MOHR MINNIEAR

Puppo, Giuseppe (*b* Lucca, 12 June 1749; *d* Florence, 19 April 1827). Italian violinist and composer. He received training in Naples at the Conservatorio di S Onofrio a Capuana and in 1768 returned to Lucca as leader of the orchestra. His talent as a soloist soon led to concert tours. An appearance in Paris in 1775 was followed by a tour of Spain and Portugal, where he reportedly made a fortune and quickly squandered it. He was in London in 1777, and in November 1783 he was again in Paris, playing at the Concert Spirituel. Viotti employed him as co-leader, with Mestrino, of the orchestra at the Théâtre de Monsieur (1789–?92), and he held a similar post at the Théâtre de la République (1793–9). He seems to have remained in Paris until 1811, when he abandoned his wife and children and went to Naples. There he was first violinist at S Carlo until his objection to playing ballets caused his dismissal in 1817. Although he taught for two years at a small school in Pontremoli, he did not succeed in re-establishing his career. He was destitute when the English musician and writer Edward Taylor found him in Florence and generously placed him in a hospice, where he remained until his death.

Puppo was admired as a soloist, said to be at his best in soft, melancholy moods. He had an eccentric personality, however, which doubtless contributed to his erratic career. His boast to have studied five years with Tartini was effectively denied by La Hussaye, a well-known disciple of that master. Although a number of his compositions may be lost, he evidently was not a prolific composer. His only known works, all published without date in Paris, are a set of three violin duos, another of eight studies for solo violin, and six violin fantasies arranged for piano, probably from the preceding studies (Fétis also mentioned two violin concertos). They reflect a fine technique, with originality confined largely to bizarre titles and tempo indications and to occasional illustrative effects.

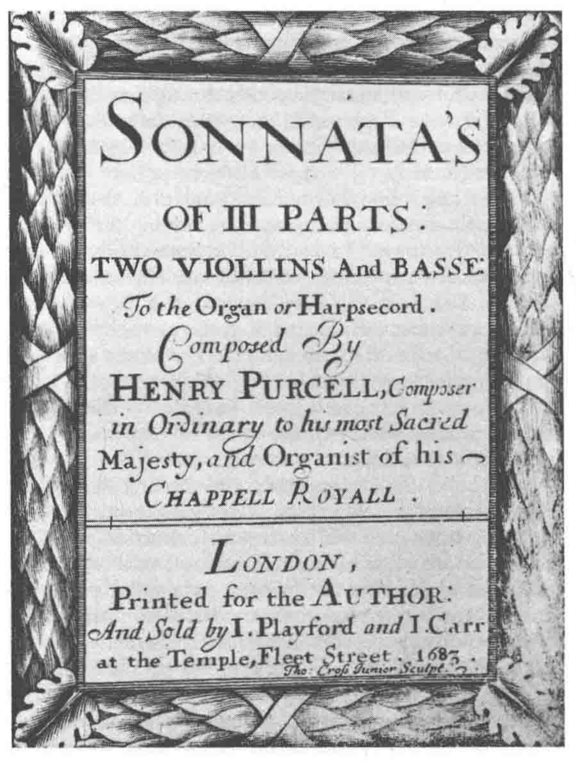
CHAPPELL WHITE

Purcell. English family of musicians and court officials flourishing in the later 17th and 18th centuries. (3) Henry Purcell (ii) used the arms of the Purcell family of Shropshire and Staffordshire, but the basis of his claim to them is uncertain. No members of the family appear to have held office at court before the Restoration, and none is known to have worked as a professional musician before the 1650s.

(1) **Henry Purcell (i)** (*d* Westminster, London, 11 Aug 1664). Singer. He is named as a performer in the 1656 edition of William Davenant's *The Siege of Rhodes*. After the Restoration he became a Gentleman of the Chapel Royal and on 16 February 1661 he was appointed a singing-man and Master of the Choristers at Westminster Abbey. At this time he and his wife Elizabeth (*d* 1699) probably had three or four young sons, including (3) Henry (ii): the eldest, Edward, was aged five or six. Their daughter Katherine was baptized in Westminster Abbey in March 1662, and (4) Daniel may have been born after his father's death, as he was still a Chapel Royal chorister in 1682. Administration of Henry's estate, worth £32 3s., was granted to Elizabeth in the court of the dean and chapter of Westminster on 7 October 1664. He may be the author of the songs *Sweet tyranness, I now resign my heart* ZS69, published in 1667 as by 'Mr. Hen. Pursell', and *More love or more disdain I crave* Z397, copied apparently in the 1650s into the Tabley Songbook (*GB-Mr*).

(2) **Thomas Purcell** (*d* Westminster, London, 31 July 1682). Singer and court official, probable brother of (1) Henry Purcell (i). He became a Gentleman of the Chapel Royal after the Restoration; subsequently he held other musical appointments at court, including the post of Composer for the Violins, though there is no evidence that he actually wrote music for the royal violin band. In 1671 he became a Groom of the Robes and in 1674 an under-housekeeper at Somerset House. On 24 June 1672 he succeeded Henry Cooke as marshal of the Corporation of Music. He was evidently a trusted and influential court official as well as a versatile musician, well placed to advance the career of his presumed nephew (3) Henry (ii). None of the several children born to him and his wife Katherine became musicians, though one, Francis, followed him into court service. There is a catch, *You that love to drink*, attributed to him in the Tabley Songbook, and an Anglican chant in *BurneyH*.



(3) **Henry Purcell (ii)** (*b* ?Westminster, London, ?10 Sept 1659; *d* Westminster, London, 21 Nov 1695). Composer and organist, son of (1) Henry Purcell (i). He was one of the most important 17th-century composers and one of the greatest of all English composers.

1. Life. 2. Domestic vocal music. 3. Instrumental music. 4. Church music. 5. Odes and welcome songs. 6. Theatre music. 7. Handwriting and autograph sources. 8. Portraits.

1. Life. No record of his baptism survives; the date of his birth is established by the ages given on his memorial tablet in Westminster Abbey and the frontispiece of his *Sonnata's of III. Parts* (London, 1683). There is some evidence, outlined below, that he may have been born on 10 September. His parents were almost certainly (1) Henry (i) and Elizabeth, but in a letter to John Gostling dated 8 February 1679 (*J-Tn*) (2) Thomas Purcell unequivocally refers to the composer as 'my sonne Henry', perhaps because he took a paternal interest in his nephew's career after the elder Henry's death in 1664.

As a boy Purcell was a chorister in the Chapel Royal, and documents concerning his maintenance and further training after his voice broke in 1673 provide the earliest definite information about his life. On 10 June 1673 he was appointed assistant 'without fee' to John Hingeston, keeper of the king's wind and keyboard instruments; he was to take up the salaried position when Hingeston died or retired. Warrants dated 17 December 1673 provided for his clothing and an annual payment of £30. After leaving the choir he probably studied with the musicians named as his teachers in early sources, John Blow and Christopher Gibbons. Matthew Locke was also an important influence, and Purcell commemorated him in the elegy *What hope for us remains now he is gone?* Z472.

On 10 September 1677 Purcell replaced Locke as composer for the violins at court. He seems, however, to have written little purely instrumental music for the violin band at this time, and may simply have been appointed on his 18th birthday to the first available salaried post. His energies appear to have been mainly devoted to the composition of sacred music, including three symphony anthems (Z28, ZN66, ZN68) completed before the end of 1677, and to scoring and editing anthems by other composers in the manuscript *GB-Cfm* 88. He later wrote the inscriptions 'God bless Mr Henry Purcell 1682' and 'September ye 10th 1682' on the reverse flyleaf, a second suggestion that 10 September might have been his

SONNATA'S
OF III PARTS:
TWO VIOLLINS And BASSE:
To the Organ or Harpsecord.
Composed By
HENRY PURCELL, Composer in Ordinary to his most Sacred Majesty, and Organist of his CHAPPELL ROYALL.
LONDON,
Printed for the AUTHOR:
And Sold by I. Playford and I. Carr at the Temple, Fleet Street. 1683.
Tho: Cross Junior Sculpt.

birthday. In the mid-1670s Purcell was closely involved with music at Westminster Abbey: not only do the partbooks *GB-Lwa* Triforium Set I, copied before Michaelmas 1677, include six anthems, but he was also paid from 1674 to 1678 for tuning the organ and in 1676 for writing out a book of organ parts. Around Michaelmas 1679 he succeeded John Blow as organist of the Abbey, a post he retained for the rest of his life.

In 1680 Purcell married Frances Peters, daughter of John Baptist Peters (*d* 1675) and his wife Amy, of the City of London parish of All Hallows; the composer's first son, also named Henry, was baptized at All Hallows the Less on 9 July 1681 and buried there on 18 July. In 1680 he also wrote the welcome song *Welcome vicegerent of the mighty king* z340, his first major secular work for Charles II, and shortly afterwards he took possession of *GB-Lbl* R.M.20.h.8, a score-book in which he made fair copies of the symphony anthems, odes and songs he composed for the court. On 14 July 1682 he was admitted as a Gentleman of the Chapel Royal to serve in the place of Edward Lowe as one of the three organists, and probably because of this new appointment had to obtain a sacrament certificate, signed on 4 February 1683 by the minister and a churchwarden of St Margaret's, Westminster, his parish church. By Easter 1682 he was living in Great St Ann's Lane, Westminster, and around the end of 1684 he moved a short distance to Bowling Alley East. He finally succeeded John Hingeston as instrument keeper in December 1683.

Between 1680 and Charles II's death in 1685 Purcell was primarily a court composer. After his music for Nathaniel Lee's play *Theodosius* (z606), performed at the Dorset Garden Theatre in the first half of 1680, he wrote no substantial works for the public stage until 1688; *Dido and Aeneas* z626 may originally have been written for the court, and the music Purcell copied in *GB-Lbl* R.M.20.h.8 seems to have been regarded as a dedicated royal repertory, none being published before 1685. *GB-Cfm* 88 contains the incomplete score of a fine full anthem, *Hear my prayer, O Lord* z15, which was probably copied in 1685 and may have been composed for the late king's funeral, for though the burial took place without elaborate ceremony the Abbey choir is known to have been present.

The accession of James II led to a reorganization of the court musical establishment. Purcell's position in the court's secular music was probably unaltered, although his title was changed from composer to 'harpsicall'. He retained his post as organist of the Anglican Chapel Royal, but the status of the chapel was diminished under the new Catholic monarch. Perhaps for this reason, Purcell's position as instrument keeper responsible for organs appears to have been forgotten until early in 1688, when he successfully petitioned for back payments and the restoration of this salary. The years 1686 and 1687 must have been difficult for Purcell and his family, as each saw the burial of an infant son, and the score-book *GB-Lbl* R.M.20.h.8 seems to reflect a change in his attitude to his work for the court compared with the period 1680–85: after the coronation anthem *My heart is inditing* z30, (fig.2) no more sacred music was added in his hand, and of the three welcome songs he composed for James II (z335, 343–4) only the last is entirely in his autograph. The exile of James II in 1688 finally ended Purcell's career as a composer working mainly for the court, though he was to remain on the royal payroll under William and Mary. This period of political and professional uncertainty also coincided with the birth of his only two children to survive to adulthood, Frances and (5) Edward, born in 1688 and 1689 respectively.

The coronation of William and Mary on 11 April 1689 led to some difficulties between Purcell and the dean and chapter of Westminster over money paid to him by spectators watching from the organ loft, but there is no evidence of any lasting tension between him and the Abbey authorities; he may simply have been unaware of new procedures introduced for this service. The court now ceased to be the important musical centre it had been under the Stuarts, and Purcell sought further employment. In 1689 he produced the first of his odes for Queen Mary's birthday, but he also edited and contributed to Playford's *The Second Part of Musick's Hand-Maid*, presented the all-sung masque *Dido and Aeneas* at Josias Priest's boarding-school for girls in Chelsea and composed the ode *Celestial music did the gods inspire* z322 for Lewis Maidwell's school in King Street, Westminster. From 1690 he was heavily involved in composing for the theatre, although he continued his series of odes for Queen Mary and wrote other major works for organizations outside the court such as the ode, *Of old when heroes thought it base* z333, presented in 1690 at the annual festival of the Yorkshire Society in London. In 1691 he acquired a second property in Bowling Alley, but then seems to have moved his family away, perhaps in search of healthier surroundings for the children. On their return to Westminster around Christmas 1693 the Purcells moved into a house in Marsham Street. During the 1690s Purcell was also in demand as a teacher. In 1693 and 1694 John Weldon was sent from Eton to study with him, and other pupils included Annabella Howard, fourth wife of the playwright Sir Robert Howard, Sir Robert's granddaughter Diana, and Rhoda Cavendish. In 1694 Purcell revised and updated the 12th edition of John Playford's *Introduction to the Skill of Musick*.

Purcell provided some of the music for Queen Mary's state funeral on 5 March 1695, and *The Indian Queen* z630, without its concluding masque by Daniel Purcell, was perhaps performed in the following June. For 24 July 1695, the sixth birthday of Princess Anne's son the Duke of Gloucester, Purcell composed his last court ode, *Who can from joy refrain?* z342. His rate of work up to September 1695 gives no hint that he was unwell, and *Lovely Albina's come ashore* z394, described as 'The last Song Mr Henry Purcell set before his Sickness' in the first volume (London, 1698) of *Orpheus Britannicus* (an anthology of his songs), refers to a reconciliation between Princess Anne and King William that cannot have taken place before William's return to London from the Continent on 12 October 1695. Purcell's will, in which he left all his possessions to his wife, was made in evident haste and signed on the day of his death, suggesting that an apparently minor infection took a severe and unexpected turn for the worse.

Purcell's funeral took place in Westminster Abbey on the evening of 26 November. *The Flying Post* for that day states that Purcell was to be buried near the organ without charge to his widow, in the presence of the chapter and choir of the Abbey as well as the choir of the Chapel Royal. Annabella Howard was responsible for a marble tablet placed on a pillar above his grave. Frances Purcell

2. *Autograph MS of part of Purcell's anthem 'My heart is inditing', composed in 1685 (GB-Lbl R.M.20.h.8, f.60v)*

died at Richmond and was buried near her husband in Westminster Abbey on 14 February 1706, leaving an organ and two spinets to her son (5) Edward along with 'the books of music in general'; the Purcells' daughter Frances, who administered her mother's will, married the writer Leonard Welstead and died in 1724.

2. Domestic vocal music. Purcell was a prolific contributor to all the main genres of secular vocal music current in 17th-century England. He has always been particularly admired as a song composer. Generations of English musicians got to know his music from the two posthumous song volumes *Orpheus Britannicus* (London, 1698, 1702), and Henry Playford wrote in the preface to the first volume that he had 'a peculiar Genius to express the energy of English Words, whereby he mov'd the Passions of all his Auditors', while Henry Hall added in a poem that he 'Each Syllable first weigh'd, or short, or long, / That it might too be Sense, as well as Song'.

Purcell probably started his composing career by writing songs. That is almost certainly so if *Sweet tyranness, I now resign my heart*, published in 1667, is his work rather than his father's. His early songs divide into two types. He usually set light verse as strophic dance-songs, often cast as minuets or gavottes, with a high degree of correlation between poetic and musical accent, line endings and phrase endings, rhyme schemes and matching cadences. He was also fond of using the French rondeau form (ABACA or AABACAA) in dance-songs, later creating such memorable pieces as 'Fear no danger to ensue' from *Dido and Aeneas* z626/7 and 'I attempt from love's sickness to fly' z630/17h from *The Indian Queen*. The other type, the declamatory song, was traditionally a vehicle for more serious verse, and used a melodic line that mirrored the inflections of speech within the framework of a grave almand or air. Purcell used it for some early songs and dialogues, and its influence lingered on in the 'recitative' sections of his later multi-sectional songs, though in general it was diluted in the 1680s by a fashion for suave melodic writing in patterns of flowing quavers.

Purcell's early songs rarely contain anything that could not have been written by Henry Lawes or Matthew Locke, though around 1680 he began to extend the range of his vocal writing, reflecting the influence of a mid-century

3. *Henry Purcell: portrait by an unknown artist (National Portrait Gallery, London)*

repertory of Venetian and Roman music brought to Restoration London by Italian immigrants. He began to write ground bass songs, mostly using patterns derived from the Italian chaconne and passacaglia chord sequences, as in *She loves and she confesses too* z413 (autumn 1680) and *Let each gallant heart* z390 (late 1682). His later ground bass songs mostly use specially-devised patterns outlining an ascending or descending sequence of harmonies, and often modulate. They are similar to da capo arias, with the first modulation occurring at the moment the singer reaches a new phrase of text, and the return to the tonic coinciding with a return to the opening words and music (e.g. 'Wond'rous machine' from the St Cecilia's Day ode *Hail, bright Cecilia* z328/8, 1692).

The other italianate feature of Purcell's song writing around 1680 was the development of multi-sectional songs. In general this seems to have been a response to cantata-like Italian pieces that circulated in London, though his first example, *From silent shades, and the Elysian groves* z370 (late 1682; the mad song *Bess of Bedlam*), takes its starting point-from the popular ballad *Tom of Bedlam*, which uses a multi-sectional Jacobean masque tune, 'Gray's Inn Masque'. Furthermore, a song such as *They say you're angry* z422 (late 1684), a setting of Abraham Cowley's *The Rich Rival*, is not very italianate, despite consisting of a declamatory passage followed by a fast duple-time air and a minuet-like passage. The poem does not divide into passages of action and reflection, as Italian cantata texts were beginning to do, and Purcell makes little of the contrast between his declamatory and tuneful material. Many of his extended multi-sectional songs are settings of Cowley, and some of them belong to a distinct sub-genre of 'symphony songs' with obbligato violins and recorders. They were apparently written in the 1680s for court use, and the largest and greatest of them, *If ever I more riches did desire* z544 (?spring 1687), is similar in size and shape to a verse anthem or a court ode.

Oddly, the anthem left more of a mark on Purcell's symphony songs than on his domestic sacred music. This is partly because his early sacred songs mostly belong to a domestic tradition of setting metrical psalms for three voices and continuo that developed during the Interregnum, when church choirs had been disbanded; some of them are settings of verses by John Patrick, Preacher at the London Charterhouse 1671–95, and may have been used for devotional purposes there. They follow the tradition established by Henry and William Lawes in that they often use the 'trio sonata' texture of two high voices in 6ths and 3rds over a sung bass, though Purcell was more inclined than they to vary the texture with lengthy solos or passages of complex counterpoint, and the gloomy, penitential texts he mostly chose gave him plenty of scope for highly affective settings, with jagged melodic lines, grinding dissonances and unpredictable harmonies.

Much of Purcell's later devotional music was published in the two anthologies Henry Playford published as *Harmonia sacra* (London, 1688, 1693). The volumes include many fine pieces, but the most striking are two that relate to a mid-century tradition of biblical dialogues. *In guilty night* z134 uses a text that Purcell would have come across in the popular pre-Civil War setting by the Cambridge organist Robert Ramsey; it is a highly dramatic setting of the encounter between Saul and the Witch of

4. *Frontispiece and title-page from the posthumous collection of Purcell's songs, 'Orpheus Britannicus', i (London: William Pearson, 2/1706): engraving by Robert White after John Closterman*

Endor from the Book of Samuel. *Tell me, some pitying angel* (*The Blessed Virgin's Expostulation*) z196 extends the tradition of biblical dialogues to solo song, and is perhaps the closest Purcell came to writing an italianate cantata (fig.5). Nahum Tate's text is an astonishingly vivid and human portrayal of a mother who has lost her child, and Purcell's five-section setting uses his full repertory of affective devices, including, most memorably, the cries of 'Gabriel!' set to high repeated Gs over a series of increasingly clashing descending harmonies.

3. Instrumental music. Virtually all Purcell's consort music comes from the first part of his career, when he was essentially a court musician. Much of it embodies archaic contrapuntal devices, and was written around 1680 apparently as part of a programme of self-education in formal counterpoint.

Purcell's first adult post at court was as composer for the court violin band, the Twenty-Four Violins, though only a few surviving pieces use the idioms and scorings associated with the group. The clearest case is the *Staircase*

5. Part of 'Tell me, some pitying angel' ('The Blessed Virgin's Expostulation') from 'Harmonica Sacra', ii (London, 1703)

6. *Henry Purcell: portrait attributed to John Closterman, black chalk heightened with white, probably 1695 (National Portrait Gallery, London)*

Overture, written around 1675 in imitation of Locke's music for *The Tempest* (1674), though the Chacony in G minor Z730 uses a deliberately restrained idiom suitable for orchestral dance music, and the incomplete Suite in G Z770 may have been written in the early 1680s for the Twenty-Four Violins to play as part of its regular court duties.

Another group of early pieces belongs to an alternative tradition of court consort music, developed for small groups of violins and viols in the Private Musick, instrumentalists working in the private apartments of the monarch. The earliest may be the four pavans for two trebles and bass Z748–51, which are similar to the pavans that begin the suites in the second part of Locke's *Broken Consort* (early 1660s); there is no sign, however, that Purcell planned to write suites to follow them. The Pavan in G minor Z752 for three violins and bass may have been intended to stand at the head of a suite, for it is followed by blank pages in the autograph. It seems to have been inspired by the three-violin music written by Thomas Baltzar and John Jenkins for the Private Musick, and is an essay in the large-scale and elaborate pavan idiom associated with Jenkins, whose death in 1678 it may have been written to commemorate. *Three Parts upon a Ground* Z731 was written for the same instruments (though there is an alternative version in F major for three recorders), and probably dates from the same period. It is a tour de force that combines brilliant division writing with elaborate counterpoint (including four passages of strict canon) and elegant chaconne-like writing in dotted notes.

Although Purcell's fantasias are cornerstones of the modern viol consort repertory, it is not certain that he would have been able to assemble a complete viol consort around 1680; treble and tenor viols were dropping out of use before he was born, though the bass remained in use as a solo instrument and for continuo. The pieces did not circulate outside Purcell's immediate circle, to judge from the surviving sources, and Roger North (who knew Purcell and played with him on several occasions) thought that Locke had written the last viol consort music. Nine of the four-part works were written in a concentrated burst in the summer of 1680, and it may be that all of the fantasias were conceived primarily as composition exercises.

They certainly show that Purcell had immersed himself in the English consort repertory. While the main models of the three- and four-part fantasias are fairly predictable (Orlando Gibbons and Matthew Locke respectively), the six-and seven-part In Nomines Z746 and Z747 reach back past Purcell's immediate predecessors to Elizabethan composers such as Robert Parsons and Robert White; Z746 even uses an archaic contrapuntal technique in which the cantus firmus provides the material for the surrounding counterpoint, and is speeded up so that it can be heard as a tune. Similarly, in the four-part fantasias Purcell shows himself to be far more interested than Locke in abstruse counterpoint. Inversion is found in most of them, and is combined with augmentation in the opening section of Z739 (19/22 June 1680), with single and double augmentation in the opening section of Z735 (10 June 1680), and with single, double and triple augmentation in an astonishing passage towards the end of Z743 (31 August 1680; ex. 1).

Purcell's obsession with formal counterpoint may also have led him to study and imitate Italian trio sonatas. In the sonata, 'the chiefest Instrumental Musick now in request', he wrote in the little composition treatise he contributed to the 1694 edition of Playford's *Introduction to the Skill of Musick*, 'you will find Double and Treble Fuges also reverted and augmented in their Canzona's, with a good deal of Art mixed with good Air, which is the Perfection of a Master'. 12 of his trio sonatas were published in an engraved edition, *Sonnata's of III. Parts* (London, 1683), and were probably composed shortly before publication. A posthumous set, *Ten Sonata's in Four Parts* (London, 1697), seems to contain pieces written over a longer period, between *c*1678 and *c*1684. Despite their titles, the two collections use exactly the same scoring: two violins, bass viol and organ or harpsichord. According to the famous preface of the 1683 set, Purcell 'faithfully endeavour'd a just imitation of the most fam'd Italian Masters' in his sonatas, and much ink has been split trying to identify them. In general, however, he seems to have looked to the works of the older generation of Italians such as Giovanni Legrenzi, Lelio Colista and G. B. Vitali, rather than his near contemporaries such as Corelli and G. B. Bassani. His sonatas use the conservative 'à tre' scoring, in which the bass viol contributes to the contrapuntal argument on more or less equal terms with the violins, rather than the more forward-looking 'à due' scoring. There is no sign of the slightly later distinction between the *da chiesa* and *da camera* types: dances are mixed freely with 'abstract' movements, as in mid-century sonatas. They tend to consist of five or more short linked sections rather than the more modern sequence of four discrete movements, the type that predominates in Corelli's op.1 (1681). The contrapuntal canzona sections, in particular, reflect the influence of a

Ex.1 Excerpt from the Fantasia in D minor z743

group of sonatas thought in England to be by Colista, though an example of 'Double Descant' (invertible counterpoint) quoted by Purcell in his 1694 treatise is actually from a work by the Milanese violinist C.A. Lonati.

Purcell's harpsichord music was probably mostly written for teaching purposes. There are three main sources. Henry Playford's *The Second Part of Musick's Hand-Maid* (RISM 1689⁷) contains 11 pieces attributed to Purcell, some of which are simple arrangements of songs or sections from larger vocal works. Purcell edited the volume, so it is likely that he was also responsible for the keyboard arrangements of some of the other pieces not specifically attributed to him; the clearest case is the beautiful *style brisé* arrangement of Lully's early song 'Scoca pur' (LWV76/iii), similar to the arrangements of several of his own vocal ground basses. *A Choice Collection of Lessons for the Harpsichord or Spinnet* (London, 1696) was the first keyboard collection printed in England to be devoted to a single composer, and contains eight suites. The manuscript *GB-Lbl* Mus.1 contains 21 graded pieces in his autograph, including versions of pieces by Orlando Gibbons and John Eccles, and seems to have been written for a pupil in the 1690s. other sources, however, suggest that some of the suite movements are relatively early works.

Purcell's suites may seem remarkably diverse by the standards of a continental contemporary such as Froberger, but English composers never really settled on a standard number or sequence of movements (there are even some differences in the composition of suites in the primary sources), and Purcell's are more regular than most: all but one are in three or four movements, all but one start with a prelude and all but one include the pairing

of almand and corant. The dances divide by style into two types: the almands, corants and ground basses mostly use the elaborate *style brisé* textures that suggest polyphonic part-writing by the use of broken chords, while the lighter dances and the arrangements of ensemble music usually have the tune in the right hand with a simple chordal accompaniment in the left. Despite the fact that Purcell was organist of Westminster Abbey and one of the organists of the Chapel Royal, we have just a handful of authentic organ pieces by him, of which only two, the related voluntaries in D minor Z718 and Z719, are at all significant. During his lifetime voluntaries were routinely improvised; Roger North wrote that 'great performers upon organs will doe voluntary to a prodigy of nature and beyond their owne skill to recover and set downe'.

4. CHURCH MUSIC. Purcell began his musical career as a choirboy in the Chapel Royal, and remained a church musician throughout his life. In the first part of his composing career (*c*1674–80) writing church music seems to have absorbed most of his energies. Like John Blow he wrote four types: service music; anthems for full choir and organ, or with short ensemble verse passages (often called full with verse anthems); conventional verse anthems for solo voices, choir and organ; and 'symphony anthems' for solo voices, choir, strings and continuo. Of the four, the last was exclusively written for the Chapel Royal, the only church institution during the Restoration to have strings available on a regular basis, while the others could have been written for Westminster Abbey. However, a large number of Purcell's full with verse and verse anthems have connections of some sort with the Chapel, so it may be that he wrote relatively little specifically for the Abbey.

His massive full with verse Service in B♭ Z230 (a setting of all the canticles for morning and evening prayer as well as the Commandment responses and Creed for the communion service) is one work that may have been written for Westminster Abbey, since it was copied there in 1682 and an early manuscript survives in the Abbey library. The only other sizable liturgical pieces definitely by Henry Purcell are an early setting of the Burial Service Z17A/58A, perhaps originally written for the funeral of Pelham Humfrey in Westminster Abbey in 1674 but later revised, and the popular Te Deum and Jubilate in D major, apparently written to be performed on 22 November 1694 in the service at St Bride's Church that preceded the main St Cecilia's Day celebrations at Stationers' Hall. The latter is scored for soloists, choir, two trumpets, strings and continuo, and was the prototype for the settings of the text by Blow, Croft, Handel and others.

Given Purcell's interest in formal counterpoint, it is surprising that he wrote so few full anthems. Discounting doubtful works and those, such as the eight-part *Hear my prayer, O Lord* Z15, that may be fragments of full with verse anthems, we are left with only two five-part pieces: *I was glad when they said unto me*, apparently written for the coronation of James II in 1685, and *Remember not, Lord, our offences* Z50, a setting of part of the 'Order for the Visitation of the Sick' from the prayer book. However, Purcell gave his interest in counterpoint full rein in a remarkable group of full with verse anthems written in the late 1670s, contemporary with his early consort music. The genre is essentially full-voiced, with verse passages for groups of soloists alternating with full sections. The organ is not always specifically indicated, and when it is it acts as a *basso seguente*, doubling the lowest voice rather than providing an independent bass. The most remarkable examples are the eight-part *O Lord God of hosts* Z37 and the 10-part (actually only in eight real parts) *Blow up the trumpet in Sion* Z10. The latter, a setting of lines from *Joel* ii.15–17, is an urgent call for a sinful people to turn to God in the face of danger from the heathen, and may have been written in the spring or summer of 1677, when a string of French military and naval victories caused great alarm in England. It is one of a number of early works that takes its starting-point from a work by Locke, in this case the great polychoral anthem *Be thou exalted, Lord* (1666). Purcell followed Locke in setting the seven-part verse passages in the declamatory style to ever-shifting groups of solo voices, and included some Locke-like harmonic surprises, such as the dramatic change from the opening C major fanfares to an E♭ chord at 'sanctify a fast', and the daring chromatic writing at 'Let them weep between the porch and the altar').

Most of Purcell's conventional verse anthems with organ also seem to be early works, and they include pieces such as *Who hath believed our report* Z64 (*c*1674–5) and *Lord, who can tell how oft he offendeth?* Z26 (*c*1676), which are among his earliest compositions. Z26 is representative, consisting of a single extended verse section followed by a concluding chorus. The duple-time solo sections are plain and simple, with only a few declamatory mannerisms and virtually no affective harmony; they could almost come from an anthem by Henry Lawes or one of his contemporaries. Another archaic feature is the presence of several short passages for continuo only, framing the solos; they mostly anticipate or repeat the harmonies of the neighbouring vocal phrases, and may be the remnants of a written-out organ part of the sort found in Jacobean verse anthems.

Most of Purcell's mature anthems have string parts, and belong to a genre that owed its existence to the personal taste of Charles II, 'a brisk, & Airy Prince, comeing to the Crown in the Flow'r, & vigour of his Age', who, in the famous words of Thomas Tudway, was soon 'tyr'd w[i]th the grave and Solemn way, And Order'd the Composers of his Chappell, to add Symphonys &c w[i]th Instruments to their Anthems'. Purcell seems to have had five string players normally available (probably a string quartet with theorbo), apparently placed in a small gallery in the chapel at Whitehall. The only Purcell symphony anthems performed with orchestra seem to have been *My heart is inditing* Z30 (1685) and *Praise the Lord, O Jerusalem* Z46 (?1689), written for coronation services in Westminster Abbey.

His earliest surviving symphony anthem is probably *My beloved spake* Z28 (by December 1677). It is a bold and confident essay in the style of Pelham Humfrey, with a complex 'patchwork' design articulated by no fewer than 12 changes of time, largely homophonic vocal sections, and dance-like instrumental passages. The work, with its fresh and sensuous evocation of spring, has always been one of Purcell's most popular anthems, though he soon moved onto other things. Influenced by John Blow, he began to find ways of making larger, more varied and more logical structures, using fewer, more extended sections, with more counterpoint and more virtuoso solos. *Behold, now praise the Lord* Z3 (*c*1678) is already mostly a continuous sweep of Charles II's favourite minuet-like triple time. *Awake, awake, put on*

Ex.2 *Thou knowest Lord* Z58C

thy strength Z1 (1681–2) has a fugal passage instead of a dance in the second section of the symphony, and the concluding Alleluia is a ground bass. *Rejoice in the Lord alway* Z49 (1683–4), the famous *Bell Anthem* (so called because the symphony is based on a descending octave peal of bells in the bass), is virtually in rondeau form, with many repetitions of the catchy, minuet-like theme. *They that go down to the sea in ships* Z57 (?*c*1682–3) is largely taken up with spectacular bass solos (presumably written for the virtuoso singer John Gostling), and exemplifies a trend in the 1680s to reduce the role of the chorus in symphony anthems, a trend taken to its logical conclusion in *My song shall be alway* Z31 (1688–90), which is essentially a solo anthem for bass or soprano with only a short choral Alleluia sung at the end of each half.

The symphony anthem did not last long after Charles II's death in February 1685. James II did little to hide his Catholic sympathies, and neglected the Anglican Chapel Royal, while stringed instruments were banned from it soon after William and Mary's accession. Nevertheless, two of Purcell's finest symphony anthems date from James II's reign: *Behold, I bring you glad tidings* Z2 (Christmas Day 1687) and *O sing unto the Lord* Z44 (1688). In their logical long-range harmonic planning, their virtuoso writing for solo voices, and their italianate prelude-and-fugue symphonies, they reflect Purcell's increasing interest in the Italian style, prompted in part by G.B. Draghi's *Song for St Cecilia's Day* (1687). Purcell was too taken up with the theatre to write much church music after 1689, though he wrote three memorable pieces for Queen Mary's funeral on 5 March 1695, the March and Canzona Z860 for four 'flat' trumpets, and the simple yet striking *Thou knowest, Lord* Z58C (ex.2), now thought to have been written to be inserted into Thomas Morley's Burial Service. Z58C was repeated at Purcell's funeral on 26 November 1695, and William Croft incorporated it into his own Burial Service for reasons 'obvious to every artist'.

5. Odes and welcome songs. *Welcome, vicegerent of the mighty king* Z340 (1680) was the first in a series of welcome songs celebrating the king's return to London after his summer progress. Purcell wrote welcome songs until the Glorious Revolution, when he switched to odes for Queen Mary's birthday. After the queen's death on 28 December 1694 he wrote his last ode, *Who can from joy refrain?* Z342, for the birthday of William Duke of

Gloucester. In addition he wrote several odes for St Cecilia's Day, as well as some occasional odes: for the marriage of Princess Anne and Prince George of Denmark (1683), for Lewis Maidwell's school in Westminster (1689), for a London meeting of Yorkshiremen (1690) and for the centenary of the foundation of Trinity College, Dublin (1694).

His first welcome songs are similar to Blow's odes of the late 1670s. They consist of a patchwork of short sections, mostly in dance rhythms, with solos often leading to ritornellos, or to repetitions of their words and music by the chorus. Most of them are scored just with strings and continuo, though in *Swifter, Isis, swifter flow* z336 (?29 March 1681) he specified in addition an oboe and two recorders, and in *What shall be done in behalf of the man?* z341 (for the Duke of York's return from Scotland, ?8 April 1682), two recorders. They apparently reflect the presence at court of a group of French players of the new Baroque woodwind instruments. In z341 and the other welcome songs of the period, *The summer's absence unconcerned we bear* z337 (21 October 1682) and *Fly, bold rebellion* z324 (?25 September 1683), Purcell reduced their dance-like character by introducing more counterpoint into the choral and instrumental sections, and by casting some of the solos as ground basses (or free ostinato movements with the character of a ground bass). Purcell did not develop the genre much further in his remaining welcome songs, though *Why, why are all the Muses mute?* z343 (?6 or 14 October 1685) is an outstanding work with a dramatic opening, placing the first solo unexpectedly before the symphony, while in *Sound the trumpet, beat the drum* z335 (?11 or 14 October 1687) he experimented with new ways of combining voices and instruments, with string interludes between the vocal phrases of the choruses, and in one case a good deal of independent writing for the upper strings.

Purcell began the series of St Cecilia's Day odes in 1683 with *Welcome to all the pleasures* z339, though he also headed the autograph of *Laudate Ceciliam* z329 'A Latine Song made upon St Cecilia . . . made in the year 1683', and a third ode, *Raise, raise the voice* z334, has also been associated with the same occasion. Of the three z339 was certainly performed by the 'Musical Society' on that date, perhaps at Stationers' Hall (the venue for subsequent St Cecilia's Day celebrations), while the smaller-scale z329, for three voices, two violins and continuo, may have been written for some more private milieu, such as the queen's Catholic chapel. z334 is also scored for three voices, two violins and continuo, but is concerned with praising Apollo on 'sacred Music's holy day', and may not be a St Cecilia's Day ode at all. It has more in common with Purcell's symphony songs (see §2 above), and like them may have been written for some informal musical entertainment at court. z339 is by far the best-known of Purcell's early odes, helped by the composer's own beautiful keyboard arrangement of the fine ground 'Here the deities approve' zT682 published in *Musick's Hand-Maid* (1689). The overall structure of the ode is nevertheless rather unsatisfactory, with the most substantial movements in the first half. By contrast, z329 has a complex and satisfying structure, with the symphony repeated in the middle of the work (a procedure also found in *My heart is inditing* z30 and other anthems of the same period). With its sweet and sensuous passages of triple time (written out in the Roman manner in void notation) and an absence of dance-based structures, it is Purcell's first italianate ode.

In general, his odes became markedly more italianate in character after 1689, when he had assimilated the innovations in Draghi's *Song for St Cecilia's Day* (1687). In *Now does the glorious day appear* z332 (30 April 1689) he used Draghi's italianate five-part string writing, began the work with a contrapuntal movement rather than a dotted passage in the French style and continued with a splendidly elaborate and vigorous contrapuntal first chorus. In the Yorkshire Feast Song z333 and *Arise, my muse* z320 (30 April 1690) he added oboes and trumpets to the orchestra, an innovation continued in all his subsequent odes except the ode for Trinity College, Dublin, *Great parent, hail* z327 (9 January 1694) and the reflective and intimate *Love's goddess sure was blind* z331 (30 April 1692). The triumphant, martial character of most of Purcell's late court odes reflects the increasingly bellicose flavour of their texts, which in turn reflects the bellicose temper of English society in the 1690s, taken up as it was with cheering on William III's annual expeditions against the French. Nevertheless, they contain some fine things. *Arise, my Muse* ends with an arresting sequence in which a countertenor accompanied by two recorders vividly describes the queen's anguish as her husband departs for the wars, while a bass accompanied by two violins interrupts from time to time with a bouncy response in jig rhythm: 'But Glory cries "Go on, illustrious man"'. The outstanding movement in *Love's goddess sure was blind* is the duet 'Sweetness of nature and true wit', which demonstrates the extent to which Purcell had assimilated italianate harmonic thinking: it moves gently but purposefully through a series of modulations to five related keys. *Come, ye sons of art, away* z323 (30 April 1694) is deservedly popular, though it only survives complete in a single source dated 1765. Its satisfying structure surrounds three contrasted ground basses with vocal and choral minuets; the poignant declamatory solo with oboe obbligato 'Bid the Virtues, bid the Graces' lies outside the scheme, and is felt to be the still centre of the work.

Purcell's greatest ode is *Hail, bright Cecilia* z328 (22 November 1692). Its power comes partly from its sheer size (it takes more than 45 minutes to perform), partly from its satisfying structure (again, three superb contrasted ground basses articulate the structure, while the opening and closing choruses balance one another and are linked in various ways) and partly from its spectacular vocal writing. The declamatory solo ''Tis Nature's voice' has extraordinarily elaborate written-out ornamentation, and the massive choruses, which influenced Handel's choral writing, mark the true beginning of the English secular choral tradition.

6. THEATRE MUSIC. Purcell seemingly had little time for or interest in writing for the theatre in the reigns of Charles II and James II. His only substantial stage works from before the Glorious Revolution are the numbers he contributed to Lee's tragedy *Theodosius* z606 (1680), the eight songs he wrote for D'Urfey's comedy *A Fool's Preferment* z571 (?April 1688), and *Dido and Aeneas* z626, if we accept the recent arguments that it was performed at court some time before its recorded performance at Josias Priest's Chelsea school in the spring of 1689.

Despite its modern fame, *Dido and Aeneas* is an anomaly in Purcell's theatrical output in that it is all-sung; like its model, Blow's *Venus and Adonis* (*c*1682), it belongs to a tradition of domestic masques, and was apparently not seen in public in the composer's lifetime. *Dido and Aeneas* is indebted to *Venus and Adonis* in many ways, not least in that it consists of a prologue (now lost) and three acts, the protagonists are a soprano and a baritone with extended passages of expressive declamatory dialogue, the chorus has a prominent role and is required to dance (the 1689 text of *Dido* mentions 17 dances), and the works end with situations of great pathos, set to heart-rending music. Most important, they have the same distinctive tone, created by the brevity of the movements and the speed of the action, though Purcell adds an extra dimension to the drama by articulating it with three ground bass airs placed at strategic points in the drama; the third, Dido's Lament, set to a chromatic version of the passacaglia bass, raises the tone of the work on to a much grander, richer plane than Blow aspired to in *Venus and Adonis*.

Attempts to establish all-sung opera found little public support in late 17th-century London. Much of Purcell's dramatic music was provided for spoken plays, in the form of introductory or incidental instrumental movements, or in songs or catches introduced where they would reasonably be expected: in drinking or seduction scenes, for serenades or lullabies, to celebrate battles or lament death, or simply for the entertainment of characters on stage – and hence the audience.

Extended pieces of concerted music were usually reserved for three situations. Ritual scenes naturally required music, whether the protagonists were Christian or pagan priests, soothsayers, enchanters or magicians, engaged in communal prayer, sacrificing to the gods, foretelling the future or summoning up supernatural beings. Self-contained masques might be presented by human characters, as in the fine Masque of Cupid and Bacchus in *The History of Timon of Athens* z632 (May or June 1695), or by supernatural beings summoned by magic, as in the Frost Scene in *King Arthur* z628. In Purcell's four semi-operas, *The Prophetess, or The History of Dioclesian* z627 (June 1690), *King Arthur* (?May 1691), *The Fairy Queen* z629 (May 1692) and *The Indian Queen* z630 (1695), the normal 17th-century relationship between spoken text and music is reversed, the text serving as a narrative framework on which to hang a succession of visually spectacular and musically elaborate scenes involving the use of complex movable scenery or stage machinery. Though such scenes were frequently integral to the dramatic situation, the principal characters did not usually sing.

Dioclesian, as the score is generally known, was the only one of Purcell's semi-operas to be published complete in his lifetime (London, 1691), although it is the least satisfactory on the stage. The play, an adaptation probably by Thomas Betterton of an old Fletcher and Massinger play about power politics in the late Roman Empire, limited Purcell largely to ceremonial and militaristic music, although the score includes a good deal of beautiful instrumental music, some of it scored elaborately with trumpets, oboe band and strings. By contrast, *King Arthur*, a reworking of dark-age legend that owes little to history or even medieval romance, was written specially as a semi-opera, and John Dryden understood much better than Betterton how to offer Purcell opportunities for varied music. The musical episodes are integrated effectively into the plot (unusually, Grimbald and Philidel sing as well as speak), and by the end of Act 3 one has experienced the solemn yet urgent music of the Sacrifice Scene, the heroics of 'Come if you dare', with its stirring battle music, the etherial double-choir spirit music of 'Hither this way', the serene minuet 'How blest are shepherds', the rustic jollity of 'Shepherd, leave decoying' and the brilliance and fantasy of the Frost Scene, perhaps Purcell's greatest theatrical scene. Unfortunately, the Act 5 masque is dramatically incoherent and degenerates into a series of turns, though it includes the evergreen minuet song 'Fairest isle'.

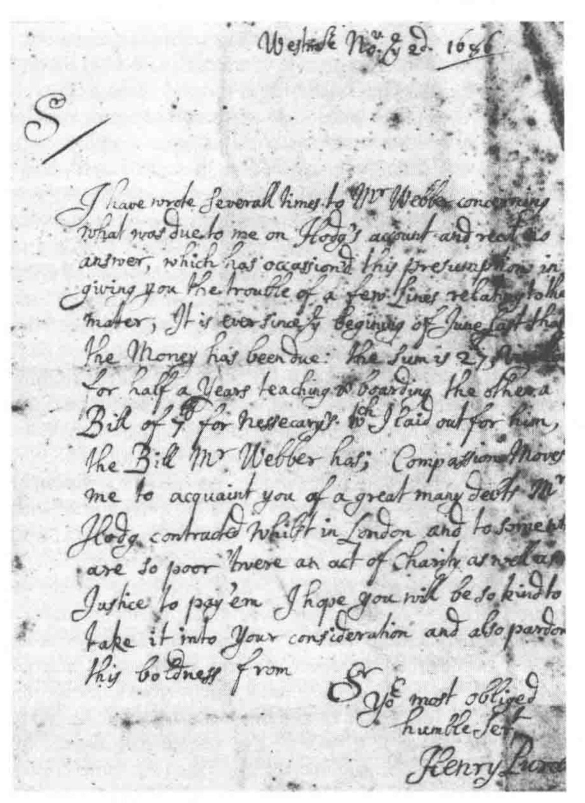
The Fairy Queen, an adaptation of Shakespeare's *A Midsummer Night's Dream*, is not as rewarding a theatrical experience as *King Arthur*: the anonymous adaptor or adaptors concentrated the musical episodes in the fairy scenes and connected them only tangentially to the drama, while Purcell made little attempt to provide his range of characters with appropriate musical idioms – the Act 5 masque, for instance, has some incongruously brilliant and up-to-date italianate numbers despite its *chinoiserie* setting. Nevertheless, with such things as the delightful drunken poet's scene in Act 1, the wonderful sleep scene in Act 2 and the imposing Masque of the Four Seasons in Act 4, it is Purcell's most consistently inspired theatrical work. *The Indian Queen* z630 (?June and/or November or December 1695) is his greatest late theatre work, despite being unfinished (the Act 5 masque was set by Daniel Purcell) and being yoked to a bombastic and anachronistic play: the plot involves accepting that the Inca and Aztec empires in ancient Peru and Mexico are adjacent and at war. Nevertheless, it contains some wonderful music, including the amusing Masque of Fame and Envy and the ritual scene in Act 3, with 'Ye twice ten hundred deities', Purcell's greatest incantation song.

There are many good things in Purcell's smaller theatre works. His contribution to D'Urfey's three *Don Quixote* plays z578 (1694, 1695) include the great mad songs 'Let the dreadful engines of eternal will' and 'From rosy bow'rs', supposedly Purcell's last song. *Oedipus* z583 (?October 1692) contains a memorable incantation scene that includes the ground bass song 'Music for a while', while *The Libertine* z600 (?spring or summer 1695) contains 'Nymphs and shepherds, come away', an amusing evocation of village music. *Bonduca* z574 (September or October 1695) includes the once-popular patriotic songs 'To arms, your ensign straight display' and 'Britons, strike home', though its finest piece is 'O lead me to some peaceful gloom', one of Purcell's most memorable two-section songs.

No discussion of Purcell's theatre music would be complete without mention of his theatre suites. The posthumous publication *A Collection of Ayres, Compos'd for the Theatre, and upon Other Occasions* (London, 1697) presents its 13 suites in a form suitable for domestic use, with the overtures placed first (in the theatre the dances making up the introductory first and second music would have come first) and with wind parts omitted. Nevertheless, the suites for ordinary spoken plays are complete as they stand in four string parts; there are no continuo parts, no figures in the bass, and little sign that they were played with continuo, in the theatre at least. Purcell does not appear to have tried to convey the mood

of the play in his suites, beyond a tendency to preface tragedies such as *Distress'd Innocence* Z577 (October 1690) or *Abdelazar* Z570 (April 1695) with overtures wholly or partly in the minor key. Yet the collection is full of delightful music. The overtures are often characterized as 'French', though they far transcend their Lullian models, with richly conceived, sonorous and often dissonant first sections leading to brilliant and densely argued fugues. In the dances that follow there is no shortage of elegant minuets and minuet-like airs, but hornpipes are equally common, and throughout there is a preponderance of breezy, tuneful airs, some of which deservedly achieved the status of popular tunes.

7. HANDWRITING AND AUTOGRAPH SOURCES. Purcell's handwriting changed significantly during his working life, and certain developments in his text hand can be dated with some precision. In his earliest manuscripts he uses secretary-hand versions of the lower case letters 'e' and 'r'. The secretary 'e' was replaced by an italic form no later than the summer of 1680 and an italic 'r' appears with increasing frequency from 1681 onwards, becoming the only version Purcell uses by 1685. In later sources Purcell habitually forms the lower case 'r' in a single stroke of the pen with a loop at the bottom. Sources copied before 1677 are characterized by a distinctive reversed bass clef.



Manuscripts in Purcell's autograph can be divided into four principal categories: performing material, autograph scores of individual works, including composing drafts, archival score-books, and collections intended for teaching or coaching. Performing materials are represented by a few very early bass parts in *US-NH* Osborn 515 and string parts for the anthem *My song shall be alway* (*GB-Och* 1188/9, only partly in Purcell's hand). To these may be added an organ part for John Blow's *God is our hope and strength* (*GB-Och* 554), dating from about 1676, and a few pages of the Theatre Royal's score of *The Fairy Queen* (*GB-Lam* 3), which is otherwise in the hand of a professional copyist. Preliminary drafts of four anthems later copied into *GB-Lbl* R.M.20.h.8 survive in *GB-Bu* 5001 and *GB-Ob* Mus.c.26, and a number of other separate autographs, mainly of works composed outside the period of the archival score-books, are preserved either individually or in modern composite guard-books.

The contents of the three major archival score-books mostly date from the reign of Charles II. *GB-Cfm* 88 and *GB-Lbl* R.M.20.h.8 were both bound before Purcell acquired them and were at least to some extent official volumes used in connection with his court employment. *GB-Cfm* 88 already contained a group of symphony anthems copied by John Blow when, probably in late 1677, Purcell began a collection of full and verse anthems by contemporary composers such as Blow, Locke and Child as well as earlier works including anthems by Byrd and Tallis; he later added some music of his own. Much of Purcell's work on this manuscript was finished by 1680, but further anthems were copied until about 1685. *GB-Lbl* R.M.20.h.8 and *GB-Lbl* Add.30930 are predominantly or exclusively devoted to Purcell's own compositions. In R.M.20.h.8 he transcribed symphony anthems from one end of the book from about 1680 until 1685; at the other he entered secular music composed for the court ranging from full-scale odes to solo songs, beginning with the welcome song *Swifter, Isis, swifter flow* (1681) and ending with *Sound the trumpet, beat the drum* (1687). The welcome songs for 1685 and 1686 are partly or entirely in the hand of an assistant, possibly Purcell's pupil Robert Hodge (*d* 1709). A second assistant took over from Purcell to complete the 1689 ode *Celestial music did the gods inspire*, and other works, including additions at both ends of the book made in about 1690, are in the hand of a prolific but sometimes inaccurate copyist who made manuscript additions to some copies of *Dioclesian* (London, 1691). He may have been the organist Francis Pigott, who later succeeded to Purcell's post at the Chapel Royal. *GB-Lbl* Add.30930 differs from the two other major score-books because it contains vocal and instrumental chamber music unconnected with Purcell's employment at court, including a remarkable series of fantasias and In Nomines. Purcell probably began work on the pages now in this volume before they were bound, perhaps in about 1678, continuing after the book had been assembled until about 1683–4.

The 'Gresham' songbook (London, Guildhall Library, Safe 3; formerly the property of Gresham College, *GB-Lgc* VI.5.6) mostly contains songs for solo soprano, many from theatre works and odes dating from 1692 to 1695; some have been transposed or more extensively rearranged. The purpose of the manuscript is uncertain, but

7. 'Still-life with Musical Instruments' by Edwart Collier, 1697–1700 (private collection); in the centre is an open copy of the posthumous anthology 'A Choice Collection of Ayres' (London, 1697)

Westmr Novr 2d. 1686

Sr

I have wrote Severall times to Mr Webber concerning
what was due to me on Hodg's account and recd no
answer, which has occassion'd this presumption in
giving you the trouble of a few Lines relating to the
mater, It is ever since ye beginning of June last that
the Money has been due: the Sum is 27
for half a Years teaching & boarding the other a
Bill of 7 for nessecarys wch I laid out for him,
the Bill Mr Webber has; Compassion Moves
me to acquaint you of a great many debts Mr
Hodg contracted whilst in London and to some
are so poor 'twere an act of Charity as well as
Justice to pay 'em I hope you will be so kind to
take it into Your consideration and also pardon
this boldness from

Sr Yor most obliged
humble Servt
Henry Purc

8. *Henry Purcell's autograph letter (2 November 1686) to the Dean of Exeter (GB-EXcl)*

the accompanist was probably Purcell himself, as the continuo line is sometimes incomplete or absent, and the book may have been used for coaching an advanced performer. Two songs near the end are by Daniel Purcell and are in his autograph. The keyboard manuscript *GB-Lbl* Mus.1 contains graded teaching material copied in the 1690s, beginning at one end with very simple pieces and ending with distinctive versions of two of the suites later published in 1696: at the other end of the volume is a series of works by G.B. Draghi, possibly in his own hand.
